"As soon as possession was taken, all hands began to pick up the wee things about the decks; and, for the next two hours, grog flowed in abundance. It was a comical sight to see: for most of the lads had exchanged their old jackets and hats for embroidered coats, double breasted wigs, and three-cornered scrapers, making a striking contrast with their tarry trousers and shoe-less feet. Others were rigged out in flounced petticoats and laced caps, underneath with their black muzzles, smeared with blood and gunpowder, produced a fine effect. All at once Lord Nelson appeared in the midst of us, and three cheers resounded in all directions. 'I hope your honour,' says Peter McCornick, offering the hero a silver goblet of wine, 'I hope your honour will drink with us. It's real sham-pain your honour, and sparkles like a maiden's eye on her wedding-night. God bless your honour (as Nelson took the cup) only drink 'better times to us.' 'Silence there, fore and aft, ye ragamuffins! Belay your jawing-tacks for a minute, d'y'e hear? and fill your buckets—all ready your honour.' 'Well then,' said Nelson, raising the goblet above his head, and smiling, 'here's better times to us.' 'Better times to us'—'better times to us'—'better times to us,' was now repeated by every voice who could command a water-tight vessel, from a golden bowl to an old shoe, filled with the richest wines.

"And now my lads,' says he, your time is expired. Officers! gather the men together. The troops are at the breach, waiting for your departure, to enter the garrison. Retire, my men, with that order and regularity characteristic of a sailor. Remember the eyes of the enemy are upon us; and do not discredit the British navy.' So saying, he left us, to conduct operations somewhere else.

"Well, we all mustered in the great square (it looked like carnival time, crowded with masqueraders) and began to withdraw. The first division descended the breach, when the lubberly sodgers brought 'em up all standing, and began to

search them for booty. 'Pray, sir,' said our commanding officer to the colonel, 'have you orders for what you do?' 'That question is unnecessary, sir,' replied the other haughtily, 'and merits no answer. However, to satisfy you, I have orders, sir, from the general.' 'Then, sir, I suppose those orders must be obeyed on your part. But I really cannot answer for my men. They have won what they have got, which I believe, merely amounts to the fine clothes on their backs, and a few bottles of wine or spirits: still I imagine they will not easily resign them, and I should recommend—' 'I'm sorry sir, your recommendation can't be attended to. My orders are imperative.' Now this was very hard, for there wasn't a red-coat at the attack; and to be robbed by 'em after storming the town, here we was flat aback. Up starts Peter McCormick: 'Lads,' says he, 'you may do as you please; but no one shall have my goblet without fighting for it. Didn't Nelson drink out of it? and d'ye suppose I'm going to give it up to a sodger? Never! Make sail, my boys; here's out shipmates close astern.' The men moved on; but the troops brought their bayonets to the charge to oppose them, though evidently with great unwillingness. By this time our whole party descended (many of them expecting a brush, had thrown away what was cumbersome), and all determined not to submit to the degradation of being searched. Peter now whispered to Tom Butt, the captain of the fore-castle, and Tom moved to another place, where he was busy among the men.

"Sir," said our commanding officer, with great emphasis, 'I think your conduct highly improper. At such a time, and at such a place, to oppose Briton to Briton in sight of their foes, is un-officer-like and unmanly. They have the admiral's sanction for what they have done, and I insist upon your letting them pass.' 'Go on board, and learn manners,' replied the sodger; 'let a single man advance a step, and I shall instantly charge.' 'Then their blood be upon your head; we shall meet again, sir.'—A shout, a wild shout now issued from the direction where Tom Butt had taken his station. The seamen had broken through in a close body, and were slowly marching away. 'Make ready!' cried the colonel: the sodgers racked their locks, 'Present!' and the butts were brought to the shoulder. 'Say but the word,' roared Peter, grasping the officer's arm, and holding a pistol to his breast—'say but the word, and I'll make a grave man of you!'

"How it would have ended there's no saying; but fortunately Nelson, who no doubt suspected something of the kind, came tearing in among us with breathless haste. 'For shame, men, for shame!' said he; 'what is all this? But when he heard the cause of the riot, he turned to the sodger-officer. 'I am surprised, sir, that you should consider these brave fellows as fit objects for a round of ball cartridge. Reserve them, sir, for the enemy, who have again entered the town, through your negligence in detaining the whole force at the breach. Follow me, my men, and show them once more what it is to conquer.' In five minutes, every tar had again entered the breach; and many of the troops, unrestrained by the officers, advanced with them. The whole party, mingled together, (for all animosity had ceased), were hastily formed in the square, and, led by Nelson himself, rushed upon the foe. The attack bore down all before it; and the enemy were compelled to retreat with great loss. The colonel, as if to display his contempt of danger (for he was a man of undoubted courage), was seen in the thickest of the fight, till he got wounded and fell. A French officer raised his sabre to give the finishing stroke—when Peter, sprung forward, and shot the Frenchman with the same pistol that only half-an-hour before had threatened death to the colonel himself! After all was quiet, the wine was again set abroad; and those, who had but a short time previous been at daggers-drawn, now drank cheerfully together in harmony and peace."

A NIGHT ATTACK.

The boatswain's shrill pipe, re-echoed by his mates, called attention, and "Boarders away!" resounded through the decks of H.M.S.——

It wanted an hour of midnight, and was intensely dark, when

I ordered the boats to follow my motions without noise, and proceeded in search of a cutter, anchored between Rochelle and Rochefort, round which the boats of that division of the channel-fleet, commanded by Sir Harry Burrard Neale, were ordered to rendezvous, for the purpose of cutting out a convoy that had left Rochelle, and been chased into a bay near that place some days previously. Its strongly guarded state forbade any prospect of success in daylight, as a very high promontory, called Point du Ché, furnished with long thirty-two-pounders, afforded effectual resistance, even to the approach of an adverse squadron. A regiment of infantry were moved from Rochelle, and encamped round the very pretty bay, their white tents glittering on the plain, and giving more effect to its beautiful scenery.

The admiral and officers that had volunteered on this desperate undertaking, had closely reconnoitered the place this day, and each officer had the plan of attack fully explained to him by Sir Harry, with the particular duty expected from him. The marine artillery were selected, and volunteers from that admirable corps, headed by Lieutenant Liddle, composed the forlorn hope. It was on reconnoitering we found that a regiment of infantry had arrived from Rochelle on the bay, and had taken an excellent position, both for defending the shipping and the promontory of Point du Ché.

The plan of attack was skilfully arranged by Sir Harry: darkness was the first requisite, and it was most essential that a landing should be effected, or the boats got so much under the promontory, that the heavy metal with which it was bristled could not be depressed to bear on the approaching force. One hundred marines, commanded by their captain from the Caledonian, were to secure the retreat of the storming party, headed by Lieutenant Liddle, and for that purpose were to take up a position between the boats and the French regiment, whose encampment so much enlivened the plain. The boats were to move in six divisions from the cutter, their oars muffled, and each division having a different duty assigned them. Some were to board and cut out the shipping, others conveyed the storming and covering party; mine, in a seventy-four's launch, was to flank the marines, and, with an eighteen-pounder mounted in her bow, to check the advance of the French infantry.

Now, fair and gentle reader, imagine the cutter (and she was found with great difficulty, not daring to show a light)—imagine the cutter's deck thronged with the officers commanding the different boats, receiving the final orders of the youthful flag-lieutenant, representative of the rear-admiral, each as he made his parting bow to the gallant youngster, for so he was compared to the senior-officers under him, each drew tighter the belt of his sword, and placed his hand on the butt of his pistols. The quick ear might have detected the half-drawn sigh, and the rapid glance, had there been light, the slight suffusion of the eye as some replaced the locket they had most affectionately pressed to their lips, arguing, from the very dangerous nature of their service, a possibility of no other opportunity of bidding farewell to the much prized tokens of love or friendship.

At this moment some awkward fellow accidentally discharged his pistol, and the stifled execration of displeasure burst from numerous lips; all eyes turned eagerly to the dangerous battery of Point du Ché, and then swept the bay, where the regiment had encamped, but nothing denoted alarm. The sentinel still paced his lonely round, and a few minutes' observation convinced us they had not observed our unguarded conduct.

"Gentlemen, to your boats," said our youthful commander, and they formed in the divisions previously planned.

As we slowly approached the intended scene of disembarkation, for the strictest orders were given for silence, and the muffled oars just touched the unruffled water, we plainly perceived the sentinel as he stood on the topmast pinnacle of the high bluff cliff. His figure, as viewed by us so far beneath, appeared unnaturally large, and swelled out into gigantic proportions. Sometimes he would slowly pace the edge, then would he rest on his musket, casting a wary eye on the dark waters below. Every man held his breath, for this was the

trying time; death or victory hung on the vigilance of that man, and each eye strained to watch his motions: "Hush!" was faintly heard along the divisions, and I thought I could distinguish even the beating of the heart as the sentinel was observed to stop and apparently stretch himself forward from the cliff. A discharge of grape and canister at this moment from their heavy guns would have swept us, like a flash of lightning, from the face of the ocean. Thank God! he drew back, and seemingly satisfied with his gaze, resumed his slow pace. Each person drew his breath more freely, at least I can answer for myself, who felt as if a ton weight had suddenly been lifted from my breast. Every yard had now life or death depending on it; yet we could not exert more speed without drawing on us the attention of our wary and vigilant foe.

With us all was profound stillness and inactivity, different from the bustle and noise of action; and I am confident many a good resolution was formed, and many a silent aspiration ascended to the throne of heaven for mercy. During the forty-two years I had been in the service, never did I feel my mind called upon for more fortitude than on this eventful ten minutes. Again the sentinel stood still, and stretched himself over the cliff, gazing on the deep, deep sea, like a man alarmed, for the dip of our oars had reached his quick ears. "Qui vive?" from his hoarse, manly voice, rang in our ears like thunder; again we heard the challenge, quickly followed by the report of his musket. Now hissed the rockets as they ascended the sky, and the blue lights innumerable threw a ghastly glare on the frowning promontory and bay below. The grape and canister splashed and tore the waters into foam just outside of us, and the British cheer rung high and merrily, as our youthful commander shouted, "Give way for your lives, men, and remember your orders."

The divisions of boats flew through the placid waters, as the rowers bent both back and oar to their work; and as they neared the shore, diverged to their different duties. The forlorn hope, under the gallant Liddle, jumped from their boats, formed, and rushed up the steep to the attack of the battery with incredible speed. I drew off to the right of the marine corps, and directly in front of the French regiment, whose bugles at intervals could be heard above the roar of the heavy artillery and field-pieces that thickly lined the beach, and now opened in earnest on the boats. A sudden nervous start, and—"I was afraid my right arm was off," said the midshipman seated near me; "but it is only soundly bruised by a shot striking the gunnel."

"It is well you preserved it, for I want its assistance in training the carronade. So oars, lay in the six foremost ones, bowse forward the gun, and load it with double canister. Now, coxswain, keep the bow of the boat directed towards the centre of that scattered fire you see advancing;" for the regiment had thrown out their sharp-shooters to feel their way, and give some knowledge of the attacking force; of these gentlemen I took no notice, confident that the main body were advancing in close column, and reserving my welcome for them alone.

By this time Lieutenant Liddle's storming party had gained the crown of the promontory, and were halted to re-form and gain breath, but finding the enemy endeavouring to turn one of their heavy guns upon them, the gallant Liddle gave the word to charge bayonet, and advance at double quick time; sparks flew as they crossed each other, and many a gallant breast was transfixed by that truly British implement. At this moment their gallant leader received a ball in his sword arm, which shattered the bone, so as to require amputation, and the wounded hero was supported to the boats with the wreath of victory on his brow.

The tramp of masses of infantry was plainly heard in the launch, and the sharp-shooters retired on their main body. "Depress the gun, and stand clear of its recoil:" nearer, and still nearer came the heavy tread. I heard the command to our marines to make ready and close their files. "Fire!" and thirty-six pounds of small balls imperatively commanded a halt, which the Frenchmen acknowledged by prompt obedience.

The flames from the grounded shipping that had been set

on fire now gave a glimpse of the retreating infantry, and our gun, by its playing, accelerated their motion. The commander of our party now ordered the bugle to sound a retreat, and the marines rushed into the boats in double quick movement. Never was a night attack better planned, or more ably executed. Our youthful commanding officer, now Captain Hamilton, then received his promotion, and we the thanks of Sir Harry Burrard Neale.

THE DEEP AND MOONLIGHT SEA.

By J. Bradshaw Walker, Author of "Spring Leaves."

In crowded halls, where beauty smiled,
I've led the fairy band;
I've roamed thy dales o'er flowrets wild,
My own dear native land.
Life's social hours of love and song,
I've spent in festive glee;
Though far away, I float along
The deep and moonlight sea.

I've gathered sweets from many a bower,
In summer's golden time,
When youth was like a careless flower,
Rejoicing in its prime.
Those happy scenes of home are gone,
Like shadows o'er the lea;
And far away I glide upon
The deep and moonlight sea.

Speed on my bark to India's shore,
'Tis night upon the deep;
The hollow wind shall loudly roar
Its music o'er my sleep.
The tempest comes on ocean's foam,
To hold its revels free;
Yet far away I cheerly roam
The deep and moonlight sea.

A MORNING SCENE AT SEA.

In the far distant east, lo! the day-star is beaming,
And the purple of morning is spread o'er the sky;
Beneath yon deep cloud now the first ray is streaming,
From the sun's golden front ascending on high.

Slow, slowly he mounts from his coral-clad pillow,
And broadens and brightens in glory serene,
Till risen majestic he smiles o'er the billow,
Effulgent abroad on the wide watery scene!

But now through the surges our vessel is steering,
The sea-fowls wild screaming oft plunge in the stream,
Then rise on the top of the billow careering,
And flap their brood wings on the new-risen beam.

And mark, how the clouds hurry fast cross the heaven,
Oft darkening the scene, and oft bursting again;
Our sails by the rage of the tempest are riven,
And we reel insecure on the foam-rolling main.

On the spray, from the brine-beaten prow as ascending
In silvery sheets, like the sweet streamers blaze,
The shades of the rainbow in splendour are blending,
For far o'er the deep the sun kindles his rays!

The wind has subsided, now steady the motion,
The seamen loud cheering again hoist the sail;
Along our smooth path, on the face of the ocean,
We skim, like the moon, on the wings of the gale!

ESTIMATED AVERAGE OF SHIPWRECKS.

It appears that in a period of 36 years, the average number of ships wrecked was 557 annually! In 1829 they exceeded 800; and they are believed to have increased since that time! More than 2,000 seamen annually perish thus in the mighty deep! The above facts, should impress us with the necessity of using every possible means to avert the evil.

DESTRUCTION OF NEW HOORN.

The New Hoorn, a vessel of eleven hundred tons burden, commanded by William Ysbrants Boutekoe, a Dutchman, with a company of two hundred and six men, sailed from the Texel on the 28th of December, 1618. On the evening of the 30th they were in sight of Portsmouth, and passed Plymouth on the following day with an east wind.

On January 1, 1619, they left the English coast; and a strong gale rising from the south-west on the 4th, they were obliged to lower their topmasts; but the night proving still more stormy, they reduced all sail and drove before the wind. Three heavy seas broke over the vessel, covering the decks with water. Many of the sailors exclaimed, "We are sinking, we are sinking; the ports before are open." The captain hearing

these words ran to the fore-castle, where, finding the ports down, he encouraged the men by calling aloud to them that they had nothing to fear; and a man who had been sent below to examine the hold, reported that there was very little water there. Speedy exertions were made to relieve the vessel, but the chief source of embarrassment arose from the seamen's chests floating between decks, which it was necessary to break in pieces in order to facilitate the work. For several successive days the tempest continued to rage with such incredible fury, that according to the captain's description, they believed heaven and earth were about to meet, and the sea was covered by fire. By the straining of the shrouds and great rolling of the vessel, the mainmast was partly carried away. Such was the violence of the shock that they at first thought the whole was gone, and that, consequently, it would be impossible to

DESTRUCTION OF THE NEW HOORN, CAPTAIN BOUTEKOE, BY FIRE, NOVEMBER 19, 1619.

prosecute the voyage; but allowing the vessel to drive, they resorted to temporary expedients, and secured the remainder of the mainmast when the storm abated.

Directing their course towards the Canary Islands, a vessel came in sight of them astern, crowding all sail to come up with them; they therefore lay-to, when she proved to be the New Zealand, on a voyage from Flessingen to the East Indies. She had not suffered any damage from the tempest, and they endeavoured to keep up with her, though they were scarcely able to hoist enough sail.

On the 23rd, another vessel came in sight which, on nearing, they recognised to be the New Enkhuysen, which had sailed from Holland for India at the same time with the New Hoorn. Keeping company they came in sight of the Canary Islands,

expecting to obtain some refreshments at St. Anthony; but the fog preventing them from discovering that island, they altered their course and arrived at Fogo.

Having cast anchor they set about refitting the ship, and sent a boat towards the shore, which was saluted by the Spaniards with shot, upon which they weighed anchor and set sail.

The other two vessels here parted company, and it was some time before they rejoined the New Hoorn; they related, that having landed on the Isle of May, they were opposed by the Spaniards, and obliged to retire with the loss of two men.

Crossing the line, they experienced calms with slight showers and occasionally baffling winds, or sometimes the wind shifted round to all points of the compass, so that they were detained

three weeks before they were able to get into the southern latitudes. The wind being then in the south-east, they kept a good look-out and endeavoured to pass the Abrolhos to windward, which, after seeing the outermost rocks, they happily succeeded in accomplishing. On this day, a double allowance was served out with a pint of Spanish wine to each man, and then they stood towards the islands of Tristan D'Acunha. By observation they found that they were in the same latitude, notwithstanding which they passed them without coming in sight, and were then, by the shifting of the wind, obliged to make for the Cape of Good Hope. The weather, however, proved tempestuous, it was resolved by the ship's council to pass without touching at the Cape; and, accordingly, having plenty of provisions, and the crew being in good health, they ranged along the coast of Natal. They had now been out five

months, and the Enkhuysen being destined for the coast of Coromandel, took leave of the New Hoorn and New Zealand, intending to pass south of the island of Madagascar, and then get refreshments at Mayote. Soon after this the New Zealand also parted company, steering two points farther to the north, when the New Hoorn made the best of her way to Madagascar.

By an observation, subsequent to the separation, they found themselves in 23° south lat., at which time great sickness prevailed in the ship; forty were confined to their hammocks, and many more complaining; the council therefore determined to steer for St. Louis Bay, in Madagascar. On approaching the island they could get no secure anchorage, on which the captain went off in the long-boat to search for it; but the surf beat so heavy on the shore, that they were unable to land to

obtain any information; and not having any prospect of obtaining fresh provisions, he returned on board, to the great mortification of the people: and then hoisting sail bore away.

The number of the sick daily augmented, and several having died, the survivors sent some of the officers to the captain, humbly requesting that he would make for land. Upon this he resolved to attempt gaining either the island of Mauritius, or that of Mascarenhas; and steering on a course between them, they came in sight of the latter, and anchored near the shore in forty fathoms.

The sick having learned that the long-boat, which had been sent to the island, had returned with a number of turtle, requested to be sent ashore; but Heyn Rol, the supercargo, would by no means consent to it, affirming that it was danger-

ous, from the roughness of the sea. They nevertheless persisted in their entreaties, and anxiously solicited the captain to send them ashore; who himself asked Heyn Rol for permission, but received a refusal. The captain, however, told him that he should do so, and be responsible for the consequences. He accordingly supplied them with a sail for a tent, oil, vinegar, and kitchen utensils, and two cooks to dress their provisions.

They found a number of blue pigeons on the trees, so tame that they caught them with their hands, and killed and roasted two hundred the first day. They also procured many other birds, such as grey paroquets, wild geese, and penguins. Turtle were also so numerous that they took as many as they chose.

A number of people were sent ashore to obtain fresh provisions; and eight of them detached on a fishing party obtained

various kinds of good fish, some as large as a salmon. On conveying the water-casks to a small fresh-water river, they found a wooden plank with an inscription, purporting that Captain Adrian Maerts Block had been there with a fleet of thirteen vessels, when on sending his boats ashore, they were overwhelmed by the surf and their crews drowned.

From the palm-trees they extracted a mild and agreeable liquor, which, with the abundance of fresh provisions of the most luxurious description, contributed to the convalescence of the sick so rapidly, that in a very short time all of them, but seven, were able to return to the ship; the others remaining till the vessel should be ready to sail.

Having refitted the ship, without and within, opened the ports for the admission of air, and fumigated the whole with vinegar, the drum beat for the return of the people, and they set sail. Though they had been twenty-one days on the island, there were still some sick people on board, which induced them to bear away for the island of Mauritius; but getting too much to leeward, they found themselves unable to beat up.

They had still a long voyage before reaching Batavia or Bantam; the ship's council therefore resolved to steer for St. Mary's Island, which lies opposite to the bay of Antongil, in the island of Madagascar. Coming in sight of it, they stood to the west, coasting round the island in six and eight fathoms water, as clear as crystal, and they distinctly saw the bottom.

They were soon observed by the natives, who came on board in small canoes, bringing apples, citron, rice, and poultry. They remained here some time trading with the natives for cattle, sheep, and rice, in exchange for bells, spoons, and knives; and then, after heeling the vessel to clear her bottom, they set sail standing for the straits of Sunda.

On November 19, they had reached the latitude of the Straits, which lie $5^{\circ} 30'$ south of the line, when they were suddenly alarmed by the cry of "Fire!" The captain immediately came on deck and looked down the hatchways, where he could not discover anything but the steward pouring water into a cask. He instantly descended and asked the steward where the fire was, on which he pointed to the cask. It appeared that the steward had gone down with a candle to fill his keg with brandy, that a small glass might be served out to each person next morning, according to custom. While thus occupied, he had thrust his candle into the hole of a cask on a tier above that from whence he drew the spirits, and in removing it a spark fell exactly into the bung-hole of the other. The water which the steward had poured in, prevented the captain from discovering the fire, and considering it extinguished, he returned to the deck. The fact unfortunately proved otherwise, and the flames rapidly reviving, burst out the ends of the cask; and, to add to the disaster, the fire reaching a heap of coals which had been stowed under the casks, set fire to them.

A second alarm ensued, and all hands ran hastily to the place, making great exertions to get the fire under, which was extremely difficult to accomplish, as there were four tiers of casks above the other. They were also hindered by such a thick and sulphureous smoke from the wet coal, that those at the bottom were almost suffocated, and could scarcely find the hatchways. In this emergency the captain proposed to Heyn Rol, that they should throw the gunpowder overboard; but this he objected to, alleging that the fire might still be extinguished. "Besides," he added, "if we throw away our powder, how shall we defend ourselves against our enemies, should we be attacked and taken! We shall have no apology." The powder therefore remained.

In the mean time the rage of the devouring element augmented more and more, and as it was impossible to remain down in the hold; the decks were scuttled, that greater quantities of water might be poured down upon it, but all was in vain.

The launch had been for the last three weeks astern of the vessel, and now the yawl was also lowered down to clear the decks. Alarmed at the dreadful appearance of the fire, without the hope of succour, some of the crew began to desert their posts; quickly slipping along by the chain-wales, they dropped down into the sea, endeavouring to swim to the launch or the cutter.

Heyn Rol coming by chance into the gallery, was surprised to see so many people in the boats. They cried to him that they were about to cast off, and entreated him, if he meant to accompany him, to lose no time but descend the stern ladder. He did so, and then requested them to apprise their captain, and wait for him; but they immediately cut the painter and made away.

Captain Boutekoe, who knew nothing of all this, was exerting himself to get the fire under, when a seamen came to him, with tears in his eyes, saying, "Dear captain, what can we now do, the launch and cutter have deserted us?" "If they are gone," the captain answered, "it is not to return;" and hastened on deck, where he soon satisfied himself as to the fact, and immediately hoisted all sail to run them down; but when within about three ship's lengths, they got the weather-gage and escaped.

The captain then renewed his endeavours to encourage the crew, telling them that, next to God, their trust must be in themselves; and exhorting them to persevere steadily in their exertions to get the fire under. In the next place he ordered the powder to be thrown overboard, which they instantly commenced doing; and ordered the carpenters to bore holes with their augurs in the ship's sides, so as to let in the water, in the hope of extinguishing the fire.

Nothing but sighs and lamentations resounded through the vessel, while with unabated vigour they continued to pour large quantities of water down the hatchways. In a short time, however, the oil took fire, and the flames became more and more furious, as they tried to conquer them. Their situation now became more desperate; consternation spread among the crew: their exclamations of terror increased, until beholding inevitable death approach with rapid strides, their courage sunk into apathy. The captain was standing upon deck, with sixty-five others, close by the main hatchway, receiving the water in the buckets. Sixty barrels of powder had been got overboard, but three hundred still remained; when the fire at length reached them, and the vessel blew up with a terrific explosion, carrying with it one hundred and nine human beings. "A moment afterwards," the captain relates, "not a creature was to be seen; and, believing myself launched into eternity, I exclaimed, 'Lord have mercy upon my soul!'"

Although stunned by the explosion, his senses had not entirely forsaken him, so that seeing the mainmast and then the foremast floating by his side, he gained the former; and soon afterwards had the satisfaction of perceiving that he was not alone, as another had also survived the wreck, and was then near him on the floating fragment.

The sun went down soon after, leaving them destitute of all prospect of succour; and their only consolation lay in the mercy of God.

Shortly afterwards they were agreeably surprised by the sight of both the launch and cutter, which met beside them. The young man leaped boldly into the water, and swam to the boat; but the captain was incapable of following his example, from the wounds which he had received. The trumpeter then threw out a rope, which he fastened round his body, and being drawn towards them was taken into the boat.

The captain lay in a little recess, which had been formed in the stern of the boat, and while there, Heyn Rol set the men to the oars, and made them row all night. In the morning they saw no appearance of land, and they had left the wreck where they might have obtained plenty of provisions, as both meat and cheese were driving about in such quantities, that they could scarcely get free from them.

The first thing was to examine their store of provisions, which they found to consist of only seven or eight pounds of biscuit. "Comrades," said the captain to them, "we must follow another course, lay aside your oars, for your strength will soon be exhausted." "What shall we do then?" said they; on which he ordered them to make sails of their shirts, by untwisting the cordage which they found about the boat, and running it through the linen.

Forty-six persons were in the launch and twenty-six in the cutter, being seventy-two in the whole. They drifted

the whole day, while occupied in making sails, and hoisted them towards night, when they steered by the stars as a guide, though they could scarcely observe their rising or setting.

The seven or eight pounds of biscuit were distributed by equal portions, daily, of the size of a man's finger; but this could not last long among so many; and they had nothing whatever to drink, till, fortunately, there was a heavy shower of rain, which they caught by means of the sails, using an old shoe as a cup.

There still being no appearance of land, their hopes died away, their misery daily increased, and the rage of hunger urging them to extremities, they began to regard each other with ferocious looks. The men, consulting among themselves, secretly determined to devour the boys on board; and after their bodies were consumed, to draw lots who should next suffer death, that the lives of the rest might be preserved, but the captain approaching them said, "My friends, I pledge myself that we are not far from land, let us put our trust in God, and he will send relief." The people answered that they had been too long amused with such predictions, and that should they not get sight of land in three days, the boys should be sacrificed.

They now became so enfeebled, that they could no longer stand upright. In this way they steered at random, until the 2nd of December, the thirteenth day after the disaster. All the people had given up their shirts for sails, so that they were almost naked, and were crowding close together to increase their natural heat. The quarter-master had not been an hour at the helm, when the weather became clear and serene, and he suddenly cried out, "Land, land!" Universal joy was disseminated, their strength was renewed, and, hoisting the sails, they stood for the shore, which they reached the same day. It proved to be an island where they found plenty of cocoa-nuts, but no fresh water.

Laying in a store of cocoa-nuts, they sailed, and the following day came in sight of Sumatra, where they endeavoured to find a convenient place for landing, which the breaking of the surf rendered dangerous; but four or five of the seamen ventured to swim ashore. After traversing the beach, some time, they discovered the mouth of a river, and made signs to those in the boat to come towards them. They did so; but finding a dangerous bar at the entrance, two of the men sat astern, one on each side, with an oar; and the captain being at the helm, they attempted the passage. The first breaker half-filled the boat, but some baled her out with their hats, others with their shoes. The second wave almost overwhelmed them, but, happily, the third broke short of the boat, and they landed in safety.

They found fresh water and beans, and, at some distance, the remains of a fire, which sight delighted them, as it showed the island to be inhabited. As night approached they kindled five or six fires, and posting sentinels in different directions, went to sleep. During the night they were disturbed by an attack of the natives, who stole upon them in the dark; but an alarm being given, each man seized a firebrand, and rushing upon the natives, soon put them to flight.

At break of day, three of the natives were observed coming down to the beach, and three of the seamen understanding something of the Malay tongue, were sent towards them. With the aid of these interpreters they purchased boiled rice and poultry, for eight crowns, which had been collected among them. The captain then paid five crowns and a half for a buffalo, which proved so fierce and unmanageable, that the men could not catch it.

This proved the cause of another rupture, for four of the men went in search of the buffalo that had been paid for. In their absence, the party were fiercely attacked by the natives, armed with sabres and shields. A vigorous resistance was made, so that they were enabled to regain the launch, with the loss of sixteen men—viz., twelve in the encounter, and four who had gone in search of the buffalo.

Having succeeded in crossing the dangerous bar in safety, they stood out to sea, to prosecute their voyage. After sailing some time, a storm rendered it necessary for them to take in

all the sails, which they spread over the launch for shelter, and allowed her to drift until daybreak. The gale then abating, they discovered three islands, which they reached before night, and found bamboos and palm trees, and, fortunately, a good supply of fresh water.

While the people were engaged in traversing the island in search of food, the captain ascended a high mountain in the hope of making some discovery. The weather was clear and serene, and looking round him in all directions, he saw two great blue hills, and, at the same time, recollected to have formerly heard from William Cornelius Schouten, an experienced navigator, that there were two of that description on the extreme point of Java. It was therefore evident, from the straits of Sunda being between Java and Sumatra, that they were in the direct course. Prostrating himself on the earth, he prayed Heaven still to be their guide, and gratefully acknowledged the mercy they had hitherto experienced; and, transported with joy, hastened down the mountain to communicate the glad tidings to the rest. Impatient to depart, the people were summoned, and they quitted what they called Prince's Island.

About midnight they desisted what was taken for a vessel on fire, but, on nearer approach, the light proved to proceed from a small island in the straits of Sunda, called Dwars in de Weg. One of the seamen climbing up the mast, discovered vessels at a distance, of which he counted twenty-three. Their joy at this discovery can only be imagined, and instantly they got out their oars for greater speed.

Frederick Houtman, who commanded these vessels, which were Dutch, had seen them with a telescope from the quarter-deck, and wondering at the singularity of their sails, sent out a boat to ascertain what they were. They very soon recognised the people in the boat, for they had left the Texel in company, and separated in the Spanish sea.

After mutual congratulations, the captain and Heyn Rol went on board Houtman's ship, which was called the Virgin of Dordrecht. He ordered a table to be covered in his cabin for them, provided them with clothes adapted to the climate, and appointed a yacht to carry them to Batavia.

Here they found General John Peter Koen, to whom they related the fatal accident which had destroyed the New Hoorn, and the disastrous adventures that followed. He ordered an attendant to bring wine, which having poured into a large gold cup, he drank; and presenting it to Captain Boutekoe, said, "Captain, you are welcome; you may consider that after once losing your life the Almighty has restored it. To-morrow I leave for Bantam, on maritime affairs; but do you remain here, and eat at my table until my return."

In eight days they were ordered to attend the general at Bantam, where they found him on board the Virgin of Dordrecht. Calling the captain, he said, "Captain Boutekoe, you may take the command of the ship *Berger Boot*, until further orders." Two days after, he sent for Heyn Rol, and appointed him supercargo of the same vessel, so that both resumed their former employment in the same ship.

A SAILOR'S SUPERSTITION.

THE wind had blown from the eastward for ten whole days, and the fleet, which lay at anchor off Harwich, were prevented from going to sea. Several of the crews were on shore anxiously waiting to see "Blue Peter" flying at the mast-head; but they looked out in vain, the wind still keeping them locked in.

The Dauntless was lying at the harbour's mouth, waiting for the first chance to get away, that she might drop down to Portsmouth previous to her leaving the British coast in search of a desperate pirate. The crew of this vessel were not allowed to remain on shore, in order that they might be ready to put to sea the moment the wind would chop round in their favour.

One evening the crew were taking their grog below—one or two acquaintances had been admitted on board; and, by way of keeping up the hilarity of the evening, Tom Pipes was

called on for a song. Tom, nothing loth, began to clear his voice ready for harmony; but Peter Doleful, one of the crew, got up and protested against any singing—"because," said he, "the wind blows pretty stiff just now, and singing may increase it."

"Belay, belay," cried Gunnel, the helmsman; "let's have none of your superstitious palaver now, old Peter: we never try to pass a merry hour or two but what you attempt to throw a wet blanket over us."

"A song! a song!" roared some twenty voices; and Tom Pipes struck up, well aided by a powerful chorus. Tom Pipes gave his song in true sailor's style, and met with due applause from his hearers; but Peter Doleful sat with his arms folded, and although his messmates were full of merriment, he scorned to join in it. "You sung about Blue Peter," said he; but I'm afraid it will be a long time before you see him flying at the mast-head."

"What ails you now, friend Peter?" asked Jack Junk; "what new maggot has got into your head?"

"It's no use jibbing and jeering in that way, Master Junk," replied Peter Doleful; "I positively tell you we shall have no luck this voyage. Here we have been at anchor in these roads for ten days, and here we are likely to remain; for the wind seems determined to set right in our teeth. I remember when we were going to weigh from Yarmouth, there were two or three cursed crows or ravens hovered over the vessel, and pitched upon our topsail-yards; that was a bad omen you'll allow; and although we fired blank cartridges at them, they would not come down, till Tom Pipes fetched them down with a charge of small shot."

"But, friend Peter," said Junk, "I'm afraid you give way too much to these superstitious fancies; we have met with no ill fortune since we set sail, except to be sure that we have got wind-bound before we have cleared the British coast; but that's not a misfortune, it's more a matter of accident."

"Not a misfortune!" exclaimed Peter Doleful; "I think it is. Accidents are misfortunes, arn't they? What the devil's the difference between them? If you break your neck by accident, that's a misfortune, arn't it? If you get shipwrecked and lose all you have on board by accident, that's a misfortune, arn't it? So now, Master Wiseacre, I should like to know what is the difference between accident and misfortune."

"Why, a great deal," replied Junk. "A man may find a sum of money by accident—that's no misfortune, is it? A rich relation may die by accident, and leave one a fortune—that's no misfortune, is it?"

"Stop there—bring to, Master Junk; you upset your own tactics there. I grant the accident is no misfortune to him who obtains the property; but you don't mean to say that the accident is no misfortune to him who is killed by it. No, no, Master Junk—if you attempt to sail on that tack, you are sure to go to leeward. I an't superstitious; but although you and the rest of the crew may sneer at it, be assured that there are omens and forewarnings of what is about to happen. As, for instance: recollect the very day we were preparing to sail, didn't that old tom-cat scratch under his left ear, just before we left the George and Dragon, and when I said it foreboded ill-luck you all laughed at me: but I was right; for poor Tom Jigger, who had carried too much sail aloft, lost his bearing as he was stepping aboard, pitched into the water, and was drowned. That was an accident, and I suppose you'll allow it to be a misfortune. Don't you remember when the owners in London paid Jack White, the boat-swain's-mate, with a check, and because we were in a hurry, he held it to the fire to dry; and didn't I say 'Jack White, you should never dry writing by the fire, because it's unlucky.' You all laughed at me then: but I was right; for Jack White had the flaps of his Flushing coat cut off, and pockets, check, money, and all were grappled by some land pirate, as he was on his way to the banker's; and there he went full sail down Cornhill, like a vessel that had lost her mizen. That was an accident and misfortune too, or the devil's in it."

Jack Junk gave up the argument. He declared Peter to

be incorrigible, and therefore left him to pursue his own course. Their visitors took leave, and went ashore. The night-watch was set, and Peter Doleful retired to his hammock to ponder on future untoward events.

The Dauntless lay at Harwich two days longer, when the wind veered round to the N.W. and they put to sea. A tide took them through the Sweyn, and they came to anchor for a short time in Dover roads. Next morning the wind was favourable for running through the channel, and the Dauntless cut through the water gaily. The crew were congratulating themselves on the favourable weather which they now experienced, when they observed Peter Doleful coming slowly towards them with his usual countenance. "Well, Peter, how fare you old chap?" said Tom pipes. "Fine breeze of wind right aft—canvass well filled—going at the rate of ten knots—soon see the Atlantic, eh?"

"I wish we may," replied Peter, with his usual doleful look—"I wish we may, but I fear the wind won't last long in this quarter."

"What, more omens!" said Jack Thompson, with a leer.

"Yes, more omens," reiterated Peter, with a look of rebuke. "That d-d cargo of pigs will spoil all. If the captain couldn't dine without pork at his table, why couldn't he have it ready killed. Pigs at the best of times are not lucky. Now only look at that ugly porker with his nose pointed right a-head. What do you suppose he is looking at so intently?"

"By my shoul I can't tell," replied Pat Larkins, the carpenter.

"Ah, you ignorant lubber, I thought so," replied Peter. "He's looking at the wind, to be sure; he sees it plain enough—wind right a head: we shall have it slap in our teeth before two hours are over."

The crew laughed at Peter's prophecy; but it was not quite such a hearty laugh as was the general custom. That pigs see wind was not altogether disbelieved, and that the pig's snout was pointed right a-head was beyond a doubt. Hour after hour succeeded, but the wind still kept aft. Evening came, wind still favourable. Peter and several of the crew had gone below to get their grog. Pat Larkins, who smarted under Peter's rebuke, couldn't forbear to have a fling at him. "Where's the wind now?" roared Pat, with a laugh and a mischievous glance of the eye.

"In the north," replied Peter drily.

"And the pig's nose to the south!" exclaimed Pat. "Blood and turf, it's impossible man! How can the pig keep his nose to the south and see the wind from the north?—unless to be sure he might squint a small trifle."

Peter looked mysterious, and with a solemn countenance disdainfully eyed Pat Larkins, as he said, "What can you expect from an Irishman but a blunder? Now to show you that you have no more brains than our sternpost, I'll just explain matters a little. I have been at sea many years, and have always paid strict attention to signs of changes of weather, and such like prognostications; and that a pig sees wind is more than all your philosophers and astrology chaps can contradict. This pig of ours, as you all know, pointed due south; and we should have had the wind from that quarter in less than two hours, had it not been for a scheme which fortunately entered my head at the moment."

"And what scheme was that?" inquired Pat.

"Why," said Peter, "I lifted the pig in my arms, and turned him right round with his nose to the northward."

Pat and the crew burst into a loud fit of laughter. "Ay, ay, laugh away," cried Peter, with a sneer; "but depend upon it, if it had not been for this expedient, we should have been blown back a hundred miles by daybreak. And you, Mister Pat Larkins—you're a pretty lubber to go to attempt to overhaul my grammatics and my learning, arn't you? What a pretty mess you made of it when our vessel was new rigged, and we were so pestered with company, that the captain was obliged to excuse himself from allowing any more strangers aboard, till we got out of harbour—a pretty bull you made of it then, sure enough."

"The devil a bit of bull is there about it, Mister Peter," said

Pat; "but I gave a clane decent off-hand answer, to a plain question, as my messmates here shall decide. Our ship lay alongside the pier, all the crew were on shore, except the captain, myself, and the mate. The captain and mate were down below overhauling a chart, and I remained on deck to give answers to any inquiries. Presently there comes a great big gentleman, with his head as thickly powdered as if Katty Maloney had emptied her flower-tub over him: 'I want to come on board and see the ship,' says he. 'You can't do that same thing, just now,' says I. 'And why not?' says he. 'Because there's nobody aboard but the captain, and he's just gone ashore,' says I. Now where's the bull in that messmates?"

A roar of laughter followed; and the crew promised themselves a good cargo of mirth, as long as they could set Peter and the Irishman foul of each other.

Plymouth Sound was now but a few miles distant, and they brought up, in order to take on board two military officers, who wished to accompany the captain, to whom they were related. They shortly set sail again. The wind was blowing a stiff breeze from N.N.E., Peter was at the helm: they were running through a narrow channel, sounding, and Peter knew that extreme attention was necessary, on account of the number of shoals which were close to them. One of the officers was standing near the binnacle carelessly looking round, while he was whistling "Rule Britannia." Peter looked at him once or twice with a countenance tinged with dissatisfaction, till not able to contain himself any longer, he turned to him, saying, "Don't you whistle, with this wind, if you please, sir."

"Not whistle!" ejaculated the officer. "My good fellow, what harm can there be in whistling?"

"Perhaps a great deal just now," replied Peter.

"What!" said the officer, "has whistling any influence over the wind?"

"Most undoubtedly," replied Peter, with a grave and somewhat consequential gesture. "*Never whistle when it blows hard; but whenever you are becalmed, you may whistle for a wind if you like.*"

The officer smiled, turned on his heel, and went down to the cabin, leaving Peter to deal with the rising wind in what manner he might think most proper.

The Dauntless left Falmouth, and was soon on the broad Atlantic. They crossed the Bay of Biscay with a good breeze off the land. The weather was mild, and the seamen found their work comparatively light.

One day about two, p.m., the man on the look-out gave notice of a vessel a-head, under a press of canvass; and from the description, the captain supposed her to be the pirate they were seeking. She came boldly on with Spanish colours flying at her mast-head.

"If she is a pirate," exclaimed the captain, "she has the impudence of the devil. Keep your ports closed. I think she mistakes us for a merchantman."

The strange sail approached, lowered her Spanish colours and hoisted a red flag with a sword and death's head. She was a capital sailor, and sailed completely round the British cruiser.

"Damn her impudence!" said the captain, "up with your ports and give her pepper."

But the pepper came too late. She flew before the wind as swift as an arrow, and the British ship lost her for that day.

"There," said Peter, "did you ever see such an evasive little devil as that in your life?"

"Why, as to that matter, Master Peter," replied Junk, "I don't exactly know the true bearing of that 'ere word 'vasive, as you calls it."

"Och, bother!" exclaimed Pat Larkins; "sure and every body knows what evasive means."

"Hush, hush," interrupted Peter; "don't let's have any more blunders. How can an Irishman explain a word as is only to be found in the most learned dictionaries?"

"And sure, Mister Peter, will you be after telling me I don't know the meaning of the word evasive?" cried Pat. "Now, messmates, only listen awhile, and I'll tell you how nately I handled that word evasive. We had just got all our rigging complete, and our sails were all unbent, and we lay at anchor

in the roads, and the captain determined to sail next morning. Our beautiful new canvass looked so neat and clean from the shore, that boats full of fine gentlemen and ladies were coming on board every hour to see the ship. Och, and didn't I take care to hand the sweet creatures aboard gently? Och, sure I was as busy as the devil in a high wind. Five o'clock came, and the captain said he must have no more visitors aboard, else we should not be ready to sail in the morning, as it hindered the men from their work. And sure as I looked towards the shore, I saw another boat full of ladies coming off. So the captain says to me, 'Paddy Larkins,' says he, 'if those ladies come alongside, and want to see the ship, you must give them an evasive answer, and get rid of them as well as you can, and I'll go down below and wait till they're gone.' And sure enough he went below, and then the boat full of ladies came alongside, and they ax'd for the captain, and I gave them an evasive answer, and they went away with it a devilish deal quicker than they came; and the captain popped up his head, and said, 'Pat, are they gone?' 'Yes, they are, your honour,' says I. 'What did they say?' says he. 'They ax'd for your honour,' says I; 'but I gave them an evasive answer.' 'What did you tell them?' said the captain. 'I said your honour was gone.' 'Gone where?' says he. 'Gone to blazes,' says I; 'and you may go after him if you please.' Now wasn't that an evasive answer, Mr. Peter?"

"Well," said Peter, "after that I think you may shut your mouth, for you'll never beat that as long as you live."

A DISAGREEABLE REMINISCENCE.

In the month of November, 1838, the Tenasserim sailed from Moulmein, bound to the Isle of France, having previously embarked for Madras about 70 European and native invalids, belonging to Her Majesty's and Honourable Company's Forces serving on the eastern side of the Bay of Bengal.

Communications betwixt the above town and the Presidency were very irregular, particularly during the monsoon, which continues in that part of India for five or six months (successively) in the year—viz., from May till September or October inclusive, and what ships do venture on the coast during that season are not only exposed to the most imminent perils, but are often totally destroyed.

The Tenasserim, which had been launched only a few weeks previously, was the first vessel announced to leave port, and as I had been waiting nearly three months for an opportunity by which I could proceed to Madras, prior to returning to Europe, I lost no time in seeing the captain, and was fortunate enough to succeed in obtaining a berth as ship's steward, for which I was to receive a free passage and the sum of fifty rupees in addition. Of course I was very well pleased with these arrangements, and went on board the evening before we sailed. I found the invalids, with their wives and families, already there. I saw the captain and mate (who, by-the-bye, were the only Europeans belonging to the ship, the crew being composed of one Serang, two Tindals, and about twenty Lascars), from whom I received my instructions, as to the duties I should henceforth have to discharge. I was not long in comprehending the nature of them, and as the despatches came on board the following morning, we immediately weighed, and dropping down the river with the tide, got out to sea before night.

This was on the 17th, from which time to the 22nd, the weather continued moderate, but about noon on that day it assumed a threatening aspect, and came on to blow very hard from the east. On the following day we sighted the Audaman Isles, which we passed to the north, and as our course now lay due west, the vessel rolled heavily as she scudded before the wind under a close-reefed fore-topsail and fore-topmast staysail. However, it began to lull on the 24th, and towards evening became unusually fine, when every stitch of canvass was spread to the breeze. It may be as well to mention here that we were freighted with timber, and having no 'tween decks, the ship was so deeply laden that the upper portion of her cargo reached within six feet of her deck. The crew occupied

the fore part of the ship, the troops the centre, and nearly all the room abaft the after-hatchway was taken up with stores, &c. These places were decidedly too small for the purposes to which they were appropriated, and what made them still more inconvenient, was the fact of there being no battens (from which circumstance we were unable to swing our hammocks), consequently we were all reduced to the disagreeable alternative of *planking it*. I secured a place just before a tier of water casks, on the top of which was placed a great quantity of baggage, consisting chiefly of several large boxes and an *immense chest*, belonging to the officer commanding the troops.

The evening in question was extremely beautiful, so much so that many were induced to remain upon deck, for hours after it was dark, to inhale the gentle breeze, in preference to seeking rest in the confined and unwholesome atmosphere below. About ten o'clock I left the deck and proceeded to my hammock—which was spread athwart-ship about 18 inches in advance of the water casks—and laying myself down, I soon fell asleep. I cannot exactly say how long I slept, but I suppose about two hours, when I was aroused by the motion of the ship, and finding my bedding quite wet, I got up, and soon found out that it arose from the salt water making its way through the ship's side directly above my head; and having ascertained that the intermediate space betwixt the casks and my hammock was perfectly dry, I removed my bed close alongside, and soon got to sleep again. It must have been soon after this that the storm commenced, which came on so suddenly, and caused the vessel to pitch so violently, that, ere I awoke the second time, down came the *chest*, right over me; without, however, materially injuring me, as one corner fell directly on the spot I had previously occupied, and pressing heavily upon my body, rested its opposite corner against the front of the water butts. I used my utmost efforts to extricate myself from this perilous situation, but I might as well have attempted—with the same chance of success—to lift the ship from the sea, for it could not have weighed less than 15 cwt.; besides, I was completely wedged down and could scarcely move a limb, much less remove such a ponderous substance.

My greatest fears were that the motion of the vessel would throw it from its position, in which case it would, in all probability, have killed me; but fortunately it had fallen in such a manner that one end of it rested against a prominent portion of the cargo, while the other way firmly fixed against the ship's side, which rendered it as immovable as a rock. However, I was not aware at the time that such was the case, so my next thoughts were to raise an alarm, which I immediately carried into execution by shouting as lustily as I possibly could, but my voice, under these circumstances, was as feeble amid the howlings of the storm as the cry of an infant would be when compared with a discharge of artillery; and what rendered my situation still more deplorable was, the few persons who occupied the same part of the ship had gone on deck the instant the storm came on, thus leaving me in momentary expectation of being crushed to death, or what was equally terrible, meeting with a watery grave; for, before the hatches could be battened down, many tons of water had passed through them, independent of the torrents that poured into her through the various seams which were opened by her dreadful strainings.

The rascally Lascars, on witnessing the violence of the hurricane, slunk from their duty, and abandoning themselves to despair, could not be induced by either threats or promises to render the slightest assistance so that the captain, mate, Serang, and Tindals, were the only five individuals belonging to the crew who exerted themselves to save the ship. On plumbing the well it was ascertained that there were nearly five feet of water in her, so that all the European soldiers capable of doing anything, were placed at the pumps, and by dint of excessive labour, combined with the fact of the hatches being secured, succeeded in course of a few hours in reducing it considerably.

It must not be forgotten that while these things were going on above, I still occupied my unenviable berth beneath the *chest*, and never did I pass such a horrible night. If I could have liberated myself and got on deck I should have been comparatively happy, for there was no apprehension of the ship's sinking (admitting she had filled), in consequence of being

laden with teak-wood, but I was afraid she would settle so low before daylight that I should be overwhelmed. Oh God! how agonizing were my thoughts during those trying hours. I prayed—aye, and fervently—more for pardon of my past iniquities than for a deliverance from the jaws of death, for such I thought impossible.

I could hear between the terrific ragings of the angry winds, a noise resembling that of axes when applied to the trunk of a huge tree, which I concluded arose from an attempt to cut away the masts, but it subsequently proved to proceed from the sails, which were torn to shreds, smacking in the air. Hour after hour—and which appeared ages—thus passed away, the vessel rolling and pitching in the most awful manner, death staring me in the face, and no soul near, or aware of my situation, when I suddenly perceived a ray of light which arose from the tarpauling being removed from the after-hatch gratings, and in a few minutes, to my inexpressible joy, I was rescued from my living tomb.

As the morning dawned it appeared that I was missed, and no one having seen or heard anything of me during the night, it was concluded that I had been washed overboard. The storm having somewhat abated the captain ordered the after part of the ship to be searched, and there I was found beneath the *chest*, which was with great difficulty removed.

Not being materially injured, I immediately proceeded on deck, whither I hastened in order to render any service that might be required of me; but never shall I forget the fearful spectacle which then presented itself. As I emerged from the hatchway I witnessed the most awfully agitated sea I had ever beheld—the foam-crested waves ran mountains high, and were every moment making complete breaches over the ship which appeared a perfect wreck—every sail was torn to ribands, making a noise similar to the smacking of a thousand whips—while fragments of the long-boat which had been dashed to atoms, together with spars, broken henceoops, ropes, poultry, pigs, and sheep (dead and dying) were scattered about the deck in indescribable confusion. Such was the scene that met my view on reaching the deck, but dreadful as this was, it was still ten thousand times more preferable than the spot I had just quitted.

About nine o'clock the same morning the storm had ceased, and by noon there was not a breath of wind stirring, although the vessel laboured exceedingly from the turbulence of the ocean, but towards evening it became more tranquil, and the Lascars having been dragged from their hiding places, and threatened with instant punishment if they further neglected their duty, they were forced into obedience. Fresh sails were soon bent, and a favourable breeze springing up, the ship which had been for fifteen or sixteen hours abandoned to the mercy of the waves, was again got under controul, and making her way for the desired port, which we happily reached without experiencing more disasters on the morning of the 30th of the same month.

S. M.

CAPTURE OF LA VESTALE.

On the 12th of December, 1796, Captain Bowen, in the *Terpsichore* frigate, of 32 guns, being on a cruise off Carthage, discovered a large French frigate lying-to on his weather-quarter, the wind at this time blowing hard from the S.E., with a heavy short sea. Captain Bowen instantly made sail, and gave chase to windward. The Frenchman, who was not equally desirous of fighting, in order to escape, made all the sail he could crowd. The chase was continued, with much manœuvring on both sides, till two o'clock in the morning of the 13th, both ships were now working to windward under their courses, when the *Terpsichore* being close in with the land, about Cape Marcus, Capt. Bowen wore, gave up the pursuit, and brought-to, with the ship's head off shore.

About eight in the morning, the enemy's frigate was again seen from the mast-head; the wind having shifted to the south-west, gave Captain Bowen the weather-gage. He immediately wore and made sail in chase, the enemy crowding all sail she

could set for Cadiz. The *Terpsichore* having the day before sprung her main and foremast, made Captain Bowen fearful he should not be able to close with her before she could effect her escape. However, by ten o'clock at night, he had the satisfaction of getting alongside of her. The enemy finding it impossible to avoid an action, brought-to; when a most gallant and spirited action commenced, and continued with great fury for an hour and a quarter, at which time the enemy being completely dismasted, with her captain and forty men killed and wounded, she struck, and proved to be the *La Vestale*, of 36 guns and 300 men. The *Terpsichore* had four killed and eighteen wounded; among the latter, Lieutenant George Bowen, brother to the captain, who was the only lieutenant on-board, the two others, with three midshipmen and forty men, being absent either at the hospital or in prizes. Captain Bowen sent the master with eight seamen to take charge of the prize, which had drifted by this time into four fathoms water, not an anchor clear for letting go, and most of the surviving Frenchmen intoxicated. By great exertions and perseverance, the master made shift to bring her up in rather less than three fathoms water, and rode out the night about a mile or two from the shore.

The conquest was scarcely achieved, when the English became sensible of a danger which the ardour of the chase had caused them to overlook. Both ships were on a dangerous lee shore, close to some shoals, which lie between Cape Trafalgar and Cadiz, and breakers were seen whitening in the moonlight at a small distance. The masts and bowsprits of the French frigate had gone by the board immediately after her surrender, and her attempting to clear off the shore became impossible. In this situation the English captain sent orders to the master, whom he had charged with the prize, to endeavour to anchor her, and exhorted him to urge the Frenchmen, whose lives depended on the success of the attempt, to assist him. This, after great exertions, was accomplished, and the *Terpsichore*, in the meantime, with considerable difficulty weathered the rocks of St. Sebastian.

As soon as the day dawned, Captain Bowen, who had, in some measure, repaired the injury this ship had sustained, and enabled her to carry sail with greater security, returned in search of his prize. After great toil he nearly succeeded in securing her, when the breaking of his tackle forced him to give up the attempt, as the day had nearly closed upon his labours. The first thought that occurred to him was to destroy her; but he revolted from this idea, recollecting the number of wounded on board the prize, whom the loss of almost all his boats rendered it impossible to remove. Having, therefore, determined to resume his task in the morning, he made sail during the night, in order to keep clear of the land. Unfortunately it fell calm; he was drawn by the current into the entrance of the straits, and the wind settling towards daylight, in the south-east, blew directly fair for Cadiz. In the utmost anxiety he returned with all the sail he could carry to the place where he had left the French frigate, and had the mortification of seeing her far advanced in her course towards the Spanish port, with some spars erected for jury masts, and her colours re-hoisted. Determined to use every effort to prevent her escaping with impunity, he chased her for some time, in the hope of forcing her on shore; but the crippled state of his ship rendered this impracticable, and on the Frenchman's reaching the back of the town of Cadiz, he reluctantly abandoned the pursuit. Willing to hope that Mr. Fancauld, the captain of the *Vestale*, had been forced into the measures he had taken by the violence of his crew, Captain Bowen sent a message to him at Cadiz, to claim the restitution of the prize, but the French captain never returned any answer to his remonstrances.

DANGEROUS EXPERIMENT.

THE captain, one day, during a heavy sea, with little wind, ordered me, in his anger, to go to the extreme end of the top-sail yard-arm, and remain there for four hours. I murmured, but was obliged to comply, so up I went; and walking along

the yard on the dizzy height, got hold of the topsail-lift, laid myself down between the yard and studdingsail-boom, and pretended to sleep as usual.

The lieutenant frequently hailed me, bidding me keep awake, or I should fall overboard.

This repeated caution suggested to me the means of putting an end to this sort of annoyance, by anticipating his fears, and falling overboard—not, however, with the idea of drowning, as few in the ship could swim so well as myself. I had seen a man jump from the lower yard in sport, and had determined to try the experiment. Besides, the roll of the ship was in my favour; so watching my opportunity when the officers and crew were at their quarters at sunset, I took advantage of a heavy roll of the ship, and dropped on the crest of a monstrous wave. I sunk deep into its bosom, and the agony of suppressed respiration, after the fall, was horrible.

Had I not taken the precaution to maintain my poise, by keeping my hands over my head, preserving an erect posture in my descent, and moving my limbs in the air, I should inevitably have lost my life. As it was, I was insensible to everything but a swelling sensation in my chest, to bursting; and the frightful conviction of going downwards, with the rapidity of a thunderbolt, notwithstanding my convulsive struggles to rise, was torture such as it is vain to describe. A death-like torpidness came over me; then I heard a din of voices, and a noise on the sea, and without it, like a hurricane; my head and breast seemed to be splitting. After which I thought I saw a confused crowd of faces bent over me; and I felt a loathsome sickness. A cold shivering shook my limbs, and I gnashed my teeth, imagining myself still struggling as in the last efforts at escape from drowning. This impression must have continued for a long time. The first circumstance I can distinctly remember was Ashton's voice, saying, "How are you now?" I tried to speak, but in vain; my lips moved without a word. He told me, I was now safe on board. I looked round; but a sensation of water rushing in my mouth, ears, and nostrils, still made me think I was, amid the waves. For eight-and-forty hours I suffered inexpressible pain, a thousand times greater, in my restoration to life, than before I lost my recollection.

THE SAILOR'S DEATH SONG.

Oh! ye who can fancy a sailor's emotion

When shorn of the sunbeams that cherished his heart,

As, tossed on the waves of the perilous ocean,

No vision of hope can a comfort impart!

Remember the kindred we now are deploring,

Our wives and our children, remember them all;

By charity's balm, oh, be hourly restoring

The pleasures they lost by the mariner's fall.

Remember how oft on the mountainous billows,

For you we have counted the moments of night,

That you might enjoy, undisturbed on your pillows,

The magical dreams of ideal delight.

We die for our country, with proud exultation,

Yet sorrowful seem it to visit no more

The friends we have thought of, in fond expectation,

Of meeting so soon on our peaceable shore!

Though destined awhile from those blessings to sever,

And traverse the merciless waves of the main;

Ah, little we fancied our vessel would never

Her ensign display to old England again.

Farewell, my dear country! no skill can restore us,

The next foaming billow our misery ends:—

It comes! but the angels of mercy assure us

Each Briton will cherish our kindred and friends.

LOSS OF THE CATHERINE AND FIVE OTHER VESSELS.

In the year 1795, it was judged expedient, in order to prosecute the war with alacrity, to transport a strong body of troops to the West Indies under the command of General Sir Ralph Abercrombie: and on the 15th of November, 1795, the fleet, under convoy of Admiral Christian's squadron, sailed from St. Helen's.

The following day, the wind continuing favourable, carried the fleet down channel; and as the Catherine transport came within sight of the isle of Purbeck, Lieut. Jenner, an officer on board, pointed out to a fellow passenger the rocks where the Halsewell and so many unfortunate individuals had

perished. He, and Cornet Burns, had been unable to reach Southampton until the Catherine had sailed, they therefore hired a hoy to overtake her: and on embarking at St. Helen's, the former expressed his satisfaction in a letter to his mother, that he had been so fortunate as to do so.

On Tuesday, the 17th, the fleet was off Portland, standing to the westward; but the wind shifting and blowing a strong gale at S.S.W., the admiral, doubtful whether they could clear the channel, made a signal for putting into Torbay, which some of the transports were then in sight of. They, however, could not make the buoy, and as the gale increased, and a thick fog came on, the admiral thought it best to alter his design; and about five in the afternoon made a signal for standing out to sea. On account of the immense sacrifice of human life, it was impossible to obtain a detailed account of the dis-

LOSS OF THE CATHERINE, VENUS, AND PIEDMONT TRANSPORTS, AND THE ÆOLUS, GOLDEN GROVE, AND THOMAS, MERCHANT VESSELS, DECEMBER 18, 1795.

astrous calamity: but the following circumstances relative to the Catherine were communicated by a female who was a passenger on board, and miraculously preserved.

"The evening of the 17th was boisterous and threatening; the master said, he was apprehensive we should have bad weather; and when I was desired to go on deck and look at the appearance of the sky, I observed that it was troubled and red, with great heavy clouds flying in all directions, and a sort of dull mist surrounding the moon. On repeating this to the other passengers, two of whom had been at sea before, they said we should certainly have a stormy night; and indeed, it proved so very tempestuous that no rest was to be obtained. Nobody, however, seemed to think there was any

danger, though the fog was so thick that the master could see nothing by which to direct his course; but he thought that he had sufficient sea-room.

"The fatigue I had suffered from the tossing of the ship, and the violence with which she continued to roll, had kept me in bed. It was about ten o'clock on the morning of the 18th, when the mate looked down into the cabin, and cried 'Save yourselves if you can!'

"The consternation and terror of that moment, it is impossible to describe. I had on a loose dressing-gown, and wrapping it round me, I went up not quite on deck, but to the top of the stairs, from whence I saw the sea break mountains high against the shore. The passengers and soldiers seemed thun-

derstruck by the sense of immediate and inevitable danger; and the seamen, too, conscious of the hopelessness of any exertion, stood in speechless agony, certain of meeting, in a few moments, the destruction which now menaced them.

"While I thus surveyed the scene around me, in a kind of dread which no language can portray, Mr. Burns, an officer of dragoons, who had come up in his shirt, called to Mr. Jenner and Mr. Stains for his cloak; but in such a moment nobody could attend to anything but self-preservation.

"Mr. Jenner, Mr. Stains, and Mr. Dodd now passed me, their countenances sufficiently expressing their sense of the dreadful situation in which we all were. Mr. Burns spoke to me cheerfully, he bade me take good courage, and Mr. Jenner observed there was a good shore near, and all would do well.

"These gentlemen then went to the side of the ship, with the intention, as I believe, of seeing whether it was possible to get on shore. The master of the vessel alone remained near the companion, when suddenly a tremendous wave broke over the ship, and struck me with such violence that I was stunned for a moment; and before I was able to recover myself, the ship herself struck, with a force so great as to throw me from the stairs into the cabin; the master also being thrown down near me. At the same instant, the cabin, with a dreadful crash, broke in upon us; and planks and beams threatened to bury us in ruins. The master, however, soon recovered himself: he left me to go again upon deck, and I saw him no more.

"A sense of my condition lent me strength to disengage myself from the boards and fragments by which I was surrounded, and I once more got up the stairs—I hardly know how. But what a scene did I behold! The masts were all lying across the shattered remains of the deck, and no living creature appeared on it; all were gone, though I knew not then they were gone for ever. I looked forward to the shore, but there I could see nothing except the dreadful surf that broke against it, while behind the ship, immense black waves rose like tremendous ruins. I knew that they must overwhelm her, and thought that there could be no escape for me.

"Believing, then, that death was immediate and unavoidable, my idea was to regain my bed in the cabin, and there resigning myself to the will of God, await the approaching moment. However, I could not reach it, and, for a while was insensible; then the violent breaking up of the wreck again roused me to recollection. I found myself near the cabin windows, and the waters were rising round me. It rapidly increased, and the horrors of drowning were present to my view; yet I well remember seeing the furniture of the cabin floating about. I sat almost enclosed by pieces of the wreck, and the water now reached my breast.

"The bruises I had received made every exertion extremely difficult, and my loose gown was so entangled among the beams and fragments of the wreck, that I could not disengage it. Still the desire of life, the hope of being welcomed on shore, whither I thought my friends had escaped, and the remembrance of my child, all united in inspiring me with courage to attempt saving myself. I again tried to loosen my gown, but found it impossible, and the wreck continued to strike so violently, and the ruins to close so much more round me, that I now expected to be crushed to death.

"As the ship drifted higher on the stones, the water rather lessened as the waves went back, but on their return continued to cover me; and I once or twice lost my breath, and, for a moment, my recollection. When I had power to think, the principle of self-preservation still urged me to exertion.

"The cabin now broke more and more, and through a large breach I saw the shore very near me. Amidst the tumults of the raging waves I had a glimpse of the people, who were gathering up what the sea drove towards them; but I thought they could not see me, and from them I despaired of assistance. Therefore I determined to make one effort to preserve my life. I disengaged my arms from the dressing gown, and finding myself able to move, I quitted the wreck and felt myself on the ground. I attempted to run, but was too feeble to save myself from a raging wave which overtook and overwhelmed me. Then I believed myself gone, yet, half suffo-

cated as I was, I struggled very much, and I remember that I thought I was very long in dying. The waves left me, I breathed again, and made another attempt to get higher upon the bank; but, quite exhausted, I fell down, and my senses forsook me.

"By this time I was observed by some of the people on the bank, and two men came to my assistance. They lifted me up, I once more recovered some faint recollection; and as they bore me along, I was sensible one of them said, that the sea would overtake us, that he must let me go, and take care of his own life. I only remember clinging to the other, and imploring him not to abandon me to the merciless waves: but I have a very confused idea of what passed, until I saw the boat into which I was to be put to cross the Fleet water. I had then just strength to say, 'For God's sake do not take me to sea again.'

"I believe the apprehension of it, added to my other sufferings, tended to deprive me of sensibility; for I have not the least recollection of anything afterwards, until roused by the remedies applied to restore me in a farm-house, whither I was carried. There I heard a number of women around me, who asked me a great many questions, which I was unable to answer. I remember hearing one say, that I was a French woman, another, that I was a negro; and indeed I was so bruised, and in such a disfigured condition, that the conjectures of these people are not surprising.

"When recovering some degree of confused recollection, and able to speak, I begged they would allow me to go to bed. This, however, I did not ask with any expectation of life; for I was now in such a state of suffering, that my only wish was to be allowed to lie down and die in peace.

"Nothing could exceed the humanity of Mr. Abbott of Fleet Farmhouse, nor the compassionate attention of his sister, Miss Abbot; who not only afforded me immediate assistance, but continued for some days to attend me with such kindness and humanity, as I shall always remember with the sincerest gratitude."

The unfortunate sufferer who furnished the preceding narrative of her providential deliverance from a calamity which had proved fatal to so many, was attended with great humanity by Mr. Bryer, while a wound in her foot, and the dangerous bruises she had received, prevented her from quitting the shelter she first found under the roof of Mr. Abbott, at Fleet. As soon as she was in a condition to be removed to Weymouth, Mr. Bryer, who was a resident surgeon, received her into his house, where Mrs. Bryer assisted in her recovery, by such benevolent offices of consolation as her situation admitted. In the meantime, the gentlemen of the south battalion of the Gloucester Militia, who had done everything possible towards the preservation of those who were the victims of the storm, now liberally contributed to alleviate the pecuniary distresses of the survivors. None seemed to have so forcible a claim on their pity as this forlorn and helpless stranger; and she alone, of forty souls, excepting a single ship-boy, survived the wreck of the Catherine. There perished twelve seamen, two soldiers' wives, twenty-two dragoons, and four officers. Lieutenant Stains, Lieutenant Jenner, the representative of an ancient and respectable family in Gloucestershire, Mr. Dodd, of the hospital staff, and Cornet Burns, the son of an American loyalist of considerable property, who had been deprived of everything for his adherence to the British government. Having no dependence but on the promises of government to indemnify those who had suffered on that account, he, after years of distress and difficulty, obtained a cornetcy in the 26th regiment of dragoons, then going to the West Indies, and thus perished in his twenty-fourth year. This officer had intended embarking in another transport, and had actually sent his horse on board, when, finding the Catherine was more commodious, he gave her the preference, while the other put back to Spithead in safety. The mangled remains of Lieutenant Jenner were two days afterwards found upon the beach, and interred with military honours.

The Catherine was not the only vessel which suffered in the tempest. Those on shore, who had the preceding evening listened to its raging, could not avoid feeling the most lively

alarm for its consequences; and early on the morning of the 18th of November, several pilots, and other persons, were assembled on the promontory called the Look-out, at Weymouth, where the dangers and distresses of many of the transports were too apparent.

Soon after, a lieutenant of the navy, resident at Weymouth, applied to the major of a militia regiment for a guard to be sent to the Chisell Bank, as a large ship, supposed to be a frigate, was on shore. This was immediately granted, and the major himself marched with a captain's guard.

The wind was so violent that it was with the greatest difficulty the party could reach the place of their destination. There they found the *Æolus*, a large merchantman, laden with timber for the government, driven on shore. Lieutenant Mason, R.N., and his brother, a midshipman, perished in her; and a number of men, who would probably have been saved had they understood the signals from shore. The men of Portland, who crowded down to the scene of desolation, threw small pebbles at them, as to make them hear was impossible, meaning that they should remain on board, as they foresaw that the ship would drive high on the bank, when they might leave her without hazard; and though many of them were dreadfully bruised, those who remained on board were saved.

Not far from the same place the *Golden Grove*, another merchantman, was stranded; and in her Dr. Stevens and Mr. Burrows of St. Kitt's, were lost; but Lieutenant-colonel Ross, who was also on board, escaped on shore. These two vessels had struck against a part of the passage-house, almost on the same spot where the *Zenobia*, a French frigate, had gone to pieces in 1763.

But about four miles to the westward, where the *Catherine* was wrecked, the scene of distress was infinitely greater. Nearly opposite to the villages of Fleet and Chickerell, the *Piedmont* and *Venus* transport ships, and the *Thomas*, a merchant ship, shared the same fate as the *Catherine*.

On board the *Piedmont* were 138 soldiers of the 63rd regiment, under the command of Captain Barcroft, with Lieutenant Ash and Mr. Kelly, the surgeon, belonging to the same regiment. Of all these, Sergeant Richardson, eleven privates, and four seamen alone survived the catastrophe—all the rest perished.

Captain Barcroft's life had been spent in the service of his country. While a young man he served in America, during the war between England and her colonies; and being then taken prisoner was severely treated. In 1794, he served on the continent with a company which he raised in his native county; and at the siege of Nimeguen he was one of the last who retreated along a single plank, knee-deep in water, under a heavy fire from the enemy. In a few months after his return he was ordered to the West Indies, and perished in the tempest in the outset of his voyage.

Of the few who reached the shore from the *Piedmont*, there was scarcely one who was not dreadfully bruised, and some of them had their limbs broken. An unfortunate veteran of the 63rd, though his leg was dreadfully fractured, had sufficient resolution to creep for shelter under a fishing-boat, which lay inverted on the further side of the bank. There his groans were for some time unheard, until he was discovered by Mr. Smith, a passenger in the *Thomas* merchant-ship, who had himself been wrecked, and was then wandering along the shore. In this ship, the *Thomas*, Captain Brown, bound to Oporto, the master, his son, and nearly all the crew were lost; the only persons saved being the mate, three seamen, and Mr. Smith. This young gentleman was on his way to Lisbon, and his fortunate escape from sharing the fate of his companions, was chiefly in consequence of his remaining on board, after all the rest had left the ship, or were washed away by the waves. She had then drifted high upon the bank, when he leaped out of her and reached the ground.

Though weak, and encumbered by his wet clothes, he gained the opposite side of the bank, but on gazing on the dreary beach around him, he considered himself cast away on an uninhabited coast, till at length observing a fishing-boat he approached it, and heard the groans of the unfortunate old soldier, whom he attempted to relieve. He found himself, however too weak to

fulfil his intentions alone, and it was a considerable time before he observed any means of assistance near. At last he perceived a man at some distance, and hastening to him, eagerly inquired whether a surgeon could be procured for a poor creature with a broken limb, who lay under a boat. So little, however, was the alacrity which the man exhibited, that Mr. Smith found it necessary to purchase his good offices by the gift of half a guinea, which he imagined would induce him to seek what was so much required; but the man with the greatest effrontery and coolness pocketed the half-guinea, and then said he was a king's officer, and must see what bales of goods were driven on shore; telling Mr. Smith there was a ferry about four miles off, by which he might get to Weymouth. The young man was thus disappointed in his benevolent design, and the soldier died in that deplorable condition, before it was possible for any other aid to reach him.

In the *Thomas*, the vessel which Mr. Smith had left, he witnessed scenes not less distressing. Mr. Brown, the master, was carried away by an immense wave just as he was stripping off his clothes to endeavour to save himself, and was instantly followed by his son, exclaiming, "Oh, my father, my father! my poor father!" The bodies of both were afterwards found and interred at Wyke.

On board the *Venus*, out of ninety-six persons, only Mr. John Darley of the hospital-staff, Sergeant-major Hearne, twelve soldiers, four seamen, and a boy were saved. Mr. Darley escaped by throwing himself from the wreck at a moment when it drifted high on the stones; he reached them without broken limbs, but, overtaken by the furious sea, he was carried back so far as to be barely capable of regaining the ground. Notwithstanding the weight of his clothes, which were drenched with water, and his exhausted state, he got to the top of the bank; but there the power of further exertion failed him, and he fell. While lying in this situation, trying to recover breath and strength, a number of people from the neighbouring villages passed him; they had crossed the Fleet water in the hope of sharing the plunder of vessels that had been wrecked, and which the lower inhabitants of the coast were too much in the habit of considering as their right.

Mr. Darley was so far from meeting with assistance from those who were now more intent upon plundering the dead than thinking of the living, that although he saw many boats passing and repassing the Fleet water, he found great difficulty in procuring a passage for himself and two or three fellow-sufferers, who had joined him. But having passed it, he met with Mr. Bryer, to whose active humanity all the sufferers were eminently indebted.

Before the full extent of this dreadful calamity was known at Weymouth, the officers of the South Gloucester militia, with equal humanity, were devising means how they might best succour the survivors, and perform the last duties to the remains of those who had perished. On the morning of the 10th of November one of them, accompanied by Mr. Bryer of Weymouth, rode to the villages where those who had escaped the various wrecks had found a temporary shelter. In a house at Chickerell they found Sergeant Richardson and eleven privates of the 63rd regiment, two of whom had fractured limbs, and almost all the rest either wounds or bruises. In other houses they found that several of the sufferers had been received, and were as comfortably accommodated as circumstances would allow.

The gentlemen then crossed the Fleet water to the beach, and there, whatever idea may have been previously formed of it, the horror of the scene infinitely surpassed expectation; no celebrated field of carnage ever presented, in proportion to its size, a more awful sight than that now exhibited by the Chisell Bank. For more than two miles it was literally strewed with the dead bodies of men and animals, with fragments of wreck, and piles of plundered goods, which groups of people were carrying away regardless of the sight of drowned and mangled corpses, that filled the new spectators with sorrow and amazement.

On the mangled remains of the unfortunate victims, death appeared in all its hideous forms. Either the sea, or the merciless wreckers, as these inhuman harpies are called, who

had first gone down to the shore, had stripped them of the clothes which the sufferers had worn at the fatal moment. The remnants of a military stock, the collar or wristbands of a shirt, or a piece of blue pantaloons, were all the fragments of their apparel that remained.

The only means they had of distinguishing the officers from the men, was the different appearance of their hands from those of men accustomed to hard labour; but some were known by the description given of them by their friends or by persons who were in the same vessel with them. The corpse of Captain Barcroft was recognised by the honourable scars which he had received in the service of his country; and the friends and relatives of him, and several more, had the satisfaction of learning that their bodies were rescued from the sea and interred with military honours.

Early in the morning of November the 20th, a lieutenant of the militia regiment who had been appointed to superintend the melancholy office of interment, repaired to the scene of destruction; but from the necessary preliminaries of obtaining the authority of a magistrate to remove the bodies, not more than twenty-five were buried that day. The bodies of Captain Barcroft, Lieut. Sutherland, Cornet Graydon, Lieut. Ker, and two women, were then selected to be put into coffins; and on the following day those of Lieut. Jenner and Cornet Burns being found, were distinguished in the same manner.

The total number of dead bodies found upon the beach amounted to two hundred and thirty-four, so that the duty of interment was so heavy and fatiguing, that it was not until the twenty-third, that all the remains of the soldiers and sailors were deposited in the ground. Of these there were two hundred and eight who were committed to the earth as decently as circumstances would admit, in graves dug on the Fleet side of the beach beyond the reach of the sea, where a pile of stones was raised on each to mark where they lay.

Twelve coffins were sent to receive the bodies of the women, but nine only being found, the surplus ones were appointed to receive the remains of the officers.

Two waggons were next sent to the Fleet water to receive the coffins, in which the shrouded bodies of seventeen officers and nine women had been placed; and on the 24th they were carried to the church-yard of Wyke, preceded by a captain, subaltern, and fifty men of the Gloucester militia, and attended by Mr. Smith, the young gentleman before-mentioned, as chief mourner. The officers were mostly interred in a large grave north of the church tower, with military honours, and Lieutenant Ker in a grave on the other side of the tower. The remains of the nine women, which had been deposited in the church during the ceremony, were then committed to the earth.

Two monuments have been erected in commemoration of the unfortunate sufferers, on the first of which is the following inscription:—

To the memory of

Captain Ambrose William Barcroft, Lieutenant Harry Ash,
and Mr. Kelly, surgeon, of the 63rd regiment of Light
Infantry;

Of Lieut. Stephen Jenner of the 6th West India regiment;
Lieut. Stains of the 2nd West India regiment;

Lieut. James Sutherland of Col. Whyte's West India
regiment;

Lieut. B. Chadwick of Col. Whyte's West India regiment;
Cornet William Stuckely Burns of the 26th Light Dragoons;
Cornet Benjamin Graydon of the 3rd West India regiment;
Two hundred and fifteen soldiers and seamen;
and nine women;

Who perished by shipwreck on Portland Beach,
Opposite the villages of Langton, Fleet, and Chickerell,
On Wednesday, the 18th day of November, 1795.

On the second monument is inscribed,

Sacred to the memory of

Major John Charles Ker,

Military Commandant of Hospitals in the Leeward Islands,
and to that of his son,

Lieut. James Ker of the 40th regiment of foot,
Who both departed this life on November 18th, 1795;

The first aged 40, and the latter 14 years.

The fate of both was truly deplorable, and is a melancholy example of the uncertainty of human affairs.

They were embarked in the *Venus* transport, and left
Portsmouth

The 15th of the above-mentioned month,
With a fleet full of troops destined on an expedition
To the West Indies, under the command of
General Sir Ralph Abercrombie.

A storm having arisen on the 17th, which lasted
Till the next day, many of the ships were lost, and
The *Venus* wrecked on Portland Beach.

Major Ker and his son were both unfortunately drowned,
With the greater part of the soldiers and crew.
The major's body could not be found, although it is possible
It may have been among the many others

Which were driven ashore

And buried in this church-yard.

His son's corpse was ascertained, and lies interred under this
stone,

Which is raised at the expense of

John William Ker, Esq.,

Brother of the Major,

In commemoration of the affection he bore him.

THE "SEA SARPINT."

"Well, as I said before," continued Barney O'Bother to his wife, who was seated by his side, over a skillet of potatoes, immediately above which hung a red herring they both appeared to devour in imagination, while they in reality caused the contents of the pot to vanish down their throats with inconceivable swiftness, "as I said before avourneen, Paddy Murphy was as good a fisherman as iver threw a net, and as stout and clever a fellow as iver shook a shillelah at wake or christening, and a good Catholic to boot! Well, poor Paddy took himself off one fine summer morning, to seek his fortune upon the broad seas, in a ship bound to a friend of his—one *Phillip Delphi*, I think he called him, in America. 'Good bye to ye,' says he to me, taking my hand and shaking it till he put my shoulder out of joint; 'and good luck to you says I,' giving him a squeeze that made his fist as soft as a roasted apple; and away then he went. Well, I saw no more of him for many a long day; but when he did come back, he told me all about his voyage to America, and how he got there; and if you were to guess from this time to the day of judgment, ye'd never hit upon the way he travelled.

"Well," says he to me, 'Barney,' says he, 'when we had run about a hundred leagues from old Ireland, wid a spanking breeze in our starn, Tim Tackle, the boatswain's mate, roared out a thousand murders!'

"Hubbaboo," says the captain, 'what's the row?'

"Blood and 'ouns," cried Pat Murphy, 'but here's the American sea-sarpint in raal earnest.'

"And sure enough, there the captain saw it wid his own eyes, for the head of it was claan over the ship's bows, and the tail was tickling the rudder into fits all at the same time. The poor captain's teeth began to play marrow-bones and cleavers, you may be sure, and divil a soul aboard the ship but ducked under the hatches, except the steersman; and he had as stout a heart as Paddy. 'Be aisy, be aisy, now,' says Pat to the captain, 'and don't be so frightened, for I'm going to show ye the way to get to America in no time at all; so get your dispatches ready, and a compass out of the binnacle, and I'll go before, and tell 'em that you are on the road. And do you Bill,' says he, talking to a powder monkey, 'fetch me that lot of bullock's bladders out of the jolly boat.' Well, when he got the bladders what do ye think he did then? By the Hill o'Howth he did nothing at all but jump claan on the back of the sarpint. 'Oh, ho!' says the cratur, 'I've got ye safe enough now, Paddy Murphy, I calculate.' 'By the trident of Neptune,' said Paddy, (paying a compliment to the sea-god,) 'you may say that, wid your own ugly mug, and ye are likely to keep me longer than ye bargain for.' Well, with that he made no more ado but he began to fasten a bladder by way of a nightcap upon the head of the monster, who thought to make a dive to

the bottom of the sea, but the devil a bit could he put his head under the waves, in course, because of Pat Murphy's cunning.

"What the devil are ye at?" says the sarpint.

"Niver you trouble your head about that," says Pat Murphy; and with that he slips down his back, and ties another here and another there, till he came to the cratur's tail; "and now," says he, "my fine fellow, I'll get you to carry me to Phildelphi."

"Well, the captain, sure enough, gave him his dispatches and compass, and a good keg of whiskey to sling over his shoulder; and Pat sticking his knife into the sarpint, away they went at a thundering rate through the wide ocean.

"Well, when they had travelled all night, says the sarpint to Pat Murphy, 'I'm mighty hungry, and should be much obliged if ye'd let me go down for to get my breakfast.'

"By no manes at all," says Pat, "for I'm but just going to get my own, and so ye see, we'll have a snack together;" and he made no more to do, but outs waid his knife, and whips off the end of the sarpint's tail, to the no small surprise of the cratur.

"Well, if iver!" said the sarpint, "that is free and aisy, any how; but you're no friend o' mine, Paddy Murphy, to be cutting off my tail for your breakfast."

"Take a bit ov it," says Pat, shoving a piece into his mouth, "sure its no matter at which end ye have it,—may be ye'll think that enough to contint ye till dinner time."

"Great were the wonders that the sarpint told Pat Murphy of what was at the bottom of the sea, to make him take off the bladders, and dive wid him to see the sights; but Pat wasn't to be blarneyed that way; for himself was the boy that had kissed the raal stone, and wandered all among

"The groves of Blarney that are so charming."

Well,—at noon the sun became blazing hot, and Paddy piped all hands to dinner in a good boatswain-like manner, when he heard the sarpint declare he was half-broiled wid the heat.

"Many thanks to ye," says Paddy, "for the information; sure I've been waiting to hear that same for the last two hours; and now, what say ye, honey, to a joint or two more of your own tail?"

"Don't mention it," said the sarpint, "for the last bit went against my stomach intirely."

"You've a mighty dainty stomach of your own, then," said Paddy, with a curning look, "but as I'm by no manes in life particular, why here goes for the first cut. 'You should have seen,' said Pat Murphy, 'how the monster lashed the waves, and wriggled and spit fire and smoke, at such a rate, that the people on board all the ships that were in sight took it for a steam-packet at full speed; and sure enough we left a train of smoke behind us for miles and miles in length,'—but all wouldn't do to get Paddy off the back of him, for he breakfasted, dined, and supped off the sarpint for ten days, and when he reached the shore where his friend lived, the monster prayed hard for his life: but Pat put an end to his frolics by cutting off his head, which, as he says, is preserved for the curious in the Museum of Phildelphi."

By this time Barney and his rib had finished the skillet of potatoes, so he returned to weeding his potato bed, while Judy went to invite the pigs and the poultry to dine upon the jackets of those they had consumed.

POOR MARK!

A RECOLLECTION OF THE PAST, BY HARRY BLUFF.

"On the 5th of August, 1825, we brought our good ship the Queen to anchor off Calcutta. We had on board a young man, the captain's nephew, who, by his kind disposition, his ready acquiescence to the wishes of the seamen when within reason, his cheerful voice, and brave heart, won the esteem and love of every soul on board.—Mark and myself, within twenty-four hours of my setting foot on board the ship, were sworn friends.

"The captain had stepped into the gig which pulled for shore, and Mark was left the temporary commander of the vessel. The evening was advancing, and the sun went down a deep red, and a deep streak of crimson along the horizon marking his exit. The air, though calmed by the breath of evening, was still oppressive and hot; the sea was calm and almost motionless, while

the sky, cloudless and of deep blue, completed this picture of quietude and serenity. Mark came on deck, and coming to me, as I stood, said merrily, but with somewhat of pique in his tone:—

"How confoundedly provoking! Uncle's gone ashore, and when I asked leave for you and me to accompany him, said, there would be time enough for that by-and-bye. I told him you was a botanist, and wanted to inspect the nature of the plants, when he says, as sharp as though he was one of the profession himself, 'Well, we'll indulge him; Bruton shall collect some for him. Decent, wasn't it?' Before I could reply to his query, he cried, 'What do you say to a bath?' 'Why, begging your honour's pardon,' said the captain of the foretop, an old sailor, and a wise one too, 'it would doubtless be very pleasant but very dangerous.' 'Dangerous,' repeated Mark; 'well, by old Father Neptune, you've either had an extra dose of grog, or your sight's bad. Why, man alive, the water's as smooth as a lady's mirror.' 'That may be,' returned the old man 'but Master Mark, many a smooth surface hides a dangerous interior. There has been a shark, ah! and a white one too,* following this ship these three days past.' 'A shark, eh?' says Mark, 'well Jack, and do you think he'd take a fancy to such carrion, as me? No such luck! My father,' said he, with a tinge of sorrow and bitterness in his tone; 'my father was ruined by a land-shark, and I doubt me, if I were to perish through this sea one you talk of, but mine would be the happiest death.' A few words are requisite, explanatory of Mark's last remark. His father had been a prosperous and wealthy merchant; but in an unfortunate moment, having endorsed a bill of immense amount for an unprincipled friend of his, who dishonoured it, his goods and person were seized by the importunate creditors. The former were sold, whilst he was thrown into prison. He came out a ruined and broken-hearted man; and after lingering a few months in a state bordering on idiocy, he died; leaving a son to the care of one of his brothers (the captain of our ship), who, truth to say, regarded his young charge more in the light of a trouble, and the expense incurred as a charity than a duty. The boy, grew in years and wisdom, and as his days increased, so did the kind and noble feelings of his heart develop themselves. His uncle, a stern and strict disciplinarian, was not more feared in the ship than his nephew was beloved. The one ruled with a frown and harsh word, the other with a smile and a joke. And the word of an old sailor on it, if the latter was more practised in the navy, mutiny and piracy would be unknown. 'Faith, Master Mark, with your landmen and your land ways you're like a fish out of water; but there's one thing in the lubber's favour, they have but one set of teeth, while our friends of the ocean here have six terrible sharp rows.'

"I doubt the favour much. The bite of a sea shark is death at once; whilst that of the landman, like a cat with a mouse, worries and tortures before it kills. But, I say, if I stop preaching with you, I sha'n't bathe, that's safe; so here goes."

"In a few minutes, Mark was divested of his clothes, and jumping on the bulwarks, sprang head foremost in the sea. He was a graceful and expert swimmer, and the old seaman, as he noticed the long and swift strokes of the young man, cried, 'Faith! he's like a fish! the water's his proper element.' Wishing to try his dexterity to the utmost, I threw with all my strength a piece of wood that lay on deck. He sprang towards it with a bound, but suddenly turned, and was now exerting himself to the utmost to reach the ship; he cried out in tones full of agony and fear, 'help! help! for God's sake help!—a shark! a shark!' The old seaman instantly sprang into the boat that lay alongside by his rescue, while some of the men following his example, pulled towards him. I jumped in and urged them on. As we neared him, the tail of the frightful monster was occasionally visible, and then disappeared as though he had turned to seize poor Mark. One bitter groan came from the poor fellows lips, and the next instant we were alongside, and actually tore him from the jaws of the savage and blood-thirsty creature; and Norris, who stood at the head of the boat, seized the harpoon, and buried it to the head in

* The most voracious and terrific of the whole species.

the body of the shark as he turned on his back, after making his successful and fatal bite; the creature, maddened by the torment, dashed beneath the waters, and with its tail furiously beat the water, which was already tinged with the crimson of its own blood.

"Poor Mark! I shall never forget his looks—full of pain and anguish—as he lay in the boat with his handsome face turned upwards towards the sky. The hemorrhage from his crushed and mutilated limbs was excessive and frightful; I knelt beside his head, and pressed my lips upon his pallid brow; he opened his eyes and fixed them on me, while a faint smile betokened his recognition. My heart was too full for words, it seemed a poor proof of friendship, that not one word of comfort could I utter to sooth my poor unfortunate friend. 'I am dying,' he said, almost in a whisper, 'dying.' I shall never get over it, I feel. Oh, that I could see my uncle! Tell him,' he said, 'and his voice sank so low that I was compelled to bend my head to catch his words, 'tell him that I died happy, and that my last word was his name and thanks for his great kindness. Farewell, I go to my father in heaven.' His head fell forward on his bosom; the gallant noble-hearted Mark was dead. We lifted his mutilated corpse upon the deck, from whence he had sprung to meet his death, full of spirit and happiness; save a sob from the overcharged heart of a stern old sailor we were as silent as poor Mark himself. A boat was despatched ashore to inform the captain of the sad catastrophe. He obeyed the summons of death with more alacrity than he would one of life. I shall never forget that stern and haughty man's face, as he bent over the corpse of his nephew. No cry or tear denoted his sorrow; but his pale face and quivering lips told too plainly, and truly, the deep regret and sorrow at his heart. The body was consigned to the sailor's last resting-place—the sea. If the tears of his hardy and well-beloved messmates were few—few as they were, their fountain was the heart. Poor Mark. The shark paid the penalty of his victory with its life. The arm of old Norris had triumphed in this respect, for the monster lay on the top of the sea dead. After having taken our cargo we bid adieu to Calcutta, with a tear of regret for him who lay buried beneath its waters."

A SAILOR ASHORE.

A sailor on board one of her Majesty's ships, who had been for several years on a foreign station, and had hardly ever been on shore, asked leave to have a trip by land, and accordingly proceeded to Alverstone, where, for the first time in his life, he witnessed a funeral. He was evidently very much surprised at the ceremonial, and when he returned on board at night could talk of nothing but what he had seen in the churchyard. "Why, what d'ye think they does with the dead corpses ashore?" said he to a shipmate. "How shall I know?" said the other. "Why then, Bill, may I never stir," replied Jack, "but they put 'em up in boxes and directs 'em."

ENTHUSIASM AND RETRIBUTION.

WHAT I am going to relate may be deemed a wild fiction. To me it was a dreadful truth, and taught me an awful lesson. It was just eight bells, ten o'clock, when Mr. Gavel again came on deck. His features rigid and stern, and there was a wild excitement in his eye that was painful to look upon, and which appeared the most startling, from the concentrated light of the lantern that he held. He first of all, with studious phrase, thanked me for the diligent watch that I had kept. Indeed, latterly, I had perceived a refinement in his language much at variance with his former nautical phraseology. He then requested me to turn up the hands for the burial of the dead. The wind was mournfully singing among the rigging, and hurrying along the decks, whilst the doleful cry of the boatswain, "All hands to burial," sounded strangely sad. The men did not hurry up quickly, as usual. They came up like so many shadows in the partial darkness, stealing quietly and reverently aft. By the directions of Gavel, who superintended the preparations, instead of placing the grating on the gangway, as is usual, he ordered it to be placed on the taffrail, that, as we were running

before the wind, when the body was thrown overboard, it might the sooner be clear of the vessel.

The line was made ready, another lantern was lighted, and Jugurtha, a dumb black, with the boatswain and Gavel, went below, and shortly afterwards the corpse was handed up, covered with the ship's colours for a pall. The body was, at the direction of the mate, made ready for launching overboard; the whole of the ship's company clustering round, and one of the seamen holding the lantern, Gavel prepared to read the funeral service. Hats were taken off. "Axing your pardon, Mr. Gavel," began one of the men, "but it seems as if you had sewed up all poor Wilson's bedclothes, it is so bulky like. Now, as he didn't die of no fever, and my whole kit was washed overboard last gale, I'm willing to pay a fair price for his'n, and you can stop it out of my wages." Jugurtha grinned, and the mate merely said, "Silence; do not disturb the service." "Had you not better, Mr. Gavel," remarked the boatswain, "send for the captain? Sarve him right, I think, to be made stand by the man he murdered." "He is near enough," said Gavel, hurriedly and with a slight shudder. "Let me have no more interruption. You man at the wheel, there, John Cousins, mind the ship's head and keep your ears open." Three times did Gavel begin, and at each attempt, his voice was, as if in wrath, blown back upon his lips; and at last, he was obliged to turn his face from the corpse, and standing thus he proceeded. This omen, this apparent anger of Him to whom the hurricane is but a servant, appalled not Gavel. Verily was he a man of strong nerve, or he was an enthusiast. In a loud, clear, and sonorous voice, that the winds could not overcome, he began, "I am the resurrection and the life saith the Lord," &c. &c., still keeping with the left hand a firm hold of the bier, whilst, with his right he held the prayer-book. There was a savage solemnity about the scene, that did not elevate, but made the heart tremble. The officiating priest—for so, for the moment, must we call this untainted seaman—seemed to be actuated by a spirit of defiance, as much as by a feeling of piety; and there was a scowl of gratified revenge or of something as evil, upon his countenance. That it was dangerous even then and there to cross him, was made manifest by an interruption, that, on any other occasion, would have appeared ludicrous.

The disappointed sailor, who had wished to inherit the bedding that he supposed was tacked up with the body of the steward, cried out in a reproachful manner, when Gavel read aloud, "we brought nothing into this world, and it is certain that we carry nothin out." "Then why does Wilson walk off with his blankets and bed?" The hand that held the bier was dashed, in an instant, by this man of fierce passions, into the face of the interrupter, whilst he exclaimed, "Silence, reprobate scoffer!" As the seaman fell to the deck with the blow; he muttered a dreadful imprecation, and a strange and stifled groan was heard, but no one knew from whence it proceeded. After this, Gavel resumed the book, and read on. The gale was increasing momentarily, but it seemed to make no impression upon the stern officiator. He read more sternly, A feeling of horror began to creep over us all. Methought, at times, that the corpse under the union jack had a motion not produced by the plunging and rolling of the vessel. I endeavoured to repel the horrible idea that seized me, It was in vain. My suspicions increased every moment. I knew not how to act. Gavel read on. It was now a perfect storm; yet he seemed to be trying his strength against it. His voice became shrill, and still mastered the rushing winds. Twice had I laid my hand upon his arm, and besought him to forbear. I might as well have addressed the tempest that was hurrying us to destruction. He was labouring—labouring did I say? revelling under the influence of a superstitious excitement. Nothing but sudden death could have stopped him. He read on. Another hand had quietly stepped to the wheel to assist the man at the helm, for the brig was bounding, plunging, and reeling—but to all this Gavel seemed strangely imperturbable. The service drew to a conclusion—I was in a perfect agony of dread. The cold perspiration stood upon my brow. I felt, I knew not why, that I was assisting at some horrible, some unnatural sacrifice. Several times was I upon the point of laying my hands upon the swaddled

corpse to relieve the crushing burthen of my suspicions; but when the cruel mate came to that part which finishes the ceremony, and read, "We therefore commit *their bodies* to the deep," the truth, in all its horror, flashed upon me; and I caught at Gavel's throat, and exclaimed, "Murderer! Men, haul the bodies on board." But Gavel was too quick for me. He thrust the grating over the stern, and the splash of the descending bodies to their cold deep grave was hardly heard amidst the lashings of the water that boiled under the counter of the vessel.

THE SMUGGLER'S LAST TRIP.

"COME, cheer up, Lucy, my girl: what's the fun of piping your tears aboard? Ha'n't I said it; and when did Jack Lawson make false entry in his log, in the matter of keeping his word?—Come, belay, woman; you know, that this is to be my last run, and the coast's pretty clear into the bargain. The red-coats are some twenty miles to the south'ard, and on a wrong scent; we've got a good wind; my head is a good chart of this here coast on both sides, and your namesake will carry us across and back again afore morn; and by to-morrow's sunset we'll have you spliced to Will, and what more can you wish? So dry your look-outs, and give us a buss, and then we're off and back again for good."

"Yes, father; but don't you see the mist rising eastward, and the sun's casting an awful kind of unnatural glare on it? And don't you hear that long, heavy boom? It bodes no good; and I'm terribly afraid we'll have a storm soon. I'm too much of a sailor's daughter, not to know something about the weather."

"Right enough there, lass; but I know 'twill not be worth mindin' afore eight bells in the morning, by which time we'll be back. So, good night; and God bless ye till then. What! not take a buss, Will?" (turning to a young man by his side.) "Why, blow me? if you don't look now as like a marine as ever I see'd anything in my born days! When I was a younker, I'd never have thought of parting company with a pretty girl without a salute given and taken: but times are altering sadly; more red coats than ever. I should not be surprised but what, in the course of time, there'll be no such thing as a free trader: but it is one comfort, how so be, I shan't live to see it. There—that's right, lad."

Of all the pretty maidens of Kent (and they are not few), Lucy Lawson was one of the prettiest. On Mayday—who so often chosen queen as Lucy? At fairs, her title was acknowledged and undisputed. Happy was he who could get her for his companion during the day, and his partner for the dance in the evening. Though Lucy's claims to beauty were everywhere recognised, you could not have fixed on one single feature to which the term regular might be applied; but there was such a lightness in her step, such glee in the tone of her voice, her hazel eyes were so arch, yet soft, and such a sweet dimple lurked round the corners of her lips, so pouting, ripe, and rosy, as if "suing to be pressed," and half open with a slight smile, displaying teeth beautifully white; and then she had a countenance so glowing with health and happiness, and so small and neat a figure, that it was no wonder she was the cause of many a sore heart as well as head. Of all her numerous admirers, both seamen and landmen, Will Smith was the successful one. To him all others had at last to give way. Will was as open, bold, and manly a young fellow, as ever put foot on salt-water; and, next to Lucy's father, was the best seaman and smuggler on the coast. Lawson was an old tar, who, from the time he could first handle a rope to the time of our story, had been a smuggler; and now, by dint of great success, as well as skill, had become owner of the Lucy, one of the fastest sailing luggers that had ever come off the stocks, and so named after his daughter. Smith had always been looked upon by the old man with a favourable eye, and since Lucy had chosen him for her future commander through life, he had made him his mate. For a long time his daughter had used all her influence with her father, to make him give up his

mode of life, but, till the time at which our story opens, in vain. He had now promised that this should be his last trip, and that henceforth he would live at home, and no more tempt the fortune and the peril of the free-trader. Lucy was dearer to him than all the world: her mother had died in giving her birth, and she was to him all that remained of his first and only love. He was proud of her, too, for Lucy was somewhat more educated than the rest of her companions, and had even at times tried her hand at spinning the yarn of a very simple species of rhyme or ballad, to the great delight of the old man; and now that she had chosen a sailor, and that he was going to see her happily married, who so well pleased as Lawson?

In the greatest glee, he took leave of his daughter on the present occasion, and started along the cliff, followed at some distance by Will, who had stopped to say something which seemed to interest him and his sweetheart exceedingly, from the close position which it brought them both into. He soon came in sight of his boat, which lay waiting for him in a small bay formed by the projecting of two headlands, while concealed under the dark shadow of one of them, lay his far-famed lugger, the Lucy. Being now rejoined by Will, the two sailors descended to the beach, and found the boat waiting for them, cautiously kept by her skilful crew just on the outside of the surf. A wave of the hand from Lawson, and with one stroke of her oars, she ran her head on the beach, and a few moments placed her again in deep water, swiftly cutting her way towards the lugger, propelled by six pair of stout and willing hands. In a short time they were all on board, the galley hoisted in, and the Lucy standing gallantly across the channel at the rate of nine knots an hour. The opposite coast was reached in safety, her cargo, which was ready waiting for her, was soon stowed away, and swiftly back again she came, favoured by the same strong side wind.

A change, however, had taken place in the weather. The night had become quite dark, except to the eastward, where on the verge of the horizon, a misty red light seemed to be dancing on the top of the waves, though, from the extreme distance, it could scarcely be told which was sea, and which sky. Large heavy masses of dark clouds were coming rapidly up with the wind, while every now and then some small cloud was detached from the main body, but was as soon scattered and dispersed by the force of the blast, which was rapidly rising. The long heavy swell of the sea, which had been prevalent during the fore part of the evening, had now assumed the appearance of arching waves, rolling thunderingly on, and breaking and re-forming every moment.

"I say, Will," began Lawson, who was holding the tiller, and anxiously watching the signs of the weather, "I'm blown but here's a pretty storm brewing. 'Tis coming on so fast, that I'm afraid we'll have to run to the south'ard, and that, I guess is right into the teeth of the sharks, and be hanged to them!"

"I can't say as how I like it all," replied Will, "specially as them 'ere gulls are making such furious sail to the land; if them birds arn't the weather-glasses, I'm a land-lubber. But as for the matter of running to the south, why, I think 'twould be even better to run her right ashore, and take our chance; we may perhaps cheat Davy that way, but, by the other, 'tis all up with us."

"Belay there with your pipe, you young imp of the devil!" roared out Lawson to an embryo free-trader, who was whistling most unconcernedly on the fore-castle, "or I'll make this rope and your back better acquainted. I wonder you havn't hoisted in more ballast in the article of sense since you've been to sea, than to whistle in a storm. A pretty sort of a place you sarked your time in, you lubber, not to know better than that!"

"Ahoy, there aft!" sung out a voice from the bow, where the lugger's look-out was stationed; "a sail rising seaward on the starboard bow! She's coming up right afore the wind, under reefed topsails and jib."

"I'm blown, Will, if I don't like this about as much as a stripped marine does the drummer! Who the devil can she be? Ahoy, there aft! What is't now, lad?"

"The strange sail's hoisted her main, double reefed, and has veered a point more to the nor'ard."

"This is no joke now! Take the glass, Will—your eyes are younger than mine—and see what you can make of her."

"By heaven, Lawson, her hull's rising; she's a king's ship, as I am alive. Who the devil can she be? Strike my tops! but she sees us now, and here she comes with a vengeance."

"You're right, you're right, boy! We must clap on more sail—our spars will bear it; but it is very unpleasant to have this here nest of sharks' flung in our way, when we'd made so sure of having the coast clear. All hands, ahoy! Let out another reef in the main, and hoist the foresail. Are ye ready there, foremen?"

"Ay, ay!"

"Away with it, then. That's right my lads. She's walking a little faster now, Will. Are we dropping her at all?"

"No, no: she's let out another reef in her main, and hoisted her gaff with a single one."

"We must fight then, Will; and if we've any luck, we may send one of her masts by the board; but she's too old, I think, to have any hope in her yawing. Clear the deck there, and out with the tampions; we may perhaps make our sixes rattle in a way she'll like about as much as nine-water grog on a banyan day. Knock the head out of that cask, and lash it to the main; there'll be enough of fighting water in it. Are ye all ready now, every soul of ye?"

"Ay, ay."

"Then listen, my lads, while I speechify a bit. You see we've but three chances. First, run, and so get clear off; second, fight, and beat them; third, blow ourselves and them to the devil together. We'll try 'em all in turn; and now lie in every mother's son of ye, and let not a gun be fired till I give the word."

The schooner was by this time within a mile of the smugglers, and had now altered her course, so that in a short time she would have run across the lugger's bows, and brought her whole broadside to bear on her; but Lawson was too old a hand to be caught in that way; and putting the tiller a little to starboard, the Lucy, in a moment, was running parallel with her foe. "Ha, ha, old boy!" muttered the smuggler; "too deep for you this tack, I imagine. He's beginning to speak now, Will, and seriously too." A cloud of smoke rushed from the schooner's side, and a whole broadside of her shot passed harmlessly over the smuggler, owing to her falling, luckily, in the critical moment, into the trough of the sea, while her antagonist was, at the same moment, raised on the crest of a wave. "See, Will, he's tired of this, and, by all my hopes, here he comes, right afore the wind! Bring her a point more to the wind, Will, and we'll rake her. Steady, my lads, steady; for God's sake wait till I sing out!" The schooner was now within pistol-shot of the lugger, never suspecting she could have any metal weight enough to harm her, and was just rounding to bring another broadside to bear, when Lawson, springing forward, sang out—"Away there, ye Lucies, up with the ports, and give it them cheerily, my lads!"

The ports were up, the guns run out, and fired by the eager and anticipating smugglers, almost before the words were out of their captain's mouth. The schooner shook to her very keelson, under the unexpected volley. Down came her foremast, her rigging was almost cut to pieces, and in a moment she lay nearly a wreck upon the waters, tossing ungovernably. The smugglers, taking advantage of the helpless state, soon shot far ahead of her, but not before Lawson roared out, "All hands ahoy there, and clear your pipes, and give us the Lucy's song; 'twill serve as grog, by way of a relish to their supper. You three musicians there, are ye all ready to make sail on it?"

"Ay, ay," answered three of the men, who, from their having rather good voices, with tolerable ears, had obtained that *sobriquet* from their companions.

"Heave away, then;" and instantly, with clear but strong voices, they struck up a rude strain, which sounded far from disagreeable, especially in the chorus given at the end of each verse, when the voices of the whole willing crew gave it a cast peculiar to their own wild kind of life; and the lashing of the

waves against her sides, and the whistling of the wind through her cordage, formed a not inappropriate accompaniment.

The song was finished: her sails were double-reefed, her hatches closed, and all made snug to meet the storm, which by this time had almost risen to a hurricane. However, Lawson, confident in the seaworthiness of his favourite, fearlessly kept on his way, and in three bells came off the harbour, against the piers of which the waves were breaking so furiously, that they were nearly hid in a cloud of foam and spray. This run the Lucy had little to fear from unwelcome visitors, the revenue officers being far south, on a wrong scent. "We're just in the nick of the tide, Lawson," said Will; "we'll clear the bar primely. A little more to the wind, eh?"

"Right, boy; in with that foressail there, and stand by to haul in every rag." The lugger appeared for a moment on the crest of a wave, was immediately lost in the spray, and next moment was in the mouth of the harbour in comparative safety.

"We'll make for the south side I suppose, Lawson, eh?"

"Ay, boy, do. Come aft here, you young imp, and take the tiller; and now, Will, come for'ard. A keg of Nantz to a pound of granny's delight, I jump ashore first. Keep her steady, you lubber, or I'm blow'd if I don't make a dead marine of your back."

They were now almost close to the quay. At that time, none of the houses on the northern side, which now protect the harbour from the wind when in that quarter were built. A fisherman's hut or two, formed of walls half mud, half brick, with an old boat inverted for the roof, were all that then broke the dreariness of the prospect in that direction. "Come, Will, art ready?" cried Lawson, one foot on the gunwale, about to leap. "Ay, ay. Steady there, steady!" roared he to the lad at the helm. The latter, more intent on recognising his own friends among the crowd on the quay, than in attending to his duty, and hearing some command given, moved the tiller a little to leeward; a gust of wind tore the half hauled-in sails from the hands of the men; her head yawed off to the wind. Lawson and Will sprang at that moment, without seeing what had happened; their feet slipped, and they both fell into the water between the lugger and the quay. At the cry of "The skipper and the mate overboard!" the lad lost all power in amazement, the tiller slipped from his hands, and at the very moment they rose above the water, the lugger, being no longer under controul, yielded to the wind, and was instantly dashed violently against the quay. A shriek of horror burst from the crowd. As quickly as hundreds of eager hands could effect it, she was moved from the place. Their bodies were soon found, but in a state too horrid to describe. An arm and hand of each were alone left entire, firmly grasped together in the death-seal of friendship. They had been driven between two beams, which formed part of the frame-work of the quay.

Morning broke bright and joyously; the storm was over, and all nature seemed rejoicing in the change; but not so Lucy. She was sitting, gazing fixedly on the bed which contained the inanimate remains of those who were dearest to her on earth. One of her companions spoke to her. She turned her dewy eyes on her for a moment, took another long last look, then rose, and with an erect step walked out of the cottage, under whose roof she had passed so many years, and sat herself on the edge of the cliff, with her eyes wandering eagerly over the sea. The guiding light of reason had happily left her.

By the side of a brawling brook, running through a beautiful sequestered little glen, a still lovely face might be seen, every summer's eve, reflected on the pure surface, as it bent, seeking the water-cresses that were abundant in its bed. 'Twas Lucy. She recollected that her father liked them, and in the morning she might be discovered on the edge of the cliff, with her basketful hanging from her arm, still gazing over the sea. Alas! no more will her father's sail break the line of the horizon. Soon she drooped, and died. The tears of the inhabitants for miles round were the last proofs of commiseration for poor Lucy, the water-cress girl!

LOSS OF THE ROYAL GEORGE.

Oh! many a dream was in the ship,
 An hour before her death,
 And sighs of home with sighs disturb'd
 The sleeper's long-drawn breath.
 He wakes at the vessel's sudden roll,
 And the rush of waters is in his soul.

THE sudden manner in which the Royal George was lost, has prevented any minute relation of the melancholy accident ever being published. Some few particulars have indeed been developed by time, and from such imperfect docu-

ments, coupled with the leading facts as known at the period, is formed the following narrative, which, it is trusted, may prove as interesting as can be expected under the circumstances.

At the time of the calamitous disaster, which precipitated hundreds into an awful eternity, the Royal George was the oldest first-rate in the service: she was built at Woolwich; her keel was laid down in 1751, and she was hauled out of dock in July, 1755, it being unusual to build such large ships on slips to launch. She was pierced for one hundred guns, but having afterwards had two additional ports, including carronades, she mounted one hundred and eight guns. She was rather short and high, than agreeing with the rules of

LOSS OF THE ROYAL GEORGE, CAPTAIN WAGHORNE, AUGUST 29, 1782.

proportion at present laid down; but still so good a sailer, that she had more flags on board of her than any vessel in the service. Lord Anson, Admiral Boscawen, Lord Rodney, Lord Howe, and several other principal officers, having repeatedly commanded in her. Lord Hawke commanded in her the squadron which defeated the French under Conflans, when the *Superbe*, of seventy guns, was sunk by her cannon, and the *Soleil Royale*, of sixty-four guns, was driven on shore and burnt. She carried the tallest masts, and squarest canvass of any English-built ship in the navy, and originally the heaviest metal, viz., fifty-two, forty, and twenty-eight pounders; but they were afterwards changed, on account of her age, to forty, thirty-two, and eighteen pounders.

The Royal George had just returned from a cruise, in

which she had more water than usual; and as it did not decrease after she came into harbour, an order was issued on Saturday, August 14, 1782, for her to go into dock; but after a strict survey by the carpenter and others, they found that the leak was not more than two feet below the water-mark, and supposing it to have been occasioned by the rubbing off of the copper sheathing, it was resolved, in order to save time, to lay her down at Spithead, by what is called a parliament heel. In the meantime it was discovered that the pipe which occasionally admitted the water to cleanse and sweeten the ship, was out of order, and that it was necessary to replace it with a new one. As the ship required to be heeled very much for this purpose, the greater part of the guns were removed from one side to the other; but as they did not ex-

pect the vessel to heel so much as she did, the crew neglected to stop the scuppers of the lower decks, so that the water coming in on the deck, she, for some time, stole down imperceptibly. The greater part of the crew were, during this time, at dinner; but the carpenters and caulkers continued at their work, and had almost finished it, when a sudden squall took the ship on the raised side, and the lower deck ports to leeward being open, the water rushed in. As soon as the crew discovered their dangerous situation, they beat to arms to right the ship, but in vain: in less than eight minutes she fell flat on one side, filled with water, and the guns, shot, &c., falling from the other side, accelerated her descent, and she sunk to the bottom so rapidly, that the officers,

in their confusion, made no signal of distress; nor indeed could any assistance have availed if they had, for after her lower ports were in the water, no power on earth could have prevented her from going to the bottom.

At this fatal moment there were nearly twelve hundred persons on board, including about two hundred and fifty women and several children, chiefly belonging to the seamen, who had been permitted to visit the ship, and remain on board until the order arrived for her sailing. The people who formed the watch upon deck amounting in number to about two hundred and thirty, were mostly saved by the boats, which the ships lying near the Royal George had manned and sent to their assistance, with the utmost expedition, when they observed the

vessel was sinking. Their assistance was, however, for some time necessarily delayed, as the swell occasioned by the sinking of such a large body produced a temporary whirlpool. The boats also picked up about seventy more, who rose to the surface after the ship had disappeared, among whom were four lieutenants, eleven women, and the remainder seamen.

Among the officers thus snatched from the brink of eternity, was Lieutenant Durham, who fortunately, was officer of the watch, and upon deck at the time when he observed the vessel going down. He had just time to throw off his coat and scramble on the beam, from which he was soon washed as the ship sunk, and left floating about among men and hammocks. A drowning marine caught him by the waistcoat, and held him so fast, that several times he was drawn under water. It was in

vain to reason with a man struggling for life; and conscious of the certainty of neither being saved if he did not disentangle himself from his burden, he clung with his legs round a hammock, with one hand unbuttoned his waistcoat, and sloping his shoulders, committed it, with the unfortunate marine, to the remorseless waves. He then got to some of the top rigging, where a boat soon afterwards came to him, but he nobly declined the assistance offered, and pointing out to them where Captain Waghorne was in great danger, he desired them to go to his relief: the gallant youth was at length taken up and conveyed in safety to the shore.

The preservation of Mr. Henry Bishop, a young man of about nineteen years of age, was effected in a very extraordinary manner. He was on the lower deck at the time of the fatal ac-

cident and as the vessel filled, the force of the water hurried him almost insensibly up the hatchway, when, at the instant, he was met by one of the guns which fell from the middle deck, and striking him on his left hand, broke three of his fingers; however, in a few seconds, he found himself floating on the surface of the water, and was luckily taken up by one of the boats.

By this dreadful and unlooked-for accident, nearly nine hundred persons lost their lives; among whom was Admiral Kempenfelt, whose flag was then flying on board the Royal George, and whose loss was universally lamented. Besides the admiral, who was in his cabin writing when the sudden disaster happened, every one who was between the decks perished with her. Captain Waghorne, the admiral's first captain, was, fortunately, on deck; but his son, who was a lieutenant on board, was drowned. It is scarcely possible to conceive a more distressing scene than this disastrous accident presented; a multitude of gallant men, many of them in the company of their wives and families, in a moment of inactivity, in the midst of amusements and the height of enjoyments, anchored on their own coast, and riding in fair weather and in smooth water, and yet in a moment overwhelmed in the gaping flood, and with scarcely time to utter an ejaculation for mercy, precipitated into an awful eternity.

A great number were saved by going out on the topsail yards, which remained above water after the ship reached the bottom.

Every effort was made by the boats of the fleet, to save the crew; but they were able to pick up only Captain Waghorne, a few officers, and about three hundred people. As the vessel was lying at Spithead, it happened that, on the one hand, several of the seamen and some of the officers were on shore, while, on the other hand, a great many women and children were on board. To the honour of the British public, a large sum of money was raised by subscription for the relief of the widows, children, and relatives of those who perished by this fatal accident.

The masts of the Royal George remained standing for a considerable time afterwards, and, until she was covered with sand, parts of the hull were visible at low water.

Rear-Admiral Kempenfelt was the son of Lieutenant-colonel Kempenfelt, a native of Sweden, whose excellent character was so highly esteemed as to be depicted and immortalized by Addison, in the Spectator, where it has ever been admired under the well-known appellation of Captain Sentry. He followed the fortunes of King James the Second, and was afterwards invited by Queen Anne to accept a commission in her service: he died Lieutenant-governor of Jersey, during the reign of George the First. The colonel left two sons and two daughters, neither of whom were ever married. One of the sons, Gustavus Adolphus Kempenfelt, Esq., was a captain in the army; the other, Richard Kempenfelt, Esq., the admiral, whose death we are now lamenting, was born in Westminster, and soon discovering uncommon talents for the profession of the navy, he entered very early into the service. In the year 1757, he was appointed to the command of the Elizabeth, and proceeded with Commodore Stevens to the East Indies, where he distinguished himself in three several actions against the French squadron, being in each instance opposed to a ship of superior force; and during the blockade of Pondicherry, his conduct and abilities were of the utmost importance, as well as during the subsequent reduction of Manilla, by Admiral Cornish, in 1761. After serving for some considerable time in the East Indies, he obtained leave to return to England, and during the peace constantly spent the greater part of the year in France, not in the pursuit of pleasure, but in ardent search of professional knowledge, in which if he did not excel, he at least equalled any naval officer in Europe. At the commencement of the American war, he was appointed to the command of the Buckingham, and served as first captain under the Admirals Hardy, Geary, and Darby; and his gallant conduct contributed in no small degree to the capture of the convoy under M. Guichen. His character in private life rendered his acquaintance an enviable acquisition, and his skill and ability as an officer, made his death a severe loss to his country.

Alongside of the Royal George, lay the Lark sloop, victual-lark, which was drawn into the vortex caused by the sudden sinking of such a vast body, and several of the people who were on board of her at the time perished.

There was no great depth of water where the Royal George sunk, and very soon after she righted herself. Several attempts have been made to weigh her at different times, but they have invariably proved unsuccessful. As late as the year 1799, the top of her mainmast is said to have been visible, and some few years after her brass guns were seen.

On the 9th of September, a court-martial was held at Portsmouth, on board the Warspite, on Captain Waghorne, for the loss of the Royal George; when, after an examination of such imperfect evidence as could be obtained, he was honourably acquitted. A carpenter on board who had escaped, declared that the ship went down so suddenly, that he had only time to tell his brother that he was sinking, when she went down. It also appeared that the ship was so old and in so unseaworthy a condition, that when a plank started not a peg would hold together.

The same day, the body of Mr. Saunders, the first lieutenant, was taken up under the stern of the Montague, East Indiaman, at the Motherbank; his gold watch was in his fob, and five pounds, fifteen shillings and sixpence in his pocket.

On the 21st of November, sixteen guns with cordage, &c. were fished up by the means of a diving-bell; and shortly afterwards by the ingenuity of Messrs. Braithwaite and Sons, the main-sheet anchor of the Royal George was safely delivered into the King's-yard, Portsmouth. It was, perhaps, the heaviest in the known world, being the immense weight of ninety-eight hundred weight. By means of Braithwaite's machine, the men could work under water for several hours together, and they had entertained hopes of being able to weigh the vessel, but all their attempts for this purpose proved unsuccessful. Several attempts have also been made at different times and by various constructions, some of which were attended with no success, others with very little, and in more than one instance human life has been sacrificed to the experiments.

In the following spring, a very elegant monument was erected in the churchyard, at Portsea, to the memory of the brave, though unfortunate, Admiral Kempenfelt and his fellow-sufferers, who perished in the Royal George. On it is engraved the following inscription, in letters of gold:—

“Reader,
With solemn thought
Survey this grave
And reflect
On the untimely death
Of thy fellow mortals;
And whilst,
As a Man, a Briton, and a Patriot,
Thou read'st
The melancholy narrative
Drop a tear
For thy country's
Loss
On the twenty-ninth day of
August, 1782,
His Majesty's ship, the
Royal George,
Being on the heel at Spithead,
Overset and sunk;
By which fatal accident
About nine hundred persons
Were instantly launched into eternity;
Among whom was that brave and
Experienced Officer,
Rear-Admiral Kempenfelt.
Nine days after,
Many bodies of the unfortunate
Floated;
Thirty-five of whom were interred
In one grave,
Near this monument,
Which is erected by the Parish of Portsea.”

As a grateful tribute
To the memory
Of that great Commander
And his fellow-sufferers."

Upon a gold pedestal, in gold letters, is this epitaph:—

"Tis not this stone, regretted chief, thy name,
Thy worth, thy merit, shall extend thy fame;
Brilliant achievements have thy name imprest,
In lasting characters, on Albion's breast."

We cannot close this narrative, so full of cause of mourning for those that met this unexpected and untimely death, without giving an extract from a journal of one of the more fortunate, who escaped the general doom:—

"The water-cock ought to have been put to rights before the shot was put on board. It is my opinion, that had the lieutenant of the watch, given orders, to 'right ship,' when the carpenter first spoke to him, nothing amiss would have happened, as three or four men at each tackle of the starboard guns, would very soon have bowled the guns all out, and by so doing have righted the ship."

"At the time this happened, the vessel was anchored by two anchors from the head. The wind was from the north-west, only a trifling breeze; and there was now, a sudden gust of wind which made her heel just before she sunk; it was, I felt convinced, the weight of metal and water which rushed in at the port-holes, that sunk her, and not the effects of the wind upon her. She had not even a stitch of canvass to keep her head steady as she lay at anchor; she had six months' provisions on board, and many tons of shot."

"The water-cock, the cause of all this fearful loss of life, is preserved in Portsmouth Dock-yard; a memorial of a second man-of-war overset at Spithead, through neglect and carelessness. The first being the *Marye Rose*, cast away near the same spot, in the reign of Henry the Eighth."

We trust sincerely, that whilst the "neglect and carelessness," of which he speaks, will ever be remembered with deep regret by every Englishman, it will serve as a warning to future generations, and prevent a recurrence of so fearful a catastrophe as—*THE LOSS OF THE ROYAL GEORGE*.

ARTHUR MARDON.

A TALE OF THE ROYAL GEORGE.

By HARRY BLUFF.

"'Tis many years ago, Harry," said my old uncle, a grey-haired old veteran, who had faced many a fearful tempest, and with his own arm laid low more than one of the enemies of his country. "Many years ago, my boy," he repeated with a sigh, "since I first knew poor Arthur Mardon, poor fellow! he's gone I trust to a better world—a world for which his kind heart well fitted him." We were not near so big as you Harry, when our acquaintance first commenced. I was sent by my parents to a boarding-school, and as the place and faces were strange to me, I, boy-like, felt shy and sorrowful; whether the older scholars mistook my quietude for cowardice, too long a time has elapsed for me to give a decided opinion now. At all events, I well remember that they not only exercised their tongues in abusing me, but not unfrequently their fists in punishing me also. In one of these conflicts, at which time one of the biggest and cruelest of my schoolfellows, was what he called, "paying me out," for refusing to tell a lie, to save him a just punishment, Arthur, unsought came to my assistance, and well thrashed my tormentor for me. Arthur did not himself escape without a mark, as a fearful black eye plainly testified. Our worthy tutor, who, if he did not hold with the boys' fighting, most certainly did when it was a case of flogging, and his the hand that was to administer it, noticed the token of war, and calling Arthur to his desk, proceeded to interrogate him as to how he became possessed of that beautiful embellishment to his handsome phisog.

Arthur was no liar: he spoke the truth, though he refrained from giving me my share in the broil, and the consequence was, that he received a flagellation that would, I feel convinced, afford ample satisfaction to any two (if shared between them) under Heaven.

I suffered more, sitting as I did, beholding the torture to which he was subjected for me, than if I had received it twice over, and yet was such a little coward, I'd not the heart to take my share.

When school-hours were over, I went up to my friend and expressed the sorrow, as well as I could, that in my heart I felt for his unmerited suffering.

He took my hand in his, and shaking it heartily said, in his own soft winning manner—

"He didn't hurt me. Bless you! my back's impregnable to anything short of an iron bar. But you'll have peace now, the fellow will never torment you any more; or in case he should, remember, my friend, that Arthur Mardon will be Arthur Mardon still."

The bell rang at the moment for returning to the school. It seemed that, away from home—amongst strangers, from whom I received no kind word of treatment, to meet with a friend, and *such* a friend was all I wanted. And my young heart clung to him in return for his kindness, with imperishable fondness. From that day we were steadfast friends. At length, the time came for me to exchange the school monotony, for the hardships and perils of the sea. My friend Arthur, who left at the same time, and for the same profession, prophesied as we parted, each to his different vessel, that our next meeting would be beneath the cloudless sky of India. I entered as midshipman in the Hon. East India Company's service, whilst Arthur served in the same capacity on board H.M.S. the *Royal George*. We parted—our good ship, with swelling sails, sped gallantly on its way. We had hardly left old England invisible behind, when a strange sail from the opposite coast was observed to be making its way towards us. Every stitch of canvass was now brought into requisition to enable us to leave our pursuer behind; the ship under the unusual weight bounded and reared, light as a horse of the blood. But it was no good, she was evidently gaining on us fast. She proved to be no less unwelcome a visitor than a French pirate—French, did I say? that is hardly just, for though the commander was himself of that nation, the crew were as different in speech and country, as they were in the colour and expression of their faces.

Though our ship was a tight built one, our guns were like the old woman's rod, more to frighten than to punish. Whilst those of our opponent had evidently been used to gunpowder, and seemed capable too of using a little more. Under these fearful odds, our captain, who, over a bottle of wine, was a brave man, turned coward when death stared him in the face.

This did not save his life. After robbing the vessel of its contents, they had the crew brought up before them, and acted the fearful farce of passing sentence upon them as in a court of law. And whilst their victims stood before them, with a death most frightful and horrible staring them in the face, the coarsest and most brutal jest passed from the lips of our savage inhuman conquerors.

The captain was first called to stand before the bar, a range of barrels, upon one of which was perched the pirate captain. I shall never, never forget the face of our poor ill-fated commander, as he was called upon for his defence—his defence—good heaven! they had no mercy or justice in their composition. His face was white as a sheet; large drops of perspiration stood upon his forehead; his lips were contracted with agony, and though they moved, no articulate sound came from them. "Speak up," cried one. He sank upon his knees, and as he clasped his hands, turned his face towards his merciless captors. Such fear, such agony, such supplication, was exhibited in that one gaze—that would have saved his life, had his enemies anything of human being about them.

"Speak, you—" and a cutlass was raised with a threatening gesture above his head.

"Mercy—oh! mercy! mercy!" he cried.

"Mercy!" sneered his foe. "Why you look warm! The noose here, my lads. A run to the yard-arm will cool him. Heave ahoy, you beggars!"

And, amid a deep shout of fiendish laughter, the body of our poor captain hung lifeless in the air.

"Now," cried the villain, when this inhuman *fête* had been accomplished, "examine them. If they'll do for slaves so much

the better for us, if not, a glorious feast the fishes will have; for by—" and the villain called his Maker to witness his words, "the ship goes down, and them in it." Then came the handling, the examination. Some few pressed forward eager to save their lives at the price of a life's freedom; others, sunk in gloomy apathy, moved neither hand nor foot. Six were left on board, locked in the cabin, while the remainder, and I among the number were conveyed on board the pirate vessel. "All right," cried one of the gang, who ascended the companion-ladder at the time, "I've fired the d— thing in three places. It'll warm 'em I'll be sworn." Orders were now given to clear away, for the smoke was already ascending and forcing its way through the ship's side, and we stood from them.

Oh God! what a fearful sight to see the smoke curling in black thick wreaths about our once good ship; but when the smoke turned into fire, for every gust of smoke, became an all-destroying flame, our hearts, at the sad sight, sunk within us. Towering up, they came so red and bright, winding around the mast, like a serpent around its victim, licking it with its red tongue; and then, amidst the silence, for even our captors gazed upon the burning ship with quiet interest, there came from the poor wretches fastened down in that doomed bark, a shriek, such as the torture alone could wring from them. Then all was still. Winding higher and higher, went those bright red flames, until the vessel from keel to mast-head, was one mass of fire, and illumined the ocean with its dreadful light for miles. At last the flames reached the powder magazine, which blew up with such violence that the burning fragments of the wreck lay scattered all around. Rocking from the effects of the explosion, she filled, and sunk to the unknown depths below.

Well Harry, we were taken to Algiers, carried into the country, and sold for slaves. I had the luck to save the life of my master, and he, for they never fail to reward a service any more than they do to revenge an injury, gave me my liberty, and procured a passage to England for me.

The laborious life I had led, unfitted for my tender years, wasted me away, and I once more stood in the streets of dear old London, but hardly the shadow of my former self. The contract of the persons who brought me, was merely to land me in England, my generous master supposing that once there, I should be all right, little thinking that the same motive which actuated the blind-idolatrous pagan, influenced the enlightened Christian—that you might die of starvation in London, amidst all its mighty wealth and population, as you could in a desert. London was all I wanted: in London I was: but with an empty belly, and an empty purse. I stood, after parading the streets all day, amidst torrents of rain, beneath the overhanging roof of a house. I had not stood long, before the sharp shrill voice of a woman—yes, a woman denied me the shelter that cost her nothing, and might save my life—crying, "go on you vagrant, you can't stop here!" Some would have cursed her, but my tongue clave to my mouth, and I turned away from the denied shelter, into the rain that fell in torrents, with a groan. It seemed as though I had escaped all the dangers of a foreign clime, of slavery, but to return and perish miserably of starvation in my native land. I felt sick and giddy, a feeling faint and death-like was crawling over me, and I fell to the ground in a swoon.

On my return to life and recollection I found myself encosed within the clean sheets of a comfortable bed. Whilst a long range of doctor's bottles on the mantleshef announced plainly, even to my disordered faculties and dim vision, that that functionary had been in attendance on me. I had not lain long before the door opened, and an elderly, but amiable-looking lady, entered, followed by a gentleman, whose brown handsome face denoted he had been beneath the burning sun of the tropics. "How is my poor friend, now?" he said, advancing towards the bedside and taking my hand, burning with fever, in his own; "Don't you know me, Tom? I'm your old school-fellow, Arthur—Arthur Mardon."

Oh, what a flood of delicious joy was there, as I caught his hand in my own, and bathed it in my tears. "Poor fellow," he said, gently disengaging his hand, and putting my hair back, which had grown long during my illness and covered my eyes.

"Well, Tom, you must get better now. The doctor says you will, and you know they are always right, except when they are wrong. But I don't see any cause to doubt his veracity this time—thank God!"

I begged him to tell me where I was, and how I came there—to tell me what I'd been doing these many long months, for my recollection of the past was gone. "What you've been doing, old friend," he answered, "is a question, when you get well enough, I shall be glad to hear answered. All I know is, that groping my way through these confounded streets one precious wet night, I came to a mob, who were surrounding a man, as they said, dying—as luck would have it, in the poor unfortunate I discovered no less a personage than you, my dear old schoolfellow. I had you brought home. This lady," he said, turning to the amiable-looking personage I spoke of, "is my mother, and this one," pointing to a pretty girl, who entered at the moment, "my little sister, Jane, that you heard me speak of at school so often."

I expressed my thanks in the best manner I could for their great kindness, but was hurriedly stopped by Arthur, who informed me that the pleasure of assisting a friend was a sufficient reward for trouble, however great. It was many weeks before I was perfectly recovered. I then announced my intention, as both my parents had died during my absence from home, of again trusting the changeable ever-varying ocean. I embarked in the H— for Calcutta, as third lieutenant; Arthur still remained on board the Royal George, and informed me with great glee, that he also was going for a cruise, but where, or how long, he did not at present know. How little we thought as we pressed each other's hands with all the warmth and sincerity of an early friendship, that we parted to meet no more! Alas! such was his fearful destiny. After an absence of two years, I returned, the second lieutenant having died on our passage out, I succeeded him. We landed our passengers at Portsmouth, I took a stroll into the church-yard at Portsea, and commenced reading the various epitaphs raised to perpetuate the memories of those that lay sleeping the sleep of death beneath. I came to one, and the moon, darkened for an instant by a black cloud, shone out in all its silvery brightness, I could distinctly read the following:—

SACRED

To the Memory of
ARTHUR MARDON,

Aged 24 years,

Who unfortunately perished, with nine hundred
persons, by the oversetting of H. M. Ship,

The Royal George,

on the twenty-ninth of August, 1782.

Oh God! the agony, the unsupportable agony of that fearful moment! And was he gone, the faithful partner of my youthful joys; my firm, my steadfast, my only friend, dead! My head sunk on his cold gravestone as I uttered the words; in my bitter grief, a hand was laid upon my shoulder, and a voice at once sweet and solemn, murmured, "Gone, we trust, to the arms of that Saviour who died to save us sinful mortals—gone from a world, whose brightest days are full of care, for one whose joys are wide, pure, and eternal;" I turned and grasped his widowed mother's hand.

"Twice many a day, Harry," continued my uncle, "before I recovered this shock, and could think with composure of his death; but time, while it hurries men to the grave, obliterates our old feelings—obliterates did I say! I'm wrong. For while this heart of mine continues its pulsation, I shall ever look back with a tear to his memory, and a prayer for the soul of ARTHUR MARDON."

A NIGHT IN THE ROYAL GEORGE.

CONFESSION OF THE DEEP.

By Albert Smith, author of "The Fortunes of the Scattergood Family," in Bentley's Miscellany.

THE circumstances I am about to relate will do little to raise me in the opinion of the reader into whose hands this paper may happen to fall. Awful and harrowing as were the events of that dreadful night, I can lay but small claim to courage

or mental boldness, in having met them as I did. Avarice—sordid, calculating avarice—drove me to the attempt, and I well deserved the total miscarriage of all my plans that succeeded.

Four years back, I was a clerk in one of the most respectable and influential houses in Portsmouth, receiving an excellent salary, and, upon the whole, most comfortably settled; far more so than the majority of the young men of my own station in the town; and yet I was not happy—far, far from it. I grumbled at the regularity of attention which my situation required; I deemed my labour ill paid, and I envied every one I met, whose lot in life appeared better cast than my own; little reflecting how many secret miseries poison the existences of those who appear in public, most smiled upon by fortune.

The loss of the *Royal George* was ever a favourite topic of conversation with the people of Portsmouth, even when half a century had elapsed since the occurrence; and, indeed, the interest connected with the subject was constantly kept alive by the numerous projects and suggestions for raising the sunken vessel or destroying the wreck, that needy speculators were perpetually starting. To myself, I will confess, the whole affair was one of deep and constant thought. I had heard the various accounts of the accident: of the heavy bags of gold that were on board at the time, to pay the seamen: of the watches, jewels, and other valuable articles, that the tradespeople had sent for sale; and all this was still there—there, within the cumbersome and sea-worn timbers of the ill-fated ship, lying as useless, at the bottom of the sea, and as comparatively worthless, as the rocks themselves.

Many, many evenings have I sat upon the shore, lulled into contemplation by the low ripple of the tide, when the last red gleam of the sun, ere he sank beneath the Isle of Wight, illumined the spot where that majestic vessel went down; and wished I had power to roam over her sea-bound hoards, for one short hour, and appropriate to myself all I could collect from her stores of value in that time. Many times have I longed for the power of those beings in the *Arabian Nights*, who could live under water; and thought, with what selfish and unseen joy, I could then revel amidst the gold and treasures that the hulk contained.

It was somewhere about this period that a man came to Portsmouth, with permission from the Admiralty, to carry on some experiments connected with the possibility of conducting different submarine operations, independent of the diving-bell. This incident changed the entire current of my thoughts. I watched his experiments with an intensity of interest, that I am fain to believe, exceeded that of the person himself. I saw him descend, in his dress, from a small vessel, to the wreck of the *Royal George*;—I noted the length of time he was enabled to remain under water;—I watched his return, with divers small articles—as oyster-shells, nails, &c., which he had picked from the wreck; and, from that period, I contemplated but one subject:—it was the idea of going down myself! It cost me many sleepless nights to bring my scheme to perfection; nor was the working out of my plans confined to night alone; I thought of it always. I neglected my business; I received endless reprimands from my employers for orders forgotten; and commissions uncared for; and, at last, I was discharged, because they found they could no longer trust me, from my undeviating forgetfulness.

As soon as I was turned away, I hired a small room in a street, and commenced my operations. The first thing I did was to purchase a quantity of Macintosh's waterproof cloth, with which I intended to form my diving-dress. I contrived to cut out a very fair set of patterns, and these I got a journeyman tailor, who lodged in the house, to sew together; after which, I daubed the seams with Indian rubber, dissolved in naphtha, some of which I obtained at the chemist's; and then, before it was dry, I pressed strips of the fabric on them with a hot iron, by which I made the whole garment perfectly impermeable. My next task was to make the head-piece. To effect this, I procured some stout iron wire, and bent it into a sort of frame, of the shape I had seen the diver wear. I secured these different pieces together by twisting finer wire

round them; and then covered the whole with the same waterproof cloth which I had used for the rest, fitting some pieces of glass carefully in front, to enable me to perceive objects around me. I fastened some roughly-shaped gloves and boots to the arms and legs of the dress, and fixed them in a similar manner to the seams; and when I had entirely completed the whole apparel, I put it on, and walked in it, about my room, the whole evening, delighted beyond measure, at my contrivance. It cost me something considerable, with all my economy, it is true; but I looked upon it as the means of leading me to immense wealth, and I deemed the money invested in a highly profitable scheme.

My next object was to provide for the transmission of a supply of air to the interior of the hood, as I termed it, adequate to the support of respiration under water. Aided by the smattering mechanical knowledge that I possessed, I was not long in fashioning a sort of air-pump, by adding some valves and stopcocks to an old garden syringe, which I purchased at a broker's near my lodgings; and this I connected to the hood by long pipes of the cloth, closed in the same manner as the seams of my dress. I likewise procured a lantern, which I rendered waterproof by similar means; and then I joined it to the head-piece by another pipe, having observed that there was, generally, a superfluity of air from the bubbles I had seen rising over the diver's head, which marked his situation in the water.

And now only one point remained to care about; but that was the most difficult—it was to seek a confederate. Not but I believe that I could have got many to join me in my fool-hardy enterprise; but they would have expected an equal share of the proceeds, and this it was, not my intention to allow. Still, I could not do without a companion to mind the boat above, and, more especially, to supply me with air. I had, at one time, formed a wild scheme of borrowing a goat from an old man, at the edge of the common, who had trained it to run round in a wheel, and assist in making string; but the insanity of trusting my life to the operations of an animal, soon made me give up the scheme I had formed of constructing some rough machinery, to be turned by a similar wheel, which, acting upon a parallel motion, or rack and pinion, might work the pump. At last, chance threw the required assistance in my way. There was a poor creature living in the town at the time, named, or rather called, Harry Weston, whom I selected for my companion. He was not exactly in his right senses, nor was he completely an idiot; but at that nice balance between the two which kept him from being the sport of the street boys, whilst it gained the pity, or sympathy, of the charitable people in the neighbourhood. He got his living by carrying out parcels from the coach-offices to their final destination, or by running on errands, and performing divers odd jobs for the inhabitants; and he generally bore a good character for sobriety and honesty. It was this harmless individual that I fixed upon as my associate. I brought him to my lodgings, and bound him down by the most horrible oaths I could invent, to frighten him, and promises of large reward, to serve me as I should direct, without ever uttering a syllable to mortal of my schemes; and then making an appointment with him for an evening in the next week, I gave him a trifling sum as an earnest of my future bounty. Poor wretch! he never lived to receive it.

The intervening days lagged slowly by, and the eventful night at last arrived. As soon as it was dusk, with the assistance of Weston, I carried my apparatus, piecemeal, down to the beach on Southsea common, and then concealed them in one of the bathing-machines which are always stationed there; leaving him to watch whilst I repaired to the Point for the purpose of procuring the boat. I had bespoken a few days before. She was an old man-of-war's gig, with gunwales rather higher than ordinary, and low thwarts, which gave her a security better calculated for our operations. I pulled round to the beach, near the common, and took Weston and my contrivances on board, and then we started again for the scene of my venture. There was very little wind, and the sea was as calm as glass: which,

circumstances were, of course, in our favour. When we got to the buoy which marks the situation of the Royal George, we fastened the boat to it, and I commenced arraying myself in my diving costume. This finished, with the exception of the head-piece, I threw overboard a rope ladder, having two small kedges attached to its inferior extremities; and when I had ascertained that these had laid hold of some portion of the wreck, I made fast the upper ends to one of the seats of the boat. I next sounded the depth with a lead-line, and arranged my water-proof pipes accordingly, by means of some taps I had purchased at a gas-fitters; allowing an extra length or two for my movements. In about half an hour from our first fixing the gig to the buoy, I had made all close and ready, and prepared to descend. I felt no timidity—the bare recollection of the wealth reported to be engulfed with the vessel, which I might, perhaps, accumulate, drove every other feeling from my mind.

With a last injunction to unremitting work and attention, on the part of Weston, I stepped on to the ladder, and commenced my task. What was my delight upon finding that my schemes answered, as I saw through the glass, in my hood, the green water ascend higher than the level of my face, and, finally, close over my head, whilst my respiration continued free and unembarrassed. There was one unpleasant sensation, but this was not of sufficient consequence to annoy me. At every stroke of the pump above, that forced a fresh quantity of air down the pipe, I experienced a feeling of *tense* pain on the drums of my ears, of which I had heard the men in the diving-bells sometimes complain; but this I, in great measure, alleviated, by making frequent attempts at deglutition. My lantern, also, preserved the flame within it admirably; and its trifling consumption of air tended, in a measure, to relieve the pressure in the head piece. I descended gradually and carefully, step by step; and at last, to my great joy, stood on a portion of the wreck. I found the kedges had caught on a large spar that lay completely across the ship, kept firmly in its place by a gun, which had, probably, rolled over it when the accident occurred. With some little caution I crawled along it; and at length stood upon the deck. And here, for the first time, I became aware of the singular assistance of my light. Everything around me was plainly discernible, when the rays, cast through a large bull's-eye, were directed towards the object, only appearing as if a dull, greenish mist encircled it. I well remember the stems of the masts, with their coating of barnacles—the masses of shell-work and weeds that incrustated the guns, still outwardly preserving their shape—the very bulwarks, with their rings of green and cankered metal attached; and the blackened pieces of timber that were grouped around me, from which myriads of strange polypi threw out their long streaming arms in quest of prey. The deck was nearly a foot deep in sand, and as I supposed not level; but still, the declivity to larboard was not too steep to preclude my keeping a firm footing. An immense quantity of corroded blocks, tackle, &c., was lying about in confusion, enveloped by perfect groves of tall sea-weed; and these floated about like monstrous snakes, twisting and undulating in all directions.

I cleared away a few trifling impediments with a light boat hook, which I carried in my hand; and moved cautiously forward in the direction where I expected to find the entrance to the chief cabin. I was not long in reaching it, but experienced some little difficulty in descending the stairs that led to it, as the passage was partly choked up with sand and debris from the wreck. At the third step I dislodged some large mass from its position. By my light I perceived a number of fish, such as sand-eels and small crabs, which had been disturbed from it; and directly afterwards, upon kicking it with my foot, I was horrified at perceiving a human skull, to which some scraps of colourless flesh and ligaments were still adhering, roll down the inclined plane of sand that covered the ladder, towards the door. My first impulse was to return immediately; but reflecting that all I had striven for was probably within my grasp, my thirst for gain once more conquered every other feeling.

With some trouble I made my way into the cabin. The

door was open—they had probably been so at the time of the catastrophe, and the subsequent accumulation of and and mud had kept them so. I drew the air-pipe down towards me, and found that I had still length enough to spare for my operations; at the same time I was convinced that my assistant was diligently supplying me with the means of respiration. I was now in the centre of the cabin, and an awful scene presented itself. Every portion of the wood-work, at least, as nearly as I could determine by approaching my lantern closely to it, was black, from the action of the sea; and like the masts above, incrustated with groups of barnacles. The floor was a foot deep in sand; and on its surface lay more oblong heaps, which I discovered, upon examination, to be also human bodies, round whose half-devoured remains shreds of clothing still floated. I could not move a step without treading upon one; and each that I thus disturbed fell to pieces immediately, surrounding me with a cloud of its sickening particles, and numbers of huge shell-fish, who were enjoying their unholy meal therefrom, and who crawled off, with their long spidery legs, in all directions.

Still I came to no treasure—I had fallen in with none of the bags of gold, which I heard were on board at the time of the accident. There were many corroded naval implements lying about; but these were not what I wanted. I examined every heap that rose above the general level of the floor, with the most diligent investigation, but without reward. Sometimes I exposed the tattered remnant of an article of clothing, a seaman's hat, a telescope, or something equally valueless to myself; but, more generally, similar objects to the above-mentioned fragments of mortality shocked me with their presence. At the side of the cabin was a small closet, having a glass door; and towards this I bent my way, thinking it might be the repository of some precious articles. But how was I horrified on approaching it! On directing my light through its still unbroken panes, I saw a dreadful corpse, that gibbered and grinned directly in my face: it was the body of some poor creature, who had, perhaps, been forced in there at the first rush of the water; and the door closing upon him, had kept out the sand and marine insects, that everywhere else abounded.—The sea-water had acted as a preservative, and the body still retained the perfect semblance of a human form; but the face was blanched and coddled—one of the eyes had dissolved, and the other was opaque, and apparently congealed; while the relaxed ligaments allowed the lower jaw to fall and rise with every vibration of the sea, in the mockery of a dreadful grin. The hair, too, floated in the water, giving a semblance of motion to the whole features, which wore an expression of hideous merriment.

Faint with terror and disgust, I turned from the loathsome spectacle, and moved slowly and laboriously away. I approached the table of the cabin: a half-opened drawer was at its extremity; and when I had cleared away the envelope of sand, I discovered it was nearly filled with bags of coin. All, then, was accomplished: the long-coveted treasure lay, in greater part, beneath my grasp! I raised my lantern eagerly to inspect the contents, when, to my extreme terror, I perceived that there was water in it half-way up the bull's eye, and the light not half an inch above the surface. The dreadful anticipation of inevitable darkness now burst in on me, and a moment of intense fear, amounting almost to stupefaction, succeeded. I began hastily to collect the small canvass bags, and stow them in my girdle; but three remained, and I stretched my hand out to seize them. In the hurry and anxiety of the moment, I threw my lantern slightly out of the perpendicular—the water within it immediately washed over the light, and it was extinguished!

I know not how the subsequent five minutes passed. The sensations of years of terror, agony, and the expectations of approaching death, were condensed in that period. My first recollection was, that I observed a gleam of light where the windows of the cabin were situated; but it was of the faintest kind. I afterwards ascertained that it was a moonlight night, and the beams had penetrated thus far through the sea;—but this was no guide for me. I was totally unconscious by what direction I had entered the cabin; and I did

not dare to move unless towards these windows. Then I thought that Weston would tire at his work—that his strength would not allow him to keep pumping so long, whatever his will might be, and I should miserably perish. Anon, the thought came that I was alone—alone, amidst a crowd of dead bodies and hideous marine monsters—alone with that gibbering and awful corpse, whose face peered at me, through the darkness, in my imagination, and pressed his slummy, soddened cheek against me—*alone, at the bottom of the sea!*

I gained one of the windows; it was open, or, rather, the frames had been carried away, by the constant action of the waves. I thought I would climb through it, and so ascend, for I was an excellent swimmer. But then the air-pipe kept me back; and it was even now becoming tight, as I reached the extent of its length. A new idea rose, bringing fresh hope with it, and I wondered I had not thought of it before.—I could use the pipe as a clue, and so return by following its course. I left the window, and prepared to make the attempt, when I felt a violent tug, that nearly pulled the head-piece from the rest of my dress. Another, and another, succeeded, and then, in an instant, I felt the tense air-pipe give way—it had broken.

But one resource was left: I clambered through the cabin window, and attempted to rise, but the pipe had caught some projection, and restrained me, and I already perceived that the supply of air was stopped. I seized a knife from my girdle, and cut the tube off close to my head. The water rushed into the hood as I performed this action, but I was enabled to rise directly. The water roared and bubbled in my ears, with the noise of thunder, as I struck upwards, still keeping my knife in my hand: and in half a minute I had reached the surface. To rip up my hood, and cast it from me, was the work of an instant. As I regained my vision, I perceived, by the moonlight, that my boat was gone, but the buoy was still floating at its usual spot. Swimming towards it, I was enabled to recover myself, and take breath as I rested, hanging on to its ring. From the appearance of the distant vessels near the beach, which were riding at anchor, I saw it was high-water, and another fearful truth burst upon me. The rope-ladder, which the kedges held fast to the wreck, had drawn the boat under, as the tide rose, and with it, my hapless assistant.

I felt at my girdle for the bags of gold; they were all gone, through the hasty manner in which I had secured them, and my struggles in coming to the surface. I tore my dress from me, in raving passion, and cast it to the waves. In my underclothes, which consisted of nothing but a common check shirt and a pair of coarse Holland trousers, I swam to land; and, on reaching the stony beach, I sank on it in a swoon, overcome by my intense emotion.

I was found there the next morning, and carried to my lodgings. A long illness succeeded;—I kept my bed for three months, and arose a maniac. I was told I talked about the wreck, and its fearful contents, during my fever; but I found my attendants merely looked upon it as the raving of delirium. As time passed, I recovered my reason; but the remembrance of the circumstances connected with my rash venture, must embitter my life until its close. I procured a moderate appointment through the interest of some friends, and to-morrow I sail for Australia.

WRECK OF THE TIGER MERCHANTMAN,

AND DETENTION OF THE CREW SEVENTY DAYS ON A CORAL ROCK.

The following account of the wreck of the *Tiger*, which sailed from Liverpool, bound for Bombay, in June, 1837, in company with another vessel called the *Tigris*, is from a youth who was on board of her.

"Nothing of more than ordinary note occurred for the first few weeks. We had brilliant weather, and held on steadily; the *Tigris* getting a-head sometimes, at others we took the lead. Soon, however, the *Tigris* shot away rapidly, and after a few days we lost sight of her. Upon this, the captain, who before had been all life and activity, was observed to grow gloomy and reserved; and the surmise was rife among the crew that some

heavy stake was pending on the sailing powers of the two vessels. To allay his chagrin, the captain drank spirits in large quantities, and symptoms of insanity were speedily discerned. One night, pacing the deck and talking incoherently, he suddenly stopped, and lifting up his dog which crouched at his feet, by the neck, flung him overboard, saying, "Poor devil! I shall soon follow you." After this he was watched narrowly; the surgeon of the vessel not considering himself justified in putting him under arrest, nor did he think it absolutely necessary. He contrived, however, to elude our vigilance, and a few days after his exclamation, threw himself overboard; and, although a boat was instantly put out, he sank before it reached him. The command of the vessel now devolved upon the mate, named Spurze, a well-conducted but inexperienced seaman, who got out of his latitude; and, after many weeks of wandering and anxious pain, we were eventually wrecked on an uninhabited island; which, as we afterwards learned was ten degrees south of the Line, and between six and seven hundred east of Madagascar; crew and passengers, 26 in number, including one lady, the wife of a naval officer on board, being all saved. The island, called Astovia, was a coral rock, and nowhere could we discover any vestige of vegetable matter. After hoisting some remnants of canvass from the wreck, in three different parts of the island, which was about six miles long by three or four wide, we set out in quest of fresh water; but to our inexpressible anguish, the search was without success. Our thirst became intolerable; and, to appease it, we were compelled to wring off the heads of sea-fowl (with which the island providentially abounded) and which were not by any means difficult to catch, and drink the blood. Our food was turtle, and we used to take it by going out in small parties of six or seven in number, and wading through a creek, on the banks of which they congregated. Here we were in constant danger of our lives, from the sharks that paddle slowly and stealthily up the creek; and on one occasion, a poor fellow, too daring and adventurous, was seized, and torn piece-meal among them. After the lapse of two weeks, fourteen of the crew agreed to take the long-boat, with a single barrel of biscuits, the only provision saved, with a solemn promise to touch at the first island to which they came, if possible to procure aid, and return to us. Their parting shout was the last we ever heard of them. A day or two after they had left us, two of the crew picked up a barrel of spirits which had been washed ashore, and for some time kept it to themselves; but upon Spurze, the mate, discovering it, and upbraiding them with the selfishness of their conduct, they, in their inebriation, drew their knives, and would have despatched him on the instant, had not some of us rushed to his rescue. The poor lady, the only female, suffered dreadfully; and notwithstanding we did all that was possible, under the circumstances, to alleviate her condition, and whilst she endeavoured to bear up with a seeming fortitude, it was evident her spirit was completely broken. With the canvass and spars from the wreck we erected a sort of tent, where she was in some measure protected from the intense heat of a tropical sun. We had been three weeks on the island, and our only drink was blood, with the exception of the spirits which had been secreted by the men and discovered by the mate, when, to our infinite joy a fresh water spring was at last discovered, and one and all scoured away, yelling like bedlamites, with delight at this priceless godsend.

"Week after week passed away, and still no sign of deliverance. To mark the days, we cut, like Crusoe, notches in a spar. At one time we were buoyed up with the hope of rescue, at others steeped in the lowest depths of wretchedness. In consequence of the nature of our diet, many of our number suffered greatly from diarrhoea, though no fatal consequences attended it. At the expiration of seventy days our signal was discovered by a South Sea whaler, by which we were taken to Mabe, an island, or rather a cluster of islands, the governor of which supplied us with necessaries, and forwarded us to the Cape, from whence we took passage to England in a vessel that touched there shortly after our arrival."

THE BATTLE OF TRAFALGAR.

EARLY on the morning of the 14th of February, 1805, the hero of the Nile reached Portsmouth; and having despatched his business on shore, endeavoured to elude the populace by taking a bye-path to the beach; but a crowd collecting in his train, pressed forward to obtain a sight of his face; many were in tears, and many knelt down before him, and blessed him as he passed. England has had many heroes; but never one who so entirely possessed the love of his fellow-countrymen as Nelson. All men knew that his heart was as humane as it was fearless: that there was not in his nature the slightest alloy of selfishness or cupidity; but that, with perfect and entire devotion, he served his country with all his heart, and with all his soul, and with all his strength; and, therefore, they loved him as truly and as fervently as he loved England. They pressed

upon the parapet, to gaze after him when his barge pushed off, and he was returning their cheers by waving his hat. They would not be debarred from gazing, till the last moment, upon the hero—the darling hero of England!

He arrived off Cadiz on the 29th of September—his birthday. Fearing that if the enemy knew his force, they might be deterred from venturing to sea, he kept out of sight of land, desired Vice-Admiral Collingwood to fire no salute, and hoist no colours; and wrote to Gibraltar, to request that the force of the fleet might not be inserted there in the Gazette. His reception in the Mediterranean fleet was as gratifying as the farewell of his countrymen at Portsmouth; the officers who came on board to welcome him, forgot his rank as commander, in the joy at seeing him again. On the day of his arrival, Villeneuve received orders to put to sea the first opportunity. Villeneuve,

DEATH OF NELSON.

however, hesitated, when he heard that Nelson had resumed the command. He called a council of war; and their determination was that it would not be expedient to leave Cadiz, unless they had reason to believe themselves stronger by one third than the British force.

The station which Nelson had chosen was some fifty or sixty miles to the west of Cadiz, near Cape St. Mary's. At this distance he hoped to decoy the enemy out, while he guarded against the danger of being caught in a westerly wind near Cadiz, and driven within the Straits. The blockade of the port was rigorously enforced, in hopes that the combined fleet might be forced to sea by want. The supplies from France were thus effectually cut off. There was now every indication that the enemy would speedily venture out; officers and men were in the highest spirits at the prospect of giving them a decisive

blow: such, indeed, as would put an end to all farther contest upon the seas, though at this time he was not without some cause of anxiety; he was in want of frigates—the eyes of the fleet, as he always called them:—to the want of which the enemy before were indebted for their escape, and Buonaparte for his arrival in Egypt. He had only twenty-three ships—others were on the way—but they might come too late; and though Nelson never doubted of victory, mere victory was not what he looked to, he wanted to annihilate the enemy's fleet. The Carthagenan squadron might effect a junction with this fleet on the one side; and on the other, it was to be expected that a similar attempt would be made by the French from Brest; in either case a formidable contingency to be apprehended by the blockading force.

The Rochefort squadron did push out, and had nearly caught

the Agamemnon and L'Aimable, in their way to reinforce the British admiral. Yet Nelson at this time weakened his own fleet. He had the unpleasant task to perform of sending home Sir Robert Calder, whose conduct was to be made the subject of a court-martial, in consequence of the general dissatisfaction which had been felt and expressed at his imperfect victory. Sir R. Calder and Sir John Orde, Nelson believed to be the only two enemies whom he had in his profession;—and, from that sensitive delicacy which distinguished him, this made him the more scrupulously anxious to show every possible mark of respect and kindness to Sir Robert. He wished to detain him till after the expected action; when the services which he might perform, and the triumphant joy which would be excited, would leave nothing to be apprehended from an inquiry into the previous engagement. Sir Robert, however, whose situation was very painful, did not choose to delay a trial, from the result of which he confidently expected a complete justification: and Nelson, instead of sending him home in a frigate, insisted on his returning in his own ninety-gun ship; ill as such a ship could at that time be spared. Nothing could be more honourable than the feeling by which Nelson was influenced; but at such a crisis, it ought not to have been indulged.

The order of sailing was to be the order of battle: the fleet in two lines, with an advanced squadron of eight of the fastest sailing two-deckers. The second in command, having the entire direction of his line, was to break through the enemy, about the twelfth ship from the rear: he would lead through the centre, and the advanced squadron was to cut off three or four ahead of the centre. This plan was to be adapted to the strength of the enemy, so that they should always be one-fourth superior to those whom they cut off. Nelson said "that his admirals and captains, knowing his precise object to be that of close and decisive action, would supply any deficiency by signals, and act accordingly. In case signals cannot be seen or clearly understood, no captain can do wrong if he places his ship alongside that of an enemy." One of the last orders of this admirable man was, that the name and family of every officer, seaman, and marine, who might be killed or wounded in action, should be, as soon as possible, returned to him, in order to be transmitted to the chairman of the patriotic fund, that the case might be taken into consideration for the benefit of the sufferer, or his family.

At daybreak of the 21st, the combined fleets were distinctly seen from the Victory's deck, formed in a close line of battle ahead on the starboard tack, about twelve miles to leeward, and standing to the south. Our fleet consisted of twenty-seven sail of the line, and four frigates. Their superiority was greater in size and weight of metal than in numbers. They had four thousand troops on board; and the best riflemen who could be procured, many of them Tyrolese, were dispersed through the ships. Little did the Tyrolese, and little did the Spaniards, at that day, imagine what horrors the wicked tyrant whom they served was preparing for their country.

Soon after daylight Nelson came upon deck. The 21st of October was a festival in his family, because on that day his uncle, Captain Suckling in the Dreadnought, with two other line-of-battle ships, had beaten off a French squadron of four sail of the line and three frigates. Nelson, with that sort of superstition from which few persons are entirely exempt, had more than once expressed his persuasion that this was to be the day of his battle also; and he was well pleased at seeing his prediction about to be verified. The wind was now from the west, light breezes, with a long, heavy swell. Signal was made to bear down upon the enemy in two lines, and the fleet set all sail. Collingwood, in the Royal Sovereign, led the lee line of thirteen ships; the Victory led the weather line of fourteen. Having seen that all was as it should be, Nelson retired to his cabin, and wrote the following prayer:—

"May the great God, whom I worship, grant to my country and for the benefit of Europe in general, a great and glorious victory, and may no misconduct in any one tarnish it; and may humanity after victory be the predominant feature in the British fleet! For myself individually, I commit my life to Him that made me; and may his blessing alight on my endeavours for serving my country faithfully! to Him I resign myself; and

the just cause which is entrusted to me to defend. Amen, Amen, Amen."

A portrait of Lady Hamilton hung in his cabin; and no Catholic ever beheld the picture of his patron saint with devouter reverence. The undisguised and romantic passion with which he regarded it amounted almost to superstition; and when the portrait was now taken down, in clearing for action, he desired the men who removed it, to "take care of his guardian angel." In this manner he frequently spoke of it, as if he believed there were a virtue in the image. He wore a miniature of her, also, next his heart.

Blackwood went on board the Victory about six. He found him in good spirits, but very calm; not in that exhilaration which he had felt upon entering into battle at Aboukir and Copenhagen; he knew that his own life would be particularly aimed at, and seems to have looked for death with almost as sure an expectation as for victory. His whole attention was fixed upon the enemy. They tacked to the northward, and formed their line on the larboard tack; thus bringing the shoals of Trafalgar and St. Pedro under the lee of the British, and keeping the port of Cadiz open for themselves. This was judiciously done; and Nelson, aware of all the advantages which it gave them, made signal to prepare to anchor.

Villeneuve was a skilful seaman; worthy of serving a better master, and a better cause. His plan of defence was as well conceived, and as original, as the plan of attack. He formed the fleet in a double line, every alternate ship being about a cable's length to windward of her second ahead and astern. Nelson, certain of a triumphant issue to the day, asked Blackwood what he should consider as a victory. That officer answered, that considering the handsome way in which battle was offered by the enemy, their apparent determination for a fair trial of strength, and the situation of the land, he thought it would be a glorious result if fourteen were captured. He replied, "I shall not be satisfied with less than twenty." Soon afterwards he asked him, if he did not think there was a signal wanting. Mr. Blackwood made answer, that he thought the whole fleet seemed very clearly to understand what they were about.

These words were scarcely spoken before that signal was made, which will be remembered as long as the language, or even the memory of England, shall endure:—Nelson's last signal—"ENGLAND EXPECTS EVERY MAN TO DO HIS DUTY!" It was received throughout the fleet with a shout of answering acclamation, made sublime by the spirit which it breathed, and the feeling which it expressed. "Now," said Lord Nelson, "I can do no more. We must trust to the great Disposer of all events, and the justice of our cause. I thank God for this great opportunity of doing my duty."

He wore that day, as usual, his admiral's frock coat, bearing on the left breast four stars, of the different orders with which he was invested. Ornaments which rendered him so conspicuous a mark for the enemy, were beheld with ominous apprehension by his officers. They communicated their fears to each other; and the surgeon, Mr. Beatty, spoke to the chaplain, Dr. Scott, and to Mr. Scott, the public secretary, desiring that some person would entreat him to change his dress, or cover the stars: but they knew that such a request would highly displease him. "In honour I gained them," he had said, when such a thing had been hinted to him formerly, "and in honour I will die with them." But both Blackwood and his own captain, Hardy, represented to him how advantageous to the fleet it would be for him to keep out of action as long as possible; and he consented at last to let the Leviathan and the Téméraire, which were sailing abreast of the Victory, to pass ahead. Yet even here the last infirmity of this noble mind was indulged, for these ships could not pass ahead if the Victory continued to carry all her sail; and so far was Nelson from shortening sail, that it was evident he took pleasure in pressing on, and rendering it impossible for them to obey his orders. A long swell was setting into the bay of Cadiz: our ships, crowding all sail, moved majestically before it, with light winds from south-west. The sun shone on the sails of the enemy; and their well-formed line, with their numerous three-deckers, made

an appearance which any other assailants would have thought formidable; but the British sailors only admired the beauty and splendour of the spectacle; and, in full confidence of winning what they saw, remarked to each other, what a fine sight yonder ships would make at Spithead!

The French admiral, from the Bucentaure, beheld the new manner in which his enemy was advancing—Nelson and Collingwood each leading his line; and pointing them out to his officers, he is said to have exclaimed, that such conduct could not fail to be successful. Yet Villeneuve had made his own dispositions with the utmost skill, and the fleets under his command waited for the attack with perfect coolness. Ten minutes before twelve they opened their fire. Eight or nine of the ships immediately ahead of the Victory, and across her bows, fired single guns at her, to ascertain whether she was yet within their range. As soon as Nelson perceived that their shot passed over him, he desired Blackwood, and Captain Prowse, of the *Sirius*, to repair to their respective frigates; and, on their way, to tell all the captains of the line-of-battle ships, that he depended on their exertions; and that, if by the prescribed mode of attack, they found it impracticable to get into action immediately, they might adopt whatever they thought best, provided it led them quickly and closely alongside an enemy. As they were standing on the front of the poop, Blackwood took him by the hand, saying, he hoped soon to return, and find him in possession of twenty prizes. He replied, "God bless you, Blackwood; I shall never see you again."

Nelson's column was steered about two points more to the north than Collingwood's, in order to cut off the enemy's escape into Cadiz; the lee line, therefore, was first engaged. "See," cried Nelson, pointing to the *Royal Sovereign*, as she steered right to the centre of the enemy's line, cut through it astern of the *Santa Anna*, three-decker, and engaged her at the muzzle of her guns on the starboard side: "see how that noble fellow, Collingwood, carries his ship into action!"

The enemy continued to fire a gun at a time at the Victory, till they saw that a shot had passed through her main-top-gallant sail; then they opened their broadsides, aiming chiefly at her rigging, in the hope of disabling her before she could close with them. Nelson, as usual, had hoisted several flags, lest one should be shot away. The enemy showed no colours till late in the action, when they began to feel the necessity of having them to strike. For this reason the *Santissima Trinidad*, Nelson's old acquaintance, as he used to call her, was distinguishable only by her four decks; and to the bow of this opponent he ordered the Victory to be steered. Meantime an incessant raking fire was kept up upon the Victory. The admiral's secretary was one of the first who fell: he was killed by a cannon shot while conversing with Hardy. Captain Adair, of the marines, with the help of a sailor, endeavoured to remove the body from Nelson's sight, who had a great regard for Mr. Scott; but he anxiously asked: "Is that poor Scott that's gone?" and being informed that it was indeed so, exclaimed: "Poor fellow!" A few minutes afterwards a shot struck the fore brace bits on the quarter deck, and passed between Nelson and Hardy, a splinter from the bit tearing off Hardy's buckle, and bruising his foot. Both stopped, and looked anxiously at each other, each supposing the other to be wounded. Nelson then smiled, and said, "This is too warm work, Hardy, to last long."

The victory had not yet returned a single gun; fifty of her men had been by this time killed or wounded, and her main-top-mast, with all her studding sails and her booms, shot away. Nelson declared, that in all his battles, he had seen nothing which surpassed the cool courage of his crew on this occasion. At four minutes after twelve, she opened her fire from both sides of her deck. It was not possible to break the enemy's line without running on board one of their ships: Hardy informed him of this, and asked which he would prefer. Nelson replied: "Take your choice, Hardy, it does not signify much." The master was ordered to put the helm to port, and the Victory ran on board the *Redoubtable*, just as her tiller ropes were shot away. The French ship received her with a broadside; then instantly let down her lower deck

ports, for fear of being boarded through them, and never afterwards fired a great gun during the action.

Captain Harvey, in the *Téméraire*, fell on board the *Redoubtable* on the other side. Another enemy was in like manner on board the *Téméraire*; so that these four ships formed as compact a tier as if they had been moored together, their heads lying all the same way. The lieutenants of the Victory, seeing this, depressed their guns of the middle and lower decks, and fired with a diminished charge, lest the shot should pass through, and injure the *Téméraire*. And because there was danger that the *Redoubtable* might take fire from the lower deck guns, the muzzles of which touched her side when they were run out, the fireman of each gun stood ready with a bucket of water; which, as soon as the gun was discharged, he dashed into the hole made by the shot. An incessant fire was kept up from the Victory from both sides; her larboard guns playing upon the Bucentaure and the huge *Santissima Trinidad*.

It had been part of Nelson's prayer, that the British fleet might be distinguished by humanity in the victory which he expected. Setting an example himself, he twice gave orders to cease firing upon the *Redoubtable*, supposing that she had struck, because her great guns were silent; for, as she carried no flag, there was no means of instantly ascertaining the fact. From this ship, which he had twice spared, he received his death. A ball fired from her mizen-top, which, in the then situation of the two vessels, was not more than fifteen yards from that part of the deck where he was standing, struck the epaulette on his left shoulder, about a quarter after one, just in the heat of action. He fell upon his face, on the spot which was covered with his poor secretary's blood. Hardy, who was a few steps from him, turning round, saw three men raising him up.—"They have done for me at last, Hardy," said he.—"I hope not," cried Hardy.—"Yes!" he replied; "my back-bone is shot through." Yet even now, not for a moment losing his presence of mind, he observed, as they were carrying him down the ladder, that the tiller ropes, which had been shot away, were not yet replaced, and ordered that new ones should be rove immediately;—then, that he might not be seen by the crew, he took out his handkerchief, and covered his face and his stars. Had he but concealed these badges of honour from the enemy, England, perhaps, would not have had cause to receive with sorrow the news of the battle of Trafalgar. The cockpit was crowded with wounded and dying men; over whose bodies he was with some difficulty conveyed, and laid upon a pallet in the midshipmen's berth. It was soon perceived, upon examination, that the wound was mortal. This, however, was concealed from all except Captain Hardy, the chaplain, and the medical attendants. He himself being certain, from the sensation in his back, and the gush of blood he felt momentarily within his breast, that no human care could avail him, insisted that the surgeon should leave him, and attend to those to whom he might be useful; "For," said he, "you can do nothing for me."—All that could be done was to fan him with paper, and frequently to give him lemonade to alleviate his intense thirst. He was in great pain, and expressed much anxiety for the event of the action, which now began to declare itself. As often as a ship struck, the crew of the Victory hurraed; and at every hurra, a visible expression of joy gleamed in the eyes, and marked the countenance of the dying hero. But he became impatient to see Captain Hardy; and as that officer though often sent for, could not leave the deck, Nelson feared that some fatal cause prevented him, and repeatedly cried, "Will no one bring Hardy to me? He must be killed! He is surely dead!" An hour and ten minutes elapsed from the time when Nelson received his wound, before Hardy could come to him. They shook hands in silence; Hardy in vain struggling to suppress the feelings of that most painful and yet sublimest moment. "Well, Hardy," said Nelson, "how goes the day with us?"—"Very well," replied Hardy; "ten ships have struck, but five of the van have tacked, and show an intention to bear down upon the Victory. I have called two or three of our fresh ships round, and have no doubt of giving them a drubbing."—"I hope," said Nelson, "none of our ships have struck?" Hardy answered, "There was no fear

of that." Then, and not till then, Nelson spoke of himself "I am a dead man, Hardy," said he: "I am going fast:—it will be all over with me soon. Come nearer to me. Let my dear Lady Hamilton have my hair, and all other things belonging to me."—Hardy observed, that he hoped Mr. Beatty could yet hold out some prospect of life. "Oh, no!" he replied: "it is impossible. My back is shot through. Beatty will tell you so." Captain Hardy then, once more, shook hands with him; and, with a heart almost bursting, hastened upon deck.

By this time all feeling below the breast was gone; and Nelson, having made the surgeon ascertain this, said to him: "You know I am gone. I feel something rising in my breast,"—putting his hand on his left side—"which tells me so." And upon Beatty's inquiring whether his pain was very great? he replied, "So great, that he wished he was dead. Yet," said he, in a lower voice, "one would like to live a little longer too!" And after a few minutes, in the same under tone, he added—"What would become of poor Lady Hamilton, if she knew my situation!" Next to his country, she occupied his thoughts. Captain Hardy, some fifty minutes after he had left the cockpit, returned and, again taking the hand of his dying friend and commander, congratulated him on having gained a complete victory. How many of the enemy were taken he did not know, as it was impossible to perceive them distinctly; but fourteen or fifteen at least. "That's well," cried Nelson, "but I bargained for twenty." And then in a stronger voice, he said:—"Anchor, Hardy, anchor." Hardy upon this, hinted that Admiral Collingwood would take upon himself the direction of affairs. "Not while I live, Hardy," said the dying Nelson, ineffectually endeavouring to raise himself from the bed:—"Do you anchor." His previous order for preparing to anchor had shown how clearly he foresaw the necessity of this. Presently, calling Hardy back, he said to him in a low voice,—"Don't throw me overboard!" and he desired that he might be buried by his parents, unless it should please the king to order otherwise. Then reverting to private feelings:—"Take care of my dear Lady Hamilton, Hardy: take care of poor Lady Hamilton.—Kiss me, Hardy," said he. Hardy knelt down and kissed his cheek, and Nelson said, "Now I am satisfied. Thank God, I have done my duty." Hardy stood over him in silence for a moment or two, then knelt again and kissed his forehead. "Who is that?" said Nelson; and being informed, he replied, "God bless you, Hardy." And Hardy then left him—for ever.

Nelson now desired to be turned upon his right side, and said,—"I wish I had not left the deck; for I shall soon be gone." Death was, indeed, rapidly approaching. He said to the chaplain,—"Doctor, I have not been a great sinner:" and after a short pause, "Remember that I leave Lady Hamilton and my daughter Horatia as a legacy to my country." His articulation now became difficult; and he was distinctly heard to say,—"Thank God, I have done my duty." These words he repeatedly pronounced: and they were the last words which he uttered. He expired at thirty minutes after four,—three hours and a quarter after he had received his wound.

DANGER OF SEA-BATHING.

A very melancholy accident happened to a poor boy on board, of about fifteen years of age, who had already become a great favourite, from his modest, quiet deportment, although he had not been above a fortnight in the ship. He had let himself down over the bows, by the cable, to bathe. There were several of his comrades standing on the fore-castle looking at him, and he asked one of them to go out on the spritsail-yard, and look round to see if there were any sharks in the neighbourhood; but all around was deep, clear, green water. He kept hold of the cable, however, and seemed determined not to put himself in harm's way, until a little wicked urchin, who used to wait on the warrant-officers' mess—a small, meddling, snipe of a creature, who got flogged,

in a well-behaved week, *only* once, began to taunt my little mild favourite.

"Why, you chicken-heart, I'll wager a thimbleful of grog, that such a tailor as you are in the water, can't, for the life of you, swim out to the buoy, there."

"Never you mind, Pepperbottom," said the boy, giving the imp the name he had richly earned by repeated flagellations. "Never you mind; I am not ashamed to show my naked hide, you know. But it is against orders, in these seas, to go overboard, unless with a sail under foot; so, I shan't run the risk of being tattooed by the boatswain's mate, like some one I could tell of."

"Coward!" muttered the little wasp; "you are afraid, sir."

The other boys abetting the mischief-maker, the lad was goaded to leave his hold of the cable, and strike out for the buoy. He reached it, and then turned and pulled towards the ship again, where he caught my eye.

"Who is that overboard? How dare you, sir, disobey the standing order of the ship? Come in, boy, come in." My hailing the little fellow threw him off his balance, and he lost his presence of mind for a moment or two, during which, he, if anything, widened his distance from the ship.

At this instant the lad on the spritsail-yard sung out, quick and suddenly, "A shark! a shark!" and the monster, like a silver pillar, suddenly shot up, perpendicularly, from out the dark green depths of the sleeping pool, with the waters sparkling and hissing around him, as if he had been a sea-demon rushing on his prey.

"Pull for the cable, Louis," shouted fifty voices at once—"pull for the cable."

The boy did so—we all ran forward. He reached the cable, grasped it with both hands, and hung on; but, before he could swing himself out of the water the fierce fish had turned. His whitish-green belly glanced in the sun—the poor little fellow gave a heart-splitting shriek, which was resounded amongst the impending rocks in piercing echoes, and those again were reverberated from cavern to cavern, until they died away amongst the hollows in the distance, as if they had been the faint yells of the damned—yet he held fast for a second or two, the ravenous tyrant of the sea tugging at him, till the stiff taut cable shook again.

At length he was torn from his hold, but did not disappear; the animal continuing on the surface, crushing his prey with his teeth, and grinding his jaws, as if trying to gorge a morsel too large to be swallowed, and making the water flush up in foam over the boats in pursuit by the powerful strokes of his tail, but without ever letting go his hold. The poor lad cried out once more—but such a cry—oh, God! I never shall forget it. Could it be possible! in his last shriek, his piercing expiring cry, his young voice seemed to pronounce my name—at least, so I thought at the time, and others thought so too. The next moment he appeared quite dead. No less than three boats had been in the water alongside where the accident happened, and they were all on the spot by this time. And there was the bleeding and mangled boy, torn along the surface of the water by the shark, with the boats in pursuit, leaving a long stream of blood in his wake. At length the man in the bow of the gig laid hold of him by the arm, another sailor caught the other arm; boat-hooks and oars were dug into and launched at the monster, who relinquished his prey at last, stripping off the flesh, however, from the upper part of the right thigh, until his teeth reached the knee, where he snapped the shank clean off, and made sail with the leg in his jaws.

Poor little Louis never once moved after we took him in. I thought I heard a small, still voice, thrill along my nerves, as if an echo of the beating of my heart had become articulate:—"Thomas, a fortnight ago you impressed that poor boy—who was, and now is not—out of a British ship." Alas! conscience spoke no more than the truth.

MIRACULOUS ESCAPE OF H.M.S. TALBOT,

AND LOSS OF THE SALDANHA FRIGATE.

At mid-day, on Saturday, the 30th of November, with a fair wind and smooth sea, we weighed from our station here, in company with the Saldanha frigate, of thirty-eight guns. Captain Pakenham, with a crew of 300 men, on a cruise, as was intended, of twenty days; the Saldanha taking a westerly course, while we stood in the opposite direction. We had scarcely got out of the loch and cleared the heads, however, when we plunged at once into all the miseries of a gale of wind blowing from the west. During the three following days it continued to increase in violence, when the islands of Coll and Three became visible to us. As the wind had now chopped round more to the north, and continued unabated in violence, the danger of getting involved among the numerous small islands and rugged head-lands on the north-west coast of Invernesshire, became evident. It was therefore deemed expedient to wear the ship round, and make a port with all possible expedition. With this view, and favoured by the wind, a course was shaped for Lochswilly, and away we scudded under close-reefed foresail and main-topsail, followed by a tremendous sea, which threatened every moment to overwhelm us, and accompanied by piercing showers of hail, and a gale which blew with incredible fury. The same course was steered until next day at noon, when land was seen on the lee-bow. The weather being thick, some time elapsed before it could be distinctly made out, and it was then ascertained to be the island of North Arran, on the coast of Donegal, westward of Lochswilly. The ship was therefore hauled up some points, and we yet entertained hopes of reaching an anchorage before night-fall, when the weather gradually thickened, and the sea, now that we were upon a wind, broke over us in all directions. Its violence was such, that in a few minutes several of our ports were stove in, at which the water poured in in great abundance, until it was actually breast high on the lee side of the main-deck. Fortunately, but little got below, and the ship was relieved by taking in the foresail. But a dreadful addition was now made to the precariousness of our situation, by the cry of "land a-head!" which was seen from the fore-castle, and must have been very near.

Not a moment was now lost in wearing the ship round on the other tack, and making what little sail could be carried, to weather the land we had already passed. This soon proved however, to be a forlorn prospect, for it was found we should run our distance by ten o'clock.

All the horrors of shipwreck now stared us in the face, aggravated tenfold by the extreme darkness of the night, and the tremendous force of the wind, which now blew a hurricane. Mountains are insignificant when speaking of the sea that kept pace with it; its violence was awful beyond description, and it frequently broke all over the poor little ship, that shivered and groaned, but behaved admirably.

The force of the sea may be guessed from the fact of the sheet-anchor, nearly a ton and a half in weight, being actually lifted on board, to say nothing of the fore-chain-plates broken, both gangways torn away, quarter-galleries stove in, &c., &c. In short, on getting into port, the vessel was found to be loosened through all her frame, and leaky at every seam.

As far as depended on her good qualities, however, I felt assured that we were safe; for I had seen enough of the Talbot to be convinced we were in one of the finest sea-boats that ever swam. But what could all the skill of the ship-builder avail in a situation like ours? With a terrible night full fifteen hours long before us, and knowing that we were fast driving on the land, anxiety and dread were on every face, and every mind felt the terrors of uncertainty and suspense.

At length, about twelve o'clock, the dreadful truth was disclosed to us. Judge of my sensations when I saw the surf and the frowning rocks of Arran, scarcely half a mile distant on our lee-bow. To our inexpressible relief, and not less to our surprise, we fairly weathered all, and were congratulating each other on our escape, when on looking forward I imagined I saw breakers at no great distance on our lee; and this suspicion was soon confirmed, when the moon, which shone at intervals,

suddenly broke out from behind a cloud, and presented to us a most terrific spectacle.

At not more than a quarter of a mile distance on our lee-beam, appeared a range of tremendous breakers, amongst which it seemed as if every sea would throw us. Their height, it may be supposed, was prodigious, when they could be clearly distinguished from the foaming waters of the surrounding ocean. It was a scene seldom to be witnessed, and never forgotten.

"Lord have mercy on us!" was now on the lips of every one—destruction seemed inevitable. Captain Swaine, whose coolness I have never seen surpassed, issued his orders clearly and collectedly, when it was proposed, as a last resource, to drop the anchors, cut away the masts, and trust to the chance of riding out the gale. This scheme was actually determined on, and everything was in readiness, but happily was deferred until an experiment was tried aloft. In addition to the close-reefed main-topsail and foresail, the fore-topsail and trysail were now set, and the result was almost magical. With a few plunges we cleared not only the reef, but a huge rock upon which I could with ease have tossed a biscuit; and in a few minutes we were inexpressibly rejoiced to observe both far astern.

We had now miraculously escaped all but certain destruction a second time, but much was yet to be feared. We had yet still to pass Cape Jeller, and the moments dragged on in gloomy apprehension and anxious suspense. The ship carried sail most wonderfully, and we continued to go along at the rate of seven knots, shipping very heavy seas, and labouring much—all, with much solicitude, looking out for daylight. The dawn at length appeared, and to our great joy we saw the land several miles astern, having passed the cape and many other hidden dangers during the darkness. Matters on the morning of the 5th, assumed a very different aspect from the last two days' experience: the wind gradually subsided, and with it the sea, and a favourable breeze now springing up, we were enabled to make a good offing. Fortunately no accident of consequence occurred, although several of our people were severely bruised by falls. Poor fellows! they certainly suffered enough; not a dry stitch, not a dry hammock, had they since we sailed.

The most melancholy part of my narrative is still to be told. On coming up to our anchorage here this morning, we observed an unusual degree of curiosity and bustle in the fort; crowds of people were congregated on both sides, running to and fro, examining us through spy-glasses; in short, an extraordinary commotion was apparent. The meaning of all this was but too soon made known to us by a boat coming alongside, from which we learned that the unfortunate Saldanha had gone to pieces, and every man perished.

Our own destruction had likewise been reckoned inevitable from the time of the discovery of the unhappy fate of our consort, five days before-hand; and hence the astonishment excited at our unexpected return. From all that could be learned concerning the dreadful catastrophe, I am inclined to believe that the Saldanha had been driven on the rocks about the time our doom appeared so certain in another quarter. Her lights were seen by the signal-tower at nine o'clock of that fearful Wednesday night, December the 4th, after which it is supposed she went ashore on the rocks at a small bay called Ballymastaker, almost at the entrance of Lochswilly harbour. Next morning the beach was strewn with fragments of the wreck, and upwards of two hundred of the bodies of the unfortunate sufferers were found washed ashore. One man—and one only—out of the three hundred, was ascertained to have come ashore alive, but almost in a state of insensibility. Unhappily there was no person present to administer to his wants judiciously, and upon craving something to drink, about half a pint of whiskey was given him by the country people, which almost instantly killed him. Poor Pakenham's body was also recognised this morning amidst the others, and, like these, stripped quite naked by the inhuman wretches who flocked to the wreck. It is even suspected that he came on shore alive, but was stripped and left to perish. Nothing could equal the audacity of the plunderers, although a party of the Lanark militia was doing duty around the wreck.

THE WRECK.

It was on a fine Sunday afternoon, in the month of April, that the crew of the Bittern were assembled on the fore-castle, passing observations on the different merchant vessels, as they made their way out of the Mersey, with a fine breeze and a flowing sheet. The day was very warm, and the watermen's boats that were passing to and fro on the river, laden with passengers dressed out in their best, with the bells ringing ashore, and the gay assemblage of people that crowded the piers and banks of the river, gave a pleasant appearance to the scene.

"Look at that 'ere craft," said Bill Jones; "that schooner with the billet head, sporting her quakers too, I'll be bound she's a tight sailer. See how she walks through the water! She's for the Straits, I s'pose, and means to frighten the pirates. She'll sail like a witch, that 'ere craft, now, and she's clinker built, too. I wish I had her, and her owners in the workhouse! And look here at that Dutch-built bitch, with the cabbages hanging over the stern. See, what a slovenly way she's rigged; by the living mouse, she's as heavy rigged as any frigate in the navy; but there goes a smart little brig! my eyes, Dick Holt!—where's the Dick Holt?—I say, Dick, doesn't you think as how that's the old Purse schooner? I'll lay my life on't."

The person thus addressed, coming forward, cast a look at the vessel, and growled out in a voice not unlike the growling of a bear, "Ay, ay, Bill, that's her; for I sailed in her four long years: and I'll bet any man a week's grog that that's the old Purse."

The boatswain being referred to, said that it was the old Purse; that she had been sold to the merchant-service, and now, being brig-rigged, will sail within three points of the wind. I had often heard of the sharpness of sailors in distinguishing vessels by the hull, but never before saw this so well exemplified. They went on criticising the different vessels that passed us, all of which, with a very few exceptions, had some fault or other, which, with a seaman's eye, some one or other discovered, till all of us were attracted by a vessel that emerged from behind the black rock, at the entrance of the river, and seemed to be beating up, tack and half tack.

"By the 'okey!" cried one, "she's a man-of-war brig: take a peep at her broad pennant."

"Stop a little, my boys," said another, "till she stretches across on the other tack, and then you'll have a fair vize of her: you can't tell right what she is at present."

"True, old boy," cried Jones, "we'll see directly; but I'll take you up your week's grog, old Dick, that she's a man-of-war. I dare say none of you will do that,—eh? Look here, now, there she goes in stays. Helm's-a-lee! the jib sheet's free—could any but a king's ship do it so cleverly? There now, look again: main-topsail haul, brace up the main yard—there she goes, my boys, round like a top! there 'tis again, my hearties. Haul off all!—in a brace of shakes, she's about and on the other tack now; if she had never a pennant up since she was launched, I'd swear that there brig's a man-of-war."

"You may see her coach-whip plain enough, now," said old Dick, "and there's old blue jacket on the quarter, with his bring-'em-near, trying to make out something.—Oh, oh; up goes her number; there it is! she'll fetch pretty near us the next tack, I think; and I'll tell you what it is, shipmates, there will be a draft made out and aboard of her, before to-morrow night; if there aint, why, I'll eat my hat, and that's no butcher meat. What do you say, Allan?"

"Why," said Allan, "I do not know. Aboard of these here tenders, one's never sure if he'll eat a second meal in 'em; they are always drafting and box-hauling a poor fellow about, like a cat in a tripe-shop. I doesn't like it at all; but if once I gets my old pins ashore again, devil burn me if ever I sets foot in one of the craft again!"

"O ho! hear that now!" cried a quarter-master of the name of O'Neil. "Only hear that! why, Allan, when you and I were in the old Ajax, before she was burnt, and that is better than a score of years ago, I've heard you say the same thing as often as I've heard bumboat women swear they didn't cheat; so you need not be after tipping us any of your back slang;

for jigger me if, as soon as this here old hooker's paid off, you don't be in a guardo, which is as bad, my name's not Jack O'Neil."

"Very well, very well," said Allan, have it your own way, for you'll have it so at any rate; but here's the brig taking in her top-gallant sails; ay, lower away the top-sails—let go your small bower—there you are now, snug and safe, my pretty fellows," continued he, as he walked aft to the gangway, followed by a number of us, to see if we could learn the name of the brig, and for what purpose she was come here.

After supper, we were all summoned on the quarter-deck, by the not very welcome cry of "All hands, hoy!" There we were informed that the brig was the Reynard, Lieutenant H—, commander; and as a draft was to go aboard to-morrow, those whose names were called were to step farther aft, apart from the rest. My name was the sixth on the list. I stepped aft, and saw Riley anxiously listening to the different sounds, as they issued from the mouth of the commander; but his name was not called. We were ordered to hold ourselves in readiness, to go aboard next morning. I went to Riley, and asked him if he could not get exchanged for another; but he answered, as I thought, in rather a sullen manner, that "I did not know the rules of the service so well as him, or I would not be axing him such foolish questions." I turned away rather hurt at this snappish reply, till I saw a small tear glistening in his eye, which explained his conduct; and as he sat down with his back to the mess table, I took hold of his hand, but he drew it from mine, and rising up, took a place on the combings. I now went on deck to take a view of Liverpool once more, before I left it, perhaps for ever. I sat down on the booms, thinking of home with an oppressed heart, until the sun set and the bell struck eight, when, going down to the lower deck, I found Riley had finished unslinging my hammock, and had stowed all my kit into my bag, which he had augmented by three shirts of his own, taken from his slender stock of half-a-dozen. I slept all night on the deck; and next morning we were called by the boatswain's mate, "All the Reynard's away! D've hear, there fore and aft, all you that are going on board the Reynard brig go aft on the quarter-deck." We accordingly went aft, while the name of each individual was called; then entering the boat, shoved off down the river, with the current, towards the vessel that lay at the distance of about a mile below.

Riley having contrived to get into the boat to pull an oar in place of another, I went and sat down beside him, where he continued plying me with good advice till we reached the brig, which, in spite of a heavy sea and a stiff breeze right ahead, we made in the space of half an hour. Having got aboard, and seen Riley away, we were mustered at the gangway, and sent below to get berths for ourselves. We all got ourselves properly stowed away before night, and, next morning, to my great comfort, we had only to wash decks instead of rubbing them with holy-stone. On the same day, we were ordered to get under weigh. By five o'clock, the hammocks were piped up, and the capstan manned in a very little time, when, the pipe playing "heave away"—"cheerily, men, cheerily," the anchor was at the cathead in fifteen minutes, and the brig, with all sail set, stood out of the river in gallant style.

The night we left Liverpool, we found ourselves on the Welsh coast, with a head wind, beating up towards Holyhead. The wind had increased so much, that the commander thought proper, with the advice of his officers, to stand out to sea, and not to attempt Holyhead that night. We accordingly hove the brig to under her storm-staysails and trisail, and stood out the remainder of the night, it blowing a heavy gale of wind. I had the middle watch, and the look-out at the weather cat-head for the first hour. The night was utterly dark, and the shore, which was to windward of us, was well known to be dangerous. Our little brig was tossed about like a cockle-shell on the top of the waves, and several seas breaking over her bows wetted me to the skin. A number of the men had gathered under the weather netting, which protected them from the spray. I scarcely knew one of the ship's company by name, except those that had come aboard with me; and I held by the hammock covers as I sat at the cat-head, listening to the discourse of the men below me.

"Well, well," said one, "it would be a bad tally, if this here

brig should get upon that there shore to-night. I think it would be as bad as the old Race-horse, that time you know, Bill, as she got upon the rocks in the Isle of Man—warn't you on board of her, Jack?"

"Ay, ay, Bo," said Jack, "and it was the devil's own night of it we had. 'Twas in the foretop when she struck, and blue lights was burning, and guns firing that night, as I shouldn't care ever to see the likes of again."

At this moment, I discovered what I took to be a vessel, a pretty large one too, seemingly beating up for Holyhead. I sung out directly, "Quarter-deck there!"

"Halló!" was the immediate reply.

"A large sail, sir," said I, "broad on the weather-bow; I can see her plainer every minute."

"Very well, very well," said the officer of the watch, "that will do." I then got the company of a number of the men, to whom, as the brig pitched, I pointed out the ship, which seemed to be upon the starboard tack. She hove in stays, and stood in on the other tack again, and we soon lost sight of her. I was relieved from the look-out by another, and went to try and walk the deck to wear away the time, but was soon diverted by the hands being turned up to strike top-gallant-yards and top-gallant-mast, as the gale was rapidly freshening. I went aloft along with three others, to send down the main-top-gallant-mast and yard. I and another were ordered to clear the mast from getting foul of the rigging as it was coming down. My companion lashed himself about half way up the top-mast rigging, while I made myself fast in the top, to bear the yard clear off the top-rim. We had got down the yard on deck, and the marines and after-guard were bowsing on the top-gallant tackle-fall, when we heard the report of a gun from the shore. The commander hailed the tops, inquiring if we had seen whereabouts the flash came from. We answered we had not, but we would watch for another. We had waited little better than a minute, when we observed a flash in the direction of the vessel that had passed us, and I had little doubt but that she had got ashore upon this dangerous coast, and was firing signals of distress. On coming on deck, we heard the commander giving orders to loose the main top-sail, but keep in all the reefs. We had therefore to go again and loose the sail, and I found it no very easy task to keep myself on the yard with both hands at work. The wind was so strong that it nearly took the breath from me, while the rain and the spray of the sea kept me completely drenched. I became so sick of this job, that I scarcely cared whether I held on for my own safety or not, when I roused to self-preservation by a loud cry of "Two men overboard!" They had been in the act of loosing the fore-sail, and reefing it, when they were washed off the weather yard-arm into the mighty deep. I heard their cries for assistance die away in the noise of the contending elements, while the officers ran about like madmen, scarcely knowing whether or not to lower down the boat. It was clear, however, that no boat could live in such a sea as was then running; so the poor fellows were left to their fate.

Soon afterwards all hands were piped to "splice the main brace," when each received a glass of rum; and my watch having expired, I turned into my hammock, but my sleep was disturbed by melancholy dreams, and the cries of the unfortunate men who were lost often rung in my ears.

By seven bells, the hammocks being piped up, I got on deck. The gale had subsided greatly, and chopped round in our favour; and having set some more sail, we expected to get into Holyhead before 10 o'clock. As we approached the entrance to the harbour, we saw a large merchant vessel on the rocks, with not a stick standing, save the stump of her mizen, to which was hanging the English ensign, union down. This was the vessel that we noticed the preceding night, and I found upon inquiry that she was a West Indiaman, and that very few of her crew had been saved. On entering Holyhead, we got into a snug berth between two merchantmen, close to the pier, where we lay till the Saturday following, waiting for a fair wind. One of our men gave the brig "French leave" here, by diving under the bottom of the vessel lying next us, and coming up on the other side, opposite some steps that were made on the pier, leaving his hammages. Two years afterwards, I met with him under a pur-

ser's name, aboard of the Parthion brig, in the Mediterranean, when he told me, that on leaving the brig, which he did from some private pique, he had travelled to London barefooted, and bareheaded, passing for one of the men belonging, as he said in his own words, "to that ere ship as was wrecked off Holyhead that dreadful night we were boxing off that place when we lost Bill Atkins and Harry Brown," and coming to London, went aboard the Perseus at the Tower, from which he had been drafted to the Parthion.

We left Holyhead on the Saturday, and kept channel groping for four months or better, during which time I had an opportunity of seeing Scilly, St. Ives, Penzance, Milford Haven, Falmouth, and other places round the coast. In the bay of St. Ives a circumstance occurred, which nearly consigned eight persons to a watery grave, and caused the death of as fine a young man, a midshipman, and as promising an officer as any in the navy. We were lying off the shore a good way, a gentle breeze blowing in, when, just as the moon sunk, I was roused by the boatswain's mate coming to the hammock, and telling me that the commander wanted me on the quarter-deck. As I was pulling on my trousers, I heard him warn other five, and give them the same orders, and I began to think it must be some secret expedition we were appointed for. I went on deck, and found the commander wrapt in a large boat cloak, with a Spanish nightcap on his head, and Mr. C——, the midshipman, standing beside him. I was ordered to get the boat lowered directly and hauled up alongside, which being done, we all, the commander, midshipman, and six men, stepped into it. The commander, being seated in the stern sheets, then ordered his steward to hand down "the baskets," who accordingly passed down twelve small baskets, with a dozen stone bottles in each, which, by their shape, I knew to be Holland gin bottles, and suspected that the commander was smuggling them ashore, as he had been on board a Dutch galliot the same afternoon, and as his house stood not very far from where we now lay. We were now told to shove off, which we did, and commenced pulling up cheerily for the land.

"Do you know the spot?" said the commander, addressing the midshipman.

"No, sir," he replied, "but I've a pretty good guess, and if you give me the tiller, as it is so dark, I know the bearing it has from the light we see, which is some limekiln, and I'll be bound I'll take you safe in."

"I'll keep the tiller myself, Mr. C——," said the commander, "for I know you're wrong in your notions of the place. Pull up, men; give way with your starboard oars," continued he, turning the boat's head in quite a different direction from that which the midshipman had indicated.

"For God's sake, sir, port the helm; for we're nearing the light," said Mr. C——, "and we shall run foul of some small rocks here, and the boat is sure to turn turtle with us."

"Whether have you or I the command of the Reynard's boat?" said the commander, snappishly; "do as you're ordered, Mr. C——, and let me hear no more of your insolence."

This short dialogue did not lose its effect on any of us, one or two of whom had been on the same kind of expedition before, and one of them, a daring fellow, called *Quid Tom*, for a nickname, even ventured to growl out loud enough to be heard, that he was d—d if he liked them there smuggling excursions, at all, and it was an infernal shame to risk people's lives for the sake of a few shillings duty. The commander, however, did not, or pretended he did not, hear the insinuation, but kept his eye fixed on the light, to which we were now rapidly approaching. We had pulled this way for about the space of ten minutes, without a word being spoken on either side, when all at once I felt the boat rising out of the water, and greating her bottom on some rock. I had just time to hear Mr. C—— cry "There we are; I told you!" when the boat upset, and all of us were tumbled into the water. I was for a few seconds under the surface, and when I rose I made for the rock, and found *Quid Tom* clinging to it. I shook the water from my head and saw the boat a few yards from us, turned bottom up, and mock, clothes, and bedding, and about fifteen pounds of

heard one of the men hallooing to the others as they swam towards the land. After a few minutes swimming, we reached the shore, where we found the commander mustering the men, two of whom were still wanting after we arrived.

The two that were missing were Mr. C—, and a young man of the name of Dooly, an Irish lad, and Roman Catholic. After a search, we found the latter on his knees, on the beach, crossing himself with great fervency, and repeating his paternosters aloud; but poor Mr. C— was gone for ever. We went up to the house of the commander, where we were well entertained, and so we might, for he knew it was in the power of any of us to break him out of the service for this night's work. We went to sleep till daylight, and on regaining the beach found the boat had drifted in, which, on hauling up, disclosed the body of Mr. C—, attached to the hook or the sheet block that had got fast to his coat, and in upsetting, had held the unfortunate young gentleman down till he was drowned, rendering useless all his skill in swimming, in which he was proficient. We carried the body to the commander's house, put it on a plank, and bore it across the country to his father's cottage, which happened to be at a distance of only six miles, after having received a crown each from old Cro'jack-eye, as Quid Tom called him, for our trouble, and an order of secrecy as to the cause that led to this unfortunate accident.

On reaching the house of Mr. C—'s father, we delivered the body to the afflicted parent, and proceeded to the next town, where we stopped all that day and the next; when our money being gone, on the morning of the third, we thought it high time to top our booms and sail large, and accordingly got aboard the brig, without a question being asked.

This affair was never spoken of, and only made a short paragraph in the newspapers, in which it was said, "Mr. C— was unfortunately drowned in the Bay of St. Ives, by the upsetting of a boat belonging to his Majesty's sloop the Reynard."

SUFFERINGS OF TWELVE MEN IN AN OPEN BOAT, 1797.

THE Thomas, commanded by Captain M'Quay, and belonging to Liverpool, was a slave-ship, trading between Barbadoes and Africa. In August, 1797, having taken in a cargo of slaves, they set sail for their destination. War having broke out between France and Great Britain, afforded an opportunity for the depredations of French privateers, with which the coast of Africa was so infested; and their force was so powerful, that Captain M'Quay judged it expedient to teach the slaves the use of fire-arms; and this he was the more induced to do, as, in the course of his former voyages, he had frequent encounters with those marauders. The slaves did not fail to avail themselves of his instructions, particularly as it might prove the means of enabling them to regain their liberty, an object which is never lost sight of by mankind; the slaves, under all circumstances, and in every situation, especially in the first hardships endured on board a slave ship, being particularly anxious to throw off their galling fetters, and if not able to regain the soil of their birth, thirsting to revenge themselves on their merciless oppressors.

Full of this intention, a secret conspiracy was formed amongst them; and early in the morning of the 2nd of September, after having taken possession of the arm-chest, about two hundred of them suddenly appeared on the deck. They instantly fired upon the crew, some of whom quickly fell; others, unprovided with the means of defence, or rendered by the surprise incapable of resistance, leaped overboard, while another portion, escaping by the cabin-windows, took refuge in the boat which was astern. The captain and the remainder still continued to exert themselves in their endeavours to quell the insurgents; but being few in number, and provided with no other arms than those that were usually kept in the cabin, they could entertain very little hope of

success. Nevertheless, when the captain observed the crew about to leave the ship in the boat which they had cut from her lashings at the stern, he remonstrated with them on their conduct so warmly, that they were induced to return; but too strongly convinced that they were overpowered by the insurgents that they could not recover the vessel, and that this was the only means of escaping the threatening danger, twelve of them once more made their way to the boat, and forsook the vessel. It was too soon evident, however, that the survivors of the insurrection had but evaded one calamity to encounter another equally as dreadful: they found themselves at the mercy of the elements, and exposed to all the miseries of hunger and thirst. This they suffered for several days, when they accidentally discovered a small turtle asleep, floating on the surface of the water, and fortunately succeeded in making it their prize. This, however, was not long in being consumed amongst so many, and the unfortunate men were once more reduced to great necessity for want of food. The only articles in the boats which they could devote to satisfy the ravenous cravings of hunger, were their shoes and two hairy caps, which they soaked in water, and when sufficiently softened, devoured portions of the leather; but they being all consumed, and a protracted length of time elapsing without any relief, or prospect of obtaining any, they were compelled to resort to the horrible expedient of devouring one another; but to prevent any contention as to who should escape, or who should be the first to be sacrificed, they cast lots to determine the sufferer.

It is not related who was the miserable person on whom the lot fell, but with manly fortitude he resigned himself to his unfortunate companions, only requesting that he might be bled to death. With this they were enabled to comply, as the surgeon of the Thomas was among those in the boat, and had his case of instruments in his pocket when he quitted the ship; but scarcely was the vein opened by the skilful hand of the operator, than the miserable sufferer, applying his own parched lips, drank the red stream as it flowed, while his expectant comrades anxiously watched the last breath of their devoted victim, and, while yet quivering with vital warmth, glutted their ravenous appetites with the horrible repast.

This new source of relief was, however, productive of the most terrible consequences. Those who indulged to excess in their cannibal appetite soon perished in all the horrors of raging madness, teaching their survivors, by an awful example, their probable fate on recurring to a similar expedient; but some few who had refused participation in the revolting repast, still preserved their senses.

At length, on Tuesday the 10th of October, the thirty-eighth day from the time of forsaking the ship, the survivors descried the shore of Barbadoes, but having no means of directing the course of the boat, they abandoned themselves to despair. Providence, however, was their guide, and they succeeded in reaching the land; but they were reduced to such a state of weakness, that they were scarcely able to leave the boat, and one of them, a boy, his strength being utterly exhausted, fell into the sea and was drowned, none of them being capable of assisting him.

The miserable survivors of this unfortunate company exerted themselves to crawl on their bellies to the mouth of Joe's river, on the north-east coast of Barbadoes, where they quenched their thirst; and, soon after this, being discovered by a Mr. Mascoll, they received from him and another person all the assistance and hospitality which their deplorable situation required.

THE Emperor Charles the Fifth, one day observed very shrewdly to an Ambassador of Henry the Eighth, "your master would not give himself the airs he does, were it not that his dominions are surrounded by a herring pond."

EXTRAORDINARY ADVENTURES OF AN ENGLISH MARINER.

In the year 1730, the John and Anne, Edward Burt, master, bound from London to Jamaica, was attacked in latitude 16° north, near an island called Swan Island, by a pirate vessel, with eighteen guns, and about ninety men, mostly Spaniards, commanded by Captain Johnson, an Englishman, and Pedro Polias, a Spaniard. The John and Anne had not above twenty-five men on board, and only eight carriage and ten swivel guns, besides some small arms. However, the latter made a gallant defence, but, overpowered by superior numbers, they were compelled to yield. At first, the pirates were disposed to murder every soul on board; but on the interposition of John-

son, their captain, and one Echlin, another Englishman, they were spared. But soon afterwards, they came to a serious debate amongst themselves, how to dispose of the prisoners without taking away their lives, as it was not safe to let so many men remain among them, who possibly, upon some turn of fortune, might be revenged. They therefore resolved to maroon them, that is, set them on shore in some desolate country, and there let them shift as they could. Accordingly, John Cockburn, and twelve more of the captured ship's company, were left upon a desolate island, where they could perceive no possibility of subsistence. While they were bewailing their fate, they saw the boat which had brought them thither, returning from the ship, with a naked man on board, under a strong guard, who was put ashore beside them, and the boat immediately rowed away.

COCKBURN AMONG THE BURICA INDIANS.

The person whom the pirates had brought to them, proved to be the gunner of the pirate sloop, and who, after they had boarded their ship, was one of the most hotly bent against them. He could not speak English, but could talk Spanish and Italian very well, being a Neapolitan by birth. He proceeded to inform them, that upon a quarrel between his two commanders and himself, about sharing the plunder, they had both determined to maroon him in the same manner as they had done the English; and he uttered a thousand curses on himself, if he did not speedily find out the means to be revenged. He then asked if there was any among them that could swim well. Cockburn told him he could, and was ready to attempt any thing practicable towards the preservation of all; but as to the rest, they were most of them wounded, and incapacitated for desperate undertakings.

No. 20.

He and Cockburn then agreed to go to the northern part of the island, and after a walk of about six hours, they came to a point of land which ran pretty far into the sea. The water between this and the continent is very full of alligators, and about a Spanish mile over. He said, if it was possible for them to swim to the main land, he knew several gentlemen of fortune there, meaning pirates, who commonly make that place their general rendezvous, and that it was most likely they might get a canoe of them to transport the rest of the English over. They were not long before they came to a resolution; and so, taking each other by the hand, they leaped into the water, and swam away stoutly. They had not gone far, before Cockburn very narrowly escaped having his leg bit off by an alligator; but by the assistance of Providence, they succeeded in getting safe across. Being thus landed at a place called

Porto Cavello, they went about three miles through a large wood, till they came to a great lagoon, that is, a flow of water from the sea, passing between the mountains. They found several long boats sunk in this place; and, on the shore, at a distance, they saw a large tent, and a great many men with guns planted thick around them. When they came within hearing, the gunner called out, desiring them not to shoot at them, telling his name, which was well known to them. Upon their promise of not firing, they marched up naked as they were.

The gunner now told them his story, and desired some of them to take a canoe, and go with him to fetch over the rest of the English from the island. It was Cockburn's misfortune to be left behind with the rest of the pirates till their return; and as soon as his friend was gone, he was ordered to sit down

at a distance, threatening, if he stirred hand or foot, he was a dead man. Under such a restraint, he suffered dreadfully from the stings of musquitos and yellow ants.

About two o'clock the next morning, arrived all his companions, who had been left at Tiger Island, so called from the great number of those creatures in the woods there. From the time Cockburn left them they despaired of ever seeing him again; not one of them had a rag to cover him, except Mr. Rounce, whose shirt was so bloody, from the wounds he had received, that it could not be removed.

Their protector, the gunner, did not return. After he had taken the English off the island, he made the men in the canoe row him about, in search of the vessel from which he had been discarded, and happening to fall in with her, he prevailed on the two captains to receive him again, and then

ordered the men to return to the place where they left Cockburn, desiring them to direct them to any part of the country they should be inclined to go to; and this was the last kind office they received from this generous man.

The next day, the men they were among granted them liberty, in order, as they said, to get a vessel bound for the Havannah, which wonderfully revived their drooping spirits; but they afterwards found, by sad experience, it was mere delusion, for no such vessel could they find. They appointed two Indians to be their guides to a town called Candilero, who led them over several high and craggy mountains, extremely difficult to ascend, especially for wounded men. This was the first setting out on a journey, as they computed, of two thousand three hundred miles, which they travelled barefooted, through an unknown track of land at least to

them, which took them up ten months. All the while they were exposed to many dangers, and underwent as many hardships as was possible for human nature to sustain. They suffered exceedingly from hunger; and Mr. Rounce, who was obliged frequently to stop and have his wounds dressed, endured considerable pain.

On their entering St. Peter's Solio, a Spanish town, they were carried before the deputy-governor, who, after asking them some questions, said he should be obliged to commit them to prison, till he could send to the governor of Comayague, to know what he should do with them. The only favour they entreated of him was, that he would give them something to eat; upon which he said, he would suffer one of them to go about the town to collect charity for the rest. This office Cockburn was obliged to take upon him, because

there was none of their company besides that could speak a word of Spanish. The first expedition he made in this way, he got some plantains, and the head of a buffalo; with which he hastened to his fellow-sufferers, whom he found in prison, lying on the ground, among strange sorts of vermin, and making bitter complaints of their wounds.

A negro, who heard their narrative, was greatly moved with their sufferings. He acquainted them, that the governor of Comayague was a cruel man to the English, and that he would certainly condemn them all to the mines. This terrified them to that degree, that three of them, Rounce, Bannister, and Cockburn, resolved, if possible, to make their escape out of prison, and try if they could get to some part of the South Seas. This project they resolved upon unknown to the other prisoners, and stole out of town about ten o'clock the same night.

By direction of the negro, they took a path which led them through the mountains. After a variety of adventures, privations, and sufferings, and enduring imprisonment at St. Michael's, where they obtained a pass from the governor, through the interest of his lady, they unexpectedly met with two of their former companions, who had also made their escape from the prison at St. Peter's Solio; and with whom, in their company, the party arrived at Grenada, and went directly to the Alcade major, who is always a Spaniard, and showed him their pass. Upon which he gave them two reals a piece, and said they must be lodged in prison while they stayed there; but they should every day have their liberty to go about the town as they pleased. They applied to the governor for a pass, intending to go to Porto Bello by the way of the lake of Nicaragua. His reply was, that he had instructions from the king of Spain not to suffer any Englishman to pass up or down the lake, and that therefore he could not, and would not comply with their request. This flat denial utterly dismayed them.

At this time an accident happened in the prison where they lodged, that might have proved fatal to them, had not some precaution been used. Five mulattomen, who were closely confined in irons for the cruel murder of an Alcade major, were passed from St. Michael's to Grenada, in order to be sent to the castle of St. John, there to remain during life. Two of these very fellows came in one of their canoes, when they crossed the great gulf of Fonseca, being at that time loaded with irons. These men were, for the present, among other criminals, in the next room to our unfortunate travellers; and one night when they were asleep they called out, as if in great surprise, to an old Indian who lay in the room with them, who was an officer of some authority, as well in the town as in the prison. He started suddenly out of his sleep at the noise, caught up a light, and ran to see what was the matter. At this time, they had unlocked the outer door, supposing the inner one to be fast; and the Indians rushed suddenly upon him, and attacked him violently with staves, until he fell down as if dead. Our mariners awaking with the noise, and supposing it to be among the prisoners, for they missed the old man, got up between sleeping and waking, and ran to inquire the cause of the disturbance. By the time they had got to the place where they thought they had heard the noise, it ceased, and they found all in darkness. At last, they chanced to stumble over a body, which lay in the doorway of the place where these men were kept. They endeavoured to raise the body, but perceiving no signs of life in it, they concluded the ruffians had broken the gaol open, and murdered the old man, which threw them into great consternation. To prevent any suspicion of the crime being attached to them, they went forthwith to the Alcade major of the town, and acquainted him with what had happened. Although it was in the dead of the night, he rose, and came himself along with them to the prison, but took care to be well guarded by his officers. He highly commended their care and fidelity in this affair. On their return to the prison, they were very glad to find their old friend, whom they had supposed to be dead, revived, though much bruised and afflicted for the loss of his prisoners, who had made their escape, and left their chains and shackles behind them, strewed about in pieces. The Alcade commanded strict search to be made after them,

and the next day they were found to have taken sanctuary in a church belonging to a monastery of Franciscan friars, who refused to deliver them up to justice, saying, since they were fled thither, they were bound to shelter them from the rigour of the law.

After a stay of about ten days at Grenada, our travellers departed for Nicoya, where they remained nearly six weeks, at the end of which time, the Alcade major acquainted them that a Spanish gentleman, who had come from Wattermall to Alberoy, was going to Pueblo Nuevo, which is not above one hundred leagues on that side of Panama, and that he went with one canoe and a paragua; by which, they who were in health might get a passage, but that Mr. Rounce, who still continued very ill, must wait until another opportunity offered. After they had returned him their thanks for the favours he had conferred on them, they set out for the river in order to embark.

It occupied them three days travelling over high and steep mountains, seeing but three wigwams by the way, and then wading over a savanna, up to their middle in water. At the end of four days, they arrived at Alberoy, and found there the Spanish gentleman, named Quintos Cataline, and his Indians, busy in making ready their craft. Three of Cockburn's companions here fell sick, upon which account they were left behind.

In the month of October they set sail from Alberoy, in their little canoe, and five Indians to assist them. The very first night they left the island of Chira, a storm began, which lasted five days, and after having in vain attempted to weather a reef of rocks running out three leagues into the sea, called Point Mala, they were forced to return about ten or fifteen leagues, to a place called Mautoose, where there were no inhabitants, but a good harbour for their canoe. There they went ashore, and made a good fire to dry themselves; and where they remained four days waiting for fair weather. On the morning of the fifth, Cockburn, on awaking, missed three of the Indians, on which he called out to the Indian patron, or pilot, who was asleep, and asked him if he knew anything of the three that were missing. He looked around, and seeing their bows, arrows, nets, and calabashes gone, cried out that they were run away; upon which they found themselves under the necessity of returning back to Nicoya, in order to get more Indians to their assistance.

The Nicoyans were greatly surprised to see them enter their town a second time, imagining that they had, ere this, got to Pueblo Nuevo; but Cockburn went directly to the Alcade major, to whom he related all their misfortunes, and inquired for his companions. The Alcade told him that as soon as they were able to travel, he had an opportunity of sending them altogether to Panama. After a stay of six days at Nicoya, the Alcade major ordered the other Indians he had appointed to accompany them to get mules ready to carry them to Alberoy, it being impossible to travel on foot, the savannas being overflowed. They took leave once more of the Alcade and his lady, and set out for Alberoy, and arrived in five days, and embarked the next day, with five Indians, and such provision as the Alcade major had furnished to them. They came at last to a place called the Capaces, where they saw several Indians ashore, who, although they were afraid at first to venture themselves among them, received them very kindly. They afterwards crossed the gulf of Heradura, and having gone ashore to rest themselves, Cockburn's companion was taken so ill, that he was obliged to leave him here in a dying state.

In six days after they made the island of Caino, but the wind turning against them, and their provision and water being done, they agreed to row in for the shore as near as possible; and when they came to an anchor, three Indians and Cockburn took each a masheet, and swam ashore, and then fell to cutting down cocoa-nuts that grew by the sea side. No sooner had they got as many as they thought they could conveniently swim off with than the wind began to blow hard, and immediately so great a sea rose on the beach that they could not get off the canoe, but were obliged to remain there that night.

As it grew dark, the tigers began to make a hideous roaring about them, and the misfortune was, they could find no wood to make a fire; and if they could, the rain that fell would soon have extinguished it. They therefore climbed the first high tree they came to. The foremost of the tigers had the boldness to advance so near that one of the Indians, stooping forwards, cut off his forepaws with his masheet, upon which he dropped from the tree roaring dreadfully. Hereupon they all fell to tearing him limb from limb, and disposed of his carcase in such a manner that there was not the least bit of him to be seen by morning.

The next day, the weather proving fair, towards evening they got to their canoe; the poor Indians they left in her being rejoiced to see them again, having given them over for lost. They rowed hard all that night, and the next day made the point of Burica, about which is Golfo Dolce; but the wind blowing very hard at south-west, they could not possibly weather it; upon which the Indians endeavoured to get to a place on this side the point, where they might shelter their canoe; but before they reached it they were driven among the breakers, and the canoe stove to pieces. The party made shift to get all on shore, and to preserve all their little necessities.

They travelled along the shore several leagues, and coming to a fine fresh river, which vents itself into the gulf, opposite two islands that lie partly in the middle of it, the gulf being twenty leagues across. Cockburn proposed that they should there make a raft of trees, or balse, as the Indians call it, to transport themselves to one of the islands; from whence they might with more ease attain the main land, on the other side of the gulf. Having finished it, they were detained several days by bad weather; but at last the weather cleared up, and having got plenty of fish with them, they launched the balse, and reached in safety the intermediate island, and afterwards they had the satisfaction of arriving on the other shore.

The first thing they did upon coming ashore, was to make a wigwam: that done, the five Indians took up their masheets to go a-hunting, and desired Cockburn to have a good fire ready by the time they returned. As soon as they were gone he fell to work, and made his fire accordingly. Finding they stayed longer than ordinary, he began to be a little uneasy. He spent that night between hopes and fears, and as soon as the sun rose, not having patience to wait longer, he got up, and followed the tracks of their feet for above a mile, till he came to a river, where he lost them. Then, concluding they had crossed the river, he resolved to do so too, in farther search of them; but hearing a great noise of tigers on the other side, and knowing they would take into fresh waters, he ran full speed back again to his fire by the sea-side, where he sat waiting two whole days and nights, earnestly offering up his vows for their safe return; but, alas! he never saw them again.

Thus, after a long series of misfortunes and miseries in company, he found himself at last singled out from his companions, to be the most forlorn and hopeless of them all. Having fortified himself as well as he could, he took a sorrowful leave of the place, threw his nets across his naked shoulders, and departed. All the provision he had, was some plantains remaining of those they got on the island, where they rested in crossing Golfo Dolce. He took care to keep as close to the sea as possible, believing that no wild beast would venture to attack him near it. In swimming over a river, he miraculously escaped drowning; for the current carried him out a great way to sea, among rocks and breakers. It was his good fortune, after all this, to get ashore on the other side of the river, where being again on his feet, to his great astonishment, his nets and bull-hide case, which held his knife and provisions, and which he had dropped in his struggles against being carried out to sea, were brought safe ashore to him by the waves. Having refreshed himself two or three hours, he again set forward; and after thirty-three days more hard travelling, during which he slept five nights in a tree, he at last came to a great river, where, after he had allayed his thirst, he sought for wood to make a fire: but espying a wigwam on the other side of the river, he caught up his nets, and swam across to it, and then had the misfortune to find

nobody in it. This was a sign, however, that some Indians had lately been here. He looked about for the tracks of their feet, which he followed till they led him to the side of a wood, where he found another wigwam, and a fire with an earthen crook full of plantains, and a hog boiling on it. Without so much as considering what he was about, he presently took the victuals off the fire, and ate so eagerly, he thought he should never be satisfied. Never had he met with such delicious fare as this seemed then, not having tasted any thing for about forty days, but cocoa-nuts and plantains.

After this he fell into a sound sleep, and on his awakening, finding nobody had come, he went into the wigwam to examine it. There he found a good quantity of provisions, and soon after, a dog came leaping and jumping about him, which made him look out on all sides, and at last he saw three Indians coming down by the river side. As soon as they saw him, they made a full stop, as if in surprise. Cockburn took courage and beckoned to them; upon which one of them, an old man, came up, and shook him by the hand. Cockburn asked him what tribe of Indians they were, and if he could speak Spanish? He said they were Indians of Burica, and that he could speak a little Spanish. Then he called to the other two to advance, which they did. After this, he spread a skin on the ground, desiring him, in a friendly manner, to sit down. Cockburn had the courage to confess how free he had been with their victuals in their absence. The old man answered he was very glad he had done so, for he judged by his aspect, he had great need of it. They then got supper ready, and urged our traveller to partake freely before going to rest.

These Indians had come here to dive for pearl, and after Cockburn had rested here four days, the Indians began to prepare for their intended journey. After they had gone about a league, they took into the mountains, which they passed in five days, and afterwards came to the sea-side, where they made a fire and staid all night. The next morning, they set forward again, every man with his net. Having kept along the sea beach, they came within a mile of the river Cherokee, where these Indians, whom Cockburn had been travelling with twelve days, said they must now leave him.

Soon after their departure, Cockburn got to the river side, where, seeing no likelihood of meeting a vessel, he began to make a little balse to cross it; but he had not been long thus employed before he heard the barking of dogs, upon which he desisted from his work, and looking about him, he saw eight Indians in a canoe. He hallooed out to them instantly, and they came toward him: he perceived they were Christians, for they had great wooden crosses hanging about their necks. He begged of them to come ashore, and take him to the other side in their canoe, which they did, saying he must keep close to the river, till he came to a path that would lead him directly to the governor's house. These Indians were inhabitants of the town of Cherokee, and were waiting on the river to catch turtle.

Being landed on the other side of the river, Cockburn took the path as directed by the Indians, that led him to a fine open country, where was great plenty of cattle, Indian corn, and fruit of several sorts. Towards evening, he came within sight of a house, which proved to be the governor's, and stood about half a mile from the town of Cherokee.

Being led into the room where the governor sat, he presently ordered him to give an account how he came thither. Upon this he told him the most remarkable occurrences of his unfortunate travels. The governor was astonished that a lonely man, a stranger to the country, and one destitute of all succour and defence, should travel so great a track of land as is between Cherokee and Golfo Dolce only, exclusive of what he travelled before he came to the latter place. He then gave orders for his refreshment, and appointed him an apartment in his own house to lodge in. The next morning he showed him a gun which he had bought of an Englishman, at Panama, for one hundred pieces of eight, which might cost in England about thirty shillings. This he

said he should be very glad to have exercised, and if he could instruct him how to make use of it, he would reward him well for doing so, for he was entirely ignorant of guns. Cockburn was not a little rejoiced that he had proposed something whereby he might oblige him; and accordingly went with him to the grounds adjoining his house, where they shot a

couple of deer, and a few small birds. By the influence of the governor, who was a native of New Spain, and one of the people called Mesties, Cockburn was conducted to Panama, from which, by means of the English factory there, he was sent to Jamaica, where he met four of his companions, and soon afterwards returned to England.

DEATH OF CAPTAIN COOK.

It had long been a favourite object with navigators, and particularly the English, to discover a shorter, a more commodious, and a more profitable course of sailing to Japan and China, and indeed to the East Indies in general, than by making the tedious circuit of the Cape of Good Hope. The discovery, if not absolutely despaired of, had been unsuccessful in such a number of instances, that it ceased for many years to be an object of pursuit.

That Captain Cook who had just returned from his second interesting voyage, was of all men the best qualified for carrying it into execution, was a matter that could not be called in question. But however ardently it might be wished that he would take upon him the command of the service, no one (not even his friend and patron, Lord Sandwich himself) presumed to solicit him upon the subject. At the same time, nothing could be more natural than to consult him upon everything relative to the business; and his advice was particularly requested with regard to the most proper person for conducting the voyage. To determine this point, the captain, Sir Hugh Palliser, and Mr. Stephens, were invited to Lord Sandwich's to dinner. Here, besides taking into consideration what officer should be recommended to his Majesty for accomplishing the purposes in view, many things were said concerning the nature of the design. Its grandeur and dignity, the consequences of it to navigation and science, and the completion it would give to the whole system of discoveries, were enlarged upon in the course of conversation. Captain Cook was so fired with the contemplation and representation of the object, that he started up, and declared that he himself would undertake the direction of the enterprise. No time was lost in laying the matter before the king; and Captain Cook was appointed to the command of the expedition on the 10th of Feb., 1776.

All former navigators round the globe had returned to Europe by the Cape of Good Hope. But to Captain Cook the arduous task was now assigned of attempting it by reaching the high northern latitudes between Asia and America.

Two vessels were fixed upon by government for the intended service,—the *Resolution* and the *Discovery*. The command of the former was given to Captain Cook; and of the other to Captain Clerke. Every preparation for the voyage being completed Captain Cook received an order to proceed to Plymouth, and to take the *Discovery* under his command. Having accordingly given the proper directions to Captain Clerke, he sailed from the *Nore* to the Downs on the 25th of June. After a highly

interesting voyage, in which Captain Cook made many discoveries, on the 30th of November he came to anchor at an island called by the natives Owwhyhee. As it appeared to be of greater extent and importance than any of the islands which had yet been visited in this part of the world, Captain Cook spent nearly seven weeks in sailing round, and examining its coast. Whilst he was thus employed, the inhabitants came off from time to time in their canoes, and readily engaged in traffic with our voyagers.

On the 17th, the ships came to an anchor in the bay which had been examined by Mr. Bligh, and which is called Karakakoo by the inhabitants. At this time the vessels continued to be much crowded with natives and were surrounded with a multitude of canoes.

Feb. 12th, says Mr. Samwell, Kario-poo, the king, paid a visit to Captain Cook, the next day, February the 13th, we were visited by the natives in great numbers. I landed with another gentleman at the town of Kava-roah, whence we found a great number of canoes just arrived from different parts of the island, and the Indians busy in constructing temporary huts on the beach for their residence during the stay of the ships. On our return on board the *Discovery*, we learned that an Indian had been detected in stealing the armourer's tongs from

the forge, for which he received a pretty severe flogging, and was sent out of the ship. Notwithstanding the example made of this man, in the afternoon another had the audacity to snatch the tongs and a chisel from the same place, with which he jumped overboard, and swam for the shore. The master and a midshipman were instantly despatched after him in a small cutter. The Indian, seeing himself pursued, made for a canoe; his countrymen took him on board, and paddled as swift as they could towards the shore. We fired several muskets at them, but to no effect, for they soon got out of the reach of our shot. Pareah, one of the chiefs, who was at that time on board the *Discovery*, understanding what had happened, immediately went on shore, promising to bring back the stolen goods.

To widen the breach between us, some of the Indians in the night took away the *Discovery's* large cutter, which lay swamped at the buoy of one of her anchors; they had carried her off so quietly, that we did not miss her until the morning of Sunday, February 14th. Captain Clerke lost no time in waiting upon Captain Cook to acquaint him with the accident. He returned on board with orders for the launch and small cutter to go, under the command of the second lieutenant, and lie off

the east point of the bay, in order to intercept all canoes that might attempt to get out, and if he found it necessary, to fire upon them. At the same time, the third lieutenant of the Resolution, with the launch and small cutter, was sent on the same service to the opposite point of the bay; and the master was despatched in the large cutter in pursuit of a double canoe already under sail, making the best of her way out of the harbour. He soon came up with her, and by firing a few muskets, drove her on shore, when the Indians left her. This happened to be the canoe of Omea, a man who bore the title of Orono. He himself was on board at the time, and it would have been fortunate if our people had secured him, for his person was held as sacred as that of the king.

During this time Captain Cook was preparing to go ashore himself at the town of Kavaroah, in order to secure the person of Kariopoo, before he should have time to withdraw himself to another part of the island out of our reach. We had reason to suppose that the king and his attendants had fled when the alarm was first given, and in that case it was Captain Cook's intention to secure the large canoes which were hauled up on the beach. He left the ship about seven o'clock, attended by the lieutenant of marines, a sergeant, corporal, and seven private men: the pinnace's crew were also armed, and under the command of Mr. Roberts. As they rowed towards the shore, Captain Cook ordered the launch to leave her station at the west point of the bay, in order to assist his own boat. He landed, with the marines, at the upper end of the town of Kavaroah: the Indians immediately flocked round as usual, and showed him the customary marks of respect, by prostrating themselves before him. There were no signs of hostilities nor much alarm among them. Captain Cook, however, did not seem willing to trust to appearances, but was particularly attentive to the disposition of the marines, and to have them kept clear of the crowd. He first inquired for the king's sons, two youths who were much attached to him, and generally his companions on board. Messengers being sent for them, they soon came to him, and informing him their father was asleep at a house not far from them, he accompanied them thither, and took the marines along with him. As he passed along, the natives everywhere prostrated themselves before him, and seemed to have lost no part of that respect they had always shown to his person. He was joined by several chiefs, among whom was Kanynah, and his brother Koo-howroah. They kept the crowd in order, according to their usual custom; and being ignorant of his intention in coming on shore, frequently asked him if he wanted any hogs, or other provisions; he told them that he did not, and that his business was to see the king. When he arrived at the house, he ordered some of the Indians to go in and inform Kariopoo that he waited without to speak with him. They came out two or three times, and, instead of returning any answer from the king, presented some pieces of red cloth to him, which made Captain Cook suspect that he was not in the house; he therefore desired the lieutenant of marines to go in. The lieutenant found the old man just awaked from sleep, and seemingly alarmed at the message; but he came out without hesitation. Captain Cook took him by the hand, and in a friendly manner asked him to go on board, to which he very readily consented. Thus far matters appeared in a favourable train, and the natives did not seem much alarmed, or apprehensive of hostility on our side; at which Captain Cook expressed himself a little surprised, saying, that as the inhabitants of that town appeared innocent of stealing the cutter, he should not molest them, but that he must get the king on board. Kariopoo sat down before his door, and was surrounded by a great crowd. In a little time, however, the Indians were observed arming themselves with long spears, clubs, and daggers, and putting on thick mats, which they used as armour.

An old priest came to Captain Cook with a cocoa-nut in his hand, which he held out to him as a present, at the same time singing very loud. He was often desired to be silent, but in vain; he continued importunate and troublesome, and there was no such thing as getting rid of him or his noise: it seemed as if he meant to divert their attention from his countrymen, who were growing more tumultuous, and arming themselves

in every quarter. Captain Cook, being at the same time surrounded by a great crowd, thought his situation rather hazardous; he therefore ordered the lieutenant of marines to march his small party to the water-side where the boats lay within a few yards of the shore. The Indians readily made a lane for them to pass, and did not offer to interrupt them. The distance they had to go might be about fifty or sixty yards, Captain Cook followed, having hold of Kariopoo's hand, who accompanied him very willingly; he was attended by his wife, two sons, and several chiefs. The troublesome old priest followed, making the same savage noise. Keowa, the younger son, went directly into the pinnace, expecting his father to follow; but, just as he arrived at the water-side, his wife threw her arms about his neck, and, with the assistance of two chiefs, forced him to sit down by the side of a double canoe. Captain Cook expostulated with them, but to no purpose; they would not suffer the king to proceed, telling him that he would be put to death, if he went on board the ship. Kariopoo, whose conduct seemed entirely resigned to the will of others, hung down his head, and appeared much distressed.

While the king was in this situation, a chief, well known to us, of the name of Coho, was observed lurking near, with an iron dagger, partly concealed under his cloak, seemingly with the intention of stabbing Cook, or the lieutenant of marines. The latter proposed to fire at him, but Captain Cook would not permit it. Coho closing upon them, obliged the officer to strike him with his piece that made him retire. Another Indian laid hold of the sergeant's musket, and endeavoured to wrench it from him, but was prevented by the lieutenant's making a blow at him. Captain Cook, seeing the tumult increase, and the Indians growing more daring and resolute, observed that if he were to take the king off by force, he could not do it without sacrificing the life of many of his people. He then paused a little, and was on the point of giving his orders to re-embark, when a man threw a stone at him, which he returned with a discharge of small shot (with which one barrel of his double piece was loaded.) The man having a thick mat before him, received little or no hurt; he brandished his spear, and threatened to dart it at Captain Cook, who, being still unwilling to take away his life, instead of firing with ball, knocked him down with his musket. He expostulated strongly with the most forward of the crowd upon their turbulent behaviour. He had given up all thoughts of getting the king on board, as it appeared impracticable; and his care was then to act on the defensive, and to secure a safe embarkation for his small party.

One man was observed, behind a double canoe, in the act of darting his spear at Captain Cook, who was forced to fire at him, in his own defence, but happened to kill another close to him, equally forward in the tumult. The sergeant observing that he had missed the man he aimed at, received orders to fire at him, which he did, and killed him. By this time the impetuosity of the Indians was somewhat repressed; they fell back in a body, and seemed staggered; but being pushed on by those behind, they returned to the charge, and poured a volley of stones among the marines, who, without waiting for orders, returned it with a general discharge of musketry, which was instantly followed by a fire from the boats. At this, Captain Cook was heard to express his astonishment; he waved his hand to the boats, called to them to cease firing, and to come nearer in to receive the marines. Mr. Roberts immediately brought the pinnace as close to the shore as he could without ground. When the marines had fired, the Indians rushed among them, and forced them into the water, where four of them were killed; their lieutenant was wounded, but fortunately escaped, and was taken up by the pinnace. Captain Cook was then the only one remaining on the rock; he was observed making for the pinnace, holding his left hand against the back of his head, to guard it from the stones; and carrying his musket under the other arm.

An Indian was seen following him, but with caution and timidity; for he stopped once or twice as if undetermined to proceed. At last he advanced upon him unawares, and with a club, or common stake, gave him a blow on the back of the head, and then precipitately retreated. The stroke seemed to

have stunned Captain Cook; he staggered a few paces, then fell on his hand and one knee, and dropped his musket. As he was rising, another Indian stabbed him in the back of the neck with an iron dagger. He then fell into a bite of water about knee deep, where others crowded upon him, and endeavoured to keep him under; but struggling very strongly with them, he got his head up, and casting his look towards the pinnace, seemed to solicit assistance. Though the boat was not above five or six yards distant from him, yet, from the crowded and confused state of the crew, it seems it was not in their power to save him.

The Indians got him under again, but in deeper water; he was, however, able to get his head up once more, and being almost spent in the struggle, he naturally turned to the rock, and was endeavouring to support himself by it, when a savage gave him a blow with a club, and he was seen alive no more. They hauled him up lifeless on the rocks, where they seemed to take a savage pleasure in using every barbarity to his dead body, snatching the daggers out of each other's hands, to have the horrid satisfaction of piercing the fallen victim of their barbarous rage.

If anything could have added to the shame and indignation universally felt on this occasion, it was to find that his remains had been deserted and left exposed on the beach, although they might have been brought off. It appears from the information of four or five midshipmen, who arrived on the spot at the conclusion of the fatal business, that the beach was then almost entirely deserted by the Indians, who at length had given way to the fire of the boats, and dispersed through the town; so that there seemed no great obstacle to prevent the recovery of Captain Cook's body; but the lieutenant returned on board without making the attempt.

The fatal accident happened at eight o'clock in the morning, about an hour after Captain Cook landed. It did not seem that the king or his sons were witnesses of it, but it is supposed that they withdrew in the midst of the tumult. The principal actors were the other chiefs, many of them the king's relations and attendants. The man who stabbed him with the dagger was called Nooah. I happened to be the only one who recollected his person, from having on a former occasion mentioned his name in the journal I kept. I was induced to take particular notice of him, more from his personal appearance than any other consideration, though he was of high rank, and a near relation of the king. He was stout and tall, with a fierce look and demeanour, and one who united in his figure the two qualities of strength and agility in a greater degree than ever I remembered to have seen before in any other man. His age might be about thirty, and by the white scurf on his skin, and his sore eyes, he appeared to be a hard drinker of kava. He was a constant companion of the king, with whom I first saw him when he paid a visit to Captain Clerke. The chief who first struck Captain Cook with the club was called Karimano, eraba, but I did not know him by his name. These circumstances I learned of honest Kaireeka, the priest, who added that they were both held in great esteem on account of that action. Neither of them came near us afterwards. When the boats left the shore, the Indians carried away the dead body of Captain Cook, and those of the marines, to the rising-ground at the back of the town, where we could plainly see them with our glasses from the ships.

Pareah seems to have been the principal instrument in bringing about this fatal disaster. We learned afterwards that it was he who had employed some people to steal the boat. The king did not seem to be privy to it, or even apprised of what had happened, till Captain Cook landed.

In consequence of this barbarity of disposition, the whole remains of Captain Cook could not be recovered; for, though every exertion was made for that purpose—though negotiations and threatenings were alternately employed, little more than the principal part of his bones (and that with great difficulty) could be procured. By the possession of them, our navigators were enabled to perform the last offices to their eminent and unfortunate commander. The bones, having been put into a coffin, and the service read over them, were committed to the deep, on the 21st, with the usual military honours. What were

the feelings of the companies of both the ships on this occasion must be left to the world to conceive, for those who were present know that it is not in the power of any pen to express them.

A TALE OF THE SEA.

"Alone, alone, all, all alone,
Alone on a wide, wide sea,
And never a saint took pity on
My soul in agony."—COLERIDGE.

I SAILED from the Thames in a merchant brig for Jamaica. I was the only passenger, and before I had been many days on board, it struck me that there was something odd both about the captain and crew. They all had very bad expression of countenance; and when I happened to be on deck, I frequently observed that they collected in groups, and seemed to carry on in whispers a mysterious kind of conversation with which I could not help thinking that I was myself in some way connected. The captain, in particular, was a dark-looking man, with a very ugly meaning in his large bright eyes. He seldom spoke except in monosyllables, and then the tones of his voice almost startled you. He and I had beds in the same cabin, but I soon discovered that he never slept. Whenever I happened to look across from my own berth towards his, I could see, by the dim light of a lamp that burned upon the table all night, his large eyes glaring full upon me, with a most unnatural kind of intelligence in them. I am not naturally of a timid disposition, but certainly did not feel altogether comfortable. We had favourable winds, however, and ran across the Atlantic without any thing remarkable occurring.

On the evening of the twenty-fifth day I was told that the land we saw, about fifteen miles to leeward, was that of the island of St. Domingo, and that, the breeze continuing, we might expect to reach Kingston in little more than eight-and-forty hours. I retired to rest between ten and eleven, with a lighter heart than I had done for some time before; and with the prospect of so soon again meeting several of my oldest and best friends, I speedily found myself locked in the embraces of slumber, and busily occupied in the ideal world of dreams. Hour after hour passed unnoted by, and daylight was shining full into my cabin before I again opened my eyes. The sun had been long up, but was not visible. It was one of those calm grey days which, in this climate, commonly predict some change of weather. There was that stillness on board the ship which almost always accompanies a calm, for when sailors have nothing to do they are the last persons in the world who will do any thing. I did not hear a step over head, and even the steward and cabin-boys I supposed had fallen asleep; for though I called pretty lustily for my breakfast, not a soul came near me. I rose at length, and having performed my toilet with all convenient speed, I got upon deck. I was somewhat surprised not to see a single hand either fore or aft. The very helm was deserted. I went forward to the steerage, but it was empty, and so was every hammock it contained! My pulse began to beat more quickly; I became alarmed and uneasy. I called aloud, but no one answered me. I looked into the hold, but no living thing was to be seen, nay, what struck me as peculiarly odd, there was nothing in the hold at all, except a cask or two of fresh water, though I had been given to understand that the vessel had a full and valuable cargo on board. I went back to the cabin; neither captain nor mate was there. I opened the door of every cupboard and closet, but it was in vain. Conviction of the truth, though at first its very conception almost bewildered me, inevitably forced itself on my mind;—I was the only human being in the ship. During the night she had been purposely abandoned by her crew, and I was left alone to the mercy of the waves. On the previous evening land had been visible at the distance of five or six leagues, but now having drifted out of my course, it was no where to be discovered.

My feelings can neither be imagined nor described. I was perfectly ignorant of all nautical affairs, and consequently had not the most distant idea of what ought to be done. But this

was, perhaps, hardly to be regretted; for however great my skill had been, what could a single person have done in the guidance and management of so large a vessel? Had a boat been left, I should instantly have entrusted myself to it, and though at a venture, endeavoured to steer in some particular direction; but we had only two originally, and they had both been taken away. I could find no loose timber of which to make a raft, for even a raft I should have considered myself safer in than where I was. There is something that the human mind cannot bear to dwell upon, in the idea that it has lost its power over inert matter, and that however great its intellectual energies, they must all succumb to the mere blind chance which governs an inanimate mass.—I was alone in a great floating castle, to which seemed to be left the power of determining whither it would carry me, and what fate it would assign me. The very bulk of my prison made me the more helpless; besides, I soon discovered that it was, in the sea phrase, water-logged, and, no doubt, abandoned under the belief that it was speedily to sink. I would have given any thing for the merest little cockboat with a single oar, for then I should have been comparatively my own master on the wide ocean.

As long as the daylight continued, my situation, though sufficiently solitary, was not so dismal. Light is companionable, and seems to be the natural element of the human soul. But the sun had scarcely set, ere I perceived that the waters were not long to continue unruffled. The sails, almost all of which were set, and which I found it impossible to take in, or even to reef, no longer hung motionless by the side of the masts, but, for some time, kept flapping incessantly like the wings of some mighty bird, and then, becoming steadily filled, carried the ship along with them, I know not where. Twilight darkened into night; the moon came out of the sea like a spectre—wan and vapoury—surrounded by a dark assemblage of murky clouds; stronger and stronger grew the wind. The waves, as they went careering by, left in their track a broad gleam of foam that gave to the dark sea an unnatural whiteness. I stood at the stern, with the useless helm in my hand, and almost believed that the whole was a horrible dream, from which, if I did not speedily awake, I might never awake with reason unimpaired. The storm increased; and the vessel, from the quantity of canvass she carried, was tossed like a toy from wave to wave. At length the foremast snapped, and, with all its sails and cordage, fell overboard;—it was overwhelmed among the billows in an instant.

Day returned, but the storm did not abate. The wind was for a while northwest, which blew me back nearly upon the course I had already sailed; but afterwards, shifting several points, it became nearly due north, so that I conjectured it must have been carrying me along the coast of South America, though that coast was nowhere visible. For several days the hurricane continued, and every moment seemed to bring along with it the promise of destruction; but though the ship was now a complete wreck, its planks still held together, and I continued to exist. Day after day, week after week, month after month, and were I to judge by my own feelings, I should say year after year passed on, and I still continued rolling about in my dismantled hulk,—sometimes with fair and sometimes with foul weather, either in the Atlantic or Pacific ocean—I knew not which. There were, luckily, provisions enough on board, such as they were, to have supported me, I should have thought, for any length of time: but existence was becoming too painful to admit of my being able to endure it much longer. Let not man talk of solitude, as long as he can see around him fields and trees and mountains. All these may hold communion with his spirit, and, as they vary their garb according to the season, he can read in them lessons of wisdom and improvement. But on the wide and changeless ocean, where human sympathies exist not, and where the very elements seem of a nature uncongenial to man; there, where the eye can see nothing but the rolling waters, and the ear catch no sound but that of the breaking wave—there speak of solitude—there feel its horrors, feel your affections stagnant within you, and your mental capabilities mouldering away into nothingness. Look at the sun, the clouds, the stars, and

ask, in the frenzy of despair, why you are the only created thing cursed with the curse of speech?

It was midnight, and thunder walked through the air; but its peals were welcome to me, for they sounded like the voice of an unseen giant. The waning moon looked dimly down through the snatches of the hurrying clouds, and the lurid lightning flashed far and wide below, as if in mockery of the pale light of the melancholy wanderer of heaven. There was alternate gloom and brightness. In the gloom was heard the savage roaring of the thunder-laden winds; in the brightness was seen the tortured ocean heaving in convulsions, and flinging its spray, in impotent wrath, far up into the dark concave. Such scenes had become familiar to me, and had almost lost their terrors. My crazy ship went tumbling on, and I had lashed myself to the remnant of one of her masts, lest I should be swept from the deck as every thing else had been already. Again the moon looked down for an instant, again lightning gushed from the clouds,—good God! a vessel, with all her sails set, bounded past me, and I heard the cries of human beings. Another gleam of moonshine—she was still there; another blaze of lightning,—she was gone—down—down into the gulf for ever!

The storm passed away, and I was still safe. The wind was in the north, and the ship sailed on. One morning I came upon deck; it was clear, though cold, and the sea, at some distance, seemed peopled with islands. How my heart bounded! I was approaching them! Shipwreck—death was all I desired, provided I met it in an attempt to make the land. I came nearer the islands;—heaven and earth! They were islands of ice! Where was I? I had been sailing south; had I got within the antarctic circle? Ice—nothing but ice. Huge mountains of dreary ice.

It was the first that ever burst
Into that silent sea.

I know not how it was, but I sailed far in among the frozen fields. The wind, at length, shifted, and my course, was altered. I retraced part of my way, and went more to the east. One night I was in bed, and my vessel was drifting as usual where it pleased. Suddenly it struck against something with a violent shock and crash. I rushed upon deck; the ship was going to pieces. It seemed to have come upon a reef of rocks. It was calm, and I was a good swimmer. I threw myself into the sea, and, reaching some of the more prominent heights, I scrambled up upon them, and waited till daylight should discover to me my situation. It came soon enough; I was on the highest peak of two or three insulated rocks, not a hundred yards in circumference altogether, that rose up from the fathomless depths of the southern ocean till they reached a little above its surface. Water—nothing but water could be seen around. Here, then, on this unknown rock, which no human eye had ever seen before, it was to be my lot to die. I wonder I did not grow mad at once. I recollect that I lost all belief in my personal identity. I could not conceive it possible that I was the same being, who had once so keenly enjoyed all the pleasures of social and civilized life; who had loved and hated, who had laughed and wept, who had feared and hoped. On a solitary peak in the ocean, what was man? more useless than the sea-weed, more helpless than the bubbles that floated past with the waves.

The ship had disappeared; but some fragments still floated about the rock. I took possession of one of them, and floated away, as I believed, to certain death. Now, talk of solitude!—on a little raft in the untraversed South Pacific. I drifted away and away; but nature was at length exhausted. I stretched myself out at full length, I closed my eyes and became insensible.

When my senses returned, I was on board a French discovery-ship, in a comfortable bed, and enjoying every luxury, and oh! that luxury above all other luxuries—the music of the human voice, when its tones are softened by human affections! I did nothing but weep—weep like a child for a whole week. In two months I was again in England.

ADVENTURES AND PIRACIES OF CAPT. DAVIS.

CAPTAIN HOWELL DAVIS was born at Milford, in the county of Pembroke, and was brought up to the sea from a boy. The last voyage he made from England was in the Cadogan snow, of Bristol, commanded by Captain Skinner, of which he was chief-mate. They were bound for the coast of Guinea, but they had no sooner arrived at Sierra Leone, than they were taken by the pirate England, who plundered the ship, and barbarously murdered Captain Skinner.

According to the account which Davis gave of the transaction, he states that England was very solicitous for him to join the pirate's crew, but he resolutely answered, that he would rather submit to be shot to death than sign the pirate's articles;

upon which England, struck with his determined bravery, sent him and the rest of the men on board the snow, and appointed him captain of her, in the room of Skinner, commanding him to pursue his voyage. He also gave him a written paper, sealed up, with orders not to open it until he came into a certain latitude, and then, at the peril of his life, to comply with the orders which he would find set down. This Davis punctually complied with, and read it to the ship's company; it contained a generous deed of gift of the ship and cargo to Davis and the crew, with orders that he should go to Brazil and dispose of the lading to the best advantage, which he should fairly and equitably divide with the rest.

Davis immediately consulted the crew as to their willingness to follow these directions, but to his great surprise, he found the

ADVENTURES AND PIRACIES OF CAPTAIN HOWELL DAVIS.

majority of them altogether averse to it, when, in a rage, he told them they might go where they pleased. They knew that part of their cargo was consigned to certain merchants at Barbadoes, and therefore steered for that island. Upon their arrival they related to the merchants to whom the goods were consigned, the unfortunate death of their late commander Skinner, and also the proposal that had been made to them by Davis; upon this information they seized Davis, and committed him to prison, where he was kept three months; but as he had as yet committed no act of piracy, he was discharged without being brought to trial. As after this circumstance it was not probable he should obtain any employment there, and knowing that the island of Providence was a kind of rendezvous for pirates, he resolved to join with some of them, and soon found means of shipping himself there; but on his arrival he

found, to his great disappointment, that the pirates had lately surrendered to Captain Woods Rogers, and accepted of the act of grace which he had brought from England.

Captain Rogers having fitted out two sloops for trade, one of which was called the Buck, and the other the Mumvil Trader, Davis soon found employment on board one of them. These vessels were laden with goods of considerable value, consisting chiefly of European produce and manufactures, which in that year (1720) fetched very high prices, with which they intended to trade with the French and Spaniards: and many of the sailors who manned these vessels were the pirates who had come in upon the act of grace. The first place at which they touched was the island of Martinique, belonging to the French, where Davis, having conspired with several of the late pirates who belonged to the crew, rose in the night, and having secured the

master of her, seized the sloop. As soon as they had accomplished this, they called to the other sloop, which lay at no great distance from them, and among whom they knew there were a number of disaffected men, who were ripe for rebellion, and ordered them to come on board of them; with this mandate a number of the other crew instantly complied, and the greater part of them agreed to join Davis on board the Buck, while those who were disinclined were sent back on board the Mumvil sloop, with permission to go where they chose, Davis first having taken out of her everything that he thought might be of value.

This business being concluded, a council of war was called, over a large bowl of punch, at which it was proposed that they should proceed to choose a commander; the election did not occupy much time, for Davis was elected by a large majority, and no scrutiny was demanded, for they all acquiesced in the choice. As soon as he had been installed into the office of commander, Davis drew up a list of articles of agreement, which were signed and sworn to by himself and the crew, and, in conclusion, delivered them a brief oration, which, in substance, was a declaration of war against the whole race.

The next consultation was to find a proper place in which they might clean their sloop, and put her into better trim, as, whether they wished to take or escape being taken, a light pair of heels would prove of great service to them. After deliberation they made choice of Coxon's Hole, at the eastern end of the island of Cuba, a place where they could very conveniently secure themselves from surprise, the entrance to it being so narrow that one ship would be able to repel the forcible intrusion of a hundred.

Not having a carpenter in their company, it was with great difficulty they were able to accomplish their purpose; but after some delay, having put her into the best condition they were able, they put to sea, and made for the north side of the island of Hispaniola. The first vessel which fell in their way was a French ship, mounting twelve guns; and although Davis had but thirty-five hands on board his sloop, yet, as their stock of provisions was getting very low, he determined to attack her; she very soon struck, and he sent twelve men on board, in order to plunder her; but they had no sooner done so than they espied a strange sail a great way to windward of them. They inquired of the Frenchmen as to their opinion of what she might be, when the captain replied, that he had spoken with a ship the day before, of twenty-four guns and sixty men, and he thought it very probable that this was the same.

Davis, without hesitation, proposed to his men that they should attack her, telling them that she would be a rare vessel for their use; this they by no means seemed to relish, looking upon it as an extravagant attempt; but he assured them that he had devised a stratagem which would make all safe; whereupon he gave chase, and ordered his prize to do the same. The prize proved to be a slow sailer, so that Davis came up first with the enemy, and boldly standing alongside, hoisted the piratical black flag. Surprised at such a daring act, they called to Davis, telling him they wondered at his impudence in venturing so close to them, and ordered him to strike; but he very coolly answered, that he intended to keep them in play until his consort came up, who was able to deal with them, and that if they did not instantly strike to him it would be all the worse for them, and followed up his threats by pouring in a broadside, which they quickly returned.

In the mean time the other vessel drew near, and the pirates who were on board having, as they had been directed by Davis, compelled all their prisoners to come upon deck in white shirts, made a great show of force, and fired a gun. The Frenchmen were so intimidated by this imposing appearance, that they immediately struck their colours; when Davis called out to the captain to come on board with twenty of his hands: they did so, and for great security were all put into irons, except the captain. Davis then sent four of his own men on board the first prize; and in order still to carry on the delusion, called aloud that they should give his service to the captain, and desire him to send some hands on board the prize to see what they had got; but at the same time he gave them a paper containing written instructions of what they were to do. These

were to nail up all the guns in the little prize, so as to render them harmless, to take out all the small arms and powder, and then for every man to go on board the second prize; when this was done, he ordered that more of the prisoners should be removed out of the great prize into the little one, and by this means he secured himself from any attempt which he might reasonably apprehend from the great number of his prisoners, as those who were on board of him were fast in irons, and he had nothing to dread from those in the little prize, as they had neither arms nor ammunition.

The three ships kept company for two days, when finding that the large prize was a very dull sailer, he thought she would not be fit for his purpose, he therefore resolved to restore her to the captain with all his crew—first taking care to render her harmless by taking out all her ammunition, and everything else which he thought he might possibly want.

Having thus let go both his prizes, he steered to the northward, taking in his course a small Spanish sloop; and after this he made towards the western isles, but was unsuccessful in meeting with any booty in that direction; he therefore steered for the Cape de Verde Islands, and cast anchor at St. Nicholas, where he hoisted English colours. The Portuguese who inhabited that place took him for an English privateer, and on Davis going ashore they not only treated him very civilly, but traded with him. They remained here about five weeks, during which Davis, with half his crew, took a journey, for pleasure, to the chief town of the island, which was situate about nineteen miles up the country. As Davis made a respectable appearance, and was very gentlemanly in his manners, he was well received by the governor and the inhabitants; indeed no diversion was wanting which the Portuguese could show or money could purchase to make their visit agreeable. After about a week's stay he returned to the ship, and the rest of the crew went in their turn to take their pleasure up to the town.

On leaving here they sailed for Bonevista, but after looking into the harbour, and not finding anything, he steered for the island of May. On their arrival they met with a great many ships and vessels in the road, all of which they plundered, taking out of them whatever they thought most valuable to them, and getting also a number of fresh hands, most of whom joined them voluntarily. Not being able to procure any fresh water, they made towards St. Jago, which belonged to the Portuguese, in order to lay in a store; Davis went on shore here, with a few hands, to find the most commodious place to water at, when the governor, with some attendants, came himself to examine who they were, asking where they came from and other particulars; and not liking the account which Davis gave of himself, the governor very plainly told them that he expected they were pirates. At this, Davis seemed to be very much affronted, talked largely about his honour, and in reply to the governor, told him that he scorned the unjust charge; however, as soon as his back was turned, he got on board again as fast as he could, for fear of accidents. He related to his crew what had happened to him, and the suspicions of the governor, and his men seemed very much inclined to resent the affront which had been offered to him; upon which Davis told them, he was confident he could surprise the fort in the night, and they agreed to attempt it: and accordingly, when it grew late, a large party of them went on shore well armed; and so negligent of their duty were the guard which were kept, that, before any alarm was given, they succeeded in making good their entry into the fort. When resistance was too late to be effectual, they made some little show, and Davis lost three men, who were killed in the struggle. Those in the fort, in their hurry to save themselves, ran into the governor's house, and this they barricaded so strongly that Davis's party were unable to effect an entry; however, they threw in some grenade shells, which not only ruined all the furniture, but killed several men within.

As the day broke, the whole country were alarmed; and soon discovering the position of affairs, came in a body to attack the pirates; but they, thinking it altogether out of their business or capability to stand a siege, made the best of their way on board their own ship again, after having dismantled the fort and dismounted the guns. By this enterprise,

which could have no object but that of revenge for a fancied insult, they committed a great deal of devastation on property belonging to the Portuguese, and at the same time did little or no good to themselves.

They now put to sea, where, having mustered their hands, and found their numbers to amount to nearly seventy, it became a question for consideration as to what course they should steer; and there being on this point a great difference of opinion, it was decided by a division, when there appeared a large majority for proceeding to Gambia, on the coast of Guinea: and Davis was also of this opinion, as, from having been employed in the trade, he was well acquainted with the coast.

Agreeably to the decision, they immediately made sail for Gambia, and having come in sight, Davis ordered all his men under deck, with the exception of the few who were absolutely necessary to work the ship, so that those in the fort, upon seeing a ship with so few hands, might have no suspicion that she was otherwise than a trading vessel; and everything being properly arranged to keep up appearances, he ran close under the fort, and dropped his anchor; he then ordered out the boat, and ordered her to be manned with six of them in old ordinary jackets, while he himself, with the master and doctor, dressed themselves like gentlemen, so that it might appear that those three were merchants, and the rowers common sailors; and in rowing ashore he gave his men instructions what they should say in case they should be asked any questions.

On their arrival at the landing-place, they were received by a file of soldiers, armed with muskets, who conducted them into the fort, where the governor, accosting them very civilly, asked who they were, and whence they came: to this, Davis very readily answered that they were from Liverpool, bound for the river of Senegal, to trade for gun and elephant's teeth; but that they had been chased on that coast by two French men-of-war, and narrowly escaped being taken, having a little the heels of them; but now they were resolved to make the best of a bad market, and were inclined to trade where they were for slaves. The governor then inquired what the chief part of their cargo consisted of; they answered, iron and plate, which being there very much in request, the governor told them he would supply slaves to the full value of their cargo, and asked them if they had any European liquor on board. Davis answered that they had a little for their own use, but a hamper of it should be very much at his service. This so far instated them in the good opinion of the governor, that he invited them to stay and dine with him; to which polite invitation Davis replied, that, being commander of the ship, he must return on board; in order to see to her being well moored, and give some other necessary orders, but that the two gentlemen who were with him would remain; and he himself would return before the hour of dinner, and bring the hamper of liquor with him.

While he was in the fort, he was very careful in observing the position and situation of everything he could see; he noticed there was a sentry at the entrance, and a guard-house just by it, where the soldiers who were upon duty generally waited, their arms standing in a pile in the corner; he also observed a great many small-arms in the hall of the governor's house. On his return to the ship, he assured the men of success, particularly requested that none of them would get drunk, and that, as soon as they saw the flag upon the castle struck, they might conclude he had become master of the fort, and should send twenty of their number on shore immediately. In the meantime, as there was a sloop lying at anchor near to them, he sent some hands on board her in a boat, with orders to secure the master and all the men, and bring them on board his own ship, as in case of their observing any bustle or arming in the pirate vessel, they might send ashore and give intelligence.

Having taken these necessary precautions, Davis ordered the men who were to go in the boat with him, to put two pair of pistols each under their clothes, he doing the like himself, and gave them particular directions to go into the guard-room, and enter into conversation with the soldiers, taking especial care to observe that when he should fire a pistol through the gover-

nor's window, they were to start up at once, and secure the arms in the guard-room.

When Davis arrived, the dinner not being ready, the governor proposed that they should spend the interval in making a bowl of punch, which would employ them till dinner. During this time they were waited upon by Davis's coxswain, who had an opportunity of going about all parts of the house to see what strength they had; presently he whispered to Davis, there being then no person in the room but Davis, the master, the doctor, the coxswain, and the governor, when Davis suddenly drew out a pistol, and presenting it at the governor's breast, told him he must surrender the fort with all the riches it contained, or he was a dead man. The governor being completely taken by surprise, and in no way prepared for such an attack, promised to be very passive, and to do all they desired; upon this they immediately closed the door, and taking down all the arms that hung in the hall, loaded them. Davis then, to give the preconceived signal to his men in the guard-house, fired his pistol through the window, upon which they executed their part of the scheme, like heroes, in an instant, getting between the soldiers and their arms, with their pistols cocked in their hands, while one of them carried out the arms: when this was done, they locked the soldiers in the guard-room, and kept guard without.

In the meantime one of them struck the union flag on the top of the castle, which being observed by those on board, who were on the look-out for the signal, they sent on shore a reinforcement of hands, by whose assistance Davis got possession of the fort without the least hurry or confusion, or even so much as a man lost on either side.

To recruit his strength of hands on board ship, Davis arranged the soldiers on the advantage and propriety of joining their crew; to which a great many lent a willing ear, and were sent on board, while those who refused he sent on board the little sloop: and to save the trouble and loss of men in appointing a guard over them, he ordered all the sails and cables to be taken out of her, so as to completely incapacitate them from getting away.

The remainder of the day was spent in a kind of rejoicing, the castle firing guns to salute the ship, and the ship in return saluting the castle; but the following day was occupied in attention to business—that is, they commenced plundering the fort; but the amount of their booty fell very far short of their expectations—for, to their great mortification, they discovered that a large quantity of money had been very lately sent away: however, they met with bars of gold to the value of about two thousand pounds sterling, besides a great many other rich effects. Everything they liked which was portable they took on board their own ship, while many things for which they had no use, they generously presented to the master and crew of the little sloop, to whom they also restored the vessel; and then, as a final work on shore, they dismounted the guns and demolished the fortifications.

After committing as much wanton destruction as they could, and were in the act of weighing their anchor to be gone, they espied a ship in full sail bearing down upon them; they soon got their anchors up, and were in readiness to receive her. This ship proved to be a French pirate of fourteen guns, commanded by a man of the name of La Bouse, and manned by sixty-four hands, half of whom were French and the other negroes. On discovering Davis's ship, he expected no less than a rich prize, which made him so eager in the chase; but when he came near enough to see their guns, and the number of hands who were on deck, he began to think it not improbable that he should catch a tartar, as he supposed her to be a small English man-of-war; however, as escape was now out of the question, he resolved upon a bold and desperate action, which was to board Davis. As he was making towards her for this purpose, he fired a gun and hoisted his black colours; Davis returned the salute, and hoisted his black colours also. The Frenchman was not a little gratified at this happy mistake; they both hoisted out their boats, and the captains went to meet and congratulate one another, having each a flag of truce hanging at the stern. A great many civilities passed between them, and La Bouse expressed a wish to Davis that

they might sail down the coast together, in order that he (La Bouse) might be enabled, with the assistance of Davis, to change his ship for a better one. To this Davis very readily agreed, and courteously promised him the first ship which he took fit for their use, which he would give him, as being willing to encourage a younger brother.

The first place they touched at was Sierra Leone, where on going in they discovered a tall ship at anchor. Davis being the best sailer, was the first to come up with her, and wondering that she did not make any exertion to be off, he suspected her to be a ship of force. As soon as Davis came alongside of her, the other ship very steadily brought a spring upon her cable, and firing a whole broadside upon him, hoisted a black flag; Davis, in reply to this rather unexpected salute, immediately hoisted his black flag, and fired one gun to leeward; this soon brought matters to an explanation. Their new companion proved to be a pirate ship, mounting twenty-four guns, and commanded by one Cocklyn, who having been in confident expectation that the other two would prove prizes, had let them come in, lest his getting under sail should have frightened them away.

The satisfaction was great on all sides at this union of confederates and brothers in iniquity, and two days were spent in improving their acquaintance and friendship. On the third day a council of war was called, at which it was unanimously agreed that they should sail down the coast together, and for the greater grandeur of their proceedings a commodore was appointed, which was Davis; but they had not been long in company, when drinking together on board of Davis's vessel, they had very nigh fallen out with one another, for the strong liquor which they were drinking stirring up a spirit of discord among them, they quarrelled, until Davis put an end to it by a short speech, saying, "Hark ye, Cocklyn and La Bouse, I find that by strengthening you I have put a rod into your hands to whip myself; however, I am still able to deal with you both, but since we met in love let us part in love, for it's very plain that three of a trade can never agree." This the others consented to: they each went on board their respective ships and immediately parted, every one steering a different course.

Davis held on his way down the coast, and making Cape Appollonia, he met with one English and two Scotch vessels, all of which he plundered of everything that was worth taking away, and then let them go. About five days after this he fell in with a Dutch interloper, carrying thirty guns, and manned with a crew of ninety men, half of whom were English; this was off Cape Three Points Bay. Davis coming up alongside of her, the Dutchmen gave the first fire, and pouring in a well-directed broadside upon Davis, killed nine of his men. This Davis immediately returned, and a very furious engagement ensued, which lasted from one o'clock at noon of one day till nine o'clock on the morning of the next, when the Dutchman struck, and yielded herself as their prize.

Davis fitted up the Dutch ship for his own use, and called her the Rover; he mounted thirty-two guns and twenty-seven swivels on board of her, and then proceeded with her and the King James to Anamboo; he entered the bay between the hours of twelve and one at noon, and found three ships lying at anchor, who were trading for negroes, gold, and teeth; these were the Hindpink, commanded by Captain Hall; the Princess, Captain Plumb, of which Roberts, a man of undaunted courage, penetration, and bravery, was the second mate; and the Morrice sloop, commanded by Captain Fin. These ships were taken without the slightest resistance, and having plundered them of everything valuable, he made a present of one of them, the Morrice, to his late enemies, the Dutchmen, on board of which alone they found a hundred and forty negroes, besides dry goods, and a considerable quantity of gold-dust.

It happened that just at the time Davis came in there were several canoes alongside of this ship, who saved themselves by running ashore, and gave notice to the fort that the ships just arrived were pirates; upon which the fort fired upon them, but without doing any execution, as they had not sufficient weight of metal to reach them; Davis, therefore, by way of defiance, hoisted his black flag and returned the compliment.

He sailed the same day with his three ships, making his way down the coast; they lay by at night, keeping their head to the offing, when soon after daybreak the man at the mast-head espied a sail. It may be observed, that they always kept a good look-out, for according to their articles, he who first spies a sail which proves to be a prize, is entitled to the best pair of pistols on board, over and above his dividend; and in this they take a singular pride, a pair of pistols having sometimes been sold from one to another for as much as thirty pounds.

They immediately gave chase, and soon came up with her. She proved to be a Hollander, and being between Davis and the shore, she crowded every stitch of canvass she could stagger under, with the intention of running aground: Davis guessed her design, and putting out all his small sails, came up with her before she was able to effect it, and fired a broadside into her, upon which she immediately struck and called for quarter. This was granted, for according to Davis's articles, it was agreed that quarter should be given whenever it was called for, on pain of death.

This ship proved to be a very rich prize, having on board the governor of Acra, with all his effects, on his way to Holland; there was also on board money to the value of more than fifteen thousand pounds, besides a considerable quantity of other valuable merchandise, all of which they plundered and brought on board their own ship.

Elated with this unexpected success, they restored to Captains Hall and Plumb, before mentioned, their ships again, but strengthened their company with the addition of thirty-five hands, all white men, taken out of these two vessels, and the Morrice sloop; they also restored their ship to the Dutch, after taking everything valuable out of her.

The next place to which they steered was the Island of Princes, but before they arrived there one of their ships sprung a leak; Davis therefore ordered all the hands out of her to come on board his own ship, and to bring everything that was of use with them, and then left her at anchor at High Came-roon. As soon as he came in sight of the Island of Princes he hoisted English colours. The Portuguese on shore observing a large ship sailing towards them, sent out a little sloop to inquire what she might be: upon the sloop hailing Davis, he answered, that he was an English man-of-war in search of pirates, and that he had received intelligence there were some upon the coast. Upon this favourable account of himself they received him as a welcome guest, and piloted him into the harbour. Upon entering he saluted the fort, which they answered with a like compliment; he came to an anchor just under their guns, and hoisting out a pinnace in the style of a man-of-war, he ordered nine men and a coxswain to row him in it on shore.

It happened, while they were there, that a French ship came in to supply them with necessaries. This vessel Davis took it into his head to plunder, but to save appearances, and give the robbery a colour of right, he persuaded the Portuguese that she had been trading with the pirates, and that he found several pirates' goods on board, which he seized for the king's use. This story passed so well upon the governor, that he entertained a very high opinion of Davis's diligence.

Some few days after this, Davis, with about fourteen men, went ashore privately, and walked up the country towards a village where the governor and chief men of the island kept their wives and families, intending, it may be supposed, from the stealthy nature of their visit, to supply their husband's places with them; but an alarm being given at their approach, the women fled to a neighbouring wood, and Davis and his party retreated to their ship without being able to effect their design. The circumstance made some noise at the time, but as none that saw them were acquainted with their persons, it soon passed over.

Having cleaned his ship, and put everything into proper order, his attention was more particularly turned to the main object of their visit, viz., the plunder of the island; but not knowing where the treasure might be concealed, he devised a stratagem by which he conceived they might get at it with little trouble; after consulting with his men they liked the design, and he proceeded to put it into execution. His scheme was, to make a present to the governor of a dozen negroes, by

way of a return for the civilities which he had received from him, and afterwards to invite him, with the chief men and some of the friars, to an entertainment on board his ship. The minute they came on board they were to be secured in irons, and there kept until forty thousand pounds should be paid for their ransom.

But this stratagem, hopeful as it seemed of success, was destined to prove fatal to him, for during the night a Portuguese negro swam ashore and discovered the whole plot to the governor; also informing him, that it was Davis who had some days previously made the attempt upon their wives. However, the governor thought it would be the most prudent course for him to dissemble, he therefore received the pirate's invitation very civilly, and promised that he and the rest would go.

On the following day Davis went on shore himself, as if it were out of great respect, to conduct the governor on board. He was received with the accustomed civility, and he and his officers invited to walk up to the governor's house to partake of some refreshment before they went on board. This invitation they accepted, without the slightest suspicion, but never returned again: an ambuscade was laid for them, the signal was given, and a whole volley was fired upon them, when every man dropped except one, who fled back, escaped into the boat, and got on board the ship. Davis was shot through the bowels, yet he rose again, and made an unsuccessful effort to get away; but his strength failed him, and he dropped down dying. Just as he fell he perceived that he was pursued, and drawing out his pistols fired them at his pursuers.

CROSSING THE LINE.

ONE lovely evening, when our gallant vessel was calmly floating on the untroubled bosom of the deep, within the tropics, and I sitting at the open port, gazing thoughtfully on the setting sun, I was suddenly startled from my meditations by the cry of "A sail a-head! hallo! Neptune! Neptune! a-hoy!" and, on gaining the deck, perceived a large tar-barrel flaming on the ocean, and gliding past our vessel, which, I was given to understand, was the royal barge of the venerable watery god, who had announced his intention of coming on board next morning, to superintend the shaving such of his children as had not previously crossed the great boundary of his dominions.

Next morning, accordingly, this august personage made his appearance on the quarter-deck, about half-past nine, a.m., and advanced to seat himself on a gun-carriage, under a gorgeous canopy of various-coloured flags, and surrounded by innumerable streamers, which kept waving to and fro with every wandering breeze. His dress, consisting of a buffalo's hide, with such other varieties as could be procured on board, added to an iron-crowned hoary-bearded mask, rendered him a very grotesque figure. By his side was seated a gigantic white-robed mariner, something resembling an old weather-beaten woman, intending to represent Amphitrite. The royal chariot, preceded by a band of music, and drawn by sixteen men, painted from head to foot in the most ludicrous fashion, led the van of the procession, and was followed by the numerous constables, bearing their rods of office, all decorated in a singular manner. Next followed the important barber, with his train of necessary attendants; and his oceanic majesty's household brought up the rear.

After parading the quarter-deck with all due ceremony, the procession halted opposite the cuddy door (that is, the door of the great cabin on the upper deck), where his godship was welcomed by the officers, and accepted the offer of a glass of spirits; nor had his fair spouse any hesitation in swallowing a potent draught of the same inspiring nectar. When the barber (who did not fail to exhibit his huge iron razor) and several of the other attendants had also paid their devotions at the shrine of Bacchus, the car was drawn into the lee waist, where were prepared a deep cistern (composed of a tarred topsail, supported at the four corners by corresponding stanchions, and filled to the brim with the salt-water of the tropical ocean), a covered throne for Neptune and his exquisite consort, a scaffolding for the barber and suite, and a narrow plank across the reservoir, on which were to be seated

those unenviable individuals who were destined to undergo the ceremony of "shaving." At this moment the beating of the drums, the sound of the horns, the shouts of the mariners, and the cry of "Bring forth my sons! bring forth my sons!" indicated to the anxious beings below, on the gun-deck, that all was in readiness to commence the business of the day; and immediately a band of the horrid constables came to lead me, blindfolded, and with a palpitating heart, to the place of execution. No sooner had I gained the summit of the companion-ladder than a deluge of salt water, from innumerable buckets, was discharged unceremoniously into my face: and when I attempted to gasp for breath, an unceasing stream from the fire-engine was directed, by some expert hand, right into my mouth.

In this state, panting, and almost breathless, I rushed forwards, with much exertion, dragging constables and attendants after me, till I gained the foot of the ladder which led to the plank across the cistern. This I ascended with some difficulty amid the cheering of a merciless multitude, took my seat on the tottering plank, and awaited with anxious expectation the dreadful result of all this ceremony. I had not sat long till a rough brush (every hair of which seemed to be formed of a porcupine's quill) saluted my chin; then a sharp-toothed saw, (intended to represent a razor) was passed over my cheeks; then a bucket of water was thrown into my face; then another dense stream from the fire-engine was directed into my mouth; and then the frail plank was withdrawn from under me, and I plunged headlong and breathless into the abyss below! This was not all. In the cistern was a shelf, and on this shelf a man (dressed in a bear's-skin, and creeping on all fours), whose duty it was to hold the subject of their mirth for some time under the surface of the water. Struggling, as it were, for my existence, no sooner did I feel the horned clutches of the great bear, than I struck him such a blow on the head as caused him to let go his grasp; and, almost insensible, I scrambled up the sides of the cistern, and threw myself down on the deck below. Still no quarter was allowed me: I had yet to make my way through a deluge of water, showered on me from the fore-castle, the decks, the booms, and the tops, to the after-part of the vessel; which, had I not immediately accomplished, I verily believe I should have sunk exhausted under the ordeal.

Notwithstanding all this roughing, however, I contrived, on the whole, to preserve my good humour; and I had no sooner recovered, and begun to look about me, than I seized a bucket, joined the enraptured performers of this busy scene, and was among the first to salute my hapless mess-mates, who next made their appearance.

After all the midshipmen had passed through the hands of the barber, the shaving of the seamen commenced. This was a more serious business, for the chins of many bled profusely, and their mouths and eyes were fearfully disfigured by the tarry brush of the barber, while torrents of their favourite element were showered on their hooded heads, without sympathy or restraint.

In the meantime, the shaving advanced with great rapidity; and before twelve o'clock, the procession returned in all its pomp, to the cuddy door, in the same order as formerly, when the captain's health, with that of all the legitimate sons of Neptune, was drunk with loud and continued cheers, and the sports of the morning concluded. But towards evening the captain ordered a liberal supply of grog to be served out to each of the sailors; and the remainder of that night was spent in

"Draining the goblet, and singing the song."

BILLY CULMER AND THE GOOSE.

"Then Billy was, moreover, a comical dog,

And, if rightly I stick to my story,

He would, now and then, get so aboard of the grog,

That, d'y'e see, he was all his glory."

And a glorious fellow he was too: I wish I could give you all his sayings and doings; it would make a better volume than

Theodore Hook's. But I remember, when we were messmates in the watch of the flag ship under Lord H——. Many's the rum rig we used to play and carry on the war together like Trojans. Billy was upwards of fifty; and though he had several commissions, threw them all up, preferring rather to be honoured as the oldest midshipman in the service, than be pointed at as the youngest lieutenant. He was a great favourite with the admiral, to whom he was distantly related. Just after we had refitted at Plymouth, orders came down for the fleet to sail. Up went Blue Petre, and all hands prepared to pay their tailors' bills with the flag end of the fore-top-sail sheet; for they knew, by going to sea in his debt, he'd never cease praying for a fair wind to bring 'em home again. Well, d'ye see, Billy was ashore, and no one could discover where he was stowed; but the admiral, unwilling to leave him behind, requested the lieutenant on duty to ferret him out and get him aboard. This was no easy task; and Mr. E——, after overhauling about fifty houses, was returning to make his report, when, passing a door in —— street, he heard the well-known voice singing, with great glee—

"Then haul away, pull away, jolly boys,

At the mercy of fortune we go."

Passing through the outer room and entering the kitchen, there sat Billy very comfortable by the fire, with one hand turning the spit to his own music, and with the other basting a fine fat goose that was roasting. His gold-laced cocked-hat ornamented the handle of a saucepan, his side-arms hung pendant from the leg of a gridiron, and his uniform coat and waistcoat dangled from the same peg with an old warming-pan.

"We're in for it now, 'tis a folly, boys;

To be down-hearted, yo-ho!"

But observing the lieutenant enter, his song ceased. "What cheer—what cheer? glad to see you. What are you come to dine with me?" "No, sir," replied E——, scarcely able to refrain from a roar of laughter; "no, sir; I am come with the admiral's orders for you to go on board." "What! and leave the goose?" "Come, come, Mr. C——, be serious; there's the signal for sailing at the mast-head, and the fleet are ordered to sea directly." "Well, tell them to wait till the goose is done." "Nonsense!—would you skulk ashore, when, perhaps, we may fall in with the enemy, and bring a few of them home with us?" "Why, not altogether that; but the goose will be spoiled, for there's not a soul in the house beside myself." "Oh, never mind the goose, you'll take that with you. But come, bear a hand; you have already incurred the admiral's displeasure, and surely you wouldn't act ungratefully to him who has always behaved so generously to you?" "Touch my honour, touch my life! No, I'll only get a fresh scrape and paint, clap my rigging over the mast-head, and then we'll make a sail together; but the goose will be burned." "Confound the goose!" said E——, stripping off his coat, "look smart, and I'll turn the spit till somebody comes;" and down he sat. Away went Billy, having mounted his uniform, to call the mistress of the house, and get shaved; but scarce had he turned the corner of the street when he ran full-butt against the admiral.

"Halloo, Mr. C——" said his lordship, "I understand your leave of absence is expired: what are you doing ashore?" "I don't know, my lord; I've been very unwell these two days—confined by room-a-tism." "Those are idle excuses, sir. Pray have you seen Mr. E——? Ah, now, if I could see you copy that young man, what satisfaction and pleasure it would afford me!" Billy shrugged his shoulders and laughed. "What insolence is this, sir?" said his lordship, "I cannot express my indignation. Tell me directly—have you seen that gentleman?" "I'm laying a particular stress on the last word." "Yes, my lord," replied Billy; "and so may you, if you go to No. —— there," pointing down the street. "What do you mean, sir?" your insinuations are base. But come, sir, I'll be satisfied—show me the way;" and Billy conducted his lordship to the door. But what was the admiral's surprise and chagrin to see the person he had just been commending, busily engaged in attending the sputtering bird, now almost

burnt to a cinder! His back was towards them; but, hearing some one behind, and concluding it was the proprietor of the rookery—"Come along, old Bet, a pretty kettle of fish I have made of it! there's the fleet getting under weigh, and old Shiver-the-wind will give me a sermon as long as the main-top-bow-line. Here's the goose as brown as a berry, and I've burnt my fingers with the ladle." This was too much for Billy; he roared till his sides shook. But who can paint the astonishment and embarrassment of the young lieutenant, on turning round and seeing who was present? "Old Shiver-the-wind is greatly obliged to you, Mr. E——," said his lordship, bowing, and walking off; "and now I shall know in whom to place confidence again. Make haste down to the barge, and wait till I come;" and away he went. "What's the matter? what's the matter, Mr. E——?" said Billy, almost convulsed with laughter on seeing the young officer throw himself into the chair in an agony. "What's the matter? why, the admiral knows the Spit-head's a naval station, and you are always fond of imitating the philosophers of grease." "I'll have satisfaction, Mr. C——; this is your doings." "So you shall, so you shall (spreading a large sheet of brown paper, and packing the goose up in it.) You put the goose upon me, you know; I clapped it upon you, and now we'll go and saddle it upon the admiral; and off they set for the boat. His lordship soon joined them, and the boat shoved off. "What is this smell, coxswain?" inquired the admiral. "'Tis Mr. E——'s goose, my lord," said Billy. "How is this that you dare to presume on my indulgence?" "Indeed, my lord, I—I—the goose—I—I," replied the stammering lieutenant. "The goose—I—I," reiterated his lordship, "what do you mean, sir?" But Billy, seeing he had run his cable out to the clinch, and that the old gentleman began to get serious, made a thousand apologies, and explained the whole business, taking the blame to himself, and respectfully entreating pardon where he had so often obtained it before. But it was not till the general action, fought soon after, that the admiral was any way reconciled. "How these balls hiss," said E—— to Billy; both stationed on the quarter-deck. "Aye, aye," retorted Billy; "aye, aye; it puts one in mind of the goose." "So," exclaimed his lordship, who had overheard it, and turning short round—"so you can't forget the goose, Mr. C——; well, well, baste the French as well as you did the goose, and I shall be satisfied." A few minutes afterwards, and the enemy dropped alongside. The boarders came rushing from their quarters, when Billy snatched up a cutlass, and, springing from the nettings on to the Frenchman's deck, roared out, waving his sword, "Here's my spit: ev'ry mon his bird, and I'll take gibbie;" and cutting down all before him, though severely wounded, fought his way to the taffrail. E—— was close at his side, and together they dowed the colours, amid three cheers from all who witnessed the exploit. The cheers were returned by the boarding party, for the finest ship in the enemy's squadron was now their own; and many an old goose at Greenwich lives to tell the tale.

UNMANLY DESERTION AT SEA.

Time wore on—days, and weeks, and months passed away, during which we were almost constantly at sea, but incidents worth relating had grown scarce, as we were piping in times of peace, when even a stray pirate had become a rarity, and a luxury denied to all but the small-craft people. On one of our cruises, however, we had been working up all the morning to the southward of the Pedro shoals, with the wind strong at east, a hard, fiery sea-breeze. We had hove a-head some three hours before, and were standing in towards the land, on the starboard tack, when the look-out at the mast-head hailed, "Dog a sail!" ("The water shoals on the weather-bow, sir," and presently, "breakers right a-head.") "Stand by to receive him!" said "Very well," I replied.—"All right!" to order out to sea. "We are nearing the reefs, sir," said I, walking aft, and addressing Captain Franksom; "shall we stand by to go about, sir?" "How the old draw mind out of bulls here, you might say." "Certainly; heave in stays as soon as you like, Mr. Cringle!" At this moment the man aloft again sang out, "There is a wreck on the weathermost point of the long reef, sir."

"Aye—what does she look like?"

"I see the stumps of two lower-masts, but the bowsprit is gone, sir. I think she must be a schooner or a brig, sir."

The captain was standing by, and looked up to me, as I stood on the long eighteen at the weather gangway.

"Is the breeze not too strong, Mr. Cringle?"

I glanced my eye over the side—"Why, no, sir, a boat will live well enough; there is not so much sea in shore here."

"Very well; haul the courses up and heave to."

It was done. "Pipe away the yawlers, boatswain's mate."

The boat over the lee-quarter was lowered, and I was sent to reconnoitre the object that had attracted our attention. As we approached, we passed the floating swollen carcasses of several bullocks, and some pieces of wreck; and getting into smooth water, under the lee of the reef, we pulled up under the stern of the shattered hull which lay across it, and scrambled on the deck by the boat-tackles that hung from the davits, as if the jolly-boat had recently been lowered. The vessel was a large Spanish schooner, apparently about one hundred and eighty tons burthen, nearly new; everything strong and well fitted about her, with a beautiful spacious flush deck, surrounded by high solid bulwarks. All the boats had disappeared; they might have been carried away by the crew, or been washed away by the sea. Both masts were gone about ten feet above the deck; which, with the whole of their spars and canvass, and the wreck of the bowsprit, were lumbering and rattling against the lee-side of the vessel, and splashing about in the broken water, being still attached to the hull by the standing rigging, no part of which had been cut away. The mainsail, gaff-topsail, foresail, fore-topsail, fore-staysail, and jib, were all set, so she must most likely have gone on the reef, either under a press of canvass in the night, in ignorance of its vicinity, or by missing stays. She lay on her beam-ends across the coral rock, on which there was about three feet water at the shallowest, and had fallen over to leeward, presenting her star-board broadside to the sea, which surged along it in a slanting direction, while the lee gunwale was under water. The boiling white breakers were dashing right against her beams, lifting them up with every scud, and thundering them down again against the flint-hard coral spikes, with a loud gritting rumble; while every now and then the sea made a fair breach over them, flashing up over the deck aft of the taffrail on a snow storm of frothy flakes. Forward in the bows there lay, in one horrible fermenting and putrifying mass, the carcasses of about twenty bullocks, part of her deck-load of cattle, rotted into one hideous mass, with the individual bodies of the poor brutes almost obliterated and undistinguishable, while streams of decomposed animal matter were ever and anon flowing down to leeward, although as often washed away by the hissing waters. But how shall I describe the scene of horror that presented itself in the after part of the vessel, under the lee of the weather bulwarks! There, lashed to the ringbolts, and sheltered from the sun and sea by a piece of canvass, stretched across a broken oar, lay, more than half-naked, the dead bodies of an elderly female and three young women, one of the latter with two lifeless children fastened by handkerchiefs to her waist, while each of the other two had the corpse of an infant firmly clasped in her arms.

It was the dry season; and as they lay right in the wake of the windward ports, exposed to a thorough draught of air, and were defended from the sun and the spray, no putrefaction had taken place; the bodies looked like mummies, the shrunken muscles, and wasted features, being covered with a dry horny skin, like parchment; even the eyes remained full and round, as if they had been covered over with a hard dim scale.

On looking down the steerage, we saw another corpse; that of a tall young slip of a Spanish girl, surging about in the water which reached nearly to the deck, with her long black hair spread out all over her neck and bosom; but it was so offensive and decayed, that we were glad to look another way. There was no male corpse to be seen, which, coupled with the absence of the boats, evinced but too clearly that the crew had left the females, with their helpless infants, on the wreck to perish. There was a small round-house on the after part of the deck, in which we found three other women alive, but

wasted to skeletons. We took them into the boat, but one died in getting over the side; the other two we got on board, and I am glad to say they both recovered. For two days neither could speak; there seemed to be some rigidity about the throat and mouth that prevented them; but at length the youngest (the other was her servant), a very handsome woman, became strong enough to tell us, that "It was the schooner Caridad that we had boarded, bound from Rio de la Hache to Savana la Mar where she was to have discharged her deck-load of cattle, and afterwards to have proceeded to Batabano, in Cuba. She had struck, as I had surmised, in the night, about a fortnight before we fell in with her; and next morning the crew and male passengers took to the boats, which with difficulty contained them, leaving the women under a promise to come back that evening with assistance from the shore, but they never appeared, nor were they ever after heard of." And here the poor thing cried as if her heart would break. "Even my own Juan, my husband, left me and my child to perish on the wreck. Oh, God! oh, God! I could not have left him—I could not have left him." There had been three families on board, with their servants, who were emigrating to Cuba, all of whom had been abandoned by the males, who as already related, must, in all human probability, have perished after their unmanly desertion. As the whole of their provisions were under water, and could not be got at, the survivors had subsisted on raw flesh so long as they had strength to cut it or power to swallow it. What made the poor creature tell it, I cannot imagine, if it were not to give the most vivid picture possible, in her conception, of their loneliness and desolation; but she said, "No sea-bird ever came near us." It was harrowing to repeat the heart-rending description given by her, of the sickening of the heart when the first night fell, and still no tidings of the boats. The second sun-set—still the horizon was speckless. The next dreary day wore to an end, and three innocent, helpless children were dead. On the fourth, madness seized on their mothers, and — but I will not dwell on such horrors.

LOSS OF THE RAVEN BRIG, WHICH WAS WRECKED ON AN ENEMY'S COAST, JANUARY 29, 1804.

THE most authentic account of the loss of this vessel, which has ever yet been published, is that which was communicated in a letter by an officer who belonged to her, then a prisoner in Spain; after having, with his shipmates, suffered all the horrors and perils of shipwreck on an enemy's coast. This letter is dated, "In prison, Fort St. Mary's, in the province of Andulusia, February 6, 1804." The particulars of which we shall give in his own words:

"I can only mention to you the outlines of our case; to describe it would be as impossible as for you to conceive it. We had left England just a week, and expected in the course of another, with the same favourable weather as had till then attended us, to reach the place of our destination."

"We had arrived within twenty-five miles of Cadiz on Monday evening, January 28th, as we imagined, but were unfortunately mistaken, for before twelve that night we found ourselves drifted into an enemy's harbour, among rocks and shoals, the recollection of which makes me shudder."

"Our situation, just before daylight on the 29th, was most truly distressing—a tremendous sea, and shoals on either hand, presented each moment as our last. At daylight we found ourselves among the enemy's ships and within the batteries, but it was determined the Raven should not be tamely surrendered, and till nine o'clock there was a hope that we should get clear off; but this hope was transient. At ten the gale increased, and we anchored, expecting every moment to be driven on the rocks by the violence of the wind and the sea. In this awful state of suspense and despair, we remained till eight at night, at which time the vessel broke from her cables, and at nine we felt the awful shock—she struck! To describe the same would baffle the efforts of the ablest pen. The groans, shrieks, and cries of men threatened with instant destruction; no hope of saving life; blowing, raining, and dreadfully dark; sea after sea dashing over us; the

crashing of the falling masts; and the shocks which the vessel received on striking the ground, presented nothing short of instant dissolution.

"Thus circumstanced we remained on the wreck from nine at night till daylight, when we were made prisoners by the Spanish soldiers. After getting on shore, how shall I speak of that Providence which saved our lives, as only two were lost, one a messmate of mine, and the other a marine. Bate-man got no hurt; but he is well and with me: we expect soon an exchange of prisoners.

"The Spanish government have behaved in the most handsome manner—and, as they had an opportunity of witnessing our exertions on Tuesday morning, they have from a sense of admiration and honour, allowed us more indulgence than has been before known to be given. We have the liberty of going where we please within twenty miles (I mean the officers), and they seem anxious to render our situation as comfortable as possible."

SHIPWRECK OF A DUTCH INDIAMAN.

NINETEEN OF THE CREW STARVED TO DEATH, AND FOUR DROWNED.

ONE of the most heartrending shipwrecks that has happened for some time was made known at Lloyd's, by the arrival of the ship *Chance*, Captain Roxby, from Sydney, in the London Docks, having on board a portion of the crew of a Dutch Indiaman, named the "John Hendrick." H. W. Edkelenbury, master, which was totally lost on the rocks forming St. Paul's island, on the morning of the 29th of May, 1845, while on her voyage from Amsterdam to Batavia. The manner in which the deplorable occurrence was discovered is remarkable. It appears that on the night of the 2nd of June, the crew of the *Chance* were anxious to ascertain whether such rocks as were laid down in the chart, forming St. Paul's Island, forty-five miles north of the equator, and twenty-nine degrees west, were really to be seen, as many doubts prevailed as to their existence. Captain Roxby informed them that if the same course they were then going was kept until the following morning, they would come in sight of the rocks. Accordingly at eight o'clock they desisted them, and at half-past nine the captain was much surprised by observing, through a glass, a Dutch ensign flying from a spar on the island. It being surmised that a vessel had been wrecked near the spot, no time was lost in bearing up to the rocks, and, on nearing them, several persons were noticed on them, evidently in an exhausted state. The captain ordered the pinnace to proceed to their assistance. About twenty poor creatures were found lying about, exhausted, and apparently in a dying condition. The boat not being able to take them all off, the captain, the chief officer, steward, carpenter, two seamen, and three apprentice boys, were first rescued, the remainder being assured by the boat's party that they would return and preserve them also. The ship was speedily gained, and on the captain learning that eleven persons were still on the island, he promptly ordered the long boat to be lowered, and with the pinnace started for the rocks. Only twelve minutes elapsed ere they had set out a second time for the island, but in the meanwhile a sharp breeze had sprung up, a tremendous sea ran, and a strong current set in to the westward. Both boats kept beating about for five hours, and it appearing evident that if they kept out much later they would be swept away, they returned to the ship, having been unable to render the promised assistance. It being probable that the gale might in some measure abate, Captain Roxby kept his ship beating about the island, as it was impossible to anchor, there being no soundings, for ten entire days; and having seen nothing of the poor creatures, who by that time must have perished from the intense heat and the want of water and food, he sailed for England, his own provisions by this time becoming very short.

On questioning those whom he had saved, he learned that they belonged to the Indiaman in question; that on the morning of the 29th of May she was running under a press of sail,

when at three o'clock the watch on deck discovered the rocks ahead so close as made it impossible to clear them. The helm was instantly brought to, but almost at the same moment she struck, and the succeeding wave pitched her on her beam ends. Every endeavour was instantly made to get her off; her rigging and masts were cut away in order to lighten her, but as the sea kept dashing her against the rocks with terrific force, she soon broke up. The captain succeeded in reaching the rocks with a line, and secured it round one of the loftiest cliffs, in effecting which he was no less than seven times swept down the rock, frightfully lacerating his body. The line being also made fast to the wreck, most part of the crew contrived to haul themselves on to the island by it. Four brave fellows attempted to land in a boat with the ship's papers and some provisions, but on nearing the breakers a heavy sea capsized her, and they all perished. A poor boy, who has been saved, had his arm broken by being dashed against the rocks. On assembling on the frightful spot which they had been cast upon, which presented not the remotest chance of escape, starvation stared them in the face. Of wearing apparel they had saved none, save the few drenched rags that covered them; and of food, the only things they could rescue from the wreck were a cask of butter, a cask of flour, a small biscuit, and a small keg of gin. Immediately under the line, a burning sun pouring upon them, and not having a drop of water to quench their thirst, the heat was intense, and which they could only allay by wading into the sea up to the chin, and thus remain the whole day. At night time the spirit was distributed amongst them. The single biscuit was broken up and divided equally, and then they commenced scouring the rocks in the hope of finding further food. They succeeded in getting a few wild fowls and eggs; they were almost driven to madness. At dusk a few drops of rain were felt descending; they instantly laid out a kind of sail to catch it, and held their heads up to the heavens with their mouths open. It soon, however, passed over.

On the third day, to their great joy, a vessel bearing American colours hove in sight in the offing. They hoisted the signal on the spar, and in order to make doubly sure, the mate, seven seamen, and a passenger, put off in the only boat they had been enabled to save, with a small piece of wood to dabble along, the oars being lost, to the approaching ship, but she passed onwards and was not seen afterwards. The poor creatures in the boat then strove to regain the island; the current was too strong for them, and they were speedily lost sight of. That they have perished there can be no doubt. They had not the slightest provision with them—no compass, and no oars, the nearest place being Cape Roque, more than 600 miles distant. The sufferings of those left on the rocks, on perceiving the fate of those in the boat, were tenfold; and on the fourth day, they gave themselves up to death. They were rapidly sinking from the effects of the heat, the skin on their face, hands, &c. actually peeling off. On the morning of the fifth day the *Chance* hove in sight, and, as before noticed, saved seven. Eleven amongst whom was the doctor, were left on the island. On the arrival of the poor fellows in London, they waited on the Netherlands consul, who having relieved their destitute condition, housed them at the Yorkshire Grey Tavern, Lower Thames-street, from whence they proceeded next day to their native country, by the Rotterdam mail steamer. The ill-fated Indiaman belonged to Rotterdam, was 800 tons burden, and had only been built about two months previous to her loss. To Captain Roxby the highest commendation is due for the humane and prompt steps he adopted to rescue the unfortunate persons on the island. Those who are indebted to him for the preservation of their lives, declare that nothing could exceed his endeavours to re-make the island. Night and day he was on deck attempting it. Of the fate of the eleven poor creatures left on the rocks, it is the opinion of Captain Roxby, as also the Dutch captain, that they must have perished in a day or two afterwards; for had they been rescued by any other vessel, she must have been fallen in with by the *Chance*. The rocks being situated some hundreds of miles out of the track of vessels trading to the Cape, perhaps scarcely two out of one thousand ever met with them.

LOSS OF THE BARRETT.

DECEMBER, 19, 1820.

THE Barrett of three hundred and fifty tons, commanded by Capt. Faragar, and laden with timber for Liverpool, sailed from St. John's, New Brunswick, on December 19, 1820. While proceeding on her voyage, on Tuesday, the 2d January, in lat. 43 deg. N. long., 34 deg. W., at 8 p.m., it came on to blow a heavy gale from the westward, and the vessel being deep, the sea made a clear breach over her. They were obliged to cut away the topsail-sheets; but every exertion to bring her to or before the wind proved ineffectual, and she continued in the trough of the sea, the water pouring down the companion, so that every moment they expected she would upset. The two pumps were constantly at work, but without effect, the water

still gaining upon them by the cabin. In this state they continued until daylight; when by this time the water had reached the after peak, so that they gave up pumping as being altogether useless. Relieving-tackles were put to the tiller, four men to each tackle, and two to the wheel, to steer her as much as possible before the wind. The sea now burst over the vessel with great force, and carried away all the rails of the poop but a few to which ropes were lashed, and to those they clung to save themselves from being washed overboard; for even the taffrail was wrenched up, and washed away. They kept a reefed foresail, a main-staysail, and trysail on her; but the foresail blew clean out of the boltropes, and such was the weakness of the crew, from the intense cold and their provisions being spoiled by the salt water, that they were unable to clear the wreck. The gale now blew with increased violence; and the

1053 THE BARRETT, CAPTAIN FARAGAR.

sea running mountains high, made a clear passage over the main deck, broke the stern, and through the bends. The deck-timber, consisting of large logs, was washed away, the ring-bolts being torn from the decks, and the stanchions broken down. The vessel would have undoubtedly gone to pieces, had she not been kept as easy as possible by steering before the wind. Day after day they lay in this condition, till the captain fell ill and took to his bed; and very few, besides the mate, out of sixteen persons, were able to crawl about. All hands had been put on short allowance; but, the wind lulling, the cook contrived to light a fire, and they made two or three pretty fair meals, and kept their course. It then fell calm with a heavy swell, and the vessel having but little aboveboard to steady her, her main and mizen-masts having gone by the board, lay rolling

in the trough of the sea; their fire was put out, and at last the foremast gave way, which they cut clear. At length they were reduced to two ounces of bread and a pint of water a man for twenty-four hours, with now and then a little drop of spirits. Daily was their small allowance diminished; hunger and thirst began to make them quarrelsome and look fiercely at one another. They had only a little water and a few pounds of bread left, when the mate at daybreak went on deck, and they heard him shout "Sail, ho!" All hands immediately crawled up—even the captain got out of his cot—making sure that deliverance was at hand. She neared them fast. Faces that had not had a smile on them for many days now again looked cheerfully—wrangling ceased, and they congratulated each other on the prospect of being snatched from death. They

hoisted a signal of distress, and the captain sent for them all down into the cabin, and solemnly returned thanks to the Almighty for his merciful interposition in their behalf.

As the stranger gradually came nigher, eager expectation increased, and when she passed within hail, heard their deplorable story, and promised to render them help, they tried to raise a cheer, but it was more like the moaning of the wind. They were so reduced that they resembled spectres more than men, and could not muster sufficient strength to get the boat out, as their stern-boat had been washed away; so the master of the brig promised he would send them his, and, being short of provisions, what bread and water he could spare. This so roused their energy, that they turned to at the pumps, and by dint of hard labour, lightened her of a great deal of water, till all hands became exhausted, and they were obliged to give in.

Just at this instant the wind chopped round to the westward and the strange sail stood away from them. Some of them thought she was only keeping to windward—others gazed in silence—yet none believed that she would leave them altogether to perish, till they saw her making sail and every hour lessening in the distance. When she was only just seen like a dim speck upon the verge of the horizon, then arose wild cries and lamentations—then did disappointment sink into unutterable despair—the mind gave way under the sudden change—the men flew to the liquor, and got drunk; and whilst some were praying to the Almighty for deliverance, others mingled their expressions of distress with oaths and curses. It was a dreadful scene, as all they could muster which were likely to appease hunger, consisted of part of a bullock's hide, about four pounds of candles, and a gallon of lamp-oil, the

pump leather, and the captain's dog, reduced almost to a skeleton, which, being a favourite, he had been unwilling to kill till the last extremity; but it being represented to the captain that they must all perish unless the dog was killed for subsistence, and the animal being bled to death, he directed Mr. Mac Cloud, the mate, to serve out every part fairly and economically, which he did by dividing the blood with a table-spoon, and the liver, heart, and kidneys were divided into sixteen shares, and distributed for that day's subsistence. About this time, the captain, who had throughout suppressed the expression of his sufferings, lest he should intimidate the men, became deranged—rushed upon deck, bid God bless his wife and children, spoke of the mutiny in the ship, and used other incoherent language. He was prevailed upon to go to his cot,

where, after twenty-four hours of insanity and suffering, he expired. The whole of the survivors now became so weak, that only the mate, a robust young man, and three others, could stand. They steered the vessel as well they could towards the east, the westerly gales still prevailing. As they conjectured they had sailed since the vessel became water-logged about six hundred miles, they were in hopes of seeing the land of Ireland, or they would have given up every exertion for preservation: but in the afternoon it became more calm; and the wind suddenly changing to the eastward, blighted all their hopes. They had seen but one vessel during the whole passage; and a glimpse of hope rushing upon them that some one might fall in their way, they made fast the tiller, and committed themselves to the guidance of Providence

Every eatable was consumed; candles, oil—all were gone; and they passed the long dreary stormy nights of sixteen and seventeen hours in utter darkness, huddled together in the steerage, imploring the Almighty to help them, yet feeling reckless of existence. Such was their condition about the middle of January, and no one but the mate paid the slightest attention to the vessel; indeed had she been laden with any other cargo, nothing would have saved her; but the timber kept her buoyant even after the water had risen to the lower deck.

It was disheartening and melancholy in those dismal and dreadful nights to hear the dashing of the waves as they broke over them—the moaning of the pent-up wind in the hold—the groaning of the vessel as she writhed between the seas, and the howling of the gale as it swept above their heads—all mingling in one terrible threat to send them to the bottom; and yet in the midst of all this, whilst the hand of the Almighty was exhibited in power and in punishment, men were setting all warning at defiance by getting beastly intoxicated. It was truly a melancholy sight to see the poor withering wretches dying by inches; some like moving skeletons, and others with their flesh swelled and bloated as if they had lived on plenty. Silently they all sat clutching their hands and catching their breath, as if each had something to communicate and dared not give utterance to his thoughts;—then there was an indistinct muttering of doing the best to save their lives, till it came to a question of what was best?

At length one of them, bolder than the rest, addressed them:—"Here we are, sixteen of us, perishing for food, and what prospect is there before us? Would not it be better"—and he stopped while his companions held their breath, shuddering at what was to come next. "D— all ceremony; one must die that the rest may live." Agreed as to the necessity, they could not decide as to the mode of choosing the victim, till eager for the performance of their intentions, and determined to put the matter beyond doubt, it was agreed that the mate should prepare sixteen pieces of cord, fourteen of equal length, one a little shorter, and another shorter still: whoever drew the first lot was to be clear, the second was death, and the third the man who was to do the deed. The cords were to be shoved through a crack in the bulk-head from the steward's store-room, and each man was to draw his yarn.

The awful moment approached that was to decide the fate of one of them, and then there was a reluctance to draw, each fearful of taking the cord that was to prove his death-warrant, till the mate addressed them:—"My lads, let us wait till tomorrow before we proceed further; we have endured thus far, and a few hours longer cannot make much difference: who knows what Providence may have in store for us." This proposition was at length assented to, although many were eager for an immediate decision.

Darkness came on; they had caught no fish, nor seen any prospect of help, so that another daylight would be the last that was to dawn upon a shipmate who was then unknown, though each might fancy it would be himself. It was a dreadful night—a night of tears and lamentations; and ere another sun had risen, two of them had met the fate they so much dreaded the night before.

Hardly could a question be asked as to their future proceedings to obtain sustenance for their famished bodies, when some of the men were observed coming forward with lumps of flesh half-roasted and half raw, which they tore with their teeth like dogs; and quarrelled and fought, to get near the grate; and though their very souls loathed the disgusting banquet, the gnawings of hunger overpowered all other sensations, and each chewed the revolting remains, though they did not swallow it.

The fearful consequences of their subsisting on such unnatural food were too soon apparent, their limbs swelled and broke out into dreadful wounds, their eyes glared with unusual ferocity, and during the following night death mercifully released two more of them from their sufferings, leaving twelve miserable beings on the wreck of this unfortunate vessel.

The gale now increased heavier and heavier, the sea rolled over them, washing away the boat, and sweeping everything from the deck. Death seemed certain; the vessel, though

sound, could not resist the constant buffeting of the waves, and began to break up. They had no canvass abroad, for it was all blown to shreds; and no one kept the deck, so that she lay on the waters like a huge coffin freighted with living skeletons.— Sometimes one or another would drag up their tortured limbs just to look round, but despair began to prevail. The hold was filled with water up to the beams, and the timber with which she was laden becoming heavier by constant immersion, they were soon up to their knees in the steerage. The yarns with which the fate of one of them was to have been decided still remained in the crack of the bulk-head, and often would their eyes wander to them as a sort of fixed point. There were the dead bodies, but they thought of the malady by which they died, and they were left untouched.

Hour after hour succeeded in pain and grief, with tribulation and bemoaning, as memory pictured past enjoyments, which they valued not at the time; and then there were agonising cries for mercy, till their throats were swelled and parched, while before their eyes were the blackening corpses with which they were compelled to hold companionship, from very inability to remove them.

It was in the afternoon of the succeeding day, when they were huddled together, each one expecting the next minute to be his last, that the man who had been left upon deck came down: there was a wildness in his eye, and he seemed gasping for breath, that they thought he was mad. He held a spy-glass in his hand, and stood holding on by the table and trembling till at last he burst out crying like a child. "What is it? Speak, speak!" cried the mate. "A sail!" replied the man. Each hurried upon deck as well as he could, and then the stranger was plainly seen, standing apparently towards them. They knew he could not help seeing them, and yet it was not unlikely he might take their vessel for a deserted wreck, and so not come to their rescue. Dreadful were the horrors of that suspense, for the wind was light, and in a few hours more it would be dark. They tried to shout, but their hollow voices died away sullenly on the waters; they had no ensign, or signal-haliards to hoist anything by, and they were afraid the stranger would not see them on the deck. In this emergency the second-mate emptied a powder-flask on the windlass, and then firing a pistol into it, it exploded, making a thick smoke which curled high over their heads.

In a few minutes they observed the stranger hoisting her ensign. It is impossible to describe their joy at this welcome sight; not a soul spoke, but every man dropped on his knees, and the great Searcher of hearts heard the silent prayer of gratitude. The ship altered her course, but before she could get near enough to hold a communication, the daylight was rapidly declining; it fell calm, and in a short time it was dark. There was a sudden change from joy to torturing anxiety; but before another hour had elapsed a boat was alongside. The miserable sufferers were obliged to be lifted in, one by one, and the sea was so rough that the boat had to make several trips to rescue all the survivors.

The wreck was of course abandoned, being then in lat. 45 deg. N., long. 28 deg. W., a very great distance from any land. It was providential that the wind changed to the eastward, which threw this vessel in their way, as she would otherwise have passed them during the night. She proved to be the *Ann*, of New York, Captain Crocker, bound to Liverpool, at which port she arrived on Friday, February 23rd, 1821, a week after taking the sufferers from the wreck; who, during the time, with the exception of one or two, were unable to rise from their hammocks. They were all of them so very weak and emaciated, having their limbs also broken out in ulcers, owing to the continued action of the salt water, that they were unable for some weeks, although treated with the greatest attention, to pursue their perilous vocation. The captain left a wife and five children, in Liverpool, to deplore their melancholy bereavement.

DICK SWIFT, THE OCEAN RACER.

It is an old saying that some men are born to be lucky, while others are just the reverse. It often occurs that some will use the utmost industry and perseverance to gain an especial

point, but fail in their attempt; while others, who take little or no pains, meet with success. Thus it is with journeys by land and voyages at sea. Two vessels may leave the same port for a distant country, and although one may sail many days later than the other, yet it often occurs that the vessel that sailed last reaches its destination first. So may it be said of Richard Swift, the master of a trader, betwixt London and Hamburg; who was so remarkable for making quick passages, that he obtained the cognomen of "Dick Swift—the Ocean Racer."

He was allowed to be a capital sailor, and when he had become accustomed to a vessel, he never liked to part from her, for he would find out her trim to an inch of canvass, and he was not a man to spare a sail or ship either: let the wind blow how it would, he despised to take in a reef. If such advice was ever offered to him, his reply invariably was, "It loses too much time," or "What's the use of having canvass on board if you don't use it?" he never could bear the thoughts of reefing, and if it was said to him that the wind did not serve, he would reply, "Then it must blow us back again, that's all. If I promise to sail at a certain hour I must go."

During the short cessation of hostilities between France and England, in 1802, several vessels were freighted for Hamburg, Amsterdam, and other eastern ports. One morning, as the sky cleared, and rendered objects visible at a good distance, the "Good Intent" (a trader) was going a good six knots an hour, with a fine breeze aft. Her captain was a careful man, and as the weather was rather squally, he did not care to carry much sail. His general maxim being—"better to be a few hours later, than come into port with a shivered topsail."

He had taken up his telescope, and was looking out astern to see what other vessels were on the same course, when he suddenly exclaimed, "Hey-day! who is this coming along in such haste, with sky-scrappers and every inch of canvass set, as if there was not a capfull of wind stirring? I'll be bound it is Dick Swift. See how he skims along, leaving every vessel astern of him. I suppose he'll be alongside of us before long, notwithstanding we sailed a tide before him." Captain Dixon was indeed a true prophet; the vessel which had at first appeared as a mere speck on the ocean, gradually enlarged until it was close astern of him.

"How are you, Dixon? How are you?" said Dick Swift. "Fine breeze this, eh?"

"Why, where the deuce are you going to in such haste?" inquired Dixon; "for you carry canvass enough for a seventy-four."

"I am on hasty business," responded Swift. "The owners desired me to be as speedy as possible, and I always wish to act according to orders. I have been accustomed to do so ever since I was mate aboard a man-of-war; and as the resolution is both good and lawful, I don't wish to break it. By-the-by, that's a good craft of yours, Dixon, and she sails well; but *mine sails better*. There she goes like a beauty, cutting through the water like a shot. Good-bye, Dixon, I must get on: my vessel's impatient you see, and so am I, and can't wait for you; good-bye. I shall see you in Hamburg; I'll tell the agents you are coming."

Swift's vessel had now shot a-head of Dixon, and in a few hours was nearly lost in the distance.

"There he goes," said Dixon. "The fellow has the devil's luck and his own too. I often wonder he doesn't meet with some accident, for he flogs his ship most unmercifully. So, so, here's a heavy squall coming; I see it running along the water's edge. Make all snug there, and let's receive it as quietly as we can. Down with your royals, My word for it, Master Swift will leave some of his tackle overboard if it catches him."

The squall came quickly on: it was a severe one; but the wise precautions of Dixon prevented any mischief on board his ship. It passed over quickly, and the weather becoming more serene, Dixon hoisted his royals, and with a steady breeze aft, he cut through the water at eight knots an hour, which was jocosely termed one of Dixon's gallops.

"Now I must have a look after my friend Swift," said Dixon, as he took up his glass. "Ah, there he is; the squall has just got hold of him. Madcap! He'll lose some of his canvass, or

I'm mistaken. There; there goes his top-sail. I expected as much. He's getting pretty close on Cuxhaven; though! Well; well, I shall not be many hours after him."

Dick Swift, who had made the best use of his time, was within ten leagues of Cuxhaven when the squall caught him. He was down below at the time, and the mate, who was then on deck, perceiving its approach gave orders to strike the royals and reef the trysail. But no sooner were the words given, than Swift came hurrying on deck, and with stentorian voice roared out,—"Hold, topmen, let the sails alone. Who the devil told you to reef and strike?" said he to the mate.

"A squall coming on, sir," was the reply.

"What the devil has the squall to do with us," replied Swift. "I don't suppose it will blow us out of the water; besides it loses time to reef and shake out; and I hate your lazy snail's gallop."

"Are we to hoist the royals again, sir?" called one of the topmen.

"No, never mind," replied Swift; "since they are down, let them remain so." It was well for him that they were struck, for when the squall reached him, it came with such violence, that in spite of all his skilful manœuvring, it carried away his top-mast and tore his mainsail to ribands. However, he got to Cuxhaven without any other damage, and soon reached the bourse at Hamburg, where he did not forget to boast of his quick passage, and the number of vessels he had left behind him. Dixon came in the next morning, without a stitch of canvass being injured. Swift began to banter him. "Well, Dixon, how are you? You have arrived at last, eh! Slow work, slow work, eh!"

"If it's slow it's sure," replied Dixon. "When I come into port I bring my vessel in complete, with every stick standing; I don't come towing into port without a topsail; or my mainsail cut to ribands like other people that I could name."

"Oh, d—n the topmast," retorted Swift; "it was old and good for nothing, and now I shall get a new one; so I gain by the loss: and as for my trysail being a little torn, it is but a few yards of canvass spoiled; and my owners don't mind that, now and then, provided I make a quick passage."

"Well," said Dixon, I see it is no use to argue with you, for you have an answer for every thing. But I must leave you, for my time is short here. I must get my cargo on shore, and be off again in three days."

"Why, what's all this bustle about?" inquired Swift.

"That's more than I know," said Dixon. "All I can tell you is, that the ship is taken by three English families, who leave for London immediately, so I am bound to sail with or without a cargo."

"Well," said Swift, "I'll walk with you to the quay; but spite of all your bustle and haste, I wouldn't mind laying a wager that I see the Thames as soon as you."

"Time will show, time will show," said Dixon; "but don't loom too large lest you should be mistaken."

Thus did these two sons of Neptune beard each other until they reached the quay.

Swift had made so many remarkable voyages that he was well known over the eastern coast, and whenever any ship-owners wanted to ensure a quick passage, Dick Swift was sure to be eagerly sought after. He was once master of one of the Hull traders, and a fleet of them had dropped down to Grimsby, and thence to Spurn; where, finding the wind adverse and blowing stiff from the south-east, and fearing to be blown on the stony binks, they remained at anchor waiting for more favourable weather. The following day Dick Swift got his cargo on board and dropped down to Grimsby with the tide, where he anchored, and got everything in good sailing trim, not meaning to bring up at Spurn-light, if the tide would last him long enough. Next tide, away he went with all the sail he could muster, and when he arrived at Spurn he found all the others, that had started two tides before him, lying at anchor. He lay-to for a short time.

"Why, what do you all do here at anchor," said he, "when you ought to be out at sea?"

"Why you wouldn't have us go to sea in such a gale of wind as this?" replied the master of a vessel, who lay alongside.

"To be sure I would!" replied Swift. "I am not going to lose time here; I am off to sea, blow high or blow low, the owner's business must not be delayed because the wind blows stiffer than usual. So good-bye to you all. I mean to see London the day after to-morrow."

Swift was as good as his word; he sailed immediately, and reached London safe and sound in forty hours. Many of the shipmasters felt ashamed at being left behind, and resolved to sail after him; but they had delayed so long that they lost their tide, and when it ebbed again the wind had chopped right in their teeth, so that they were detained a day longer in consequence; and when they got to sea the gale had dropped into a calm, and they made but slow work of it. Dick Swift got his cargo landed, and was soon freighted and ready for sea again. Many inquiries were made respecting the other ships, to all of which he replied, "He supposed they were at Spurn waiting till he went back to tell them what news was stirring in London."

Dick Swift, having got his clearance, set sail on his return to Hull. When he reached the Nore he found several of the Hull traders at anchor, and he did not forget to congratulate them on the quick passage they had made. His jeers made them rather sore; but there was no help. When Swift got into the Sweyn he found the rest of them, and he saluted them all as he passed. There was one vessel commanded by Joseph Benton, who had not been in the habit of speaking very favourably of Dick Swift; and he made a point of passing close alongside of him, and giving him a fillip. "Good day, Mr. Benton," said Swift: "any news at sea—are all well at Spurn Point?"

"I don't know," responded Benton, rather sulkily; "what's the news in London, if you come to that?"

"The news in London!" echoed Swift; "I know of none, excepting that there were a great many anxious inquiries after you and the rest of traders; but, however, you will now have an opportunity of getting to the Nore this evening, and to London some time or another, although a west wind is not altogether the sort of thing to work up the Thames. So good-bye to you, old friend—bad luck now, better another time."—So saying, Swift brought his vessel to the wind and was soon out of sight.

Captain Dixon made all possible haste to get his ship cleared of her cargo, and made the necessary preparations for the accommodations of his passengers who were about to quit Ham-burgh. Dick Swift had also discharged his cargo, and was waiting for a freight to take back to England, while the necessary repairs were going forward on board his ship.

It was about this period that Buonaparte had made rapid inroads into the German territories, and the non-intercourse decree was passed. Dick Swift and Captain Dixon happened to be at the bourse, when one of the merchants called them aside, and told them that he had private information that an order had arrived from the French authorities to seize on all English shipping in the Elbe. "The devil they will!" exclaimed Swift. "They must look sharp to catch me, then."

"What do you mean to do?" inquired Dixon.

"What do I mean to do?" echoed Swift. "Why, cut and run to be sure. It will soon get dark; there is a night tide, and it shall take me out to sea, before any of the French mounseers shall know my anchor is weighed."

"But how will you get to sea without your topmast, and with your trysail cut to ribands?" said Dixon, ironically.

"Under such circumstances," replied Swift, "I'd go to sea with nothing but an old blanket for a trysail; and I don't mind betting you a glass of grog that I reach the Thames before you."

"Done," said Dixon. "You have generally won your wagers when you betted on your speed, but I think I am safe for winning this time."

"That remains to be proved," said Swift. "I shall leave you now and get on board, and see about putting a few stitches in my trysail, and I'll be bound we'll be able to rig something by way of a topmast."

"And I must go down to the quay, and see about my passengers," said Dixon; "for if the French are going to get to

windward of us, I must look out ahead, and keep clear of the breaking waters."

"Away with you, then," said Dick; "but don't forget our wager." They parted; each taking his way to his ship. Swift was not idle a moment—he set all hands to work, in order to repair the damage sufficiently to enable them to set sail with the next tide.

Night came, and Dixon, who had warped out quietly, got to sea unobserved. Dick Swift had greater difficulties to surmount—he was obliged to have his work done quietly to prevent any appearance of bustle on board, lest it should create suspicion, for the French authorities were on the alert; but, seeing the tattered state of Swift's vessel, did not imagine he had the most remote idea of going to sea that night. Swift was, however, keeping a sharp look-out, and the moment opportunity offered he cut his cable, and silently dropped down with the tide; and as soon as he got clear of the other shipping, up went every stitch of canvass he could muster. A stiff breeze sprang up from the eastward. He was hailed by several vessels, but no answer being returned, a shot was fired at him; but Swift's good fortune stuck to him—he dashed along, spite of all obstruction, and got out to sea. The armed corvette which had fired at him cut her cable, and went in pursuit; but Swift, who knew every inch of the coast, shaved every sand or shoal so close, that the corvette fell into the snare, and getting a little too much to the larboard of Swift's track, stuck fast ashore, where he had the mortification of seeing Swift escape, as well as hearing three lusty cheers given in derision.

Swift was now safe on the German Ocean—plenty of sea-room, and a stiff breeze from the east; his trysail was rather the worse for its late accident, and the bit of spar he had rigged out for a top-mast cut a strange figure: but, notwithstanding all these disadvantages, he contrived to make good way. When daylight broke upon him he could see Dixon's ship a long way ahead of him, and he could not help exclaiming, "I think my glass of grog will be lost this time." A fog came gradually on, and obscured the other vessels from his view. Dick Swift, however, set his bells going, and disdaining to lay-to as others had done, made the best of his way; and in twenty-four hours, when the fog cleared off, the English coast could be discerned like a black streak running athwart the ocean's bosom. The wind had been pretty stiff, and Dick Swift had nearly met with an awkward accident before the fog cleared off, as he got foul of a large ship, which carried away his jib-boom.

This, of course, could not but be deemed a sad misfortune, more particularly at a juncture like the present, when not only his character, as an "ocean racer," but also his *grog* was at stake; and every means that ingenuity or experience could devise were adopted to get the weather-gage of Dixon.

He succeeded, and reached the Thames without any further damage. As usual he was the first in. A few hours after he saw a vessel coming in: a short glance convinced him it was Dixon.

"Halloo, Dixon!" said Swift. "Where the deuce have you been loitering? Why you were twenty miles ahead of me before the fog came on."

"And how the deuce did you get in so soon?" said Dixon. "And where's your jib-boom?"

"Why, as to that," replied Swift, "I can't exactly say where it is. All I know is, that it went overboard in the fog; and as I was in haste I could stop to look after it."

"Ha, ha, ha," said Dixon, laughing heartily. "A pretty sailor, to come into port without a jib-boom."

"I confess," said Swift, "I confess I've lost my jib-boom—but I've won my grog."

A GALE OFF MARMORICE.

In the latter end of the month of January, 1801, the day dawned with every indication of bad weather—the mass of dense and heavy clouds, piled upon each other, occupied all space to the south-west; the sun in his course looked with a fiery aspect, and the sea-fowl, with the wonderful instinct that puzzles the wise, from their foreknowledge of the storm, came

screaming in upon the land; the wind blew fiercely and in fearful gusts; the labouring clouds seemed preparing to discharge their overloaded breasts, and distant thunder rolled along the horizon. The masses of clouds, as they sailed along the ocean, nearly shut out the light of day, and rose at opposite extremities into huge mountains of vapour: they were illuminated by fitful flashes of lightning, and looked like giant batteries erected in the heavens. As they moved onwards from the south-west, they shot down vivid streams, which, at times, pierced the waters like quivering blades of fire; again the electric fluid took an horizontal direction through the skies, and its dazzling streak fluttered like a radiant streamer, until it lost itself among the clouds. Comparative darkness came on with a suddenness that I never before had observed, and the gusts were terrific.

During this elemental war, the British fleet under Vice-Admiral Lord Keith, and the army under Sir Ralph Abercrombie, closely crammed in men-of-war and transports, to the number of two hundred sails, were carrying a heavy press of canvass to claw off a lee-shore: that shore was Caramania, in Asia Minor, a most mountainous and well-wooded, black-looking coast. We were in search of Marmoreice harbour, the appointed rendezvous of the Egyptian expedition; and the Asiatic pilots, frightened at the dangerous position of the fleet in this tremendous weather, lost the little knowledge they had formerly possessed of this unfrequented and frowning coast, whose mountains towered high above the clouds, on which no vestige of human life could be seen. Every glass, in the clearness between the squalls, was eagerly turned upon the precipitous shore, upon which the heavy waves beat with the most horrific grandeur. It was self-evident to the meanest capacity, that unless the harbour could be entered before night, the transports filled with British warriors would be wrecked on the lee-shore, with no chance of assistance. The men-of-war, by dint of carrying sail, might claw off; but the great majority of this fine army would, in a few hours, become food for the monsters of the deep, or the ferocious and ravenous tenants of the vast forests that seemed interminable to our straining sight. As each withdrew his glass, with a disappointed look, the longitude of their countenances increased, and the round-faced, laughing midshipman, lost his disposition for fun or frolic, and all at once became a reflecting, sedate personage.

The admiral, on whom all the responsibility rested, endeavoured to assume a calmness of tone and manner, that the honesty of his open nature would not brook: his agitation was visible in the contortions of his venerable countenance, and the sudden starts of his nervous system.

"Fire a gun, and hoist a signal of attention to the fleet," said his lordship.

"They have all answered, my lord," said the officer of the signal department.

"Now, Mr. Stains, be particular; ask if any one is qualified to lead into Marmoreice."

As the negative flag flew at the mast-head of the men-of-war, every countenance proportionally fell. At length, with heart-felt joy, I proclaimed, that one of our sloops had hoisted her affirmative.

"Who is she, younger? D—n it, boy, do not keep me in suspense."

"The Petrel, my lord."

I saw an ejaculation of thankfulness rise warm from the heart on the lips of Lord Keith, as he piously raised his eyes and pressed his hand on his heart.

"Signal for the fleet to bear up, make more sail, and follow the Petrel," said Lord Keith; "Captain Inglis may be depended on."

And we shook out a reef, and set the main-top-gallant-sail, which soon closed our leader in the Petrel. As we approached this mountainous and novel land, the idea (and it must be an astounding one) seemed to dwell on and occupy the most unreflecting mind, that should Captain Inglis be wrong, every ship with twenty-five thousand men, would be the sacrifice of such error.

Lord Keith ordered the signal of attention with the Petrel's pendants.

"Captain Inglis, your responsibility is awful," said the telegraph. "Are you perfectly certain of the entrance of Marmoreice?"

"Perfectly sure," was the answer, "and right a-head."

"Signal officers on the fore-yard, with their glasses," said the admiral; and slinging our telescopes we ascended: indeed it was time, for now the roar of the waves, as they broke on the coast, throwing their spray on high, conveyed a dismal idea of our impending fate.

"A narrow entrance a-head," called the signal-lieutenant, Stains.

"Do the midshipmen make out the same?"

"We all of us discern it, my lord," shouted the whole at the very extent of their voices.

"God be praised for this great mercy!" ejaculated his lordship, uncovering and bowing his head with great devotion; and I do aver and believe that the grateful sentiment pervaded every heart in the Foudroyant.

The entrance of Marmoreice now became distinctly visible to all on deck, from the contrast of the deep still water to the creamy froth on the shore; and the signal of the fleet to crowd all sail for the port in view, and the men-of-war to haul their wind, until the merchantmen had entered the channel, was flying at the Foudroyant's mast-head, as she shot into the gut of Marmoreice. The tremendous mountains overshadowed us, and seemed inclined, from their great height, to come thundering down upon us like the destructive avalanches in the mountains of Switzerland.

We now entered the spacious and splendid harbour, circular in its form, and more than twenty miles in circumference. It created great astonishment from its vast magnitude, being capable of containing all the ships in the world, and from its vast mountainous shore with immense forests. In so small a nook as to be nearly invisible, stands on a rock a fort, and a few wretched houses, surrounded by a high wall, I conjecture for the purpose of keeping out wild beasts, which seemed here lord of the ascendant. This fortification displayed the crescent and was saluted with eleven guns, as we took up anchorage, closely followed by our numerous fleet. Scarcely had we moored, when the heavy masses of clouds that had rested on and capped the high land, now opened upon us in earnest, and the forked lightnings darted among the fleet with fatal effect. The gale increased to a perfect hurricane, and blew from all points of the compass; the flakes of ice, for they were too large to be called hail, came down with such prodigious force as to destroy man and beast; and whoever witnessed that storm, could entertain no doubt of a special Providence in the affairs of men. We were all safe moored, and the heart expanded in thankfulness to the Eternal Power that had watched over our safety.

The following night was beautifully serene, and the suns of other worlds threw their softened and passive light on this minute speck in the boundless creation—the watch, some of whom paced the deck, castle-building, and imagining scenes of bliss that never were to be realized, while others admired the starry vault of heaven, wondering with what sort of beings yon myriads of worlds were peopled; while the talkers who could get listeners, were spinning many a yarn of by-gone days and other scenes. Crombie, a grey-headed young gentleman, (for all midshipmen are called young gentlemen, and with whom the youthful lieutenant of his watch commonly created some mirth by desiring him as youngest to sheer up to the mast-head and count the convoy), now seized me by the button, by which he compelled me to listen to his yarn as follows: "I say, youngster, that was an ugly coast we ran down upon yesterday, and reminds me of an occurrence that was particularly mournful." here he hemmed, and seemed to smother a sigh. "You see, when I belonged to his majesty's sloop—but it will be as well not to mention her name, as I cut and run one day without asking permission; well, we were cruising in the latitude, and, by old Sounding's longitude (but that, by dead reckoning, could not always be depended upon) near where brother Jonathan said he had discovered a dangerous cluster of rocks, to which he had affixed the appropriate name of the 'Devil's Grip'; well, I dined in the gun-room that day, and many a

heartily laugh at the Yankee notion circulated with the bottle; for the master proved, to the satisfaction of all but one at the table, that rocks could not be in the open sea, so many hundred miles from any known land, and where the deep sea lead could not find bottom, and for which he had often tried in vain: so when the caterer bowed round to signify that the mess allowance of wine, viz., a pint each person, was drunk, the first luff proposed an extra bottle, while we listened to the most extraordinary youth I ever met with, as he, with fluency of speech and elegance of manner, demolished the master's premises and inferences. This young gentleman was called the captain's nephew, and might, I think, have claimed nearer relationship; he was named Paulo, after his mother, Pauline, a Neapolitan Countess, who fled from a nunnery, where she had been imured without asking her consent. She must have been a beauty, for her son, though of a very fragile and delicate make, was remarkably tall and handsome, with a most expressive countenance, generally clouded with a shade of melancholy: he was fond of gazing at the moon, and wrote a deal of poetry, comparing ladies' eyes to the bright stars that shone above him, all about love, and such other nonsense; but our doctor, who was a learned man, pronounced it beautiful, and said he was a genius of the first order, full of susceptibility, and with nerves too finely strung for this coarse and bustling world; at all events, he was universally beloved for his gentleness and kindness of heart: at punishment you would see him with his hands clasped, and his eyes suffused with tears, looking up in his uncle's face with such an imploring look to spare the culprit, while the muscles round his well-formed mouth used to work as the sharp lash fell on the tender skin of the sufferer.

"The captain was a stern unbending man, but his iron countenance softened at the visible agony of this glorious youth, who frequently gained his point, and the last dozen was remitted. He said, as far as I could understand him, that the shell of the earth was trifling compared to its interior, which was supposed to be in a state of fusion, and hence arose volcanos and earthquakes, the heaving up of lands that had been the bed of the ocean, and the submersion of others; that the vast Atlantic itself was supposed by some philosophers to have once been habitable and a great continent. All this was too learned, and made no impression on any one but the doctor; so we drank the captain's toast, of good afternoon, and went to our usual duty; mine was to keep the first watch. The gale blew hard, right aft, and we were dashing through a heavy sea in merry style.

"I think, sir," said I, addressing my officer without touching the hat, the night being too dark to notice the omission, (a point on which he was very particular), "I think, sir, that the sea seems inclined to kick up a bobbery to night, and is rising fast."

"I am of the same opinion, youngster: but what is that a-head?"

"At this moment the look-out man on the bowsprit sung out, 'Breakers a-head!' and was reiterated by the cut-head-man, 'Breakers on both bows!' in that indescribable tone of alarm that carries instant conviction of great danger, and causes a revulsion of the blood.

"This terrific announcement woke even the sleepers, for in less time than I take to tell you, every man and boy was on deck, most of them in their shirts; poor dear Paulo, looking more like an ærial sprite than of mortal mould, ran after the captain, who went out on the end of the bowsprit, and looked steadily around, which required nerves of iron; for right a-head seemed a vast barrier of rocks, on which the sea was wildly breaking, throwing its white spray to the clouds; and on each side, as the mad waves receded, were seen their black tops, peeping through the creamy froth that surrounded us, the gallant ship bounding like a greyhound, at the rate of ten knots, full upon them, that would dash her to atoms; for she seemed to me to increase her speed, probably from an indraught in the reef. Then arose the wild shriek of despair from the timid, and stood still the brave; their manly brows blanched, it is true, for it was a sight of such horror, youngster, that my hair turned perfectly white, and I shut my eyes with the sinner's last ejaculation, of 'God be merciful to me!' but not before I

had seen Paulo, the beautiful and good Paulo, with the scream of a maniac, jump into the boiling surf. The manly tone of the captain's voice was heard high above the roar of the breakers, 'Port the helm, port, and silence all of you—your lives depend on your steadiness and prompt obedience. Master, take the weather-wheel, and steer for an opening, two points before the starboard beam: me may find water through the reef where it does not break so heavily. Brace forward the yards;' and the lee-gunnel buried itself in the agitated water, as she sprang to the wind.

"Let fly the main-topgallant-sheets!" The sail flew to ribands, and saved the topmast. 'Now, master, hard up to the helm, and square away the yards; send her between those high rocks where the sea does not break.' The noble ship leaped between them, while the spray from them washed some of the unnerved over the bulwarks, and their last despairing cry was drowned in the roar of the surf. She steered beautifully in the master's able hands, who had frequently declared he could turn her through the eye of a needle; and this channel between the breakers was like one, and very little wider than her main-yard. Nothing was heard from old Soundings but 'Port it is, starboard withal,' not forgetting sir, at the end of each response. As I went to assist him at the wheel, after drawing in a long breath, I heard him mutter, 'Who would have thought the Yankee notion true, but it is the Devil's Grip, and a devilish ugly one it is for sartin.'

"We are through the reef, thank Almighty God," said the captain: and it came warm from the heart. 'Master, we will heave-to till daylight.' 'Better take a large offing,' said Sounding: 'the devil may have a young grip forming in the wake of his mother.' 'Keep a good look out for breakers,' called the captain; 'and, Mr. Handsail, shorten sail, laying her to.' And we heve-to, a league to leeward of the most frightful cluster of rocks that ever reared their ugly heads above the wide and open sea. 'But where is my boy, Paulo!' said the captain. I advanced, and gave my doleful story. His strong and pent-up feelings broke down in a torrent of grief; the big tears coursed each other down his weather-beaten cheeks as he exclaimed, 'Oh! Paulo, my good and gentle son, Paulo, would to God that I had died for thee!'

"There is something so affecting in the grief of a strong mind like the captain's—so firm, that he retained his self-possession in the midst of scenes that paralysed the heart and blanched the boldest front—that all shed tears that heard him exclaim, in the bitter accents of heart-broken misery, that he was bereaved and desolate, and would welcome death as a cessation from intolerable anguish. I alone stood firm, not being of the melting mood, though I dearly loved the boy, who haunts me in my sleep. I saw him last night, plain as I see you, and heard his maniac scream, as he jumped into the agitated waters." Saying this, Crombie pulled off my button and burst into tears; I respected his feelings too much to recal to his mind his previous declaration of stoicism. "The master," said he, "called for a norwester to comfort him, saying, 'grief always made him dry.' The captain did his duty mechanically, but the elasticity of his step, and his manly deportment had, like his son, left him for ever. He was never after seen to smile, retired on half-pay, and soon went to that 'bourne from whence no traveller returns.'"

A FLEET SETTING SAIL.

—Suppose that you have seen
The well appointed King at Hampton Pier
Embark his royalty: and his brave fleet,
With silken streamers, the young Phoebus fanning,
Play with your fancies; and in them behold,
Upon the hempen tackle, ship-boys climbing,
Hear the shrill whistle, which doth order give
To sounds confused; behold the threading sail,
Borne with the invisible and creeping wind,
Draw the huge bottoms thro' the furrow'd sea,
Breasting the lofty surge!—*Shakspeare.*

LOSS OF THE ALBION.

THE *Albion*, of 447 tons burthen one of the finest class of packet-ships between New York and Liverpool, commanded by Captain John Williams, having on board a crew of twenty-five persons, besides twenty-three cabin and six steerage passengers, making fifty-four persons in all, sailed from New York on the 1st of April, 1822.

For the first twenty days the voyage had been prosperous and pleasant, with moderate and favourable weather; and at about half-past one o'clock in the afternoon of Sunday, the 21st, they made the land; the Fastnet Rock bore, by compass, E.N.E., distant about three leagues. At two, they made Cape Clear, bearing E. and by N., distant about two leagues. The weather at this time was thick and foggy, the wind blowing fresh, and heavy squalls from the southward. The ship was

now heading up E.S.E., and carrying all prudent sail to crowd the ship off the shore; but as the gale increased, they were obliged to shorten sail. At four o'clock, they were under double-reefed topsails, foresail, and mainsail, when a sudden squall carried away the fore-yard and split the fore-topsail; they, however, got the pieces of the yard down, and prepared to get another yard up; and as the gale still increased, they took in the mainsail and mizen-topsail, and set the main-trysail.

As the night came on, the decks were cleared for working the ship; the wind lulled, and it was supposed that the storm of the day was over: they were near to the coast, and all hands flattered themselves that in a short time they should reach their destined harbour; but about nine o'clock they were struck by a heavy sea, which threw the ship on her beam-ends, and carried away the main-mast by the deck, the heads of the

LOSS OF THE ALBION, CAPTAIN WILLIAMS, APRIL 22, 1822.

mizen-mast and fore-topmast sweeping the decks clear of everything, including boats, caboose-house, and bulwarks, and staving in all the hatches, state-rooms, and bulwarks in the cabin, which was nearly filled with water. At the same moment six seamen, and one of the cabin passengers, Mr. A. B. Conyers, of Troy, New York, were swept overboard; in short, that fatal wave left the *Albion* a wreck. She was then about twenty miles from the shore, and Captain Williams steadily and coolly gave his orders, and cheered the passengers and crew with the hope that the wind would shift, and before morning blow off shore.

The ship being unmanageable, and the sea making a complete breach over, both crew and passengers were obliged to lash themselves to the pumps that they might work them. All who were useless on deck retired below, but the water was

knee-deep in the cabin, and the furniture floating about rendered the situation dangerous and dreadful. On deck they were in total darkness, and, having no correct compasses, they could not tell how the ship's head lay.

About one o'clock in the morning of the 22nd, they made the light of the Old Head of Kinsale, but could not ascertain its bearing, and at two o'clock they found the ship embayed. All night long the wind had blown directly on shore, towards which the *Albion* was drifting at the rate of about three miles an hour. The complete hopelessness of their situation was known to few, except Captain Williams; the coast was familiar to him, and he must have seen, in despair and horror, throughout the night, the certainty of their fate. At length the ocean, roaring and dashing upon the precipice of rocks, told them too plainly that their hour was come. Captain Williams

summoned all the passengers up who had not before been on deck, and briefly told them that the ship must soon strike—it was impossible to preserve her. Their state was pitiable; many of them had received considerable injury when the sea first struck her, and were scarcely able to come on deck; others had been incessantly assisting at the pumps; and it is an interesting fact, that Miss Powell, of Canada, daughter of Judge Powell, an amiable young lady, was desirous of being allowed to take her turn. One gentleman, who had been extremely ill during the voyage, Mr. William Everhart, of Chester, Pennsylvania, was too feeble to crawl to the deck without assistance, though, strange to say, he was the only cabin passenger who was saved. Professor Fisher never came on deck, and perished below.

Their situation, at that moment, is indescribable, and can scarcely be dwelt upon, much less to attempt to detail its horrors. Major Gough, of the British army, remarked, "That Death, come as he would, was an unwelcome messenger, but that they must meet him like men." Very little was said by the others; the men waited in silence for the expected shock. General Lefebvre Desnouettes during the voyage, had evidently wished to remain without particular observation; and, to prevent his being known, besides taking passage under a feigned name, had suffered his beard to grow during the whole voyage. He had the misfortune, before the ship struck, to be much bruised, and one of his arms was broken, which disabled him from exertion if it could have been of any avail.

It is barely possible to conceive the horrors of their situation: the deadly and relentless blast impelled them to destruction—the ship a wreck—the raging of the billows against the precipice on which they were driving, sending back from the caverns and the rocks the hoarse and melancholy warnings of death—dark, cold, and wet. In such a situation, the stoutest heart must have quaked with utter despair. When there is a ray of hope, there may be a corresponding buoyancy of spirit; when there is any thing to be done, the active man may drown the sense of danger while exerting himself; but here there was nothing to do but to die!

Just at the grey of dawn the Albion struck on a reef, her upper-works beat in over the rocks, and in about half an hour, after coming in over the first reef, they parted midships, and her quarter-deck drifted in on the top of the inside ledge, immediately under the cliffs. The perpendicular precipice of rocks is nearly two hundred feet in height, the sea beating for ages against it had worn large caverns in its base, into which the waves rushed violently, sending back a deep and hollow sound, then running out in various directions, forming whirlpools of great violence. For some distance from the precipice, rocks rise out of the water, broad at bottom, and sharp at top; on one of these the Albion first struck, the next wave threw her farther on the rock, the third farther still, until, nearly balanced, she swung round, and her stern was driven against another near in shore.

In this perilous situation, every wave making a complete breach over her, many were drowned on deck. Up to the period of her parting, nearly twenty persons were clinging to the wreck, among whom were two females, Mrs. Pye and Miss Powell. Captain Williams had, with several others, been swept away soon after she struck, a circumstance which may be attributed to the very extraordinary exertions which he used to the last moment for the preservation of the lives of the unfortunate passengers and crew. A woman, but who Mr. Everhart could not distinguish, fell near him and cried for help. He left his hold and raised her up—another wave came, but she was too far exhausted to sustain herself and sunk on the deck, and the next wave swept her into the vast abyss of the ocean.

A short time before the vessel parted, the mate and six of the crew got away from her. After gaining a rock in a very exhausted state, the mate was washed off, but by the assistance of Providence was enabled to gain it before the return of the sea. He was obliged to lie down to regain a little strength, after the severe bruises and contusions he had received on the body and feet, before he could attempt to climb the rock, which was nearly perpendicular. One of the passengers, Colonel

Augustine J. Provost, reached the rock alive, but was, together with one of the stewards, washed off and drowned.

Some of the passengers were suffocated on deck, and in the fore-rigging, and some must have been destroyed, by an anchor which was loose on the fore-castle, before the ship parted. The devastation which followed was frightful. The entire cargo, consisting of cotton, rice, turpentine, and bees'-wax, together with a quantity of silver and gold to a large amount, was in all directions beaten about by the violence of the sea, without a possibility of saving it.

Perceiving that the stern was higher out of water and the sea had less power in its sweep over it, Mr. Everhart went aft. He now perceived that the bottom had been broken out of the ship. The heavy articles must have sunk, and the cotton and lighter articles were floating around, dashed by every wave against the rocks. Presently the ship broke in two, and all those who remained near the bow were lost. Several from the stern of the ship had got on the side of the precipice, and were hanging by the crags as well as they could. Although weakened by previous sickness and present suffering, Mr. Everhart made an effort and got upon the rock, and stood upon one foot, which was the only hold he could obtain. He saw several around him, and, amongst the rest, Colonel Provost, who observed, on seeing him take his station, "Here is another poor fellow." But the waves rolling heavily against them, and often dashing the spray fifty feet above their heads, gradually swept those who had taken refuge, one by one, away; and one poor fellow losing his hold, grasped the leg of Mr. Everhart and nearly pulled him from his place. Weak and sick as he was, Mr. Everhart stood several hours on one foot on a little crag, the billows dashing over him, and quite benumbed with cold.

As soon as it was light, and the tide ebbed so as to render it possible, the people descended the rocks as far as they could, and dropped Mr. Everhart a rope, which he fastened round his body and was drawn up to a place of safety. Of twenty-three cabin passengers he alone escaped.

At four o'clock in the morning, Mr. Purcell, of Garret's Town, was informed that a ship was cast on the rocks at the bottom of the dairy farms of T. Rochfort, Esq., he immediately repaired to the spot, and at about the centre of the two farms, found a vessel on the rocks under a high cliff. At this time, as it blew a gale, with spring tide and approaching high water, the sea ran mountains high; however, he descended with some men as far down the cliff as the dashing of the sea would permit them to go with safety, and there had the horrid spectacle of viewing five dead bodies stretched on the deck, and four other fellow creatures distractedly calling for assistance, which they were unable to afford them, as certain death would have attended the attempt to render them any. Of those in this perilous situation, one was a female, whom, though it was impossible to hear from the wind and the roaring of the sea, yet from her gestures and the stretching out of her hands, they judged she was calling and imploring for that assistance they were incapable of affording her.

At this time, the greater part of the vessel lay on a rock, and part of the stern, where this poor woman lay, projected over a narrow creek that divided this rock from another. Here the sea ran over her with the greatest fury, yet she kept a firm hold; but they soon perceived that the vessel was broken across where she projected over the rock; and after many waves dashing against her, this part of the vessel rolled into the waves, and they had the heart-rending scene of seeing the poor woman perish. Three men lay towards the stern of the vessel, one of whom stuck to a mast which projected towards the cliff, to whom, after many attempts, they succeeded in throwing a rope, and brought him safe ashore. Another they also saved; but the constant dashing of the waves put an end to the sufferings of the others.

On hearing of the disaster, Mr. Marks, the American consul, hastened to the spot, and did all that a man of humanity could to aid the survivors and save the property. As the dead bodies lay on the shore, the mate pointed them out to him, and he affixed each person's name to the corpses, and had them buried in a row, and the graves numbered, so that if the relatives of

any of the deceased wished to have them disinterred, their bodies could be easily found. Among the bodies washed ashore was that of a French lady; she was extremely beautiful, and when first discovered by some respectable persons it was entirely naked. A boy, who first saw the body, took off his outside coat and covered it; and it is related of others of the country people, that they also took off their warm clothing and put them on the half-perished part of the crew that escaped. Mr. Marks had coffins provided for each body, a clergyman of the Church of England officiated at the funeral, and they were buried in Templetrine churchyard, four miles from Kinsale, and one from the fatal spot.

Mr. Everhart was taken to the hospitable mansion of Mr. James B. Gibbens, where he lay for several weeks exceedingly ill, receiving the kindest attention. Indeed, the attentions paid to all the survivors were in the true style of Irish hospitality.

Many of the passengers held distinguished stations in society, in military, literary, and commercial capacities; among whom were Lieut.-Col. Augustine, J. Prevost, and Major William Gough, of the 68th regiment; Rev. G. R. G. Hill, last from Jamaica; William H. Dwight, of Boston; Professor Fisher, of Yale College, New Haven, who was distinguished for his private virtue and profound literary attainments; he was professor of mathematics and natural philosophy, and intended to make a professional tour in Europe. But the most distinguished sufferer was Gen. Lefebvre Desnouettes: during a long series of years he had braved death in the field, fighting in the most gallant style, and escaped to perish at last in this catastrophe, when his mind was perhaps less, than at any other period of his life, reconciled to the stroke of fate. His situation was every way peculiar. It is well known that he had been one of the favourite and most distinguished of Napoleon's military generals, and that he took part in the combination against Louis XVIII. On the landing of his old commander from Elba, he joined the latter with headlong enthusiasm in his last campaign, and being finally proscribed by the royal government took refuge in the United States. Here his misfortunes, reputation, intelligence, and manly unexceptionable deportment rendered him an object of universal esteem. To escape, as he used to remark, pity and curiosity, to counteract memory, and to gratify the natural activity of his mind, he retired to the French grant, in Alabama, where he laboured in the fields under the burning sun, with a reckless exertion which proved very injurious to his health. His wife, an amiable and accomplished woman, remained behind in France to look over his interests there. He himself, after having begun his agricultural toil, never quitted it until his final departure, except to visit Washington on business. At length he addressed a petition to the French government praying to be allowed to return home. He received directions to proceed to Holland, and there wait the final pleasure of the king; and on his way to Liverpool met with a watery grave on the Irish coast.

This terrible wreck and loss of human life, and on the part of Mr. Everhart such a miraculous preservation, excited the public sensibility throughout Europe and America. When he landed at Liverpool it was difficult for him to get along the streets, the people crowded around in such numbers, to see the only passenger saved from the wreck of the *Albion*.

Previous to the establishment of a life-boat on this dangerous part of the coast, the loss of life was tremendous.

LIGHTNING CONDUCTORS FOR SHIPS.

A most ingenious experimentalist in electrical matters and the disastrous effects of lightning upon ships, at a Liverpool meeting of the British Association, read reports on the loss of his Majesty's ships *Duke* and *Russel*, and similar accidents. He said that he could state upwards of a thousand cases of destruction by the same agency, and many ships, he had no doubt, which had never been heard of from the period of their having set sail had been destroyed in the same way. By a very neat experiment he proved the utility of lightning conductors as applied to houses. He placed a small quantity of gunpowder within a model of a house placed before him. With the conducting-wire attached, the fluid passed down imperceptibly, but the moment this was removed, the gunpowder ex-

ploded. After having spoken forcibly of the dangers to which the ships were exposed from lightning, the lecturer proceeded to show that it was possible, by a very simple contrivance, to adapt conductors to them. This, he said, consisted in placing copper rods in a continuous line down the masts into the water. This was also illustrated by experiments on the model of a vessel. The first experiment was briefly as follows.—Some gunpowder was placed on the main-mast of the ship. A small quantity of percussion powder was put into a little paper funnel, about one-third down the mast. The conducting-chain passing this, was carried into a boat floating in the water, in which also was placed a quantity of powder. Mr. Harris explained, that by the conductors used on board of vessels at sea, the electricity was at once dissipated into the water. In this experiment, however, he wished to show that it could be conducted further. An artificial cloud, represented by a suspended mass of light cotton, was charged with electricity from the machine. This was brought in contact with the mast of the ship, when the powder on the cap of the mast, that in the boat, and not that on the table, instantaneously exploded. The percussion powder escaped, the fluid having been conducted past it. Mr. Harris said he had the greatest confidence in this sort of conductor, and he read several testimonials to its practical utility. The last experiment was one to show the effects of lightning without a conductor. A model of a ship's mast was reared on the stage, with the metal conductor fixed in a small groove down one side. A strong shock was applied without any other effect than the slight crackling sound that is usual. The conductor was then removed; a small quantity of gunpowder, it was stated, was placed between the two segments of the divided mast, the shock was applied, and the mast was instantly blown asunder. The effect of this, we may truly say, was electrical.

A GENEROUS TAR.

A young, but experienced skater, with the graceful rapidity of the feathered Mercury, was gliding over the ice, when he saw at a distance some confusion, and heard an exclamation that a young lord would certainly be drowned. He immediately checked his course, and then moved towards the youth, whom he beheld holding by the edge of the ice, struggling to extricate himself, and crying loudly for assistance. As the skater approached, he begged the young lord to be silent, and then holding his handkerchief by one corner, he threw the other to him, at the same time extending his arm to the utmost, that he might keep the weight of his own body as far as possible from the broken part of the ice, and that the sound might have the better chance of sustaining the youth, when he should get upon it. At that instant, a sailor, who had viewed the scene from the shore, ran to the benevolent skater, calling, "avast, avast, brother, the sliders on which you stand have no hold; that squalling lubber is more likely to draw you to the bottom, than you to heave him above board, or tow him on shore; catch fast hold of this here with your larboard hand." So saying, he jerked the end of a piece of rope to the skater, while he himself stood firm on the ice, holding the other end. "Now, boys, bear a hand," cried he; "hillos, pull away." Thus the young lord was pulled to a safe part of the ice. The sailor, after contemplating him with a look of contempt, said, "Zounds, what a squalling did you make friend; why, if I have not seen a whole ship's crew go to the bottom with less noise than came from your jaw-port."

Whether it was the shivering condition in which the young lord was, that deprived him of recollection, or his being offended at the sailor's speech, cannot be known, but he certainly went away with all the expedition he could, and without saying a word.

The generous skater, then shaking the sailor by the hand, offered him a guinea for his assistance in saving the young lord from being drowned.

"He is not worth the money," said the sailor. The other insisted upon his acceptance of it, to which he at last consented, saying,

"Well, sir, since you insist upon it, I'll accept your guinea; but, on my conscience, you have a d—d hard bargain."

JACK'S TRICK UPON THE BOATSWAIN.

The next day, the Harpy was at anchor in Gibraltar Bay; the Captain went on shore, directing the gig to be sent for him before nine o'clock; after which hour the Sally Port is only open by special permission.

There happened to be a ball given by the officers of the garrison on that evening, and a polite invitation was sent to the officers of H.M. sloop Harpy. As those who accepted the invitation would be detained late, it was not possible for them to come of that night. And as their services were required for the next day, Captain Wilson allowed them to remain on shore until seven o'clock next morning, at which hour, as there was a large party, there would be two boats sent for them.

Mr. Asper obtained leave, and asked permission to take Jack with him; to which Mr. Sawbridge consented. Many other officers obtained leave, and, among others, the boatswain, who, aware that his services would be in request as soon as the equipment commencement, asked permission this evening. And Mr. Sawbridge, feeling that he could be better spared at this than at any other time, consented. Asper and Jack went to an inn, dined, bespoke beds, and then dressed themselves for the ball, which was very brilliant, and, from the company of the officers, very pleasant. Captain Wilson looked on at the commencement, and then returned on board. Jack behaved with his usual politeness, danced till two o'clock, and then as the ball thinned, Asper proposed that they should retire. Having once more applied to the refreshment-room, they had procured their hats, and were about to depart, when one of the officers of the garrison asked Jack if he would like to see a baboon, which had just been brought down from the rock; and, taking some of the cakes, they repaired to the court where the animal was chained down to a small tank. Jack fed the brute till all the cakes were gone; and then, because he had no more to give him, the baboon flew at Jack, who, in making his retreat, fell back into the tank, which was about two feet deep. This was a joke; and having laughed heartily, they wished the officer good night, and went to the inn.

Now, with the number of officers of the Harpy on shore, who had all put up at the same inn, and other occupants, the landlord was obliged to put his company into double and treble-bedded rooms; but this was of little consequence. Jack was shown into a double-bedded room, and proceeded to undress; the other was evidently occupied, by the heavy breathing which saluted Jack's ear.

As Jack undressed, he recollected that his trousers were wet through, and to dry them he opened the window, hung them out, and then jammed down the window again upon them, to hold them in their position, after which he turned in and fell fast asleep. At six o'clock he was called, as he had requested, and proceeded to dress, but to his astonishment found the window thrown open and his trousers missing. It was evident, that his partner in the room had thrown the window open during the night, and that his trousers having fallen down into the street, had been walked off with by somebody or another. Jack looked out of the window once more, and perceived that whoever had thrown open the window had been unwell during the night. A nice drunken companion I have had, thought Jack; but what's to be done? And in saying this he walked up to the other bed, and perceived that it was tenanted by the boatswain. Well, thought Jack, as Mr. Biggs has thought proper to lose my trousers, I think I have a right to take his, or at least the wear of them to go on board. It was but last night he declared that decency must give way to duty, and that the orders of a superior officer must be obeyed, with or without garments. I know he is obliged to be on board, and now he shall try how he likes to obey orders in his shirt tails. So cogitating, Jack took the trousers of the boatswain, who still snored, although he had been called, and, putting them on, completed the rest of his dress, and quitted the room. He went to that of Mr. Asper, where he found him just ready, and, having paid the bill, for Asper had forgotten his purse, they proceeded down to the Sally Port, where they found other officers waiting, sufficient to load the first boat, which shoved off, and they went on board. As soon as he was down below, Jack hastened to

change his trousers, and unobserved by any one, threw those belonging to Mr. Biggs on a chair in his cabin, he went on deck, and waited the issue of the affair.

Before Jack left the hotel, he had told the waiter that there was the boatswain still fast asleep, and that he must be roused up immediately; and this injunction was obeyed. The boatswain, who had drunk too much the night before, and, as Jack had truly imagined, had opened the window because he was unwell, was awakened up, and hearing how late it was, hastened to dress himself. Not finding his trousers, he rang the bell, supposing that they had been taken down to be brushed, and in the mean time, put on every thing else, that he might lose no time: the waiter that answered the bell, denied having taken the trousers out of the room, and poor Mr. Biggs was in a sad quandary. What had become of them, he could not tell; he had no recollection of having gone to bed the night before; he inquired of the waiter, who said that he knew nothing about them—that he was very tipsy when he came home, and that when he called him, he had found the window open, and it appeared that he had been unwell—he supposed that he had thrown his trousers out of the window. Time flew, and the boatswain was in despair. "Could they lend him a pair?"

"He would call his master."

The master of the inn knew very well the difference of rank between officers, and those whom he could trust and those whom he could not. He sent up the bill by the waiter, and stated that, for a deposit, the gentleman might have a pair of trousers. The boatswain felt in his pockets, and then remembered that all his money was in his trousers' pocket. He could not only not leave a deposit, but could not pay his bill. The landlord was inexorable. It was bad enough to lose his money, but he could not lose more.

"I shall be tried by a court-martial by heavens!" exclaimed the boatswain. "It's not far from the Sally Port; I'll make a run for it, and I can slip into one of the boats, and get another pair of trousers before I report myself as having come on board;" so making up his mind, the boatswain took to his heels, and with his check shirt tails streaming in the wind, ran as hard as he could to where the boat was waiting to receive him. He was encountered by many, but he only ran the faster the more they jeered, and, at last, arrived breathless at his goal, flew down the steps, jumped into the boat, and squatted on the stern sheets, much to the surprise of the officers and men, who thought him mad. He stated in a few words that somebody had stolen his trousers during the night; and as it was already late, the boat shoved off, the men as well as officers convulsed with high laughter.

"Have any of you a pea jacket?" inquired the boatswain of the men—but the weather was so warm that none of them had brought a pea jacket. The boatswain looked round, he perceived that the officers were sitting on a boat-cloak.

"Whose boat-cloak is that?" inquired the boatswain.

"Mine," replied Gascoigne.

"I trust, Mr. Gascoigne, you will have the kindness to lend it to me to go up the side with."

"Indeed I will not," replied Gascoigne who would sooner have thrown it overboard and have lost it, than not behold the anticipated fun; "recollect I asked you for a fishing line, when we were becalmed off Cape St. Vincent, and you sent word that you'd see me d—d first. Now I will just see you the same before you have my boat-cloak."

"Oh, Mr. Gascoigne, I'll give you three lines, directly I get on board."

"I dare say you will, but that won't do now. 'Tis for tat,' Mr. Boatswain, and hang all favours," replied Gascoigne, who was steering the boat, having been sent on shore for the others. "In bow—rowed of all." The boat was laid alongside, the relentless Gascoigne caught up his boat-cloak as the other officers rose to go on board, and rolling it up, in spite of the earnest entreaties of Mr. Biggs, tossed it into the main chains, to the man who had thrown the stern fast; and to make the situation of Mr. Biggs still more deplorable, the first lieutenant was standing looking into the boat, and Captain Wilson walking the quarter-deck.

"Come, Mr. Biggs, I expected you off in the first boat,"

cried Mr. Sawbridge; "be as smart as you please, for the yards are not yet squared."

"Shall I go ahead in this boat, and square them, sir?" "That boat, no; let her drop astern, jump up here and lower down the dingey. What the devil do you sit there for, Mr. Biggs?—you'll oblige me by showing a little more activity, or, by Jove, you may save yourself the trouble of asking to go on shore again. Are you sober, sir?"

The last observation decided Mr. Biggs. He sprang up from the boat just as he was, and touched his hat as he passed the first lieutenant.

"Perfectly sober, sir; but I've lost my trousers."

"So it appears, sir," replied Mr. Sawbridge, as Mr. Biggs stood on the plane-shear of the sloop where the hammock netting divides for an entrance, with his shirt tails fluttering in the sea breeze; but Mr. Sawbridge could not contain himself any longer, he ran down the ship ladder which led on the quarter-deck, choked with laughter. Mr. Biggs could not descend until after Mr. Sawbridge, and the conversation had attracted the notice of all; and every eye in the ship was on him.

"What's all this?" said Captain Wilson, coming to the gang-way.

"Duty before decency," replied Jack, enjoying the joke.

Mr. Biggs recollected the day before—he cast a furious look at Jack, as he touched his hat to the captain, and then dived down to the lower deck.

If any thing could add to the indignation of the boatswain it was to find that his trousers had come on board before him. He now felt that a trick had been played him, and also that our hero must have been the party, but he could prove nothing: he could not say who slept in the same room, for he was fast asleep when Jack went to bed, and fast asleep when Jack quitted the room.

The truth of the story soon became known to all the ship, and "duty before decency" became a bye-word. The boatswain was very obnoxious to the men, and in consequence of Jack's known opinions on the rights of man, and having served out their enemy, he became a great favourite with the seamen, and as all favourites are honoured by them with a *sobriquet*, our hero obtained that of Equality Jack.—*Midshipman Easy*.

SUFFERINGS OF A BRITISH SEAMAN.

In 1614, Sir William Monson was sent to scour the Scotch; and Irish Seas, which were much infested with pirates; nevertheless, the next year, 1615, the ordinary passage-boat, sailing from England to Dublin, was taken by a French pirate; but a tempest arising immediately after, they were obliged to let it go again. There happened to be three persons then in it, who were thus left to the mercy of the wind and waves, which carried them between Ireland and Scotland, into the main sea, expecting to be cast away every minute. They had neither victuals nor drink, except some sugar, which happened to be in the boat. Upon this they lived, and drank their own urine, till their bodies were so dried up that they could make no more. In this doleful condition, one of the company, being quite spent with fatigue and misery, died, and was heaved overboard by the remaining two. After a while, the second grew so feeble, that he laid himself along in the boat, ready to yield up the ghost. In this extremity, the third providentially described a small island towards the extremities of Scotland. It was a great way off, but he encouraged the dying man to rouse himself with hopes of life; and, accordingly, upon this good news, he raised himself up, and by and by the boat was cast upon a rock, and split, the two men escaping up into the island. They found nothing growing there—no grass, tree, or anything else by which man could procure subsistence; nor any shelter from the weather, except about the middle of the island, where there were two long stones pitched in the ground, and a third laid upon them, like a table, which they judged to have been so placed by some fishermen to dry their fish upon; and under this they slept at night. Fortunately, the next day they took some sea-mews, which they

dried in the wind and sun, and eat them raw. They also caught some sea-dogs, and found some eggs in the crevices of the rocks, by the sea-side. Thus they had wherewithal to subsist, so as to keep them from starving. But what they thought most insupportable was thirst, because the place afforded no fresh water, except what fell from the clouds, and was left in certain cavities which time had made in the rock. Neither could they have this at all seasons, because the island, or rather rock, being small and laying low, in stormy weather the waves dashed over it, and filled the pits with water.

Before they had been here long, they built a kind of hut with the boards from the ruins of the boat, which served them for a more comfortable shelter than the stones, against the rain and injuries of the wind and weather.

In this condition they had lived together for about the space of six weeks, comforting one another, and finding some ease in their common calamity; till at last the poor Englishman being left alone, the burden became almost insupportable; for one day, awaking in the morning, he missed his comrade, and getting up, went calling and seeking all about the island for him. Not being able by any means to find him, he fell into such despair, that he frequently resolved to cast himself down headlong into the sea, and so put a final period to that affliction, of which he had endured but one half while he had a friend to divide it with him.

What became of his companion he could not guess; whether despair forced him to that extremity, or whether, getting up in the night, he had fallen into the sea, he knew not; but he rather thought that, through want of proper care, he fell from the rock as he was looking for bird's eggs, for it was very steep on that side.

His loss sorely affected the poor disconsolate survivor, and another affliction soon befel him. His only knife, with which he used to cut up the sea-dogs and sea-mews, having a bloody cloth wrapped round it, was carried away, as he supposed, by some bird of prey. Being now not able to kill any more, he was reduced to the following extremity: with much difficulty he got a great nail out of one of the boards of his hut, which he made shift so to sharpen upon the stones, that it served him instead of a knife.

By degrees his clothes wore out; and when winter came on, and every thing bore a more doleful aspect than before, he endured the greatest misery imaginable, for many times the rock and his hut were so covered with snow, that it was not possible for him to go abroad to provide his food, which extremity put him upon this invention: he thrust out a little stick at the crevice of his hut, and baited it with a little sea-dog's fat; by that means he caught some sea-mews, which he took with his hand from under the snow, and thus kept himself from starving.

In this sad and solitary condition he lived for about eleven months, expecting to end his days there, when providentially a ship came, which delivered him out of as great misery as perhaps any man was ever in.

In the year 1616, a Fleming, named Pickman, coming from Drontheim, in Norway, in a vessel laden with boards, was overtaken by a calm, during which the current carried him upon the rock, or island, where the poor Englishman dragged on his miserable existence.

This Pickman was well known in England and Holland for his art and dexterity in getting out of the sea the great guns of the Spanish Armada, which were driven upon the coast of Scotland and Ireland in 1588.

He was now in some danger of being cast away, and to avoid being wrecked, ordered some of his men to get into the shallop, and to tow off the ship. They having done so, he would needs climb up into a certain rock to look for bird's eggs. As soon as they got up, they, at some distance, perceived the figure of a man, whence they imagined there were others lurking thereabout, or that this man had made his escape thither to avoid some pirates, who, if not prevented might surprise their ship. On this, without stopping to relieve him, they returned, with all the haste they could, to their shallop, and so got on board.

The calm continuing, and the current of the sea still driving them upon the island, they were forced to get into the long-boat, and to tow the vessel off again. The man whom they had seen before, was, in the meantime, come to the brink of the island, and made signs, with his hands lifted up, entreating them to come nearer; sometimes falling on his knees, and joining his hands together begging and crying to them for relief.

At first they made some difficulty about going to him, but at length, being overcome by his lamentable signs, they went nearer the island, where they saw a stark naked body, black and hairy, a meagre and deformed countenance, with hollow and distorted eyes, which raised such compassion in them, that they endeavoured to take him into the boat; but the rock was so steep thereabout, that it was impossible for them to land, whereupon they went about the island, and came at last to a flat shore, where they took him on board, at the same rock where he had been cast on shore. They saw neither grass or tree on the island, or any other shelter, except the hut which the poor man and his companion had built.

The sun was set ere they got to the ship, when the wind immediately rose, and drove them off from the island.

The master of the ship commiserating his deplorable condition, treated him so well, that within a few days he was quite another creature. He afterwards set him ashore at Londonderry, and some time after saw him again at Dublin; where such as had heard of his singular affliction, gave him money to return to England, his native country.

A STEAM-BOAT RACE.

Monday the 14th of August opened calmly and beautifully. The sea seemed smooth as a polished mirror—a sight that not a little comforted me on account of my companions, as we passed along the shingly shore a little after seven o'clock, on our way to the harbour—where, lo! two steamers were making sputtering and smoking preparations for starting—one an English boat, the other the French mail-packet.

“Sare,” said in a low tone the captain or steward of the latter, stepping up to us as we approached—“if you shall go wit me—bien!—we shall take you for five shilling—the oter charge you ten shilling—and, certainment! we shall be there one half-hour first.—Sare! we carry the maille!” he added with an important air.

“No—I—I think,” said I hesitating—I think I”—

“Beautiful boat, sare! mi ladi, *ver* fine boat.”

We passed on to make inquiries into the real state of the question as to fares; and I soon found that the Frenchman had taken the great liberty to tell me a greater lie; for the English boat charged only five shillings instead of ten shillings; and her captain seemed such a hearty, thorough-going Englishman, that forthwith we stepped down the accomodation, ladder, and were soon on our way, having the start of the Frenchman who did not follow for several minutes. Our captain was wroth enough when I informed him of the attempted imposition of his rival. “Oh, sir,” said he, “if you’ll believe me, those Frenchmen are the biggest liars God Almighty—or rather the devil—ever made! Many and many’s the passenger they’ve done me out of in that way.”

“And—hem!—how many have you, captain, done them out of?—Eh! you understand?”

“None, sir—never!—honour bright!” he answered with a serious air; and I believed him. At length we beheld Monsieur coming out of the harbour; and I began to feel a little curious to see which was the better sailer—union-jack or tri-colour.

“Which is the quicker boat?” I asked of the captain, as we both stood looking over the stern at our companion.

“Why—much about the same; perhaps—if there is any difference, certainly—why, sometimes one has it, and sometimes the other, you see!”

“Which will get to Calais first to-day d’ye think?”

“Why, we shall—not a doubt of it. Monsieur won’t fetch up this start, anyhow—let him puff and blow as hard as he likes!”

“His is a very good-looking boat, eh?”

“Ay, ay—no doubt; all outside, though—like all the French! Our inside and engines are five-times the strength of his. His boat is just fit for this sort of thing; but I’d go round the world in mine, I’ll be——if I wouldn’t!”

For above twelve miles the two boats preserved the same relative distance; and I felt a kind of school-boy’s interest in standing and watching our competitor, whom, by-and-bye, I regretted to see certainly beginning to gain upon us. By the time that we were about two-thirds on our way, the fellow had positively got up to us.

“Ah, captain—’tis no use; we are over-matched; I’m afraid the tri-colour is rather too much for the union-jack.”

“Tri-colour a match for the union-jack! D—d if she is, though—and none knows it better than she, or she’s had a mighty lot of licking without learning her lesson!” he added with a disdainful air.

“But still I am afraid that on *this* occasion—”

“If she does get in first it’s because *we* don’t try it on with her. I don’t care a button which gets into harbour first. What does it signify? I never took the trouble to race with her!”

This might be; but shortly afterwards he sauntered carelessly forwards, and in passing evidently whispered something to the engine-man below—and we certainly a little increased our speed. By-and-bye I observed the captain looking occasionally with affected indifference at his rival—somewhat stimulated nevertheless by the interest his passengers appeared to take in what looked uncommonly like a race between the two boats. But ’twas of no use—Monsieur gradually passed us! His triumph, however, was of short duration; for as soon as ever the mist which had come over us so suddenly, and completely hid the French coast from our sight, began to clear away, lo! Monsieur was seen to have run himself a-ground, having mistaken his course in the mist, and it might be in the eagerness of the race, omitted to sound as he went on; through the which negligence we also were within a hair’s-breadth of incurring the like mishap: but a vigorous effort—the helm ported—the lead in the water every half-minute, got us out of our danger—and we left our friend to enjoy his novel and interesting position at his leisure. So that after all, we got first into harbour, our captain carelessly hinting something about superior sailing.

THE DYING SAILOR BOY.

DARK flew the scud along the wave,

Repeated thunders rolled on high;

“All hands aloft the storm to brave!”

At midnight, was the boatswain’s cry.

On deck sprang every soul apace;

But one bereft of human joy,

Within a hammock’s narrow space

Lay stretched—a hapless sailor boy.

Once when the boatswain’s pipe would hail,

The first was he of all the crew,

On deck to spring, to trim the sail,

To steer, to reef, to furl, or clew.

Now fell disease had seized a form,

Which nature cast in happiest mould;

The bell struck midnight through the storm—

His last, his funeral knell it told.

“Oh, God!” he cried, and dropt a tear,

“Before my spirit mounts the skies,

Are there no friends or messmates dear,

To close in death my weary eyes?”

“All hands aloft, loud blows the wind,

Surrounding billows loudly roar;”

He raised his head he bowed resigned,

Then backward sunk to rise no more.

The morning sun in splendour rose,

The gale was hushed, and stilled the wave;

The sea-boy found his last repose,

In ocean’s deep and boundless grave.

A SCENE ON THE COAST.

The day had been particularly fine, and I stood admiring the departure of the sun as he was rapidly retiring from the surface of the ocean, whose watery ridges were beautifully crimsoned with his parting beams, when my attention was attracted by a group of peasants, who were silently watching the appearance of something on the boundless deep, though its distance rendered it as yet scarcely discernible. I turned my eyes towards the object which had so firmly fixed their attention, and in a short time beheld a vessel sailing in gallant trim before the breeze, which filled her canvass. After observing it for a considerable time, I saw it stop suddenly in its course, and the sails, which but a minute before were swelled out by the wind, hang motionless, while the streaming pennon curled itself round the mast. From the conversation of some old men who stood by me, I found her situation was by no means enviable. One, who by his silver hairs and hoary look seemed to be the senior of the party, was remarking to his neighbour,

"Say what you will, Davy, but I like not the look of yon clouds; those little clouds bode no good to the dweller on the salt seas; and for my part, I'd rather pass a week of nights in St. Edmund's turret, where the ghost of Esterling is for ever crying out, 'Beware! Edmund, beware!' than I would be now upon those sleepy waves."

The person who stood next to him, and whom I had concluded to be a fisherman, from the old and tattered jacket which he wore, added to the foreboding remarks of the first speaker, "Ay, ay; I ween ye speak the truth, and may I never draw net again if some harm comes not to yon brig before midnight. I well remember when, forty years ago last March, the 'Bonny Gilderoy' stuck in the same place. She little knew her danger, nor thought that rocks were there; but the first squall pitched her bows under, and in half an hour she was shivered plank from plank. I shall never forget that day, nor the song which mad Wilson, as he was called, made the same day. Hold now, you shall hear it, unless my memory be buried with him who made it."

The old fisherman proceeded to sing, in a tone by no means musical, yet suited well to the song itself, and to the scenery around:

"The winter's snow was on the ground,
The winds of March blew cold,
The gallant sun refused to shine,
To waste his beams of gold.
The sea look'd wild, the sky look'd dark,
Loud was the sea-gulls' joy;
When from the west, on the billows' breast
Came the Bonny Gilderoy.

Anon the slumb'ring winds arose
And swept the briny sea,
The waves that long lay still and dead,
Now danced right merrily;
They beat against the rugged rocks,
Aye threaten'g to destroy,
But careless still, of good or ill,
Sailed the Bonny Gilderoy.

The thunder shook the murky sky,
The forked lightnings flashed,
While loud the sparkling billows roared,
That o'er the Swickers dashed.
The danger bids all hands aloft,
And finds them full employ,
For the lightning past and struck the mast
Of the Bonny Gilderoy.

And then the piercing shriek was heard,
Mix'd with the ocean's roar;
For all was lost, and the gallant ship
Shall plough the waves no more.
Full many a corse was cast on shore,
The ravens to decoy,
Which hovering flew round the lifeless crew
Of the Bonny Gilderoy."

The song was scarcely ended, when a rough-looking sailor, who had been all along gazing from the heavens to the sea, and then to the ship, exclaimed aloud, "Hold your tongue, Tom, we shall have enough noise presently, for there goes the cormorant and the gull; and if the black clouds deceive me not, we shall soon hear the cries of man mixed with their cursed croaking, and the roar of the dashing breakers; so bear a hand, let's down and make safe the skiffs; there's no time to lose with so wild a sky above, and so still a sea below us." With that he bounded off, followed by his companion, and they were soon lost amidst the windings of the rocks.

This seemed a signal for the whole to depart, and in a short time I was the only one left, except, indeed, a young man, who till now had escaped my observation, and who was leaning against an old wall a short way off, with his arms folded and apparently regardless of everything, save the vessel, upon which he had fixed his eyes immovably. But the darkness of the night, which now came on apace, concealed him from me, and I fancied he had, followed the example of the rest, retired to his home. The moon now rose, but the scud which swept wildly over the horizon, only permitted it to be seen at intervals, while the largeness and the paleness of the halo with which it was surrounded, evidently indicated the approach of a storm; which was confirmed by the awful stillness which reigned on earth. The few withered leaves which still clung to the branches, rustled with a fearful motion; while the waves came slowly to the shore, and sent forth a low and hollow sound as they beat against the cliffs, or flowed over the shells and pebbles of the coast.

Darkness now asserted her power uncontrolled. No object could be discerned, save here and there a faint glimmer which shone through the window of the cottager, and even that was hardly distinguishable; for the inmates had well nigh excluded all light, by crowding round its source, where they sat either silently gazing at each other, or else relating some doleful narrative, of itself sufficient to terrify the superstitious peasants without the assistance of the portending elements. Many a tale of the most terrifying description had already been told, when that but half related was deprived of its conclusion, and cut short on the verge of its melancholy catastrophe; by a loud blast of wind, which threatened destruction to half the village, and forcing open the doors, announced to those within the arrival of the storm they had been fearfully expecting. The rain, at the same time, began to descend: at first in a few large drops which pattered mournfully against the windows, but increasing in a minute to the tempest shower; the lightning flashed faintly along, and the rumbling of the thunder was heard at a distance, though every flash grew more vivid than that which had preceded it, and every peal became louder and louder; while the interval between each was filled up with the whistling of the wind, and the roar of the breakers, which had now risen to considerable violence.

Nothing could well be greater than the contrast which at this time existed between the tumult without, and the stillness within doors; for each sat silent and motionless as a statue; or if any one ventured to speak, it was done in so subdued a tone, that it sounded but as a whisper; and even then the speaker seemed afraid of infringing upon the rights of the maddened elements. But this lethargy was not doomed to last long, for we were soon roused by the thrilling report of the signal gun, which broke upon the ear with an awful echo, and seemed possessed of an electric power—again, once—twice—thrice, the signals were heard in rapid succession; and now the idea of fellow-beings in danger roused all from the stupor which the first report cast them into. Each forgot for a while the tempest which a few minutes before had filled them with fear, and rushed towards the shore. By the time I had reached it, the beach was covered with those who, being better acquainted with the ways, had got there before me. But no one could do more than express his feelings in sudden ejaculations, as the lightning, or the flashes from the guns, which now kept up an incessant firing, revealed the vessel to his view, where she might be seen struggling between two sharp rocks, which rose upon each side of her, and against which the angry breakers beating caused the surf to cover the ship every minute. The

people on the shore either stood motionless with fear, or ran madly from place to place along the rocks, to catch a glimpse, if possible, of the stranger vessel, for, to render her any assistance in her present situation was altogether impossible. However, to do all that might be done, two small boats were brought forward, and a liberal reward offered to any one who would be hardy enough to risk their lives for the preservation of others.

Instantly, one of them was occupied by a young man whom, by the glare of a torch, I recognised to be the same that I had seen at nightfall gazing so attentively on the vessel. The boat darted over a wave, and was lost from sight in a moment. By the flash of guns we could still distinguish the brig whenever the surf, which now rose to a tremendous height, presented a clear passage; but the little skiff seemed to have disappeared for ever, and it was given up for lost by most persons. However, after waiting in painful suspense for several minutes, it was again observed wearing to its object, and a shout from the vessel announced that the crew had recognised the intrepid hero who had come to their assistance. But fate seemed determined to thwart all human efforts, for a heavy swell, accompanied with a resistless squall of wind, forced the ill-fated vessel against one of the rocks she had so long avoided; and from the confused noise which ensued, we understood, alas! too well, that she was wrecked—that all was past!

Darkness now completely veiled every object from our sight, and the next flash of lightning showed us the ship, though still together, yet laid completely on her beam-ends, and washed by every wave.

About an hour after, the storm began to abate, and the moon peeped through the clouds at intervals. We still continued on the beach, in hopes of being able every minute to gain some information concerning the wreck; but he waited in vain; the vessel still remained immovable; and the fragments which floated ashore had nothing on them from which we might learn her name or place of destination. Midnight arrived, and we were well repaid for all our anxiety by the appearance of our little skiff, emerging from the waves with its gallant charge and two other persons. We hailed it with all our might, but our joy was considerably damped on receiving no answer. A minute brought it to where we stood, but its cargo was inanimate; one had ceased to breathe—the generous youth, indeed, was still alive, but the power of utterance was gone, and ere morning he also was a corpse; while the third, the maid he loved, and whom he had rescued from a watery grave at the expense of his own life, survived but a week, and now rests beside him in the churchyard of Saint D—.

A SHARK YARN.

"WELL, one day—'twas a precious fine un—I remember it very well, the sun was up above all, burning as hot as possible; the sea looked so shiny that you could scarcely bear to look at it, and it was so dreadful close that all on deck got quite drowsy. I and another man, named Tim Dowling—by-the-bye, he was a bit of a Irishman, at least his father and his mother was Irish; they kept a crockery-shop at Cork, very respectable people; Tim's grandfather had a post in the Excise, with good wages and now and then a good deal of condemned wares. Pass us the grog, will ye, Bob? Well, as I was saying, 'Tom Dowling an' I—he was a short, sturdy-looking chap, with a devil of a brogue—was a stretching over the starboard bulwark with what we called our haggling-rods in our hands, and a bit of sheep's heart a-piece on the hooks. I said afore that the day was very sultry. Well, I was a shutting my eyes, and feeling a little inclined to fall asleep over my fishing, and Tim was agoing off in downright earnest. By-and-bye, out slipped his rod out of his hand, and over he fell—aye, right overboard, head foremost, by George! But I forgot to tell ye that he had lost one of his pins—the larboard one it was—and wear'd a wooden one. I'll tell you how it was: he happened to fall in a gale from the foreyard when he'd been sent up to help in taking in a reef: the doctor spliced it as well as he could—a clever fellow he was too

—I could tell you a dozen antidotes of what wonderful things he did: but a inflammation comed on, and nothing could be done but it must be lopped off, so——But I'm steering a little wide, arn't I? Let's see: where did I leave off?"

"Why you'd just got Tim overboard."

"Ay now I've got it. Well Tim fell smack over; and a devil of a fuss there was aboard when I sing'd out. I cocked my eye over the bulwark, and what should I see but a perdigious great shark rising out o' the bottom o' the sea, as he seemed, and making way directly for poor Tim. Poor devil, he screamed like I don't know what. Down went the swings o' the jolly through the david blocks like lightning, and the crew pulled out hard for him; for by this we had made some way, you know, and he had drifted astarn. They warn't in time, for the shark had got hold of his leg—but it was the wooden one though, and master shark had no soft morsel with it. He looked as if he couldn't make out for all the world what he'd got in his throat. Well, the shark tugged at Tim's pin, till there was such a splashing and tumbling in the water never was seed. You never seed such fun. But they got the shark at last aboard, and he begin'd to beat about on the deck with his tail like a fury. A hatchet soon brought him to his senses; and a'ter Tim had been brought aboard again, and the boat was run'd up, we had leisure to cut him open and see what was inside of him. A mighty fine feller he was indeed; I don't know how many feet long. We found inside of him a boat's rudder, a straw hat, a baccar-box, a spirit-flask, a sugar-box, compass, and beer-barrel, all in a very undigested state. We got off his skin, and throw'd him overboard. And there's my story.—*My Marine Memorandum Book.*

PIRACY AND MURDER IN THE BAY OF BENGAL.

THE East India ship, Admiral Benbow, from London, bound to Bengal, commanded by an experienced and highly-respected officer, Captain Crawford, had a prosperous voyage till she entered the bay. What is called the bay, is an expanse of ocean, reaching seven hundred miles in breadth, and five hundred miles in depth, before you reach the mainland. Why it has been called a bay, is no more to be accounted for than the Bay of Biscay, which is an open sea.

The Admiral Benbow was not armed, and in latitude 7° 40' north, they fell in with an armed ship, who sent her boat on board; they said that they belonged to a French frigate, and were in want of fresh provisions, and that if Captain Crawford would give them some, they would send him anything he wanted in return, and requested him to send his boat on board the frigate. With this Captain Crawford complied, and sent his boat accordingly. The vessel being now slack of hands, the pretended Frenchmen began to plunder her and ill-treat those on board, knocking them down with crow-bars and tomahawks. They did not find money as they expected, and hailed their vessel to tell them so, when, horrible to relate, the reply was—"Kill the captain, and scuttle the ship." Captain Crawford was in an instant attacked and pierced with eight wounds; he ran forward with the intention of throwing himself into the sea, but the fore hatchway-grating being off he threw himself down, and hid in the hold; the pirate believed that he had gone overboard. The mate had the good fortune to escape in a similar manner, and hid himself in the dunnage.

The steward and cabin-boy were most inhumanly murdered, and thrown into the sea, and Captain Stirling, of the 3rd Buffs, who was a passenger, after resisting and killing one of the pirates, seeing all escape hopeless, threw himself into the sea, but was dragged on board by the pirates, no doubt to be executed in some terrible manner, when he put an end to his existence by stabbing himself with his pen-knife.

Several of the crew jumped overboard and were drowned, and the boat's crew which had gone on board the pirate, were made to jump overboard and swim to their boat. The vessel was plundered of every thing worth taking—compasses, quadrants, charts, chronometers, and all the stores of the captain; they cut her rigging and sails, and left the ship a wreck on the ocean.

Fortunately the Ganges, Captain Lloyd, met with the Admiral Benbow, and rendered her every assistance: and Captain Crawford was getting the better of his wounds.

LOSS OF THE MINERVA, CAPTAIN HOLMES,

SEPT. 16TH, 1782.

THE *Minerva*, one of the West India ships commanded by Captain Holmes, and bound for Clyde, was on the 16th of September, 1782, in lat. 41° N., and long. 49° W., when it began to blow hard, and continued till the evening, by which time the gale had increased to a perfect storm. The *Minerva* was then brought under a foresail, and afterwards a mizen-staysail, under which she continued till near midnight, when the mizen-staysail split in two, and she proceeded under a foresail.

About a quarter of an hour afterwards, the ship at the time lying very low, the quarter-boards went down with a crash, that sounded as if the ship was going asunder. They immediately cut away the mizenmast, to try if the ship would keep before the sea; but she would not, although the helm was hard kept on the starboard. In five or six minutes afterwards, Mr. Scott, the second mate, who was then at the helm, was told that the ship was going down, and that the pumps were completely choked, when just at that instant, a tremendous sea fairly broke over the ship, and washed Mr. Scott from the helm; who being able to discern the ship's quarter when in the hollow of the sea, succeeded in swimming on board, and caught hold of the tiller-ropes.

The deck being then full of water, he, with the assistance of the rope, got to the weather-side of the ship, and secured himself in the lee of the mizen-chains, at which time he could not discern a person on board. In this situation the sea several times broke over him. Shortly afterwards he felt the ship going down, and was soon carried under water by the force of the suction it had occasioned. After losing the ship, he struck out in the action of swimming; and in doing so, struck the cross-jack-yard with one of his hands, and laid fast hold upon it. When looking round he could see nothing of the ship but about a fathom of her starboard mainyard-arm.

For two hours he hung by the cross-jack-yard, till daylight on the 17th, when finding the mizenmast hanging by the yard, he lashed the yard to it by the running rigging of the mizen-topsail, and hung by it. In this dreadful situation, with scarcely one ray of hope to save him from despair of perishing with his hapless companions, he remained for five hours longer, when he was fortunately removed from his perilous position by the *Betsey*, of Whitehaven, commanded by Captain Storey. With this solitary exception, the master and the whole of the crew of the *Minerva* perished, together with several gentlemen who were passengers on board.

LOSS OF THE SHIP AMICUS.

THOUGH we cannot give the particulars of the commencement of this unfortunate event as fully as we wish, yet the subsequent preservation of the crew, and the heroism of the spectators, as prompted by humanity, will, it is presumed, render this narrative, though it is short, extremely interesting to our readers.

At four o'clock on Tuesday morning, December 8, 1807, it blowing a tremendous gale of wind, with a heavy snow, the ship *Amicus*, Captain Simpson, of Hull, from Petersburg, with hemp, flax, tallow, &c. struck on the Holderness coast, half a mile to the south of the Sister Churches.

At 12 o'clock the captain, who was an excellent swimmer, committed himself to the waves, with a rope, hoping to be able to gain the shore, but was overwhelmed by the breakers, and perished in the attempt. The mate and another of the crew followed his example, and met with a similar fate. The remaining part of the ship's company were seen clinging to the rigging and wreck, by numerous spectators.

After several ineffectual attempts to assist these unhappy sufferers, Mr. Giles had recourse to the following: he procured a leaden half-pound weight, and making a hole through it, he fastened it to a long piece of whip-cord, and selected from the spectators the most athletic man to cast it at the wreck. After many fruitless trials, the man, following a receding wave,

succeeded in throwing it across the vessel. The carpenter fastening the cord round his arm, was dragged through the surf to the shore, apparently lifeless, but he afterwards recovered. The cord was again cast, and a boy was rescued from the vessel in the same manner.

After this a person, named John Greensides, notwithstanding the heavy surf, rushed through it to the vessel; and though he was hidden repeatedly by the tremendous waves, and could not swim, he succeeded in gaining the wreck, and brought to land another boy. In his passage to shore he was twice thrown down by the violence of the back-water. He again returned to the wreck, and at the hazard of his own, saved the life of another seaman.

At six o'clock, four persons ventured through the waves to the ship, and brought away two others, who died shortly after their gaining the shore. The bodies of the captain and the mate were afterwards washed ashore.

CAPTAIN DEATH.

PERHAPS history cannot afford a more remarkable instance of desperate courage than which was shown by the officers and crew of an English privateer, called the *Terrible*, under the command of Captain Death, of twenty-six guns and two hundred men. On the 23rd of December, 1757, he engaged and made prize of a large French ship, from St. Maloes, after an obstinate battle, in which he had his brother and sixteen seamen killed: he then secured his prize with forty men, and directed his course for England; but, in a few days, he had the misfortune to fall in with the *Vengeance*, of thirty-six guns, a privateer, off St. Domingo. Their first step was to attack the prize, which was easily retaken; the two ships then bore down upon the *Terrible*, whose mainmast was shot away by the first broadside. Notwithstanding this disaster the *Terrible* maintained such a furious engagement against both, as can hardly be paralleled in the annals of the British Navy. The French commander and his second lieutenant were killed, with two-thirds of his company; but the gallant Captain Death, with the greater part of his officers, and almost his whole crew, having met with the same fate, his ship was boarded by the enemy, who found no more than twenty-six persons alive, sixteen of whom were mutilated by the loss of a leg or an arm, and the other ten grievously wounded!!! The ship itself lay like a wreck upon the water, and the whole exhibited a scene of horror and desolation. The victor itself was so shattered that it was scarcely able to tow the *Terrible* into St. Maloes, where she was beheld with astonishment and terror.

This adventure was no sooner made known in England, than a liberal subscription was raised for the support of Death's widow, and that part of the crew which survived the engagement.

There was a strange combination of names belonging to this privateer; the *Terrible* was equibbed at Execution-dock, commanded by Captain Death; his lieutenant was named Devil, and the surgeon's name was Ghost.

TO THOSE AT SEA.

High let the goblet now be crown'd,
And by the brave, the firm, the true,
Let it from every lip go round
To those whom last we bade adieu.
Hark! the wind roars, the billows rise,
Perchance for shelter now they flee;
Here brethren, drink to fairer skies
And smoother waves to those at sea.

How many noble hearts that beat
Around this board, ere morn, may have
The billow for the winding-sheet,
The weed or coral for their grave.
Then to their safety fill again,
High cause to toast their good have we;
Here's to the riders of the main,
The ocean kings, the far at sea.

DREADFUL SUFFERINGS OF CAPT. WOODARD.

In the year 1791, Captain Woodard sailed from Boston, in America, in the ship *Robert Morris*, commanded by Captain Hay, belonging to Mr. Russell, of Boston, and bound for the East Indies. Upon his arrival in India, he was employed in different country ships, till the 20th of January, 1793, when he sailed from Batavia as chief mate, in the American ship *Enterprise*, commanded by Captain Hubbard, and bound for Manilla.

In passing through the straits of Macassar the wind was northerly, with a current to the south, and both of them being adverse, the ship was obliged to beat up for six weeks, during which time she fell short of provisions; but perceiving a vessel at the distance of about four leagues, Captain Hubbard directed Mr. Woodard to take the boat

and go on board and purchase some. This was on the 1st of March, at about half-past twelve, they being then in about nine degrees south latitude. There were in the boat, besides Mr. Woodard, five seamen, two of whom were Americans, two English, and one Scotchman; their names were William Gideon, John Cole (a lad), Archibald Millar, Robert Gilbert, and George Williams. They had on board the boat neither water, provisions, nor compass, having only an axe, a boat-hook, two pocket-knives, a useless gun, and forty dollars in money. They reached the ship about sunset, a strong squall then blowing from the land, accompanied by heavy rains, which hindered them from seeing their own ship. Mr. Woodard immediately applied to the captain of the ship for a supply of provisions, but was told that he had barely sufficient to last him the remainder of his voyage to China; but as it was by this time quite dark, the captain

DREADFUL SUFFERINGS OF CAPTAIN WOODARD AND FOUR SEAMEN, IN 1793.

invited them to stay on board, to which Mr. Woodard the more readily consented as there was not much chance of finding their own vessel in the dark.

During the night it rained very hard, with a full, fresh breeze from the southward. In the morning they were in the same place, the land bearing the same as on the preceding evening; but of the *Enterprise*, the ship Mr. Woodard had left, there was not a vestige to be seen, even from the mast-head, and the wind then blowing fair for her to go through the straits of Macassar.

As the ship they were on board of was bound for China, and was then making the best of her way thither, Mr. Woodard thought the most prudent course he could adopt would be to leave the ship without any further delay, and proceed

in search of their own. For this purpose he called the sailors and had the boat hauled up, which was then laying astern; and having got all their things into her, he asked the captain for twelve musket-cartridges, which were given to him; the captain also ordered them a round bottle of brandy, but neither water nor provisions of any sort. Upon leaving the ship they continued their course to the south, in the hope of getting sight of their own vessel again; and after rowing and sailing till twelve o'clock at night, they landed on an island to get fresh water, and made a large fire so that their ship might see it. In the morning they went to the highest part of the island, but could see nothing of the vessel; and not having found any water or provisions, they left the island and continued their course down the middle of the

straits for six days longer, without going on shore or tasting either food or drink, except the bottle of brandy. A heavy squall coming on from the south-west, obliged them to keep the boat before the wind; and when the storm abated, they had the Celebes shore clearly in sight. They all agreed to go on shore in search of provisions, and then to proceed to Macassar, which they judged to be about three degrees to the southward. After rowing all day and nearly all night, they came near the shore, but not thinking it prudent to land at night, they waited until morning, when, observing two proas close under the land, they steered towards them with great joy; but as they drew near, they found the people on board putting themselves into a posture of defence, lashing their proas together, and getting large bundles of bamboo spears upon deck. Overcome with hunger and fatigue, they were still not discouraged, but coming up alongside, Mr. Woodard told

them he wanted to buy some provisions. To this request, which was made intelligible by signs, they replied that they would grant some, and asked where their ship was? and was answered that she was a little distance at sea; when the Malays, perceiving that they had no arms in the boat, put on their cresses or steel daggers, about two feet long and a little waved towards the point.

Mr. Woodard still continued to solicit them for provisions, either Indian corn or cocoa-nuts, which they refused. Three of the men jumped on board the first proa, to beg some Indian corn, and got three or four small ears: at the same time Mr. Woodard offered a dollar for two cocoa-nuts; but after having received the dollar, the chief refused the cocoa-nuts, and jumping with another man into the boat, pulled up Mr. Woodard's shirt to feel for money, holding his drawn dagger over him; when Mr. Woodard, finding himself in so

much danger, took up his small axe to defend himself, and ordered the man in the bow to cast off the boat: the two Malays observing this, made towards their own proa. Before she was clear, the chief reached a pistol from the stern of his own proa to shoot at them; but the boat being just then in the act of casting off, he was obliged to leap into his own proa, when he took up a musket and presented it at them, but fortunately it missed fire. As every moment now increased their distance, the boat got some way off before the chief could fire, which he did without execution.

They now directed their course towards the shore, where Mr. Woodard landed with one man, leaving the others in the boat. Soon after, both the proas came to an anchor, and sent on shore six hands, completely armed, in canoes. Mr.

Woodard immediately ran to the boat and shoved her off, when the Malays cried out that they had some Indian corn for them; but the intention of the Malays being evidently to detain them, to take possession of the boat and massacre the crew, they stood off, went about four miles to the northward, round a point of land, and landed out of sight of the proas, where there were a great number of cocoa-nut trees. Mr. Woodard went on shore with three hands; but not being able in their weak state to climb the trees, he was obliged to have recourse to his axe, with which they cut down three trees for a sea stock. Being now quite tired, Archibald Millar said that he would go down and take care of the boat, and let one of the men in it, who could handle the axe, come to his assistance. Both of them joined the party on

shore, while Millar stayed in the boat. They had scarcely cut down the fourth tree, when they heard Millar scream in a strange and agonising manner. Upon their arrival at the beach, they saw their boat off at some distance, full of Malays; but seeing nothing of Millar, they ran to the water's edge, and supposing him to be in the boat, called to him. As they could get no answer, they supposed that the Malays had carried him off with all their little stores in the boat, which was their only means of escape. What was their horror, on turning round, to see the poor fellow close at their feet, lying on his back at the edge of the water, with his throat cut; one cut on his right side between the ribs, and another on his right leg.

Mr. Woodard and his four men now fled into the woods, where they concealed themselves among the dry leaves the greater part of the day. They now found themselves doubly beset; the day-time was not safe to walk about, as they heard people on all sides, and at night they were in danger of wild beasts, of losing their way, and were destitute of the means of furnishing themselves with subsistence. They, however, agreed to travel by night, and accordingly set out about eight o'clock, taking a star for their guide, bearing south. They soon lost sight of the star, and at daylight, when they imagined that they had walked about fifteen miles, they found themselves within a few roods of the place whence they had set out the preceding night, which was owing to their having gone round the mountain instead of over it. On the following night they again set out for Macassar, but not trusting to a star, they kept by the sea-side, and continued so for six successive nights, retiring each day into the woods for shelter.

On the sixth day from the loss of the boat, and the thirteenth from their leaving the ship, the men were become very faint, hungry, and weary, having had no provisions since they left the ship, and only now and then a little water from the hollows of trees, and a few berries when they could find any. Their feet were also very sore, being without shoes, and their bodies severely torn by briars and brambles.

In the morning they came to a mountain by the side of a deep bay, where they remained all day. At noon they perceived many of the Malay inhabitants fishing in the bay at a little distance. Soon afterwards, Mr. Woodard, taking a walk along the banks, found a yellowish-looking berry, about the size of a currant, hanging in little bunches, and finding them very palatable, he carried his hat full to his unfortunate companions, who did not like them; but three of the men began eating the leaves of bushes. In the evening they were attacked with violent vomitings and pains in their bowels, and all night were crying out through torture. In the morning they appeared more like corpses than men; but Mr. Woodard did not dare pity them for fear of depressing their spirits. He then went in search of water for them, and soon found about a pint in the hollow of a tree, which he gave them to suck through a reed, giving each three mouthfuls, until the whole was consumed. Being now convinced that they were unable to proceed any further, Mr. Woodard asked if they were willing to surrender themselves to the natives; to which they all with one voice consented, excepting the American lad John Cole, who, on his knees, entreated them to stay in the woods, saying he would rather die there of hunger than be massacred by the inhuman Malays. In order to preserve authority and create some degree of confidence, Mr. Woodard roughly called him a fool, and directed him to follow; which he did, though very reluctantly. They now thought it most prudent to hide their weapons in the ground, viz. their boat-hook, the axe, two pocket-knives, and a dollar, which they hid by the side of a large tree; and then proceeded to the bay, where they had seen the Malays in the morning, to meet their fate or to find friends. However, on their arrival at the beach, they did not see any one; for the tide being up, the natives had all gone away. They immediately walked on until they came to a path, when, ascending a few steps on the banks, they perceived three girls fishing in a brook, who, on seeing them, ran away up the path. They followed them for some distance, and then sat down on the trunk of a large tree to await the event of their departure.

In about a quarter of an hour, they observed three men coming towards them by the same path which the girls had gone, when Mr. Woodard, immediately rose to meet them, desiring the men to sit still. He proceeded towards them alone, until he had approached them within a short distance, when they stopped and drew out their cresses or knives. He still advanced without hesitation till within about two yards of them, when, falling on his face, he earnestly begged for mercy. For some minutes they looked steadfastly at him, with their knives drawn, when one of them, putting up his cresse, came towards him, and kneeling in the same manner, offered Mr. Woodard both his hands, which he acknowledged by doing the same. By this time about twenty of the natives assembled and commenced stripping him; they took off his hat and handkerchief, and, thinking them to be money, cut the buttons off his jacket. His four companions had by this time come up, and they were treated in the same manner.

They were now completely at the mercy of the natives, whom they entreated, as well as they could do by signs, for something to eat, on which they immediately supplied them with five green cocoa-nuts; and then taking them to a town called Travalla, carried them to the court-house or judgment-hall. They were placed near the judgment-seat, accompanied by a vast concourse of people, including women and children, who made a circle at some distance from them, having never before seen a white man in that place. Here they waited for the chief, or rajah of the place, who made his appearance in about half an hour. He was about six feet high, tall, straight, and well made. On his entrance he looked as wild as a madman, flourishing in his hand a large cresse, the blade of which was two feet and a half long, and very bright. His only apparel was a small pair of short breeches, a girdle round his waist, and a red handkerchief on his head. On coming within the circle of men and women he made a stop, when Mr. Woodward immediately rose and went to meet him. The chief fixed his eyes steadfastly upon him, and though the other begged for his life, he neither spoke a word nor altered his position. Mr. Woodward then approached so near, that he took the chief's foot and placed it on his head as a token of submission. The chief then went to his judgment-seat, when, assembling his officers round him, they held some consultation; after which he rose from his seat to go to his own house, which was at no great distance, and soon returned with five pieces of betel nut, which the natives chew instead of tobacco. He presented each of them with a piece, as a token of friendship, and then ordered them some cocoa-nuts.

By this time the day was nearly spent, and their minds a little more at ease, after the dangers and alarms they had gone through. They now retired to rest, and they slept quietly till about eight o'clock; when they were conveyed to a room in the rajah's house, where a sapper of sago-bread and peas was provided for them, but the quantity so small, that one man might have eaten the whole of it. They, however, shared it amongst them, and then again lay down to sleep.

After being examined a second time by a number of strange Malays, who, having been out of the town, had not seen them before, they were again awakened at daylight by a large concourse of women and children, who filled the house till near noon. All this time they had no victuals; they therefore asked the chief, who sent them some cocoa-nuts and Indian corn—the allowance for each man being a cocoa-nut and an ear of Indian corn at noon, and the same at supper. They lived in this manner for about twenty days, but were not allowed to go out of the house except to bathe.

Upon being informed that they were English, an old man, one day brought them a Mahomedan priest, whose name was Tuan Hadjee. He could speak a few words of English, some Portuguese, and some words of the Moorish language. He had been at Bengal and Bombay on his way to Mecca, and had with him a certificate from Henry or John Herbert, the governor of Balambangan, in the island of Borneo, dated 1771, to certify that he was a trusty good man, and was empowered by the governor to assist all distressed Englishmen, and convey them to an English port.

Tuan Hadjee asked whence they came; to which Mr. Woodard answered, from Bengal, and last from Batavia. The priest immediately asked the rajah what he should give for them; but the rajah replied that he would not part with them.—Tuan Hadjee then offered one hundred dollars in gold-dust, but was refused; on which he left them, and said that he would go to the head rajah about them.

They were now kept close prisoners, and constantly guarded by two persons, in which situation they were detained for about a month, when provisions growing scarce, they were taken into the woods by two at a time to make sago-bread; and after working all day without any thing to eat, the Malays would scarcely give them enough for supper.

After a few months they were permitted to walk about the town, or wherever they pleased; but a good watch was kept over them during the night. One day, as they were upon the sea-shore, having been about four months at Travalla, they discovered their own boat without sails, but full of Malays, who came on shore. Mr. Woodard asked them where they were going; they told him "To the king or head rajah;" but the Malays were very cautious not to allow them to approach the boat, but ordered them off into the town; and in the course of the evening the boat disappeared.

Finding it was the intention of the Malays to keep them unless they should receive a large sum for their ransom, Mr. Woodard most earnestly inquired where the old priest was to be found, who had visited them on their first arrival; and after some entreaty, ascertained that he lived in the town of Dungally, about eight miles distant. In the course of eight months from their arrival, there came a proa from Dungally to Travalla, to purchase cocoa-nuts of the captain, of which Mr. Woodard made particular inquiries concerning the old man.—About the same time the head rajah, who lived at Parlow, at the bottom of a bay of that name, sent for them, and they were accordingly conveyed thither. Two of them, who were sick, were carried round in a proa, while Mr. Woodard and the other two travelled by land, attended by the rajah of Travalla, and guarded by five men on horseback and one on foot. They set off in the morning, and at night arrived at their journey's end, where they were supplied with a warm supper of a little rice and greens.

On the third day they were conducted to the head rajah, who, after looking at them for some time, sent for a musket for each of them, and asked if they understood the use of them; and not knowing the object of the inquiry, Mr. Woodard replied in the affirmative. They were lodged in a large house open all round, which was very warm in the day, but the nights were so cold from the damp fogs, owing to the low situation of the town, that Mr. Woodard caught a violent cold, which turned to fever and ague; but was still kept in the cold house without clothes.

In the course of a few days, the head rajah, Tommy Ganjoo, provided a house for Mr. Woodard and his companions, who were conducted to it. Mr. Woodard being sick, was obliged to be carried, and was accompanied by a large concourse of young females, who kindled a fire and boiled some rice for him. Soon after his removal the fever began to abate, and in a few days the head rajah sent to a Dutch port called Priggia, which is at the head of an extensive deep bay at the east side of the island, under the care of the commandant; who in a few days arrived at Parlow, and sent for Mr. Woodard, and asked him to go to Priggia, where he resided. Mr. Woodard found him to be a Frenchman, who had been thirty years in the Dutch service, and refused his request, as he was apprehensive they would force him into the Dutch service; but the Frenchman did not offer a penny, assistance, or clothes, to Mr. Woodard or his people.

Finding that it was not their intention to send them away, Mr. Woodard went to the head rajah, and asked his permission to go to Travalla, as a proa was then lying there destined for that place, urging his wish to bathe a few days in salt water. To this the rajah consented, but enjoined the captain of the proa not to let Mr. Woodard get a sight of Dungally on his way, as he had heard that the priest had been inquiring for the captives. It fortunately happened that, as they passed Dun-

gally in the middle of the night, they were becalmed, which enabled Mr. Woodard to get a full sight of the town, and carefully observe the situation of it. In the course of the following day they arrived at Travalla, where his whole ideas were bent upon running away to Dungally. By constantly begging for Indian corn, which he carefully concealed under his pillow, and soon after changing his diet, he lived upon the corn he had thus acquired, which considerably improved his strength. He also provided himself with a bamboo spear, and although he was guarded by three men and two women who kept in the house with him, he rose about twelve o'clock one night, and finding his guards asleep, took his spear, and leaving the house, directed his course to the sea-shore, where, finding a canoe on the beach, he immediately launched it and set off. After reaching about a quarter of a mile from the shore, the canoe became so leaky, that it was nearly half filled with water.—Alarmed at this accident, for he could not swim, and finding it impossible to reach to any distance in her, he rowed back, when, just as he made the shore, the canoe filled, and sunk in five feet water.

He returned immediately to the town, where, finding every thing quiet, and that he had not been missed, he directed his course for Dungally by land; and after traversing through woods and over mountains, and passing by two villages, he reached Dungally as the day dawned. He proceeded towards the middle of the town, and not seeing any person stirring, seated himself on a log of wood. In the course of half an hour, he observed a man come out of the public building which was near him, who proved to be the servant of the old priest, of whom he was in search. The man ran back, crying out "Putu Satan! Putu Satan!" meaning a white devil; but one of the men who had seen Mr. Woodard at Travalla, came running out, and taking him by the hand, called him steersman or mate, and conducted him to his friend Tuan Hadjee, who was greatly rejoiced at meeting with him. The old priest behaved very kindly to him, gave him plenty to eat, and bought him some linen for a shirt, jacket, and a pair of trousers, which he made himself, and were the best clothes he got there.

In the course of three days, the chief of Travalla, having learned that he had gone to Dungally, sent after him; but the old priest and the rajah of Dungally refused to let him go, nor was he willing to return.

The priest and the rajah now informed Mr. Woodard that, in the course of three months, they would convey him to Batavia or Macassar, desiring him at the same time to send for the four men he had left at Parlow. The old priest supplied him with a slip of paper, and with a pen made of bamboo; he wrote a letter to the men, and sent it by the captain of a proa bound thither, with orders to give it to them secretly. This commission he faithfully executed, and, in about five days, to their extreme joy, all the men arrived at Dungally.

After staying for some time at Dungally, during which some skirmishes took place between the inhabitants and a party sent from Parlow, and their friend Tuan Hadjee being called away to a distant part, Mr. Woodard determined to steal a canoe, and to endeavour to make their way to Macassar, which was about four degrees to the southward; and for this purpose went to work in the woods to make paddles, at the same time begging Indian corn to lay in a stock of provisions to carry with them. The old priest being on the point of starting on his journey at midnight, they followed him to the gate without telling him of their intentions, but when the man who kept the gate asked where they were going, said that they were accompanying the old priest to Sawyah, to make sago, when they were permitted to pass, and the gate was immediately shut.

By the time they gained the beach, he had just gone on board the proa, when, observing a large canoe at hand, and having the paddles which they had made lying in the woods, they immediately launched the canoe and put to sea, accompanying the proa for a short distance; but daylight coming on obliged them to make the opposite shore to prevent being discovered.

They set off again at sun-set, and had resolved to put up a sail made of a mat; but one of them stepping on the edge of

the canoe to hoist up the mast, turned the boat keel upwards, and they all fell into the water. They however managed to tow her to shore, where they bailed her out, and having dried their clothes and warmed themselves by a fire which they re-kindled, they again set off and rowed or paddled all night. In the morning they discovered a proa close to them, which immediately took possession of them. Mr. Woodard informed the Malays that they were bound with the old man to Sawyah; upon which they carried the captives to him instead of to Dunggally, which was a lucky escape for that time. He informed Tuan Hadjee, whom they met at Sawyah, that their intention was not to run away, but to follow him, and they continued with him there a considerable time.

Finding after some time that there appeared to be no likelihood of being able to get to Macassar, they came to the resolution to steal a canoe, and attempt to go there. They accordingly made five paddles, and after saving the rice which had been given them as a reward for beating it, till they had collected five or six quarts, they formed the project of stealing the rajah's canoe, which was a very good one; but he, perhaps, suspecting their design, ordered it to be drawn up nearer to his own house, at some distance from the sea.

Fortunately, however, a pirate's proa came that day into the river, up to Tombooa, and she had a very fine canoe. Mr. Woodard went immediately to borrow it to go fishing with, and having caught several fish, which he shared with them, he asked for the canoe to fish again at night, but they refused, intimating that they might use it in the day-time, but not at night. However, in the dead of the night, when every one had retired to sleep, Mr. Woodard came out of the house and directed his course to the proa, where the canoe lay, having left orders with the men that, if he succeeded in seizing it, they were to come round to the beach, which was not far off. He succeeded in the attempt, and was joined by the four men, who brought with them their small stock of effects.

They directed their course to a small island about three leagues distant, where they landed at day-break; but not being able to procure any water there, they removed to a point of land where they knew there were no inhabitants. Having obtained a little water, and repaired the canoe, they directed their course southwards towards Macassar.

After being three days at sea, there came on a strong wind from the southward, by which they were nearly lost; and, unfortunately, just as they were going to land, they discovered a proa at no great distance, rowing towards them with all their might. They immediately tacked, and stood off, but the proa soon got up her sails, and coming close alongside, asked them whither they were bound. Mr. Woodard answered that they were bound to Macassar; when the Malays in the proa said that they must come back, and ordered them on board.

Mr. Woodard perceiving that she was weakly manned, having only five, their own complement of hands on board, they were determined not to be taken; all hands therefore turned to, and rowed directly to windward. The proa at first attempted to follow them, but soon changed their intentions, got up their sails again, and ran in shore.

The wind still blowing very strong, they resolved to go on shore at a distance from the proa, and being desirous also of avoiding any inhabitants, and after a good look-out not perceiving any, they went on shore at a place called Tranamare, about ten or twelve leagues to the south of Travalla. On going ashore, one of the men unfortunately broke his paddle, and on getting a stick to mend it was seized by two Malays, who brought him to the canoe. Mr. Woodard, to his great surprise recognised one of them to be the captain of the proa that had taken him from Parlow to Travalla.

They left that place in the evening, and a storm coming on, passed the proa that had chased them in the morning, and rowed all night along shore. After several days' voyaging, endeavouring to find their way to Macassar, and getting near to several proas, with whom they avoided too close a contact, just as the sun was setting one evening, they perceived a proa full of men set off from the shore; she rowed very fast and soon came alongside, and they were once more taken prisoners by the Malays, four or five of whom jumped into the canoe,

by which she was nearly overset, and told them that they must immediately go to the rajah who had sent the proa after them.

Overpowered by numbers, they were obliged reluctantly to submit; they were taken to the town of Pamboon, where they were stripped and then conducted to the rajah, by whom they were questioned as to where they came and whence they were going, and also whether they understood a musket; and showing Mr. Woodard a hundred of them wanted him to stay and take charge of them. Grown almost desperate by their long continuance of misfortunes, and reckless of danger, Mr. Woodard answered him boldly, that they were bound to Macassar, that they did not understand a musket, which was only known to a soldier, and that he would not remain there.

The next morning he again waited upon the rajah, and, as he could now speak the Malay tongue well, he begged the rajah to send them to Macassar, assuring him that the governor had sent for them, and that if they were detained, all the rajah's proas would be stopped at Macassar. After some consideration, he gave orders for the captain, of a proa to take them, and if possible to get something for them; but if not, he might leave without.

After waiting some days till the proa was ready, they left Pamboon, which is about ninety or a hundred miles from Macassar, and belonging to a tribe called Tramany. In the course of three days they arrived at a small island called Sam Bottom, within about nine leagues of Macassar, where they were left two days on board the proa, not being allowed to go on shore. Mr. Woodard desired George Williams to go on shore, and if they refused him, to swim or steal a canoe, and to inform the rajah that Mr. Woodard was on board the proa and very ill. Upon receiving this information, the rajah sent his son on board the proa with a note to the captain, by whom the prisoners were instantly released. The rajah, on their going ashore, ordered them some food, and a proa to be got ready that afternoon, to convey them to Macassar.

They set off just before night, but did not reach Macassar until the following. They landed on the 15th of June, 1795, after a voyage of nineteen days from Tombooa, and after having been in captivity two years and five months.

Through the benevolent exertions of the governor of Macassar, whose name was William Pitt Jacobson, a native of Amsterdam, and a man of respectable family, these unfortunate men experienced every attention and relief. The linguist was ordered to take Mr. Woodard to his own house, and supply him with everything he wanted; and his four companions were lodged with the company's sailors, to have as much as they required. Mr. Woodard was thoroughly fitted out with new clothes, supplied with money, and had the promise of provisions for his homeward voyage; and when, on the day approaching, and they were about to embark, he waited on the governor in the new clothes he had given him, to thank him for his great kindness, and to receive a bill of their expenses, the governor kindly informed him that there was no bill, that all they had received was freely given them, and wished to know if they wanted anything more.

On parting, the governor gave him eighteen rupees in cash, and also letters to the general of Batavia, stating the situation in which they arrived at Macassar: from the linguist he received a present of eight rupees, and several other presents from the inhabitants.

Mr. Woodard and his men left Macassar on July 1, 1795, and arrived at Batavia on the 11th of the same month. On landing, Mr. Woodard directly engaged his men a passage on board the Betsey, commanded by Captain Millar, an American ship, bound for Boston.

While at Batavia, he discovered an old acquaintance in Captain Sands, who commanded the American, an American ship, then lying there and bound to Bengal. After discharging all their expenses at Batavia, both for himself and his men, he embarked with Captain Sands, on the 20th of July, 1795, and after touching at two or three ports, arrived at Calcutta on the 20th of September.

Through Captain Sands, his story soon became circulated

at Calcutta, where he had many friends, as he was well known to Captain Blythe and other gentlemen belonging to that place; and the ship having discharged her cargo, he soon got the command of a country ship then in dock under repair.

Captain Woodward was daily employed in superintending her repairs, when an American ship arrived at Bengal, which, to his great surprise and joy, was commanded by his old friend Captain Hubbard, the very captain with whom he had sailed about three years before in the *Enterprise*, when they missed their vessel, in the boat in the Straits of Macassar. The meeting was quite unexpected to them both. Captain Hubbard had changed his ship, though in the same employ, for a vessel called the *America*, in which Captain Woodward had formerly sailed as an officer, to different parts of India. Captain Hubbard told him that after having waited for them three days in vain, he had given up the boat for lost. He had perceived the fire, but had supposed it to be made by the Malays.

Captain Hubbard pressed him to go to the Mauritius, and promised that, on their arrival there, he should succeed him in the command of his ship. His circumstances being very low, and the ship of which he had the care not being likely to come out of dock for nearly three months, he accepted the offer.

They sailed together in the *America*, on the 1st of January, 1796, and arrived at their destined port, where they discharged the cargo in forty-two days, and Mr. Woodward was very soon after appointed captain of the *America*.

THE OLD COMMODORE.

"Who is that old gentleman hobbling along there, with his crutch-stick, giving orders to his servants with such a stentorian voice?" inquired Mr. Crayon.

"That is the well-known Admiral Broadside, whom we denote the Old Commodore," replied Mr. Judgewell, the Mayor. "He lost his eye in the action off Cherbourg, and had his knee splintered by the bursting of a canister shot off St. Malo. He is often teased with the gout, which renders him rather testy at times, but in other respects he is a hearty good fellow; and although quite an eccentric, his old heart overflows with kindness and humanity. The sea is still his favourite element; he cannot bear to lose sight of it for two days together, and consequently resides in a house near the sea shore, planned by himself, and built under his own directions. A ship is to him the grandest sight in the universe; and so prepossessed is he in their favour, that even his house is built as near as possible in the shape of one. To-morrow is the anniversary of Lord Howe's victory over the *Brest* fleet, where his valour raised him to his present rank. He was sent home with the despatches, and the King being much pleased with his gallant behaviour, the order of his promotion was given without delay. It is now six years since he retired from the service; but he makes a custom of giving a grand entertainment on each anniversary to his neighbours. There is to be a grand sailing match and a sham-fight to-morrow, in which all the fishermen, and such as are skilled in nautical affairs, are invited to join. The old gentleman is now busy in preparations, and generally plans the order of battle himself. He used to join in it, and take the command of a squadron of boats himself; but since the gout has laid hold of him the command has devolved on William Stedfast, a youth, whom report states to be his nephew. He is bringing him up to the sea-service, and swears if he does not turn out one of the most expert navy officers that ever walked the deck, he'll cram him into a forty-pounder and blow him to the devil."

The Old Commodore had risen at an early hour, in order to complete the arrangements for the following day. He had constructed a fort, in which was placed sundry old muskets and blunderbuss barrels, which were to represent cannon, but were to be manned and served by veteran soldiers who had lost either an eye or a limb in their country's service. Some of these veterans were so enthusiastic in the

undertaking, that many of them came from a distance of twenty miles to be present at the anniversary. Two carpenters from the village were busily employed in constructing the fort, under the superintendence of Joe Dreadnought, an old sailor, who had served as gunner's mate to the Old Commodore ever since he had the command of a vessel. Joe was moored for life in the Commodore's establishment; he was his right-hand man, and combined the various stations of valet, footman, cook, and butler; in fact, everything but coachman, and that was quite out of Joe's line. He swore that coaches never could sail a steady course, as long as the helmsman was placed at the head instead of the stern, and when any of the village ostlers jeered him on the subject, his answer was:—"How the devil do you think a man can steer if he sits in front? How can he tell where the vessel is going if he don't watch her head? And how can he see her head if the vessel is behind him?"

The Old Commodore had determined the sailing-match should take place in the bay; but the sham-fight was to be on a spacious lake which ran through his grounds. He took a trip towards the fort, assisted by his nephew, William Stedfast, and took a survey of the works.

"Hollo Joe," shouted the Commodore, "what the devil are you at there? Don't you see you have got your chief butment projecting the wrong way? Why, your ramparts hang over, instead of leaning inwards: if your fort was built of stone in that fashion a couple of twenty-four pounders, and a handful of men, would oversway it, and tumble it all into the lake together."

"Please your honour," replied Joe, "it is built exactly after the manner of the fort at St. Domingo, and your honour cannot have forgotten what a deal of trouble we had to silence it. We gave 'em plenty of twenty-four pounders then; but they took no more effect than if we had discharged as many penny popguns at it."

"Why, you audacious son of a porpoise! do you dare to dispute with me as to how a fort ought to be built or attacked—I that have been in no less than thirty engagements, and have served in every station from the cabin-boy to the Rear-Admiral—I that lost an eye in the action off Cherbourg, and got my leg splintered by the bursting of a canister shot at St. Malo? But I'll catch you in your own net, Master Joe; I'll make you commander of that fort to-morrow; your French colours shall fly from the tower, and if my nephew here don't blow you and your fort to the devil together, I'll bring him to a court-martial."

"Please your honour," replied Joe, rather sulkily, "I a't no soldier, I don't know nothing about defending castles ashore; but only set me afloat in a cockle-shell, and see if I don't do my duty like a British seaman."

"Hold your tongue," shouted the Commodore. "Go and make me a glass of grog, and let's have no more of your palaver."

Joe touched his hat, and away he went.

"That's an honest, brave, obstinate rascal," said the Commodore, as he looked after Joe. "There are few seamen to equal him now-a-days."

Joe returned with the Commodore's grog and a pipe: he handed them to him on a waiter, and looking in his face with an expression of anxiety, whispered—

"Must I command the fort to-morrow, your honour?"

The Commodore paused—put his pipe to his mouth—blew a few whiffs, and replied,

"No, Joe, no. You shall be my coxswain at the sailing-match, and if any one tumbles in the water, you must pull them out again; you can do that well enough, because you have had good practice that way. And when the fight takes place on the lake, you shall be my nephew's gunner."

"Say no more, your honour," responded Joe, joyfully.

"Victory is certain; we'll give the French fort such a peppering, that she'll strike her flag in quick time."

At day-break, the various crafts that were to sail at the match began to drop into a line along the bay. The road was thronged with peasants and villagers, in their best clothes, pressing forward to view the pleasing sight. The

village bells began to ring a merry peal, and the beach and surrounding cliffs soon abounded with smiling faces.

Old Joe had brushed up the Commodore's hat and laced coat—the one which he had not worn since the last anniversary; the same which he wore on the day his leg was splintered at St. Malo. Joe assisted him to put it on.

"Ah!" said the Old Commodore, "whenever I get this coat on my back, I always raise my heart in thankfulness to Providence, when I reflect that it has never witnessed a single act of cowardice or dishonour in its wearer."

The Old Commodore bustled out of the room, followed by Joe, and was met by his nephew.

"Come, bustle, bustle, boy," said he to Stedfast; "get on board your boat, and get all your tackle well overhauled; you must win the wager, boy. There's a party of ladies coming to visit us, and among them a certain Miss Emmeline Winterton, who, I rather think, has answered your signals, so far as not being averse to sailing in company; therefore you must look out, Will Stedfast, and not disgrace yourself in her sight, else you may get run out of your course; and she's worth looking after, boy. She is a fine trim vessel; well rigged, and carries twenty thousand guns—pounds I mean; so look out, boy, look out. Now, Joe, heave ahead, and get our boat ready."

"All ready, your honour," replied Joe.

"Stretch along then, coxswain, and let's aboard," cried the Old Commodore, as he quitted the house.

No sooner did he appear on the lawn than the assembled crowd welcomed him with three hearty cheers, which were echoed by those on board the boats in the bay. The Old Commodore's heart glowed within him; he felt assured it was an effusion of sincere congratulation.

The wager-boats were brought up in the order for sailing, and off they went. Stedfast's boat was fourth at starting; it was named the *Swift*. The Old Commodore hailed him.

"You William! what are you after there? Shall I send an old woman to steer for you? Luff, you swab, or you'll go all to leeward. That's better—now port—there—there—steady—now there's wind coming to you: put your helm well over to the starboard—now she fills—keep her close—that's right, boy—now she feels it: there she goes—third boat—second boat—cut away, Will Stedfast—save your wind; now let her go a little—now she shoots a-head: first boat—he has it—he has got to windward. Look sharp, you Tim Bowling, or you'll be left out of sight—ha! ha! ha! well done; but it's of no use. Will Stedfast has it. Bravo, my boy—well sailed i'faith! You Joe, put your helm up, and steer me amongst the wager boats."

Joe did so. The Commodore waved his stick in token of silence.

"Well sailed, my boys, you are a credit to Old England; and although my nephew has come in first boat, you have all worked so seamanlike, that you shall each have a few shot to stow in your lockers. Now, get ashore, and away to the lawn, and there you'll find a good stock of provisions ready laid out."

The air was rent with deafening cheers, and they adjourned to the lawn, where the rural feast was done ample justice to.

The sham-fight followed next; the boats were fitted out as gun-boats, each having a musket-barrel placed in front to represent a cannon. Will Stedfast led the attack, and was followed by the other boats. An old soldier named Stock commanded the fort, supported by a train of staunch old fellows, who had seen good service. He peppered away at the boats in good style, and gave them strong doses of rockets. The Old Commodore was busy in advising the boats how to work; and after a hard fight, some of the assailants effected a landing, and the fort struck her colours, and surrendered on honourable terms. Will Stedfast was invested with the medal of honour, which he received from the fair hand of Emmeline Winterton.

The lightsome dance succeeded the feast, and the Old Commodore felt no other regret than that of not being able to join in the merry maze; but wooden legs were not intended for dancers, and he was therefore obliged to content himself with his pipe and glass, cheered by the pleasing reflection that he was administering to the pleasures of others.

THE NEGLECTED TAR.

I sing the British seaman's praise,
A theme renown'd in story,
It well deserves more polish'd lays,
Oh! 'tis your boast and glory.
When mad-brained war spreads death around,
By them you are protected;
But when in peace the nation's found
These bulwarks are neglected.
Then, oh! protect the hardy tar,
Be mindful of his merit,
And when again you're plung'd in war,
He'll show his daring spirit.

When thickest darkness covers all,
Far on the trackless ocean;
When light'nings dart, when thunders roll,
And all is wild commotion;
When o'er the bark the white-topped waves,
With boist'rous sweep are rolling,
Yet coolly still the whole he braves,
Serene amidst the howling,
Then, oh! &c.

When deep immersed in sulphurous smoke,
He feels a glowing pleasure;
He loads his gun—right heart of oak—
Elated beyond measure.
Though fore and aft the blood-stain'd deck
Should lifeless trunks appear;
Or should the vessel float a wreck,
The sailor knows no fear.
Then, oh! &c.

When long becalm'd on Southern brine
Where scorching beams assail him!
Where all the canvass hangs supine,
And food and water fail him;
Then oft he dreams of Britain's shore;
Where plenty still is reigning;
They call the watch—his rapture's o'er,
He sighs—forbears complaining.
Then, oh! &c.

Or burning on that noxious coast,
Where death so oft befriends him;
Or pinch'd by hoary Greenland's frost,
True courage still attends him:
No clime can this eradicate;
He's calm amidst annoyance!
He fearless braves the storms of fate,
On heav'n is his reliance.
Then, oh! &c.

Why should the man who knows no fear,
In peace be then neglected?
Behold him move along the pier,
Pale, meagre, and dejected!
Behold him begging for employ;
Behold him disregarded!
Then view the anguish in his eye?
And say are tars rewarded?
Then, oh! &c.

To them your dearest rights you owe,
In peace then would you starve them!
What say ye, Britain's sons?—oh! no!
Protect them and preserve them.
Shield them from poverty and pain.
'Tis policy to do it;
Or when grim war shall come again,
Oh! Briton's ye may rue it.
Then, oh! &c.

LOSS OF THE DUKE OF CUMBERLAND.

THE Duke of Cumberland packet, commanded by Captain Lawrence, was, on the morning of Monday, September 3, 1804, lying at anchor in the road of St. John's, waiting to receive the mail, which was expected to come on board that day.

His majesty's ship *Serapis*, of forty-four guns, armed *en flûte*, lay about two miles farther out, in readiness to convey the packet down to Tortola. The wind had been blowing very fresh from the north during the night, and at noon had considerably increased. His majesty's ship *De Ruyter*, an old seventy-four, which had lately been brought there to be fitted up as a prison-ship, lay at anchor in Deep Bay: she had a very weak crew on board, and made signals of distress to the *Serapis*; and at twelve o'clock a boat came on board the Cum-

berland, to request the aid of some men to assist the *Serapis* in relieving the *De Ruyter*; but this Captain Lawrence could not, with propriety, grant. At this time the *Cumberland* had been obliged to strike their top-gallantmasts, and at two o'clock they let go the best bower-anchor, having previously been riding with only the small bower.

The gale still continued to increase, and by six o'clock in the evening it blew a perfect storm from the N.N.W., when they struck their yards and topmasts; but they had scarcely finished this work, when they discovered that the vessel had parted her best bower-cable. This unexpected circumstance surprised and alarmed them exceedingly, as the rope was nearly new, and they had been assured that the bottom of the roadstead was a fine hard sand; it must have been cut upon a ship's anchor, or on a bed of coral rock. They immediately bent the remaining

LOSS OF THE DUKE OF CUMBERLAND PACKET, CAPTAIN LAWRENCE, SEPTEMBER 4, 1804.

part of it to the stream-anchor, and the stream-cable to the kedge; but as the wind continued to rage with unabated violence, and the ship pitched immoderately, they were fearful that the cable should give way, and at ten o'clock they let go the two remaining anchors.

Every thing had now been done for the safety of the ship that was in the power of the crew, the rest they confided to Providence; and having recommended themselves to the protection of the Almighty, they remained passive, but anxious spectators, of the awful scene, and awaited the event in silent dread. To men who were so deeply interested in the effects of the storm, no scene could be so fearfully grand: the wind raged with a fury known only within the tropics; the rain fell, not in drops, but in torrents, like a deluge; the waves had

risen to a most stupendous height; the ship was pitching, one moment with her fore-castle under water, and the next pointing to the skies; they had already lost their best cable and were in momentary expectation of parting with the rest; and, to add to the horrors of their situation, the vivid flashes of the lightning discovered to them, notwithstanding the pitchy darkness of the night, that so soon as they should part or drive away from their moorings, a reef of horrid rocks lay to leeward ready to receive them. In such a situation of harrowing suspense and awful uncertainty, each man was sensible of the absolute impossibility of singly combating the terrific agitation of the conflicting elements, and their feeble expectations of saving their lives, rested solely on the frail hope of the ship being able to ride out the tempest.

The glare of the lightning had frequently shown them the masts of the *De Ruyter*, and they could perceive that she was driving from her moorings; she, however, suddenly disappeared, when they at once concluded that she must have foundered, and they also supposed that the *Serapis* had shared the same fate. About eleven o'clock, there was a violent crash on board, accompanied by a most tremendous noise, when they found that the windlass had given way. The sailors immediately clapped stoppers upon the cables, and secured them by means of ring-bolts on the decks: these were continually breaking, and were as often replaced.

The cable had now held so long, that they began to entertain some faint hope of her being able to ride out the gale, and so much did this strengthen, that several of them quitted the deck in order to obtain some refreshment, but they had scarcely sat down, when a loud groan from the crew summoned them again upon deck. They dreaded the worst, when the captain put and end to their doubts by running forward, exclaiming, "All's now over! Lord God have mercy upon us!" The cable had parted; for about two minutes the ship hung by the stream and kedg, and then began to drive broadside out, dragging them along with her. Their feelings at this awful moment language is inadequate to describe, nor is there any similar situation to which it is possible to compare them. Some of the seamen seemed at this time, for a moment, to forget themselves; their cries for their wives, their children, and their homes, resounded through the ship, in noisy but vain lamentations; but they soon became sensible of their folly, and resumed their wonted firmness.

As soon as the ship parted, which was about midnight, each man flew to a rope, with the determination of clinging to it as long as the ship remained entire. Fortunately, the wind had shifted somewhat more to the westward, and this prevented her from striking on the reef of rocks which they had so much dreaded. For above an hour they had continued to drift, without their having the slightest conception of the direction in which they were going; but they continued to hold on by the rigging, their bodies beaten by the heaviest rain, and lashed by every wave. A dreadful silence ensued, as each one was too intent on his own approaching end, to be able to communicate his feelings to another, while nothing could be heard but the horrid howling of the tempest. Soon after one o'clock the ship struck, and instantly went off again; and this circumstance, together with several lights being seen before them at a distance, convinced them that they were driving towards the harbour of St. John's, and that they had struck on the bar. They saw before them a large object, which they dreaded was Rat Island, a perpendicular rock in the centre of the harbour, upon which was a fort. This they were fast approaching, and that the garrison might be spectators of their fate, for it was in vain to think of assistance, they fired two alarm guns; but from the tremendous noise of the wind and waves, they were doubtful if the sound could be heard. However, they soon discovered that the object which they were approaching, was a large ship, on which they were directly driving, and they soon came up with her, passing close under her stern. This produced a faint hope of their being stranded on a sandy beach, for although they knew that the harbour chiefly abounded with rock, yet there were a few banks of mud and sand, and their wishes led them to hope the best: the captain, therefore, ordered the carpenter to get the hatchets ready to cut away the masts, in order to make a raft for those who might choose to venture on it. They could now plainly perceive the land at no great distance, on which they were driving, and as they knew it to be a huge rock, they ran up the fore and mizen-staysails, to endeavour by these means to divert the course of the ship; but just at that instant the wind suddenly changed from N.N.W. to W., being no less than six points of the compass, and continued to blow with increased fury: this kept them clear of the projecting land, and drove them beyond it a short distance, when the ship struck. At first they imagined that she had struck upon a sandy beach; and as they could plainly discern two large ships ashore just abreast of them, they buoyed themselves with the hope that they should be driven on board these vessels; but in this they were disap-

pointed; they drove past, beating with violence at every wave, and in a few seconds found the ship bring up on some horrid rocks, at the foot of a stupendous precipice. Every hope now vanished, and in despair of the slightest chance of relief, they already began to consider themselves as beings of another world. The vessel was dashed with extreme violence against the rocks, and they could distinctly hear the cracking of her timbers below.

In order to ease the vessel, and if possible to prevent her from parting, they immediately cut away the the mizen-mast and shortly afterwards the foremast; but they allowed the mainmast to remain, in order to steady the ship, and to prevent her, if possible, from canting to windward, by which they must all have been inevitably drowned.

It was about two o'clock in the morning, when the vessel struck, and in half an hour afterwards they found that the water was up to her longed deck. Never, perhaps, was daylight so anxiously looked for, as by the almost despairing crew of this unfortunate vessel. After having held on so long by the shrouds, they were forced to cling for three hours longer before the dawn appeared; and during this time they were under the continual dread of the ship's parting and launching them all into eternity. The vessel lay on her beam ends, with the sea making a complete breach over her; and stiff and benumbed as they were, it was with the utmost difficulty they could preserve their hold against the force of the waves, every one of which struck and nearly drowned them. The break of day only discovered to them the horrors of their situation; the vessel was lying upon large rocks, at the foot of a craggy, overhanging precipice, hove as high as the ship's mainmast; and although the mizenmast had been cut away, it still hung in a diagonal direction, supported by some ropes, and reached within about four fathoms of the rock. The land forming a sort of bay around them, also approached a-head; and the extremity of the jib-boom was at no great distance from it.—They could plainly discern several ships on shore in various parts of the harbour, and the wind and rain continued to beat on them with unabated violence.

The ship lay a most miserable wreck; one wave had carried away her stern boat, unshipped her rudder, and washed overboard her quarter-boards, binnacle, and round-house; her fore and mizenmasts lay alongside, supported by small ropes, and the ship had bilged her larboard side. After the dawn appeared, their first thoughts were naturally directed to the possibility of saving their lives, and they were unanimously of opinion that their only chance of effecting this, was by means of the mizenmast. With this view, they immediately got the topmast and top-gallantmasts launched out on it, which reached within a few feet of the rock; but that part of the precipice which it approached was so perpendicular, that it afforded but very faint hopes of relief, unless by the aid of some bushes which grew on the top. These were soon made trial of by a sailor; but after he had thrown a rope, with a noose on the end of it, and which had caught hold of some of the largest bushes, they had the mortification to see them brought away in an instant, discovering the roots of the shrubs to be fastened only to a much decayed, weather-beaten rock, incapable of affording them support sufficient to withstand the smallest weight. Another seaman, to whom despair had lent an extraordinary degree of courage, followed the first man out on the mast, with the intention of throwing himself from the end upon the rock, and had proceeded to the extremity of the top-gallantmast, when, just as he was on the point of leaping among the bushes, the pole of the mast, unable to sustain his weight, gave way, and he was precipitated into the water. As the fall was at least forty feet, it was some time before he made his appearance above the surface of the water, and when he did, every one expected to see him dashed to pieces among the rocks; but, fortunately, he had carried down with him a piece of the broken mast, to which some small ropes were attached, and by clinging fast hold of these, he preserved his head above water, at the intervals of the waves' receding, until a tackle could be fixed to hoist him in. This blasted all their hopes of being saved by means of the mizenmast; and yet some decisive measure was

absolutely necessary—for, as the storm continued to rage with unabated violence, they began still more to dread that the ship would part, as she had already bilged on the larboard side; and, moreover, the whole crew had been so fatigued by their previous exertions, and dispirited and benumbed by the constant exposure to wet and exhaustion, that they were scarcely able to hold out any longer. It was in vain to look around them for assistance; they were not seen from the town, and the ships which were in sight, had it not in their power to render them any aid. Some negroes, indeed, made their appearance on the top of the rock, and were earnestly requested to descend a little way, that they might receive a rope to be thrown from the ship; but whether from fear or sheer stupidity, they could not make out which, these creatures made not the least motion to approach them, but stood gaping in the most idiotical manner, sometimes at the ship and sometimes at themselves, in spite of reiterated entreaties, promises, and threats.

Whilst they were meditating on their situation in sullen silence, Mr. Doncaster, the chief mate, without communicating his intention to any one, went out on the bowsprit, and having reached the end of the jib-boom, threw himself headlong into the water; he had scarcely fallen, when a tremendous wave threw him upon the rock, and left him dry. There he remained a few minutes, motionless, when a second wave washed him still further up. He then clung to a projection of the cliff, by which he effectually preserved his hold; and after remaining a few minutes to recover his breath and recruit himself, he began to scramble up the rock. The preservation of Mr. Doncaster was almost miraculous, for all the ship's company were unanimous in declaring it to be next to an impossibility; indeed, it appeared to be a singular interposition of Providence in their behalf. In about half an-hour, with great difficulty, he reached the summit of the cliff, while the crew on board the ship were most anxiously watching every step that he took, and praying for his safety and success, with the consciousness that their preservation depended solely thereon. The instant that he reached the summit, he came round to that part which was over against the vessel; and, descending a little way, received a rope which was thrown from the main-top, and fastened the end of it to some trees which grew on the top of the cliff, while those on board secured the other extremity to the head of the mizen-topmast. This being done, a few of the most expert seamen warped themselves up upon it, carrying with them the end of another rope, upon which a tackle was bent, and this they fastened also to the trees; the other end of the tackle was made fast to the mizenmast, and the fold of it passed to the crew upon deck. By means of this rope, which they fastened to their waists, and the first rope by which they were supported, and warping along it with their hands, in the space of three hours they were all safely hoisted to the top of the cliff, with the exception of a few of the most active seamen, who were left to the last, and were obliged to warp themselves up as the first had done.

The whole of the ship's company, consisting of Captain Lawrence; Mr. Lawrence, the master; Mr. Doncaster, the chief-mate; Mr. Louie, the surgeon; twenty-four seamen and petty officers, and three passengers; Mr. Verchild, Mr. Wood, and Lieutenant Webber of the artillery, having assembled on the rock, they bade farewell to their miserable vessel, and took their departure towards the town. But their difficulties were not yet at an end; the whole plain was before them, and in consequence of the immense quantity of rain which had fallen, and which was still pouring down in torrents, it had more the appearance of a large lake, through which it was with the greatest difficulty they could find their way; and in those places where roads or furrows had been made, they frequently plumped in up to the neck, in imminent hazard of being carried down by the stream.

After wading for about three miles through fields of canes, whose tops were barely visible above the water, they reached the town of St. John's, where they were so hospitably received, that had it not been for the kind offices of a mulatto tailor, to whom they sent for clothes, and who carried them to a house, where they were furnished with beds and provisions, they

might have died from the want of food and necessaries. In a few hours afterwards, the wind chopped round to the south, from which quarter it blew with the same violence the whole of the 4th and part of the 5th of September. The hurricane lasted eight-and-forty hours, during which time it made a complete sweep of half the compass, beginning at N. and ending at S. This favourable change saved the Cumberland packet from breaking up, and, on the morning of the 5th, they found her lying upon the rocks, nearly dry, with five large holes in her larboard side; and they were thus enabled to save some of their linen that was floating in the hold.

SHIPWRECK OF THE LITCHFIELD MAN OF WAR, ON THE COAST OF AFRICA, AND MARCH OF THE SURVIVORS TO MOROCCO.

The following narrative of the shipwreck of his Majesty's ship Litchfield, of 50 guns, Capt. Barton, on the coast of Africa, is extracted from the account published by Lieut. Sunderland. It will be seen that the ship was wrecked about thirty miles from Sallee, in the South of Africa, and that the captain and crew, as well as the crews of a transport and a tender, wrecked about three leagues to the north of the wreck-place of the Litchfield, marched to Morocco, by order of the emperor, by whom the greater part were made slaves. Their ransom was at length effected, and they arrived at Gibraltar in about six months from the period of their shipwreck.

"The Litchfield left Ireland, November 11, 1758, in company with several other men of war and transports, under the command of Commodore Keppel, intended for the reduction of Goree. The voyage was prosperous till the 28th, when, at eight in the evening, Lieut. Sunderland took charge of the watch, and the weather turned out very squally with rain. At nine it was exceedingly dark, with much lightning, and the wind varying from S. W. to W. N. W. At half-past nine we had an extreme hard squall; Capt. Barton came upon deck and stayed till ten; he then left orders to keep sight of the Commodore, and to make what sail the weather would permit. At eleven we saw the Commodore bearing S., but the squalls coming so heavy, we were obliged to hand the main-top-sail, and at twelve o'clock we were under our courses.

"November 29, at one in the morning," says Mr. Sunderland, "I left the deck in charge of the first lieutenant: the light, which we took to be the Commodore's, right a-head, bearing S., the wind W. S. W. blowing hard. At six in the morning I was awaked by a great shock and a confused noise of the men on deck. I ran up, thinking some ship had run foul of us: for by my own reckoning, and that of every other person in the ship, we were at least thirty-five leagues distance from the land; but, before I could reach the quarter-deck, the ship gave a great stroke upon the ground, and the sea broke all over her; just after this I could perceive the land, rocky, rugged, and uneven, about two cables' length from us. The ship lying with her broadside to windward, the masts soon went over-board, carrying some men with them. It is impossible for any but a sufferer to feel our distress at this time, the masts, and yards, and sails, hanging alongside in a confused heap, the ship beating violently upon the rocks, the waves curling up to an incredible height, then dashing down with such force, as if they would immediately have split the ship to pieces, which we indeed every moment expected. When we had a little recovered from our first confusion, we saw it necessary to get everything we could over to the larboard side, to prevent the ship from heeling off, and exposing the deck to the sea. Some of the people were very earnest to get the boats out: contrary to advice, and after much entreaty, notwithstanding a terrible sea, one of the boats was launched, and eight of the best men jumped into it, but it had hardly got to the ship's stern when it was whirled to the bottom, and every one perished; the rest of the boats were soon dashed to pieces upon the deck. We then made a raft with wadded capstan-bars and some boards, and waited with resignation for Divine Providence to assist us. The ship was soon filled with water, so that we had no time to get any provisions up; the quarter-deck and poop were now the only places we could stand on with any security, the waves being mostly

spent by the time they reached us, owing to the fore part of the ship breaking them.

"At four in the afternoon, perceiving the sea to be much abated, one of our people attempted to swim, and get safe on shore. There were a number of Moors upon the rock, ready to take hold of any one, and beckoned much for us to come on shore, which at first we took for kindness; but they soon undeceived us; for they had not the humanity to assist anybody that was entirely naked, but would fly to those who had anything about them, and strip them before they were quite out of the water, wrangling amongst themselves about the plunder. In the meantime the poor wretches were left to crawl up the rocks if they were able; if not, they perished unregarded. The second lieutenant and myself, with about sixty-five others, got ashore before dark, but were left exposed to the weather on the cold sand, and to keep us from starving, we were obliged to go down to the shore and bring up pieces of the wreck to make a fire; and if we happened to pick up a shirt or handkerchief, and did not give it up to the Moors at the first demand, the next thing was a dagger offered to our breasts. They allowed us a piece of an old sail which they did not think worth carrying off, of which we made two tents, and crowded ourselves into them, every one sitting between another's legs to preserve warmth, and make room. In this uneasy situation, continually bewailing ourselves and our poor shipmates upon the wreck, we passed a most tedious night, without so much as a drop of water to refresh us, except what we caught through our sail-cloth covering.

"November 30, at six in the morning, we went down with a number of our men upon the rocks to assist our shipmates in coming ashore, and found the ship had been greatly shattered in the night. It being now low water, many attempted to swim ashore; some got safe, others perished. The people on board got the raft into the water, and about fifteen men upon it, but they were no sooner put off from the wreck than it was quite over-turned; most of the men recovered it again, but were hardly on, before it was again overturned; there were only three or four that had got hold of it again, the rest perished. During that time a good swimmer brought a rope ashore with much difficulty, which I had the good fortune to catch hold of just as he was quite spent, and had thoughts of quitting it. Some people coming to my assistance, we pulled a larger rope ashore with that, and made it fast round a rock. We found this gave great spirits to the poor souls on the wreck; for it being hauled tight from the upper part of the stern, made an easy descent to any one who had art enough to walk or slide upon a rope with a smaller rope fixed above to hold by. This was a means of saving a number of lives, though many were washed off by the impetuous surf and perished. The flood coming on, raised the surf, and prevented any more coming at this time.

"We then retired from the rocks, and, hunger prevailing, we broiled some of the turkeys, &c., which, with some flour mixed and baked amongst the coals, made our first meal upon this barbarous coast. We found a well of fresh water about half a mile off, which very much refreshed us; but we had hardly finished this cold repast, when the Moors (who were now grown numerous), drove us down to the rocks, to bring up empty iron-bound casks, pieces of the wreck which had most iron about them, and other things. About three o'clock in the afternoon, we had another meal upon the drowned poultry, and finding this was the best we were likely to have, some were ordered to save all they could find, others to raise a larger tent, and the rest were sent down to the rocks, to look out for people coming ashore. The surf greatly increasing with the flood, and breaking up the fore part of the ship, she was divided into three parts; the fore part was turned keel upwards, the middle part was dashed into a thousand pieces; the fore part of the poop fell likewise at this time, and about thirty men with it, eight of whom got ashore with our help, but so bruised that we despaired of their recovery. Nothing but the after part of the poop now remained above water, with a very small part of the other decks, on which our captain and above one hundred and thirty more remained, expecting every wave to be their last. Every shock threw some off, few or none of

whom came on shore alive. During this distress, the Moors laughed very loud, and seemed much diverted, when a wave, larger than common, threatened the destruction of the poor tottering souls upon the deck.

"Between four and five o'clock, the sea was much decreased with the ebb; the rope being still secure they began to venture upon it. Some tumbled off and perished, others got safe ashore. About five we beckoned as much as possible for the captain to come upon the rope, as this seemed to be as good an opportunity as any we had seen, and many came safe with our assistance. Some told us that the captain was determined to stay till all the men had quitted the wreck. However, we still continued to beckon for him, and just before it was dark we saw him come upon the rope; he was close followed by a good able seaman, who did all he could to keep up his spirits, and assist him in warping. As he could not swim, and had been so many hours without refreshment, with the surf hurling him violently along, he was no longer able to resist the violence of the waves, but had lost his hold of the great rope, and must unavoidably have perished had not a wave thrown him within reach of our ropes, which he had barely sense to lay hold of. We pulled him up, and, after resting a little upon the rocks, coming to himself, he walked up to the tent, desiring us still to continue to assist the rest of the people in coming ashore. The Moors would have stripped him, though he had nothing on but a plain waistcoat and breeches, if we had not plucked up a little spirit and opposed them, upon which they thought proper to desist.

"The people continued to come ashore, though many perished in the attempt; the Moors growing tired with waiting for so little plunder, would not let us stay upon the rocks, but drove us all up. I then, with the captain's approbation, went and made humble supplication by signs to the bashaw, who was in his tent with many other Moors, dividing the valuable plunder. He understood me at last, and gave us leave to go down, sending some Moors with us; we carried firebrands down to let the poor men upon the wreck see we were still there ready to assist them. About nine at night, finding no more men venture upon the rope, as the surf was again greatly increased, we retired to the tent, leaving between thirty and forty persons upon the wreck. We now thought of stowing everybody in the tent, and began by fixing the captain in the middle, then made every one lie down upon their side, as we could not find each a breadth; but after all there were many took easier lodgings in empty casks.

"December 1. In the morning the wreck was all in pieces upon the rocks, and the shore quite covered with lumber. The people upon the wreck all perished about one in the morning. At one in the afternoon we called a muster, and found our number to be two hundred and twenty, so that there were one hundred and thirty drowned.

"December 2. We subsisted entirely on the drowned stock, with a little salt pork to relish it, and the flour made into cakes, all of which we issued regularly and sparingly, not knowing whether we should have anything from the Moors or not, as they still continued to be very troublesome, wanting to rob us of the canvass which covered our tent. At two in the afternoon a black servant arrived, sent by one Mr. Butler, a Dane, factor to the Dutch African company at Sallee, a town about thirty miles off, to inquire into our condition, and give us assistance. The captain wrote him a letter, the man having brought pens, ink, and paper: finding there was one who offered us help, it greatly refreshed our heavy hearts.

"December 3. In the afternoon we received a letter from Mr. Butler, with some bread and a few other necessaries.

"Dec. 4. The people were employed in picking up pieces of sail, and what else the Moors would permit them. We put the people into messes, and served the necessaries we received the day before. They had bread and the flesh of the drowned stock. In the afternoon we received another letter from Mr. Butler; at the same time we had a letter from Mr. Andrews, an Irish gentleman, a merchant at Sallee. The Moors were not so troublesome now as before, most of them going off with what they had got.

"Dec. 5. The drowned stock was all expended, the people employed at low water in gathering muscles. At ten in the morning Mr. Andrews arrived, and brought a French surgeon with him, with some medicines, which many of the bruised men stood in very great need of.

"Dec. 6. We served one of this country blankets to every two men, and pampooes (a sort of slippers) to those who were most in need of them. These supplies were brought by Mr. Andrews. The people were forced to live on muscles and bread, the Moors having deceived us, and not returned, though they promised to supply us with cattle.

"Dec. 7. The people employed in gathering muscles and limpets. The Moors began to be a little civil, for fear the emperor should punish them for their cruel usage of us. In the afternoon a messenger arrived from the emperor, at Sallee, with orders in general to the people to supply us with provisions. Accordingly, they brought us some poor bullocks and lean sheep, which Mr. Andrews purchased for us; but at this time we had no pots to make broth in, and the cattle were scarce fit for anything else.

"Dec. 10. In the morning we got everything ready to march to Morocco, the emperor having sent orders for that purpose, and camels to carry the lame and the necessaries. At nine we set out with about thirty camels, having got all our liquor with us divided into hogsheds, for the convenience of carriage on the camels. At noon we joined the crews of one of the transports and of a bomb tender, that were wrecked about three leagues to the northward of us; then everybody was mounted upon camels, except the captain. We never stopped till seven in the evening, when they procured us two tents only, which would not contain one third of the men, so that most of them lay exposed to the dew, which was heavy and very cold. We found our whole number to be three hundred and thirty-eight, including officers, men, and boys, three women and a child, which one of the women brought ashore in her teeth.

"Dec. 11. We continued our journey, attended by a number of Moors on horseback. At six in the evening we came to our resting-place for the night, and were furnished with tents sufficient to cover all the men.

"Dec. 12. At five in the morning we set out as before, and at two in the afternoon saw the emperor's cavalcade at a distance. At three, a relation of the emperor's, named Muley Adriss, came to us, and told the captain it was the emperor's orders he should that instant write a letter to our governor at Gibraltar, to send to his Britannic Majesty, to know whether he would settle a peace with him or not. Capt. Barton sat down directly upon the grass, and wrote a letter, which being given to Muley Adriss, he went and joined the emperor again. At six in the evening we came to our resting-place for the night, and were well furnished with tents, but very little provision.

"Dec. 13. We were desired to continue here till the men were refreshed, which they were much in need of. They brought us more provision than before. This morning Lieut. Harrison, commanding officer of the soldiers belonging to Lord Forbes's regiment, died suddenly in the tent. In the evening while we were burying him, the Moors disturbed us by throwing stones, and mocking us.

"Dec. 15. We found the Moors had opened Lieutenant Harrison's grave, and stripped the body.

"Dec. 16. We continued our journey. At four in the afternoon we came to our resting-place, pitched the tents, and served the people with provisions. Here some country moors served us ill; as they were taking water from the brook, the Moors would always spit in the vessel before they would let them take any away. Upon this some of us went down to inquire, but were immediately saluted with a shower of stones; we ran in upon them, beat some of them pretty soundly, put them to flight, and brought away one who defended himself with a long knife. This fellow was severely punished by the alcaide who had the charge of conducting us.

"Dec. 18. At three in the afternoon we came to the city of Morocco, without having seen one dwelling-house in the whole journey. Here we were insulted by the rabble, and at five were carried before the emperor, surrounded by five

or six hundred of his guards. He was on horseback before his palace-gate, that being the place where he distributes justice to his people. He told Capt. Barton, by an interpreter, that he was neither at peace nor war with England; that he would detain us till an ambassador came from England to settle a firm peace. The captain then desired that we might not be used as slaves. He answered hastily we should be taken care of. Then we were directly thrust out of his presence, conveyed to two old ruined houses, and shut up amidst dirt and innumerable vermin of all sorts. Mr. Butler, being here upon business, came and assisted us with victuals and drink, and procured liberty for the captain to go home with him to his lodgings; he likewise sent some blankets for the officers, with which we made shift to pass the night tolerably comfortable, as we were very much tired and fatigued.

"Dec. 21. At nine in the morning the emperor sent for the captain and every officer to appear before him. We immediately repaired to his palace, where we remained waiting in a outer yard two hours. In the mean time he diverted himself by seeing a clumsy Dutch boat rowed about a pond by four of our petty officers. About noon we were called before him, and placed in a line about thirty yards from him. He was sitting in a chair by the side of the pond, with only two of his chief alcaides by him. After viewing us some time, he ordered the captain to come forward, and asked him many questions concerning our navy, and where our squadron was going. We were also called forward by two and three at a time, as we stood, according to our rank; then asking most of us some very insignificant questions, and taking some to be Portuguese because they had black hair, and others to be Swedes, because they had white hair, he judged none of us to be English except the captain, the second lieutenant, and myself, and the ensign of the soldiers; but assuring him we were all English, he cried, 'Bonno,' and gave a nod for our departure, to which we returned a very low bow, and were glad to get to our old ruined houses again. Our number at this time was thirty.

"Dec. 25. Being Christmas-day, read prayers to the people. The captain received a present of some tea and loaves of sugar from one of the queens, whose grandfather had been an English renegade.

"Dec. 26. This afternoon we heard the disagreeable news that the emperor would oblige all the English here to work the same as the other Christian slaves, except the officers that were before him on the 21st instant.

"Dec. 27. At seven this morning an alcaide came and ordered all out to work, except those who were sick; and, by intercession, eight were allowed to stay every day as cooks for the rest, which they took by turns through the whole number. At four in the afternoon the people returned, some having been employed in carrying wood, some in turning up the ground with hoes, and others in picking weeds in the emperor's gardens. Their victuals were got ready by the time they came home.

"All the people went to work as soon as they could see, and at four in the afternoon they returned. Two of the soldiers had one hundred basdinades each, for behaving in a disrespectful manner while the emperor was looking at their work.

"Dec. 30. Captain Barton received a kind message from the emperor, with his leave to ride out, or take a walk in his garden, with his officers.

"From this time the men continued in the same state of slavery, till April when, their ransom having been settled, they set out for Sallee, attended by a bashaw and two soldiers on horseback. They had a skirmish the fourth day of their march with some of the country Moors. It began by some of our men in the rear stopping to buy some milk at a village, for which the Moors wanted them to pay an exorbitant price after they had drank it, which the men would not comply with. Upon this the Moors began to beat them, which the men returned, and more coming to assist they maintained a smart battle till they grew numerous; in the mean time some rode off to call the guard, who instantly came up with their drawn scimitars, and dealt round them pretty briskly. The guards seized the chief man of the vil-

lage, and carried him with us to the bashaw, who was our conductor, who, having heard the case, dismissed him without further punishment, in consideration of his having been well drubbed by us.

"On the 2nd of April we got to Sallee, and pitched our tent in an old castle, whence we soon afterwards embarked on board the Gibraltar, which landed us at Gibraltar on the 27th of June."

NARRATIVE OF THE LOSSES AND DISTRESSES OF PIZARRO'S SQUADRON.

WHEN in the latter end of the summer of the year 1739, it was foreseen that a war with Spain was inevitable, it was the opinion of some considerable persons then entrusted with the administration of affairs, that the most prudent step the nation could take on the commencement of hostilities, was attacking that power in her distant settlements; for by this means it was supposed that we should cut off the principal resources of the enemy and reduce them to the necessity of sincerely desiring a peace, as they would thereby be deprived of the returns of that treasure by which alone they could be enabled to carry on a war.

These considerations induced the English government to send a strong squadron into the South Seas to attack the town and harbour of Baldivia, in South America, and other important places in that quarter.

The Court of Spain having timely information of the design of the English government, had fitted out a considerable armament, and which actually sailed before that under the command of Mr. Anson.

The squadron, exclusive of two ships intended for the West Indies, which did not part company till after they had left Madeira, was composed of the following men of war, commanded by Don Joseph Pizarro:—

The Asia of sixty-six guns, and seven hundred men; this was the Admiral's ship. The Guipuscoa, of seventy-four guns, and seven hundred men. The Hermiona, of fifty-four guns, and four hundred and fifty men. The St. Estevan, of forty guns, and three hundred and fifty men; and a patache, of twenty guns.

Pizarro with his squadron having, towards the latter end of February, run the length of Cape Horn, he then stood to the westward, in order to double it; but in the night of the last day of February, O. S. while with this view they were turning to windward, the Guipuscoa, the Hermiona, and the Esperanza, were separated from the admiral; and, on the 6th of March following, the Guipuscoa was separated from the other two; and on the 7th there came on a most furious storm at N.W., which, in spite of all their efforts, drove the whole squadron to the eastward, and after several fruitless attempts, obliged them to bear away for the river of Plate, where Pizarro in the Asia arrived about the middle of May, and a few days after him, the Esperanza and the Estevan. The Hermiona was supposed to founder at sea, for she was never heard of more; and the Guipuscoa was run on shore, and sunk on the coast of Brazil.

By the storms they met with off Cape Horn, their continuance at sea was prolonged a month or more beyond their expectation, they were reduced to such infinite distress, that rats, when they could be caught, were sold for four dollars a-piece; and a sailor, who died on board had his death concealed for some days by his brother, who during that time lay in the same hammock with the corpse, only to receive the dead man's allowance of provisions! In this dreadful situation, they were alarmed (if their horrors were capable of augmentation) by the discovery of a conspiracy among the marines, on board the Asia, the admiral's ship. This had taken its rise chiefly from the miseries they endured; for though no less was proposed by the conspirators than the massacring the officers and the whole crew, yet their motive for this bloody resolution, seemed to be no more than the desire of relieving their hunger, by appropriating the whole of the ship's provisions to themselves: but their designs were prevented when they were just upon the point of execution, by means of one of their confessors, and three of their ringleaders were immediately put to death.

The Asia arrived at Monte Video, in the river of Plate, with half her crew only; the St. Estevan had lost, in like manner, half her hands when she anchored in the Bay of Bagan; the Esperanza, a fifty-gun ship, was still more unfortunate, for out of 450 hands which she brought from Spain, only fifty-eight remained alive, and the whole regiment of foot perished except sixty men. But we shall give a short account of the fate of the Guipuscoa, extracted from a letter written by Don Joseph Mindiunetta.

He mentions, that he separated from the Hermiona and Esperanza in a fog, on the 6th of March being then, as we suppose, to the S. E. of Statenland, and plying to the westward; that, in the night after, it blew a furious storm at N. W. which, at half an hour after ten, split his main-sail, and obliged him to bear away with his fore-sail; that the ship went ten knots an hour, with a prodigious sea, and often run her gangway under water; that he likewise sprung his main-mast, and the ship made so much water, that with four pumps and baling he could not free her; that on the 9th it was calm, but the sea continued so high, that the ship in rolling opened all her upper works and seams, and started the butt ends of her planking, and the greatest part of her top-timbers, the boats being drawn by the violence of her roll; that, in this condition, with other additional disasters to the hull and rigging, they continued beating to the westward till the 12th; that they were then in sixty degrees of south latitude, in great want of provisions, numbers every day perishing by the fatigue of pumping, and those who survived being quite dispirited by labour, hunger, and the severity of the weather, they having two spans of snow upon the decks: and then finding the wind fixed in the western quarter, and blowing strong, and consequently their passage to the westward impossible, they resolved to bear away for the river of Plate; that on the 22nd, they were obliged to throw overboard all the upper-deck guns and an anchor, and to take six turns of the cable round the ship, to prevent her opening: that on the 4th of April, it being calm, but a very high sea, the ship rolled so much, that the main-mast came by the board; and in a few hours after, she lost in a like manner her fore-mast and her mizen-mast; and then, to accumulate their misfortunes, they were soon obliged to cut away their bowsprit, to diminish if possible the leakage at her head: that by this time he had lost 250 men by hunger and fatigue; for those who were capable of working at the pumps (at which every officer without exception took his turn) were allowed only an ounce and a half of biscuit per diem: and those who were so sick or so weak that they could not assist in this necessary labour, had no more than an ounce of wheat, so that it was common for the men to fall down dead at the pumps; that, including the officers, they could only muster from eighty to a hundred persons capable of duty; that the southwest winds blew so fresh after they had lost their masts, that they could not immediately set up jury-masts, but were obliged to drive like a wreck, between the latitudes of 32 and 29, till the 24th of April, when they made the coasts of Brazil, at Rio de Plata, ten leagues to the southward of the island of St. Catherine; that here they came to anchor, and that the captain was very desirous of proceeding to St. Catherine's, if possible, in order to save the hull of the ship, and the guns and stores on board her; but the crew instantly left off pumping, and being enraged at the hardships they had suffered, and the numbers they had lost, there being at that time no less than thirty dead bodies lying on the deck, they all with one voice cried out, "on shore, on shore," and obliged the captain to run the ship in directly for the land, where, the fifth day after, she sunk, with her stores, and all her furniture on board her; but the remainder of the crew, whom hunger and fatigue had spared, to the number of 100, got safe on shore.

From this account of the adventures and the catastrophe of the Guiposecoa, we may form some conjecture of the manner in which the Hermiona was lost, and of the distresses endured by the remaining ships of the squadron, which got into the river Plate. These last being in great want of masts, yards, rigging, and all kinds of naval stores.

By removing the masts of the Esperanza into the Asia, and making use of what spare masts and yards they had on board, they made a shift to refit the Asia and the St. Estevan. And

in the October following, Pizarro was preparing to put to sea with these two ships, in order to attempt the passage round Cape Horn a second time; but the *St. Estevan*, in coming down the river Plate, ran on a shoal, and beat off her rudder, on which, and other damages she received, she was condemned and broke up, and Pizarro, in the *Asia*, proceeded to sea without her. Having now the summer before him, and the winds favourable, no doubt was made of his having a fortunate and speedy passage; but being off Cape Horn, and going right before the wind in very moderate weather, though in a swelling sea, by some misconduct of the officer of the watch, the ship rolled away her masts, and was a second time obliged to put back to the river of Plate in great distress.

The *Asia* having considerably suffered in this second unfortunate expedition, the *Esperanza*, which had been left behind at Monte Video, was ordered to be refitted, the command of her being given to Mindinueta, who was Captain of the *Guipuscoa* when she was lost. He, in November of the year, 1742, sailed from the river of Plate for the South Seas, and arrived safe on the coast of Chili: where his commodore, Bizarro, passing over land from Buenos Ayres, met him.

Pizarro found at Monte Video, the *Asia*, which, near three years before, they had left there. This ship, they resolved, if possible, to carry to Europe, and with this view they refitted her in the best manner they could; but their greatest difficulty was to procure a sufficient number of hands to navigate her.

They endeavoured to supply this defect, by pressing many of the inhabitants of Buenos Ayres, and putting on board besides all the English prisoners then in their custody, together with a number of Portuguese smugglers, which they had taken at different times, and some of the Indians of the country.—Among these last, there was a chief and ten of his followers, which had been surprised by a party of Spanish soldiers about three months before. The name of this chief was Orellana.—The native Spaniards, being no strangers to the dissatisfaction of their forced men, treated both those, the English prisoners, and the Indians, with great insolence and barbarity: but more particularly the Indians. Orellana and his followers, though in appearance sufficiently patient and submissive, meditated a severe revenge for all these inhumanities. They first furnished themselves with Dutch knives sharp at the point; besides this, they employed their leisure in secretly cutting out thongs from raw hides, of which there were great numbers on board, and in fixing to each of these thongs the double headed shot of the small quarter-deck guns. This, when swung round their heads, according to the practice of their country, was a most mischievous weapon.

It was about nine in the evening, when many of the principal officers, were on the quarter-deck, indulging in the freshness of the night air; the waste of the ship was filled with live cattle, and the fore-castle, was manned with its customary watch. Orellana and his companions, under cover of the night, having prepared their weapons, and thrown off their trousers, and the more cumbersome part of their dress, came all together on the quarter-deck, and drew towards the door of the great cabin. The boatswain immediately reprimanded them, and ordered them to be gone. On this, Orellana spoke to his followers in his native language, when four of them drew off, two towards each gangway, but the chief and the six remaining Indians seemed to be slowly quitting the quarter-deck. When the detached Indians had taken possession of the gangway, Orellana placed his hands hollow to his mouth, and bellowed out the war-cry used by those savages, which is said to be the harshest and most terrifying sound known in nature. This hideous yell was the signal for beginning the massacre, for on this they all drew their knives, and brandished their prepared double headed shot; and the six, with their chief which remained on the quarter-deck, immediately fell on the Spaniards, who were intermingled with them, and laid near forty of them at their feet, of which above twenty where killed on the spot, and the rest disabled. Many of the officers, in the beginning of the tumult, pushed into the great cabin, where they put out the light, and barricaded the door: whilst of the others, who had avoided the first fury of the Indians, some endeavoured to escape along the gangways into the fore-castle where the Indians, placed on purpose, stabbed the greatest part of them,

as they attempted to pass by or forced them off the gangways into the waste; some threw themselves voluntarily over the barricades into the waste, and thought themselves fortunate to lie concealed amongst the cattle; but the greatest part escaped up the main shrouds, and sheltered themselves either in the tops or rigging; and though the Indians attacked only the quarter-deck, yet the watch in the fore-castle, finding their communication cut off, and being terrified by the wounds of the few, who, not being killed on the spot, had strength enough to force their passage, and not knowing either who their enemies were, or what were their numbers, they likewise gave all over for lost, and in great confusion ran up into the rigging.

Thus these eleven Indians, with a resolution perhaps without example, possessed themselves almost in an instant of the quarter-deck of a ship mounting sixty-six guns, and manned with near five hundred hands, and continued in peaceable possession of this post for a considerable time; for the officers in the great cabin (amongst whom were Pizarro and Mindinueta), the crew between decks, and those who had escaped into the tops and rigging were only anxious for their own safety, and were for a long time incapable of forming any project for suppressing the insurrection, and recovering the possession of the ship. It is true the yells of the Indians, the groans of the wounded, and the clamours of the crew, all heightened by the obscurity of the night, had at first greatly magnified their danger, and had filled them with the imaginary terrors, which darkness, disorder and an ignorance of the real strength of the enemy, never fail to produce; for as the Spaniards were sensible of the disaffection of their pressed hands, and were also conscious of their barbarity to their prisoners, they imagined the conspiracy was general, and considered their own destruction as inevitable; so that, it is said, several of them had once taken the resolution of leaping into the sea, but were prevented by their companions.

However when the Indians had entirely cleared the quarter-deck, the tumult in a great measure subsided; for those who had escaped were kept silent by their fears, and the Indians were incapable of pursuing them to renew the disorder. Orellana, when he saw himself master of the quarter-deck, broke open the arm-chest, which on a slight suspicion of mutiny, had been ordered there a few days before, as a place of the greatest security. Here he took it for granted he should find cutlasses sufficient for himself and his companions, in the use of which weapons they were all extremely skilful; and with these it was imagined, they proposed to have forced the great cabin; but on opening the chest there appeared nothing but fire-arms which to them were of no use. There were indeed cutlasses in the chest, but they were hid by the fire-arms being laid over them. This was a sensible disappointment to them: and by this time Pizarro and his companions in the great cabin were capable of conversing aloud, through the cabin windows and port holes, with those in the gun-room, and between decks; and from hence they learnt, that the English (whom they principally suspected) were all safe below, and had not intermeddled with the mutiny; and by other particulars they at last discovered, that none were concerned in it but Orellana and his people. On this Pizarro and his officers resolved to attack them on the quarter-deck, before any of the discontented on board should so far recover their first surprise, as to reflect on the facility and certainty of seizing the ship, by a junction with the Indians in the present emergency. With this view, Pizarro got together what arms were in the cabin, and distributed them to those who were with him; but there were no other fire-arms to be met with but pistols, and for these they had neither powder nor ball. However, having now settled a correspondence with the gun-room, they lowered down a bucket out of the cabin window, into which the gunner, out of one of the gun-room ports, put a quantity of pistol cartridges. When they had thus procured ammunition, and had loaded their pistols, they set the cabin door partly open, and fired several shots among the Indians on the quarter-deck, though at first without effect; but at last Mindinueta, whom we have often mentioned, had the good fortune to shoot Orellana dead on the spot; on which his faithful companions, abandoning all thoughts of further resistance instantly leaped into the sea, where every man perished. Thus was this insurrection quelled, and the

possession of the quarter-deck regained, after it had been full two hours in the power of this great daring chief, and his gallant unhappy countrymen.

Pizarro having escaped this imminent peril, steered for Europe, and arrived safe on the coast of Gillicia in the beginning of the year 1745, after having been absent between four and five years, and having, by his attendance on our expedition, diminished the naval power of Spain by above three thousand men (the flower of their sailors), and by four considerable ships of war and patache; for we have seen that the *Hermiona* founded at sea; the *Guipuscoa* was stranded, and sunk on the coast of Brazil; the *St. Estevan* was condemned and broken up in the river of Plate; and the *St. Esperanza*, being left in the South Seas was, doubtless, totally incapable of returning to Spain. So that the Asia only, with less than one hundred men, may be regarded as all the remains of that squadron with which Pizarro first put to sea. And whoever considers the very large proportion which this squadron bore to the whole navy of Spain, will confess, that had the English undertaking been attended with no other advantages than that of ruining so great a part of the sea force of so dangerous an enemy, this alone would be a sufficient equivalent for our equipment, and an incontestible proof of the service which the nation thence received.

CLERICAL HUMANITY AND FOPPISH INDIFFERENCE.

"Good God!" exclaimed the parson, "the boy's overboard!"

Startled by the heavy splash heard in the water, as he stood on the gangway, with his back turned to the main rigging, the gentle Giles exclaimed! "Bless my soul! I do verily believe that somebody has fallen overboard."

"Seeing's believing," said Leatherlungs, who flew like lightning forward on the fore-castle, to let go the maintop-bowline, with a view of backing the main-yard, and stopping the ship's way through the water.

"Giles, Giles! let go the main-brace," bellowed the first-lieutenant from the fore-castle.

Giles, who, touching all matters of "Reports," was punctilious even to a fault, had already entered the cabin for the laudable purpose of "reporting" to the captain—"a man overboard."

The confined brace was, however, disengaged from its cleet by the chaplain on the poop, who instantaneously, on letting it go, sprang to the lee-quarter cutter, to clear her for lowering. Here, however, his alacrity, ere he reached the fire-rail leading to the suspended boat, met, indeed, with unexpected obstruction.

"Must't go in that boat, sir," cried the sentinel, who had been recently placed over the painted cutter, at the same time pulling the chaplain back by the skirt of his coat.

"Inhuman monster!" ejaculated Lawrence, "is it your object to cause loss of life?"

"I knows my orders, sir."

Regardless of all orders, Lawrence again essayed to enter the boat; but the bare bayonet presented to his breast compelled him to forego his purpose. In a second he sprang to the weather side of the poop to clear away the boat which was suspended to the davits on the opposite quarter; but here his quick sight was scared by another obstruction. The boat was under repair; several streaks had been removed from her bottom. In this state it was manifest that, if lowered, she would instantly fill and founder; neither was oar, nor mast, nor spar, left in the boat. The life-buoy, it is true, had been cut away by the sentinel to leeward; but this drifted in the ship's wake, widely away from the struggling youth. To Lawrence the sight of the poor boy buffeting the tops of the white-headed waves (for a cross-sea was fast getting up), was not to be borne. The look of terror depicted in Darcy's face wrung the heart of his friend, across whose mind flashed many distracting images: he thought of the gallant boy contending in vain with his fate; of the bereaved mother, and her wild outcries for her lost and only son; of her subsequent dumb despair, and longing for death, because the only being that alone had reconciled her to life had perished. Such ideas were torment, and he

instantly resolved to save the youth, or be lost with him. His coat was already thrown off, and he was about to plunge headlong into the tumbling sea, when the timely voice of the same sentinel, who had seemed to him such an inhuman monster, checked his resolve. "For God's sake! sir, don't attempt it—the jolly-boat—the jolly-boat, sir."

The suggestion was enough. Meanwhile, the second-lieutenant, who had returned from the important service of arousing his commander from his *siesta*, had already, in conjunction with the Irish waister who had been standing at the "tee-wheel," repaired to the poop for the purpose of lowering the jolly-boat suspended at the stern.

Where, may it be asked, was the quarter-master at the conn? Contrary to the custom observed in well-regulated vessels of war, the quarter-master at the conn had forsaken his station, and without awaiting his regular relief had shouldered his hammock, and borne it below to the cable-tier.

Lawrence (and be it observed this was the *third* boat he had sought to clear and lower), had already entered the "jolly," and had cast adrift her grips and confining gear, when the Irish waister, in his haste and anxiety to "clear for running the foremast fall," accidentally, though awkwardly would be nearer to the truth, threw off from the belaying-cleet the turns of the tackle by which the boat's bow was suspended. By this accident the poor parson was precipitated headlong into the sea, and the boat was ultimately swamped under the stern of the ship.

No sooner had Lawrence risen to the surface of the water, and had recovered from the shock of his lofty fall, than he was seen breasting the surge, and making his way for the sinking youth. Until the noise and confusion afloat had drowned his voice, distinctly was he heard hailing and cheering Darcy in his danger.

"Hold up! hold up, my boy! I'm coming to your aid! Fear not—don't tire yourself;—try and tread the water. That's a fine fellow! That's a brave boy!"

"A fine fellow!" exclaimed the Irish waister, who had distinctly heard the chaplain's words in the water.

"By Jagers, a finer feller never sot fut afloat nor yer same self, Larking Larry. Bad luck to the fall, it flew so fast, it fairly fired my hands." And now thundered forth the mandate of the first-lieutenant.

"Turn the hands up! out yawl! Where's the boson? Good God! where's Mr. Brown?"

Mr. Brown had deserted the fore-castle to "freshen his nip" in the fore-cockpit.

"By the Immaculate Man, if a life's lost, I'll break that skulking, lubberly boson."

"A man overboard! A man overboard!" vociferated the timber-toed cook, stooping his body downward over the main-deck combings of the fore-hatchway, his unbending wooden leg pointing straight upwards in the air.

The hue and cry increased on the lower-deck:—"A man overboard! A man overboard!" resounded fore and aft the ship; seamen and marines were tumbling over the stray hammocks strewed upon the different decks, whilst others were running up the ladders in the greatest confusion.

"Silence! silence! Good heaven! silence!" ejaculated the first-lieutenant, in a voice of thunder. "Clear away the yawl; up wi' the stays, and down wi' the yard tackles. Oh! you Mister Brown! You're a precious boson, indeed! Where were you, sir, that you were not to be found to turn the hands up? No reply, sir—silence."

Confusion was now rendered "worse confounded" by the official interference of the drowsy captain.

"What! somebody overboard? Cut away—cut away the life-buoy abaft. Mr. Leatherlungs, Mr. Leatherlungs, what's the use of the quarter-boats, sir?" Leatherlungs made no reply. He was better employed. At length the boat on the booms was hoisted out, and a willing crew was soon seen pulling away with might and main astern of the ship.

"Mast-head there!" hailed the first-lieutenant; "point to the men in the water."

"They sees 'em, sir, in the yawl. She's steering right for 'em."

The excitement of the spectators already crowded on the poop had now risen to a painful height. Darcy's youth—his intelligence—his amiable disposition, and general amenity of manner—flashed upon the mind of every man who thought of the poor boy in his peril; whilst the noble intrepidity of the parson, who evidently was resolved to share his danger, and who had long stood in the new and almost anomalous position of "pet of the people," was the admiration of all around.

"Mr. Lawrence," said the signal-man, who, with his glass to his eye, had already placed himself in the mizen-top, watching the movements of the parson in the water, "Mr. Lawrence, sir, has just closed wi' the young gemman. There!—no—yes—yes, sir—there! there!—he's got him!—he has him! holdin' him up by the hair o' his head."

"Bravo, Larry!" simultaneously burst from several voices on the poop. "What a chap!"

The bowman of the boat had already thrown in his oar, and now was seen "the row-out of all," and a couple of stout topmen bending their bodies over the gunnel of the yawl, and grappling with Lawrence and his apparently lifeless load.

"All right," said Leatherlungs, rubbing his hands with a countenance beaming with delight.

Sir Montague retired to his cabin. The steward had announced "coffee."

NARRATIVE OF AN ESCAPE FROM A NIGHT WATCH.

WE were not more than three-quarters of a mile from a rocky and barren island, and I determined to risk everything to gain it, and get on board one of the merchant-ships in the morning.

The first thing was to get my money from my bag of clothes, which was snugly tied up over my hammock, on the lower deck. I stole quietly down, and was in the act of searching the bags, when the serjeant of marines, and master-at-arms, who were going their rounds, nearly caught me; but springing unobserved into my hammock, I lay covered till they passed, and was not a little alarmed to find that I was the subject of their conversation.

"Do you know the number of the pressed man's berth?" said the serjeant; "I heard the officers say he was worth keeping, and it would be well to keep an eye on him."

"I don't know his number," replied the master-at-arms; "but I saw him on the fore-castle just after the watch was mustered."

So soon as they were on the ladder, I untied my bag, and pocketed my purse. You know, Harold, how soundly men sleep after having been well trounced in a gale, and I got both in and out of my hammock without a question from my snoring neighbours. I then mounted the fore-castle again, and made a point of being seen by the serjeant; after which I skulked through one of the port-holes under the main-channels, as the island lay astern.

Having buttoned my jacket tight round me, and tied the bottom of my trousers, I fastened a rope's end, which was hanging overboard from the channels, (a thing almost unknown in the frigate) to the irons below, and slid without the least splash into the water; but when my head was just above the surface, I found my legs pressed, as it were, against the bottom of the ship, and it was not till I let go the rope, and struck off a little from the side, that I was disentangled from this effect. I scarcely breathed on the water, and moved my arms and limbs as little as possible, but my heart beat within me as I found myself floating with the tide past the quarter of the ship. I was beginning to feel fresh vigour at observing myself distancing the frigate, when I heard the hoarse voice of an owl of a quarter-master say to the officer of the watch, "There is something in the water, sir."

The voice acted upon me like electricity; and I do believe that I bounded two-thirds out of the water.

"Tis a man, by all that's holy, sir!" said the old fellow.

"Ahoi! come back, you rascal!" cried the officer. "Fire, sentinel, fire." And as it seemed to me, the very moment I saw the gleam on the water, I felt a sharp cut on my

left heel. Another and another ball followed, but not with the same success.

"Away, there, black cutters of the watch, away!" halloed the boatswain's mate.

Luckily for me, the boats had been secured for sea, in consequence of which they took more time in being cleared away; and I was half-way to the shore before I heard the running crackling of the tackles, and the boat go splash into the water. The noise seemed so near to me, that I looked round, but saw nothing; soon, however, I heard the rolling of the oars in the rullocks, and my hopes began to fail me, when a sight of the fretting surf of the rocks cheered and saved me from sinking with despair. I plied every nerve, and in a few minutes more was close to the breakers.

None but swimmers can conceive the narrow limits of the view when the head only is above the surface; every wave is a boundary, and to a person pursued as I was, and in search of a landing place, mountains could not have been a more agonising barrier.

I at last perceived a black shelving point of rock, on which the surf was rolling heavily on one side; while on the other the water appeared smoother. For this point I immediately swam, as a forlorn hope. On approaching, I found myself between two white ridges of foaming water, and occasionally sunk in the hollow abyss of the waves, and sometimes dashed about amidst the foam on their tops.

When about to pass the shelving rock, I was thrown head foremost on to its margin by one of those sovereign waves which seem to lord it over all the rest, and left in a kind of niche, which prevented its recoil sweeping me back. On recovering from the stun I had received, I found that my head was cut and bleeding, but that the wound on my heel was of no consequence.

Soon the noise of oars and voices assailed my ears, and I distinctly heard the midshipman of the boat say, "The fellow could never land here; he must have been dashed to pieces on the rocks, or drowned in the surf, and we shall find his body in the morning."

This conversation convinced me I was not discovered; and the dawning sun found me safely stowed on board of a merchantman.

THE DEVIL IN THE MAIN-TOP.

THE devil has more laid to his charge by sailors than he really deserves, under the name of "Whirlwind Tom." He is accused of souring the bergout in a morning; souring the wine; putting weevils and maggots in the bread and cheese, and making the ship leak; forging iron chains, which he would fling round the first fellow that went up aloft, and carry him off to the infernal regions, where, probably, sailors were scarce. The weather not being very hot, and death's scythe not much in use, one youngster, who was made very tipsy, was persuaded to make the attempt. Armed with a loaded pistol, he got as far up as the futtock shrouds, where the body is faced to the sky, and the hands the only support; here, all of a sudden, off went the pistol, down came the poor fellow against the main rigging, and rolling overboard was seen no more.

The crew below fancied at this time that the clinking of chains was much louder, and they all declared that the devil had taken the pistol from Jack Mullins, shot him, and pitched him overboard. About day-break the noise ceased, and after inspecting the top from the fore-topmast head, where nothing living was perceptible, several of the crew ventured up, and the cause of their fears was discovered. When a ship is cleared for action, the lower yards are slung in chains; and that morning the Philomel had been made ready for that purpose, but it did not take place; the topmen had neglected to take off the chains, and by the motion of the ship, with the heavy swell, they had broken loose, and ten heavy links beating about the iron sheathings of the mainmast head, made the noise that so frightened them, and which caused the poor fellow to lose his life. It is very probable, that he was too drunk to sustain himself by his arms, which caused him to fall, and the pistol went off by accident. The sudden ceasing of the noise was owing to the vessel's floating in smooth water and remaining still.

LOSS OF THE PORPOISE AND CATO.

ABOUT the middle of July, 1802, H.M. ship the Investigator, commanded by Lieutenant Robert Fowler, sailed for Sidney Cove, and stood along the coast to the northward, for the purpose of entering the gulf of Carpentaria. Having, with great trouble and perseverance, penetrated the long extended reefs, which, in a manner, form a barrier from the ocean to the coast of New South Wales, lining it from the tropic to its southern extreme, they got into the Pacific Ocean, and experienced no other difficulties till they reached Murray's Isles, where they again encountered the reefs; but through a passage, which proved perfectly safe, they happily made the Prince of Wales's Island.

In the early part of November, they entered the gulf of Carpentaria, on its eastern side, and were much surprised to find their vessel leaky, even in fine weather; but as they had been for three months exposed to a tropical sun, it was considered as merely the consequence of the pitch having run from the seams of the upper-works. On coming to a convenient anchorage, they determined to remedy the supposed defects by caulking; but, on inspection, they found, to their great astonishment, that the vessel was so rotten, that the master and carpenter pronounced her incapable of sailing more than six or eight months longer, and that too only in fine weather.

Upon their arrival at Port Jackson, a minute survey was held on the vessel, when, after a careful examination, she

LOSS OF THE PORPOISE, CAPTAIN FOWLER, AND THE CATO, CAPTAIN PARK, AUGUST 17TH, 1803.

was declared to be rotten past repair, and the crew were turned over to the Porpoise, in order to proceed home, to their no small disappointment and mortification, as their voyage had been scarcely half completed.

The Porpoise had been formerly a Spanish packet, and had been purchased from the captors by the Government, and converted into a store-ship, for the use of the colony of New South Wales. Having been from England three years, she also wanted repair; and, as the Buffalo was then on the station, his Excellency Governor King appropriated the Porpoise to the conveyance of the crew of the Investigator, and the command of her was given to the same Captain, Lieutenant Robert Fowler. There were then in Sydney Cove two ships belonging to London—the Cato, commanded by Captain John Park, and the Bridgewater, commanded by Captain Edwin Harker Palmer, who were preparing to pro-

secute the voyage to Bombay, after having landed their Government cargoes.

On the 10th of August, 1803, the Porpoise sailed from Port Jackson, in company with these two vessels. Nothing of particular consequence occurred till the afternoon of the 17th, when the Cato observed a dry bank to leeward, and immediately communicated the unwelcome intelligence to the Porpoise, by signal. The Porpoise stood towards it for a short time, and then resumed her former course. Being fairly within the influence of the trade-wind, they were enjoying it, strong and steady, and making rapid progress to the northward, when, at about ten o'clock the same evening, breakers were discovered on the lee-bow, from the fore-castle, and the cry of "Breakers!" was instantly given to the quarter-deck.

The officer of the watch had immediate recourse to the

proper steps for putting the ship round; and while they were carrying this manoeuvre into execution, a swivel was about to be fired, to apprise their consorts of the impending danger, this being the signal they had agreed on for discovering any peril at night; but the vessel being then in the wind, and the swivel upon the gunwale to windward, every particle of priming was unfortunately blown off the instant the apron was removed, for the purpose of applying the match, so that their attempt to warn their companions of the danger which threatened them was completely frustrated.

Their situations now became awfully alarming. Foiled in their endeavours to stay the ship, and unable to communicate by signal the intelligence of their danger, they had the distressing misfortune not only of seeing the Porpoise in broken water, but their two companions fast hurrying to certain, if

not instant, destruction. The night was dark and cloudy, and the wind being rather high, was driving the Porpoise along under double-reefed topsails and foresails. Having been amongst these reefs the preceding year, the crew were perfectly aware of the dangerous nature of them, and had not the most distant hope of being saved. Fortunately, however, for themselves, they were mistaken; for instead of those narrow ridges, with deep water on each side, and the overwhelming tides they had recently met with among reefs, they here found an extended surface, so insulated, that the current was inconsiderable. At this alarming juncture, they did not shrink from their fate, or, in a fit of despondency, cease one second from using every effort, not only to prevent themselves but their consorts from getting on the reef. Disappointed equally in their hopes of their own ship staying, and

of their being able to give timely notice of their situation by the swivel, one of the head-sails was ordered to be hoisted, and the helm put a-weather, for the purpose of trying to wear; while, at the same time, the leaves of a book, torn out, and lighted, were exposed from the weather main-chains in different places, accompanied by loud shouting.

This gave the alarm to the other two vessels, who were by this time close up with the Porpoise, and indicated the danger to them, from which they both prepared to extricate themselves with surprising promptitude and presence of mind. The Bridgewater hauled to the wind on the larboard tack, and escaped, after having almost rubbed the Cato, and actually tailed the breakers. The Cato, however, was not so fortunate, being now involved in the same ruin with the Porpoise.

While the crew of the Porpoise were witnessing the fortu-

nate escape of the Bridgewater, and the inevitable destruction of the Cato, the head of their vessel had passed round till her broadside was brought on a parallel with the brink of the reef, and, in the midst of a dead silence, she struck.

The first shock was gentle, but the succeeding surge produced a most dreadful crash, and threw the vessel on her beam-ends; the foremast suddenly snapped at its head, while, at the same instant; the sea was making a complete breach over them. They were now no longer in a state of dreadful suspense, nor filled with anxiety from the apprehension that the ship, after striking again on the edge of the coral, might rebound, and go directly to the bottom with them; but, trusting that she would be able to hold together till the morning, they made certain of being then taken up by the Bridgewater, whose security materially contributed to keep up the spirits of both the crews of the Porpoise and Cato. With the exception of only two men,

the crew of the former displayed uncommon fortitude and resignation, and, when matters were at the very worst, the boatswain was remarkable for his vigour and activity of mind. The conduct of the officers and crew of the *Cato*, at this critical juncture, was equally prudent and deliberate, for it was entirely owing to their cool and manly exertions that they did not get foul of the Bridgewater, and involve her with themselves in one common ruin.

The best measures having been now concerted by Captain Flinders, who was on board the Porpoise, and Lieutenant Fowler, the smallest boat was hoisted out in the hope of its reaching the Bridgewater, and bringing immediate assistance to the Porpoise. Though the ship broke a great deal of the surf, it was still with great difficulty that the boat got through; and while she struggled through the spray, there was a profound silence, the signal of hope and doubt, which happily was but of short continuance; for, although the night was dark, those in the wreck had the happiness of seeing her get safely into smooth water. A second boat was also hoisted out, in which two petty officers and several seamen embarked, and succeeded in penetrating the surf in safety. The largest cutter, a six-oared boat, was stowed under hatches, and it was judged imprudent to attempt hoisting her out, as the advantages attending it were considered uncertain, or, at best, but trifling, and not sufficient to counterbalance the risk of her getting stove in launching her over the ship's side.

Notwithstanding the sea continued to beat violently against the Porpoise, yet, as she was embedded in the coral, little doubt was entertained of her being either carried over the reef, or of her keeping together till morning, especially as she was now stove on the larboard side; and she appeared, from her inflexible pliancy, to easily sustain the weight of the surf. It now became a subject of serious deliberation what was best to be done in case of any emergency; for though they felt equally confident of the wreck holding together, and to a certainty being rescued in the morning, it was yet considered prudent to prepare for the worst that might happen. From the smoothness of the water to leeward, they had every reason to believe that the reef they were upon was exceedingly narrow, like those which they had been among the preceding year, and that if the tide should rise much higher and come away with the velocity with which they had sometimes seen it, they might, though stove and water-logged, be nevertheless precipitated by its force over the narrow ridge upon which it was generally supposed they were.

To render the vessel as easy as possible, the weather-lanyards of the topmast-shrouds had been cut, and all three topmasts went over the side. It now became a matter of deliberation whether cutting away the lower masts might not facilitate their floating over the reef, from their materially lightening the ship and thus accomplishing that which was a matter of the first importance.

Two circumstances were particularly favourable for securing the vessel in her situation, and of which the crew readily availed themselves. The anchors were bent at the bows, from a full conviction of their being indispensably necessary to their safety during their run to Timor. It likewise fortunately happened that their mainmast was made of the blue gum tree, a species of wood which, like most others grown in New South Wales, is specifically heavier than water. When this was taken into consideration, it was evident that it was the most salutary measure they could adopt, both for lightening the vessel and effectually preventing her from starting. The anchor was, therefore, let go, and the masts were cut away; and so completely was the ship on her broadside, that the angle formed by the masts with the surface of the water could not amount to more than forty-five degrees; in consequence of which those made of fir were almost ready to break down from the overhanging weight of the tops, and were, therefore, easily got rid of, but the mainmast was made of sterner stuff, and, for a long time, resisted the stroke of the axe before it fell.

Notwithstanding the very unpleasant situation which the crew were in, the same regularity of conduct and cheerfulness of deportment pervaded all ranks and classes as if nothing had happened; and strange as it may seem, after all that could be done for their preservation was accomplished, the affair was

talked over by the officers in the great cabin, with no small share of mirth and pleasantry. About midnight, the sea broke with less vehemence, and they observed the tide to be on the decline, which afforded a proof almost amounting to certainty, that the vessel would hold together till daylight, when they confidently expected to be released by the boats of the Bridgewater.

In the midst of their greatest apprehension, the crew of the Porpoise expressed the most sympathetic concern for their unfortunate consort the *Cato*, whose situation they judged to be far more deplorable than their own, and which daylight proved to be actually the case; for she was surrounded by a surf breaking to pieces, and infinitely more violent than that which was around the Porpoise; the crew of which endeavoured, during the night, to comfort and cheer them as much as possible, by exhibiting blue lights at intervals, which, at their first meeting, they were happy to learn had the desired effect.

On the approach of the long wished for dawn, the two boats were seen close to the Porpoise, and the Bridgewater in the offing, at no very great distance. The Bridgewater then put about, and stood for them; but as it blew fresh at the time, this was looked upon as a proper and necessary proceeding. They now soon found, to their great astonishment, that they were wrecked in the vicinity of a bank of coral, permanently dry, and where, at low water, they had easy access.

Having made every preparation for quitting the Porpoise, they made several trips backwards and forwards in the course of the day, carrying with them those necessities of life which their necessities immediately demanded; and then they resolved to wait patiently till fine weather should bring back the Bridgewater. The boats now pulled up towards the *Cato*, with the intention of affording her assistance, but could not reach her for broken water; they were, consequently, of no other use than to prevent despair, and incite them to make strenuous efforts to penetrate the surf.

About eleven o'clock the officers and people of the *Cato* got on board the Porpoise, having met with great and painful difficulty in escaping from their own ship. Three of the crew had perished, and some of the others were much cut and bruised, by the surf dashing them against the sharp-pointed coral, when in the act of swimming from the wreck.

As the place of their future habitation was but half a mile distant from the wreck, they had but little trouble in passing and re-passing; so that, in the course of the day, they succeeded in carrying a number of things on shore; and in the evening all lay down on the coral rock, which, hard as it was, afforded a tolerable repose to their wearied bodies.

Early on the following day they began to get everything out of the Porpoise, which, notwithstanding it was a crazy old ship, they were happy to find it still held stoutly together; while, on the other hand, though the *Cato* was a stout merchant ship, there was scarce a vestige of her to be seen above water. Tents were also erected, from sails and spars, to afford shade from the sun and shelter from the rain, rather than defence from the inclemency of the weather; for, with the exception of the first night, they never experienced cold. Persevering with the boats and some rafts which they had constructed on the emergency, they soon got all the provisions on shore, of which, excepting bread, they found a supply adequate to nearly four months. This was, indeed, a fortunate circumstance, as their numbers exceeded eighty; and to their great surprise and mortification, they were deserted by the Bridgewater, and were now uncertain of speedy release.

Their first object being to get the provisions on shore, they effected that desirable end, after considerable labour, in one week; and, by the 24th, every morsel of provisions was safely lodged in a store-tent, over which a sentry was placed to prevent depredation.

The large cutter that had been under the hatches, was now put under the carpenter's hands, to be decked and properly fitted for proceeding to Port Jackson; and, on the tenth day after the wreck, Captain Flinders, with Mr. Park, second mate of the *Cato*, Mr. Charrington, boatswain of the Investigator, and a stout boat's crew, embarked on that undertaking. Previous to their departure, the following resolutions were agreed to by Captain Flinders and the other officers:—first, that a

boat of eighteen or twenty tons burthen should be immediately laid down and built, with all possible despatch, to guard against any accident that might befall the boat that was about to bring them assistance; secondly, that if no tidings of Captain Flinders should arrive in the space of six weeks, the boat now about to be laid down should make the best of her way to Port Jackson, with as many people as she could carry with safety, and that if competent to carry the whole, they should all embark in her, with the exception of one officer and a boat's crew, who should remain for six or eight weeks longer, as plenty of provisions would be left them; and if no one returned in that time, they were finally to leave the reef in the small cutter, with all the charts, papers, &c., of which they were to have the important charge, and follow to Port Jackson. These precautions were absolutely necessary, as the distance was a very great undertaking for a small boat only twenty-six feet in length, the reef being situate in lat. 22 deg. 11 min. south, long. 155 deg. 85 min. east, 208 miles to the north, and 42 miles east from Sandy Cove, and 357 miles from Sydney.

These arrangements having been made, Captain Flinders set out with his small party, after receiving the unfeigned wishes of every one for his success, having been cheered as he went, and earnestly beheld by every eye on shore, while he remained in sight. A saw-pit was then erected, the forge set up, and every necessary preparation made for laying down the new boat.

Their attention was soon after attracted by an island situate about nine or ten miles E. and N., and which was visited, in the remaining boat, by Lieutenant Fowler. This they found much larger and more perfect in its formation than that which they were upon, being nearly a mile in circumference, abounding with birds, and occasionally visited by turtle; it was also rather deeply covered by vegetable soil, and had a spring of water which, though fresh, was too much impregnated by salt-petre to be of use to them. The birds were chiefly water-fowl, and had resorted thither to rear their young, which afforded the shipwrecked crew an opportunity of procuring eggs in abundance. The first visit to this spot repaid them with a supply of all its delicacies, for the boat returned loaded; one turtle was caught, and the cargo was completed with eggs of birds, which was a great incitement to future adventures. They had also, about this time, such a violent shower of rain, that they were obliged to rise from their beds; but were amply repaid for the interruption to their repose, by a fortnight's supply of fresh wholesome water.

Though thus situate upon a small bank of naked white coral, yet, by their mutual endeavours to cheer each other, they all appeared very tranquil; and their new vessel, which was named the *Resource*, was ready for launching before the expiration of the six weeks agreed upon.

On the 7th of October, a little before noon, they descried a sail in the eastern quarter; in a little time another, and soon after a third, were also discovered. It is impossible to attempt a description of their emotions at the sight of these vessels; and, indeed, the astonishment on board was equal to their own; for on that very day, the *Resource*, the work of their own hands, had gone to Turtle Island, by way of trying her, and little could these vessels have expected to be met by a schooner of twenty tons, erected on a coral bank; and especially considering the short space of time and the implements they had to work with. Upon their nearer approach, they perceived the largest of these vessels to be the *Rolla*, convict ship, which they had left at Sydney Cove; the others were the *Frances* and *Cumberland*, colonial schooners, which were familiar to them. In the afternoon, the three vessels anchored to leeward of the reef, and a boat soon after put off from the *Cumberland*, in which, as she neared them, to their great joy, they saw Captain Flinders, who received a hearty cheer on landing. For the last ten days preceding the arrival of these vessels they had, every night, at eight o'clock, fired a great gun, by way of apprising them of their situation, if chance should have brought them at dusk near to the reef.

Notwithstanding six weeks had expired from the time Captain Flinders had left them, they did not think it proper to adhere to the agreement that was made; and, therefore, had no intention of quitting the island yet. They naturally con-

cluded that he might have had a tardy passage to Port Jackson, and even when there, that vessels might not have been in readiness in Sydney Cove to send to their assistance. He might also, from the fatigue of going there, have been incapacitated from returning immediately, and thus the sailing of a vessel might have been procrastinated. These and other considerations made them change their former resolutions; and it was agreed that they should not separate, but patiently wait till another boat could be built, and go together in a body. This was so far fortunate; for had they parted as had been previously planned, at the end of six weeks, it would, in all probability, have been productive of much uneasiness and dissatisfaction, as well to those who went from, as those who remained on, the reef.

The following arrangements were now agreed upon: the *Rolla* was to receive the officers and crew of the *Porpoise*, with whom she was to proceed to Canton, where they were to be distributed among such of the East India Company's ships as their servants in that port might think proper; and the *Frances* was to take on board such stores saved from the wreck as she could safely and conveniently carry, with any of the officers or people who had a desire to return, and forthwith proceed with them to Port Jackson. Mr. Dennis Lacy, one of master's mates of the *Investigator*, who was anxious to get home, returned in their new schooner, the *Resource*. Captain Flinders, with a select portion of the ship's company, attended by Mr. Aken, the master, and Mr. Charrington, the boatswain of the *Investigator*, went on board the *Cumberland*, and proceeded in her to the Mauritius, by way of Torres Straits.

On the 10th of October the *Rolla* left the reef, in company with the *Cumberland*. On the 17th they passed Deliverance Isles, and crossed the equator on the 25th. On the 30th they bore due west from a cluster of low islands, distant eight or ten miles, which they supposed was called Baring's Islands. The day being calm, several were anxious to visit them, but on their approach were prevented by a high surf from reaching the shore. They appeared very low, of a corally base, and, though uninhabited, very perfect in their formation.

On the 6th of November a group of islands bore N.W., distant three or four miles. They were very low, but well peopled. The men muscular and well made, rather above than below the middle size, of a copper or olive colour, with regular animated features, fine teeth and long black hair. They were also fancifully tattooed on the breast and belly. Their only covering was a piece of shell, hanging in front; and none of them had any beards. They came off in canoes, without any symptoms of distrust, and exchanged, alongside, their different articles of traffic for iron, with which they seemed perfectly acquainted, and showed a predilection for it to every other thing.

About noon on the 17th, they came in sight of Tinian, Saypan, and other islands. On the 3rd of December they saw Pedro Blanco, and on the following day anchored in Macao Roads. Here they remained till matters were arranged at Canton for their passing the Bocca Tigris, or entrance of the river of Canton, and making Whampoa; where, on their arrival, the men were put on board the different *Indiamen*, and the officers invited to the English factory.

On the 6th of February, 1804, the season being then far advanced, they left Macao. Their passage down the China seas, along the coast of Cochinchina, though tedious, was not attended with danger; but their passage up the Straits, for the first week after getting into the Indian Ocean, was not only tedious, but exceedingly boisterous. On the 3rd of July they made the island of St. Helena, and anchored there on the 12th. Some of the gentlemen now procured a passage home in the *Courageux*, Captain Boyles, which weighed anchor, August 13, and after a boisterous passage arrived safe in the Downs, about dusk, on the 9th of October.

Captain Flinders, on his arrival at the Mauritius, was detained by the governor, under pretence of his being a spy; because, upon entering Port Louis, he took soundings, as a measure of precaution, but which was construed into a meaning consonant to those principles by which the governor usually regulated his own conduct. He was closely confined, and treated with great severity.

THE NOCTURNAL SEPARATION.

ONE summer, whilst at Baltimore, on a pleasure excursion, peculiar circumstances suddenly rendered it necessary that I should set sail for St. Thomas's. I immediately proceeded to make inquiry about a vessel to convey me there, and found that there were none bound for that quarter, except a small schooner, which had very inferior accommodations, and was commanded by a person of rude manners and a disobliging temper. However, as my business admitted of no delay, I engaged a passage in her, and put my luggage on board, and desired the captain to send me notice whenever he was ready to sail, that I might immediately join him.

I passed two days in that anxious and unsettled state of mind which the prospect of going to sea generally induces, and went despondingly to bed the second night, after having ascertained that the wind was unfavourable to the prosecution of my intended voyage.—A loud knocking at my chamber door awakened me from a profound sleep, about an hour before dawn. It was a messenger from Captain Burder, to inform me that the schooner was ready to sail.

I started from bed, and having dressed myself as quickly as possible, accompanied the messenger to the wharf, and embarked in a boat which waited there for us, and soon reached the schooner. Her captain was so busily engaged in giving orders to the seamen, that he seemed scarcely to notice my arrival. However, I addressed him and made some remark about the suddenness of his departure. "That doesn't concern you," replied he, abruptly; "I suppose your berth is ready below." But instead of taking his hint and going down to the cabin, I remained upon deck until we cleared the mouth of the harbour.

I felt at a loss to conceive the cause of our putting to sea in such unfavourable weather; but judged from the specimen of the captain's manner which I had already had, that it would be useless to address to him any inquiries upon the subject. I therefore went to bed, and did not get up next morning till called to breakfast.

On entering the cabin, I was astonished to find a lady and a gentleman there, whom I had not previously known to be on board. They were introduced to me as fellow-passengers; and after expressing my gratification at the prospect of enjoying their society during the voyage, I began to converse with them, and soon found that their presence would in a great measure counterbalance the disagreeableness arising from Captain Burder's surly and untractable temper. They were named Mr. and Mrs. Monti, were both young, and had recently been married. She was a pretty, lively, interesting creature; and having fortunately been at sea before, she did not suffer from sickness, or feel at all incommoded or depressed by the comparative uncomfords of her situation; and therefore the sociality of our little circle was never interrupted by her absence, or her incapacity to join it.

Captain Burder treated his crew in a capricious and tyrannical manner; but, at the same time, behaved towards them

with an air of familiarity very unusual for ship-masters to assume when among common seamen. But a negro man, who attended the cabin, daily experienced the most inhuman usage from his hands, and afforded such a spectacle of degradation and misery, as was painful to look upon. Almost every night after dark, Captain Burder had a long conversation with his mate, during which both seemed particularly anxious to avoid being overheard; and I once or twice observed them studying charts of parts of the ocean, that lay quite out of our due and proper course. Their whole conduct was equally suspicious and inexplicable.

Our personal comfort was but little attended to on board the schooner; and our table, which had never been a well-furnished one, soon became so mean and uninviting, that Mr. Monti complained to Capt. Burder, about it; however, without avail, for the latter told him that he must just take things as he found them.—On comparing the quantity of stores we had respectively brought on board, we thought we could manage to live independent of our commander; and Mrs. Monti's woman servant was, therefore, desired to prepare our meals, & spread a table for us every day. Captain Burder grew furious with passion when he learned this ar-

range ment, and muttered some threats, which he did not understand.

Delightful weather attended us during the first week of the voyage, and we usually spent the evenings upon deck, under an awning, and whiled away our time in agreeable conversations, in which Mrs. Monti, whose mind was a little tinged with the romantic, generally took the lead. While thus engaged one calm moonlight night, I several times observed Samno, the negro man, beckoning to me, and then putting his finger upon his lips. At length I went to the bows of the vessel, where he stood, and asked if he had anything to communicate. "Yes, yes, master," said he, in a whisper, "something very strange, and of great consequence—but will no one overhear us?" "Do not fear that," answered I; "Captain Burder is asleep in his berth, and the watch are all near the stern." "Then I will speak," answered Samno. "You and that other gentleman have been kind to me, and have often tried to save me from the rage of my wicked master; I mean now to serve you in my turn. Your lives are in danger. The captain intends to cast away the vessel." "What do you mean?" cried I; "I am at a loss to understand you." "Oh, I'll soon explain it all," replied he. "Last night, I listened to my master and the mate, while they were talking together, and found out that they had formed a plan to wreck this schooner, that they might get the insurance, which would buy her, and all she contains, twenty times over. The bales, casks, and boxes, that lie in the hold, have no goods in them; they are full of sand and stones. Captain Burder has cheated the insurers in this way, and now he wants to run the vessel aground somewhere on the Bahama Banks, and leave her to be beat to pieces by the waves. He and his crew, who are all leagued with him, will go off in the boat, and land upon the nearest coast, and give out that they

have been shipwrecked. This story, if it is not found out to be false, will entitle him to claim the insurance, which is all he wants. Here is a scheme for you!"

I was much too startled and agitated by this intelligence to think of holding any farther conversation with Samno; and, after warning him to conceal his knowledge of the affair from his master and the seamen, I returned to my friends. As the tale I had just heard completely explained Captain Burder's mysterious behaviour, and unveiled the cause of his sudden departure from Baltimore, I did not at all doubt the negro's veracity, and began to consider how the infernal machinations of our commander might best be counteracted. When Mrs. Monti retired to her state-room, I informed her husband of the plot that was in agitation. We conferred together a long time upon the subject, and at last resolved to do nothing openly, until matters came nearer to a crisis. We cautiously concealed the affair from Mrs. Monti and her attendant, and took care that every thing connected with our little establishment should go on in its usual routine, lest any alteration might have excited suspicion among those who were leagued against us.

Four or five evenings after Samno had made the above-mentioned communication to me, we were seated upon deck, according to custom. It blew pretty fresh, and we went through the water at such a rapid rate, that Mrs. Monti remarked it, and asked me, in a whisper, if vessels usually carried on such sail at night as we then did. At this moment, Captain Burder, who had been pacing the deck in an agitated manner for some time before, seized the lead, and hove it hurriedly, and continued to do so without mentioning the soundings to any one, or making any reply to the mate, who came forward, and offered to relieve him of his charge. There was a dead silence among the crew, all of whom stood near the bows of the vessel, observing their commander with expressive looks. Mrs. Monti trembled, and seized her husband's arm, and looked anxiously in his face; but he turned from her gaze without saying anything. Samno leant against the bulwark, and twice stepped forward, apparently with the intention of addressing some one; but each time, after a few moments' hesitation, he quietly resumed his former position.

The silence was suddenly interrupted by Samno, who cried, "We are now on the Seal-bank! I see the *black-heads*! The schooner will be aground immediately," "Rascal! what do you say?" returned Captain Burder, running furiously up to him; "you are a lying vagabond! Utter another word, and I will let you feel the weight of the lead upon your body!" "What can all this mean?" exclaimed Mrs. Monti, in a tone of alarm; "are we really in danger?" "Captain Burder," cried her husband, "I command you to put the ship about instantly; we know all your plans; you are a deceitful villain!" "Seamen," continued he, addressing himself to the crew, "obey this man at your peril! he intends to cast away the vessel for the insurance; if we do not resist, we shall lose our lives." "Mutinous wretch!" returned the captain, "you speak falsely; I deny the charge; you shall repent of this, yet; yes, yes, I'll find a time. Fellows, stand by me; recollect I am your commander; may I depend upon you all?" "Ay, ay, sir, to the last," answered the sailors, though some of them spoke rather faintly and irresolutely.

We easily perceived that any sort of resistance on our part would be vain, and perhaps dangerous, and, therefore, patiently waited the catastrophe. While Mr. Monti employed himself in soothing and encouraging his lady, I went down to the cabin, and collected all my valuables of small bulk, and concealed them about my person; and likewise privately desired Mrs. Monti's servant to occupy herself in the same way.

In a few minutes I distinctly felt the keel of the schooner rub upon the bottom, and she quickly got hard and fast aground. It was evident that the schooner would soon go to pieces, and Captain Burder ordered his men to let down the boat. While they were engaged in this, a temporary dispersion of some of the clouds afforded us light enough to discern a rocky island at a little distance; and the boat had hardly been dropped, when our vessel struck violently, the waves breaking over her at the same time in rapid succession.

We all rushed to the side of the schooner on which the boat

lay, and leaped into her, one after another, with the exception of Mr. Monti, who, when he had assisted his wife and servant in getting on board, returned to the cabin for some papers which he had forgot. Just as he came upon deck again, a tremendous sea took the vessel astern, and swept him overboard. Mrs. Monti fainted away. Captain Burder immediately cut the barge rope, and ordered the crew to make for the island, saying it was absurd even to think of saving my companion's life, and that we should be more than fortunate if we escaped a similar fate ourselves. The men rowed furiously, and we soon gained the rock, and landed in safety, though not until the bows of the boat had been stove in by the violent percussions she underwent while we were getting ashore. It was so dark that none of us attempted to explore the apparently isolated spot upon which we had been obliged to take refuge; and my thoughts were chiefly directed to the recovery of Mrs. Monti, who continued in a state of insensibility for a considerable time, and revived only to feel the agonising conviction that her husband was no more. Captain Burder and his crew stood watching the schooner as she rapidly went to pieces, and had a great deal of conversation among themselves, which the noise of the sea prevented me from overhearing.

About an hour after we had landed, Samno came running to me, and whispered that he believed Mr. Monti was still alive, for he had recently heard some one shouting at a distance. I immediately accompanied him to a projecting point of rock, about a hundred yards off, and we both called as loud as we could. A voice, which I instantly recognised to be that of my friend, answered us; but it was some time before we were able to distinguish what he said. At last I ascertained that he had reached the shore by clinging to part of the wreck, and that he could not then gain the spot on which we stood, on account of an arm of the sea which extended into the interior of the island; but that he would immediately endeavour to find his way round the head of it. On hearing this, I entreated him to desist from any such attempt till daylight should render it a secure and successful one. He at last consented, and I hastened to Mrs. Monti, and communicated the joyful tidings of her husband's preservation, which affected her nearly as much as her previous belief in his death had done.

Long before dawn, we had all assembled on the point of the rock already mentioned; and the first beams of morning showed Mr. Monti opposite to the place where we stood, and divided from us by what appeared to be an arm of the sea, about one hundred and fifty yards wide. After exchanging a few words with his wife, he set out to compass its head, and thus got round to us, while Samno went to meet him.

We waited their arrival impatiently for nearly half-an-hour, and then saw the negro coming towards us with looks of despair. "We are all deceived," cried he; "this is not an arm of the sea, but a channel between two distinct islands; we are on one, Mr. Monti is on the other; he cannot possibly reach us, unless he swims across, or is brought over in a boat. What is to be done?" This intelligence filled Mrs. Monti and me with dismay, for both knew that the boat was totally unfit for service, and that her husband could not swim. Every one appeared in some measure to participate in our distress and disappointment, except Captain Burder, who, when asked if there were any means of rescuing Mr. Monti, said, that it behoved him to get across the channel as he best could.

Mr. Monti soon appeared on the opposite rock, and explained the hopelessness of his situation more fully than Samno had done. It was evidently necessary that something should speedily be done; for though we had picked up a considerable quantity of wrecked provisions, Mr. Monti had none of any kind. We therefore saw at once, that he must either risk his life upon the sea, or perish with hunger.

In the afternoon, under the influence of these convictions, he began to collect together all the pieces of plank he could find; and having torn up his shirt and handkerchief into strips, he bound the timber together, so as to form a sort of raft. This he conveyed to the utter extremity of his own island, hoping that the sweep of the current might carry him, when embarked, to the lower end of the opposite shore. These preparations were viewed with torturing suspense and anxiety by

Mrs. Monti and me; and when her husband had placed himself upon the raft, she grew half frantic with alarm, and entreated him to desist. However, after a few moments of irresolution, he pushed off, and was whirled rapidly along by the stream.

None of us dared to speak, scarcely even to breathe, during this soul-absorbing crisis. Several of the crew stood upon the edge of the cliffs, with ropes in their hands, waiting to afford the adventurous navigator assistance as he passed; and their hopes of being able to do so were strengthened, when they observed the influence which an eddy had in drawing the raft towards the shore. Mr. Monti was soon within seven or eight rope yards of us. One of the seamen then seized the end of the line and made a strong effort to throw it towards the raft, but he lost his balance, and fell into the water, dragging the line along with him. The golden moment elapsed, and the object of our solicitude was quickly swept away far beyond our reach. His wife relapsed into insensibility, but not before she had seen the form of her husband receding from her eyes, and at the mercy of a boundless ocean.

The man who had the misfortune to cause this disastrous result, was allowed to clamber up the rocks quite disregarded, the attention of all being fixed upon Mr. Monti, who floated so fast into the open sea, that we perceived we had no chance of beholding him much longer. He waved his hands to us several times, with an air of resignation, but we thought we once or twice observed him endeavouring to impel the raft towards our island, by using his arms as oars, and then suddenly desist, as if conscious of the hopelessness of the attempt. Fortunately the weather had become very calm, and we knew that there was no chance of his sinking while it continued so, and while the planks that supported him kept together. We watched him till it grew dark, and then set about providing ourselves with a place of shelter for the night; during the whole of which, Mrs. Monti, in her indescribable anguish, forgot all that had passed, and even where she was, and talked, laughed, and wept, alternately.

I spent the greater part of the night in strolling along the shores of the island; which I could do with pleasure and safety, for the moon and stars successively yielded enough to direct my steps. Neither did Captain Burder nor his crew seem inclined to take any repose. When I happened to pass the spot where they were, I always heard them disputing about the way in which they should manage to leave the rock; and it appeared, from their conversation, that the wreck of the schooner had been much more complete and sudden than they had anticipated or intended. I also gathered, from some accidental hints, that they did not regret that Mr. Monti was now out of the way—his avowed knowledge of their plans having excited a good deal of alarm and anxiety among them.

At daybreak no vestige of the raft, or its unfortunate navigator, was discoverable, and I forgot my own desolate prospects in thinking of the fate of Mr. Monti, and trying to believe that he might still be in life, although conclusions to the contrary were forced upon my mind, by a consideration of the dangers that surrounded him, and of the limited means he had of successfully contending against them. Immediately after sunrise, the crew hauled up the damaged boat, and began to repair her with some fragments of the schooner, which had that morning floated ashore. They soon rendered her in a manner sea-worthy, and I found that the mate and crew intended setting out in search of relief, while Captain Burder, and Mrs. Monti, and her maid, and I were to remain till they returned. Accordingly, in the afternoon they put off, taking Samne with them, on the ground that they would require him to assist at the oars.

It appeared to me rather strange that Captain Burder should not accompany his crew, and direct the expedition, though he said he remained behind to show the two females that neither he nor his men had any intention of abandoning them. I pretended to be satisfied with this explanation, but, nevertheless, determined to watch his motions. Mrs. Monti and her maid had taken up their abode in a small rocky recess, which sheltered them, in some measure, from the weather, and I had conveyed thither the best provisions I could select, from the

quantity washed ashore, but did not intrude myself upon them, for I perceived that my presence was painful to the former, by recalling the visage of her husband.

Having chosen a place of repose in the vicinity of the recess, I retired to it soon after sunset, and endeavoured to sleep; but, notwithstanding, the fatigues of the preceding night, I continued awake so long, that I resolved to walk abroad and solicit the tranquillising effects of the fresh air. As I emerged beyond the projecting rock behind which I had formed my couch, I saw Captain Burder stealing along on tip-toe. Fortunately he did not observe me, and I immediately shrunk back into the shade, that I might watch his steps unseen by him. He proceeded cautiously towards the recess and having looked round a moment, entered it. I grew alarmed, and hastened to the spot, but remained outside, and listened attentively. I heard Mrs. Monti suddenly utter an exclamation of surprise, and say, "Pray, sir, why do you intrude yourself here?" "I come to inquire how you are," replied Captain Burder, "and to ask if I can be of any service to you." "None, none," answered she; "this is an extraordinary time for such a visit. I beg you will leave me." "Are you not afraid to remain here alone?" said Captain Burder. "I have my attendant, sir," returned Mrs. Monti, haughtily. "No, no," cried the former; "you know well enough you have sent her across the island for water, and I have taken advantage of her absence to have a little conversation with you; you are a beautiful creature, and—" "Captain Burder," exclaimed she, in a tone of alarm, "touch me not!" I heard a shriek; I rushed into the recess, and seizing the insolent villain, dragged him backwards a considerable way, and then dashed him twice upon the rocks; he could not rise, but lay groaning with pain.

I now hastened to Mrs. Monti, whose agitation I endeavoured to relieve and compose. When her attendant returned, I left them together. Captain Burder continued for some time on the spot where I had left him, and then got upon his feet and retired out of sight.

I armed myself with a piece of broken oar, which I found among the cliffs, and paced along the rocks like a sentinel, ardently wishing for dawn, although I know that there was no chance of its bringing me any relief.

Shortly after midnight, while taking my round along the cliffs, I met Captain Burder. We both started back, and surveyed each other for some time without speaking. "Do not suppose," said he at length, "that the attack you made upon me this evening shall remain unresented or unpunished; you have behaved most villainously; you took advantage of me, like an assassin, when I was off my guard." "And shall not hesitate to do so again," returned I, "if I chance to find you insulting Mrs. Monti." "You talk boldly," cried he; "are you aware that you cannot leave this island unless I choose?" "No, I am not." "Then learn that it is so," exclaimed he, stamping his foot. "My crew have gone to secure a small vessel, and when they return we shall depart in it, taking the females with us, and leaving you here. In the meantime, be thankful that your life has not been the forfeit of this evening's temerity." He now hurried furiously away, and soon disappeared among the rocks.

The most melancholy anticipations absorbed me so completely, that I did not discover that it was day, till the sun had got completely above the horizon. Then on looking towards the sea, I observed a sloop at anchor, about half a mile from the shore, and a boat full of men approaching.

I hastened towards the landing-place, that I might solicit their interference in behalf of Mrs. Monti and myself. The boat, which had now touched the shore was concealed from my view by a projecting rock. A man, who stood on the top of it, called me by name. I looked up, and started back, and then rushed into his arms—it was Mr. Monti himself.

As we hastened towards the recess, I related briefly all that had happened since the preceding morning, to which he listened with intense and shuddering anxiety, and seemed indescribably relieved when I had finished the recital. On reaching Mrs. Monti's abode, I retired, lest my presence should impose any restraint upon the feelings of the happy couple. In a little time my friend came forward, with his wife leaning

on his arm. "I must now," said Mr. Monti, "give you the particulars of my preservation. I drifted about the ocean nearly three hours, and then came within sight of the sloop, which lay to when she observed me. The captain sent out his boat to pick me up. I immediately told my story, and entreated him to steer for the island, which he readily consented to do, for he is one of the Bahama wreckers, who make it their business to cruise about in search of distressed vessels. We should have arrived here much sooner, but the wind was ahead, and we lay at anchor all night, the intricacy of the navigation around this rendering it dangerous to continue sailing after sunset. My preserver shall not go unrewarded."

Mr. Monti had informed the master of the sloop, that he believed Captain Burder had cast away the schooner for her insurance, and the former proceeded to the place where she was wrecked, and succeeded in fishing up some bales and packages, which, on being opened, were found to contain nothing but sand and rubbish. This discovery afforded satisfactory proof of Captain Burder's guilt. In the course of the day the whole crew returned in the boat, having exhausted their stock of provisions, and failed to meet with any vessel, or an inhabited island. We all embarked on board the sloop about noon, and shortly set sail.

We arrived safely at Nassau, New Providence, in a few days. Captain Burder and his mate were immediately apprehended on our evidence, and committed for trial. However, they both managed to escape from prison, and, having stolen a boat put to sea; and it was supposed either reached the coast of Cuba, or were picked up by some Spanish pirate, as no one saw or heard anything of them while we remained upon the island. Mr. and Mrs. Monti, and myself, soon afterwards embarked for St. Thomas's, and reached it after a pleasant voyage.

DINING AT SEA IN ROUGH WEATHER.

THE ship's company often reap much amusement from the little accidents, the ludicrous tumbles, and strange postures which the passengers are thrown into by the unsteady motion of the vessel; in time we feel so little alarm during a gale, that we sometimes disregard its perils, and join in the smiles and jokes at the ludicrous occurrences which happen among ourselves.

In the confusion of motions caused by the heavy seas, if we attempt to walk we fetch away, and we are tossed to the farthest side of the cabin, in all the odd and uncommon figures which can be imagined, and very often before we can regain our legs, the ship yields to another wave, and we are tumbled in a most ludicrous manner to the opposite side—kicking, striving, or crawling, amidst a confusion of moving chairs, stock-boxes, and other furniture.

The dinner ceremony is often rendered a humorous scene; the cabin being the general rendezvous of a party, we crawl trembling to the table, and tie ourselves to the chairs, a tray is set before us with deep holes cut for the dishes, plates, and glasses, the tables and chairs are lashed to the deck, and yet one or other frequently gives way and, consequently, upsets half the things in the cabin.

Presently enters the steward with soup, followed by his little slave with potatoes, and the other servants with such other covers as there may chance to be; but scarcely are things on the table, and servants stationed, clinging to our chairs, before the sudden lurch of the ship tumbles the whole into disorder. Away goes steward, servants, and little Mungo, to the corner of the cabin; the soup salutes the lap of one, another receives a leg of pork, a third is presented with a piece of mutton or beef, a couple of chickens, or ducks, fly to another, the pudding jumps nearly into the mouth of the next, and the potatoes are tossed in all directions about the cabin.

One saves his plate, another stops his knife and fork, some cling to the table, thinking only to save their persons, one secures the bottle, another half fallen, holds up his glass in one hand, and fixes himself fast to the chair with the other. Chaos is renewed, every thing is in motion—every thing in confusion.

At the next roll of the ship, the servants, staring with amaze-

ment, again fetch away, and with extended arms are tossed to the opposite side of the cabin, where they cling fast and remain as firm as statues; and although we are lashed in the chairs ourselves, it is with difficulty we can retain our seats. Plates, dishes, knives, forks, and glasses clatter together in all the disorder of the moment.

The steward and his boy crawling upon their hands and knees after the dancing potatoes, the flying fowls, or the walking joints, are rolled over and over at our feet, and all is disorder and confusion. The ship now becomes steady for a moment; the scattered parts of the dinner are collected, and those who have escaped sickness, again attempt to eat.

Some foreseeing all these accidents, place themselves up in a corner, on the cabin-deck, and take the plate between their knees, fancying themselves secure, but quickly they are tumbled into ridiculous postures to the other side of the cabin, sprawling with outstretched limbs, like frightened crabs.

Others having no call for appetite, join not in the feast, but lie swinging up and down in their cots or hammocks; others remain rolling from side to side in their berths; some cry out with sore bruises; some with being wetted by the spray of the sea; one calls for help, another relieves his stomach from sickness; while others, lamenting only their dinners, loudly bewail the soup, the meat, and the pudding.

Some abuse the helmsman, others the ship, and others are found to rail against the sea, while all join in imprecations against the wind.

THE TAILOR THAT WANTED TO SEE THE WORLD.

MR. SMEATON, to whom the science of civil architecture is indebted for systematic improvements, which place him upon a level with its original inventor, once in conversation stated, that when, in spite of the various difficulties, he had to encounter, the Eddystone light-house was finished, notwithstanding the fate that had attended the former building, a number of persons applied to be appointed residents in the new erection, where it is to be understood, two were to be constantly on duty, immured or cased in stone, in a situation where, probably, for many months in every year, it was impossible to have any communication with them from the main land. Among the rest that, upon this occasion, attended his levee in Arundell-street, was a young man, one of the journeymen to his tailor.

As this youth had frequently brought home, and tried on, clothes for him, Mr. Smeaton knew him perfectly well; but as at this time he had given no orders respecting apparel, he was astonished at his appearance, and still more so when he understood the nature of the application.

He asked him if he was married?

"No," he said, "he was a single man."

"What then," said Mr. Smeaton, "can induce you to become an inhabitant of the Eddystone light-house?"—"Why, to confess the truth," replied the tailor, "I have a vast inclination to see a little more of the world; I was always fond of liberty, and have for many years disliked the confinement of business and my master's shop."

Mr. Smeaton knowing the person to be perfectly sober, and of an unexceptionable character, he no longer pressed his objections, but accordingly sent him to reside at the light-house. As he was fond of reading, his patron directed that whensoever an opportunity offered, files of newspapers, with magazines, and other books, should be sent to him; and the tailor, by his care and diligence, repaid his attention. He continued in this perilous situation for a long period, and declared that he never was so happy in his life. Fishing, in fine weather, was one of his favourite amusements. But what was very extraordinary, he made such good use of the abundant leisure which the winter afforded, in reading, writing, and studying, that he exceedingly improved his mind, and became so capable of business, that his patron, when the term of his last engagement (I think seven years) had expired, employed him more advantageously, though, probably, not more agreeably to himself.

LOSS OF THE FORFARSHIRE STEAMER.

THE Forfarshire steamer, a vessel of about 300 tons burthen, under the command of Mr. John Humble, formerly master of the Neptune of this port, sailed from Hull, on her voyage to Dundee, on the evening of Wednesday, the 5th of September, 1838, about half-past six o'clock, along with the Pegasus and Innisfail, for Leith, with a valuable cargo of bale goods and sheet iron; and having on board about twenty-two cabin and nineteen steerage passengers, as nearly as could be ascertained, Captain Humble and his wife, ten seamen, four firemen, two engineers, two coal trimmers, and two stewards.

Previous to leaving Hull, the boilers had been examined and a small leak closed up; but when off Flambro' Head the leakage re-appeared, and continued for about six hours, not, however, to much extent, as the pumps were able to keep the vessel quite

dry. The engine-man, Allan Stewart, who furnished these particulars, also states that he had frequently seen the boiler as bad as it was on this occasion. The fireman, Daniel Donovan, however, represents the leakage as considerable, so much so that two of the fires were extinguished; but they were re-lighted after the boilers had been partially repaired. The progress of the vessel was of course retarded, and three steam-vessels passed her before she had proceeded far. The unusual bustle on board the Forfarshire, in consequence of the state of the boilers, attracted the notice of several of the passengers, and Mrs. Dawson, a steerage passenger, who was one of the survivors, stated, that even before the vessel left Hull, so strong was her impression, from indications on board, that "all was not right," that if her husband, who was a glassman, had come down to the packet in time she would have returned with him on shore.

LOSS OF THE FORFARSHIRE STEAMER, CAPTAIN JOHN HUMBLE, SEPTEMBER 7, 1838.

In this inefficient state, the vessel, with above sixty individuals on board, was sent out and proceeded on her voyage, and passed through the "Fairway," between the Fern Islands and the land, about six o'clock on Thursday evening. She entered Berwick bay about eight o'clock the same evening, the sea running high, and the wind blowing strong from the N.E. From the motion of the vessel, the leak increased to such a degree, that the firemen could not keep the fires burning. Two men were then employed to pump water into the boilers, but it escaped through the leak as fast as they pumped it in. About ten o'clock she bore up off St. Abb's Head, the storm still raging with unabated fury. The engines soon after became entirely useless, and the engine-man reported that they would not work. There being great danger of drifting ashore, the sails were

hoisted fore and aft, and the vessel got about in order to get her before the wind, and keep her off the land. No attempt was made to anchor. The vessel soon became unmanageable, and the tide setting strong to the south, she proceeded in that direction. It rained heavily during the whole time, and the fog was so dense that it became impossible to tell the situation of the vessel. At length breakers were discovered close to leeward, and the Fern Lights, which about the same period became visible, relieved all doubt as to the imminent peril of all on board. An attempt was made to run the vessel between the Fern Islands, but she refused to answer her helm, and at three o'clock on Friday morning she struck with tremendous force against the outer or Long-stone Island.

A portion of the crew, intent only on self-preservation, had

lowered the larboard-quarter boat down, and left the ship, amongst whom was the first mate, James Duncan. The stroke of the vessel on the rock was regarded as the signal of death. The master lost all self-possession, and his wife, who was on board with him, sought in cries of anguish and despair the protection which, alas, he could not extend. The cries of females on deck, mingled with the roaring of the ocean and the screams of the wild fowl disturbed from their resting-places, whilst the men, clinging to the vessel, awaited in silence their inevitable fate. Most of the cabin passengers were below, and many of them asleep in their berths. As soon as the vessel struck, the steward ran down and gave an alarm, but one passenger only, Mr. Ruthven Ritchie, of Hill of Ruthven, Perthshire, was saved. On being awoke, he arose instantly, and, seizing his trousers, rushed upon deck; from whence, observing the sailors leaping into the boat, he, with an extraordinary effect, by means of a rope, swung himself into it, and was thus miraculously preserved. The uncle and aunt of this gentleman made a desperate effort to get into the boat just as it was leaving the wreck, and, in endeavouring to leap on board, they fell into the sea and perished in his sight. He had nothing on all the time he was in the boat but a shirt and a pair of trousers; and his employment whilst in it was baling out the water with a pair of shoes for a "howskelly." The escape of the boat was remarkable. There was only one outlet by which it could escape being dashed by the breakers against the island, and that outlet was taken without the parties being aware of it. The boat's crew passed through the mighty current uninjured, and, after being exposed in an open boat all night, were picked up about eight o'clock on Saturday morning by a Montrose boat, and carried into Shields. Mr. Ritchie had fortunately some sovereigns in the pockets of his trousers, which he brought out of the cabin, and these enabled him to procure clothes soon after being landed. The following is a list of the crew and passengers brought into Shields:—John Matson, second mate; James Hill, Alexander Murray, Robert Fox, Allan Stewart, engineer; Jas. Hall, coal-trimmer; David Grant, Ruthven Ritchie, farmer; and James Duncan, first mate. Mr. Ritchie proceeded to Bamburg, to inquire into the fate of his fellow passengers, and thence he went to Edinburgh on his way home to communicate the melancholy intelligence to his friends. The mate and some other of the crew reached Dundee on the Tuesday following.

The vessel struck aft the paddle-boxes, and not above three minutes after the few survivors had rushed upon deck, a second shock separated her in two parts—the stern, quarter-deck, and cabin, being instantly carried away with all upon them, through a tremendous current called the Piper Gut, which is dangerous even in temperate weather, running between the islands at the rapidity of six miles an hour, and in tempestuous weather becomes terrific; whilst the fore part of the vessel remained fast on the rock. The captain stuck to the wreck, till washed overboard with his wife in his arms, and both were drowned.

The situation of the few passengers who remained on the fore part of the vessel was perilous in the extreme. Placed on a small rock surrounded by the sea, which threatened to engulf them, and their companions having but just before been swept away from them, they were clinging to life whilst all hope of relief was sinking within them, and crying for help, whilst the tempestuous billows drowned their feeble shrieks, and defied their puny efforts to escape. Their cries, however, were not unheard. Their shouts of distress fell upon the ear of Miss Grace Horsley Darling, who, with her father, Mr. W. Darling, occupies the outer Fern Lighthouse. She awakened her parent, and at daybreak he launched his boat and prepared to proceed to their rescue. The state of the tide and of the weather was such as to render any attempt to reach the wreck extremely dangerous; and the old man, who had never before known the quailings of fear, was loth in such a tremendous gale to rush, as he considered, on certain death. After watching the wreck for some time, they discovered, from some movement, that living beings were still clinging to it, and the gallant female, who partook of her father's generous sympathy, as she acknowledged the relationship of flesh and blood, with matchless intrepidity, seized the oar and entered the boat. This was enough—the

noble parent followed, and with the assistance of the fair sailor, conducted the frail skiff over the foaming billows to the spot where the wreck appeared. By a dangerous and desperate effort the father was landed on the rock, and to preserve the frail coble from being dashed to pieces, it was rapidly rowed back among the awful abyss of waters, and kept aloft by the skillfulness and dexterity of this noble-minded young-woman. At length the whole of the survivors, consisting of five of the crew and four of the deck passengers, were taken from the wreck, and conveyed to the lighthouse, where the same tender hand administered to their wants, and anxiously, for three days and three nights, waited on the sufferers, and soothed their afflictions. By the assistance of the crew they were enabled to bring the coble and its burthen to the Long-stone Island. It is impossible to speak in too high terms of this unparalleled act of humanity, bravery, and disinterestedness. This perilous achievement—unexampled in the feats of female fortitude—was witnessed by the survivors in silent wonder. The main land could not be reached, from the state of the weather, till Sunday, and during the whole of this time the attentions of the heroine were indefatigable.

The names of the individuals saved from the wreck of the *Forfarshire*, by Mr. Darling and his daughter are—John Kidd, fireman of Dundee; Jonathan Ticket, cook, of Hull; John Macqueen, coal trimmer, Dundee; John Tullock, carpenter, Dundee; John Nicholson, fireman, Dundee, of the crew. D. Donovan, fireman, and free passenger of Dundee; James Keeley, weaver, Dundee; Thomas Buchanan, baker, Dundee; Mrs. Dawson, bound to Dundee, passengers. The entire number saved is eighteen, of whom thirteen belonged to the vessel, and five were passengers. The remainder on board perished.

The wreck of the steamer was seen from North Sunderland, on the morning of the wreck, about six o'clock, when signals were hoisted and guns fired immediately, but men could not be found to go off in the life-boat. After some delay seven persons volunteered their services, and set out in a four-oared coble. The boat shipped several seas in the course of her perilous voyage, and on their way they spoke a steam-vessel of London, going north, and requested the captain to proceed to the wreck, offering at the same time to pilot the vessel, as they could easily have done to within a few yards of the lee of the rock in seven fathoms water. The captain, however, declined, and the men in the coble, after much exertion, succeeded in reaching the wreck. They found three bodies, one of them dressed in black, apparently about forty years of age, who, from papers found on his person, is supposed to be the Rev. John Robb, of Dunkeld. The other two were brother and sister, the boy eleven and the girl eight years of age, and children of Mrs. Dawson, who was saved by the exertions of Mr. Darling and his daughter. They also took a quantity of copper and some light articles which would soon have been washed away. The storm raged with unabated fury, and in attempting to return, they were compelled to put in at Longstone Lighthouse, which they reached with much difficulty, where they were obliged to remain two days and two nights in a temporary building, the waves occasionally bursting in and obliging them to seek shelter in the Lighthouse tower, which was occupied by Mr. and Miss Darling, and the persons they had saved from the wreck. They made another attempt to reach North Sunderland on Sunday, but they were obliged to run in at Beadnel, where they remained till the following day. They visited the wreck on Monday, and found the body of an Irishman, named John Gallehar, who lately resided at Dundee. The names of the brave and meritorious individuals who ventured their lives from North Sunderland are as follow:—Wm. Robson, James Robson, Michael Robson, Wm. Swain, Brooks Darling (brother to Miss Darling,) Thomas Cuthbertson, and Robert Knox. They behaved most gallantly.

The wreck was discovered from Bamburg Castle early on Friday morning, when a signal was immediately hoisted, and an alarm-gun fired along the shore to apprise the fishermen of the calamity. The life-boat could not be launched from the extremely boisterous state of the weather, but every thing was done that could be devised; and Mr. Smeddle, the principal agent, Mr. Hamilton, and others attached to the castle, were most indefatigable in their exertions.

On the following Monday the four bodies were brought to the castle, and on the next day an inquest was held before Stephen Reed, Esq., in the absence of T. A. Russell, Esq., when, after a patient investigation, the coroner summed up, and the jury returned a verdict to the following effect:—Wrecked on board the Forfarshire steam-packet by the imperfections of the boilers, and culpable negligence of the captain not putting back to port. Deodand on the vessel, £100, being one-half of the estimated value of that part of the vessel and machinery left upon the rock.

One of the most heart-rending circumstances connected with this melancholy event occurred during the night when the survivors were on the rock. The vessel became a total wreck in less than a quarter of an hour after she struck; and those that were fortunate enough to get on the rock suffered severely from the cold, and from the heavy seas which washed over them at intervals. Their clothes were mostly torn off, and from continued exertions they were reduced to a state of complete exhaustion. The most agonizing spectacle was that of Mrs. Dawson, with her two children, a boy and a girl, eight and eleven years of age, firmly grasped in each hand: there she held them in the agonies of despair long after the buffeting of the waves, which drove them to and fro, had deprived them of existence. She was severely injured, and remained at Bamburgh, unable to proceed homewards. Donovan was also much hurt; and he stated that he lay for three hours holding on by a spike nail.

It is impossible to tell with certainty the number of those who have suffered, inasmuch as no entries were made when the passengers embarked. One of the survivors states the number at forty-two, and another at forty-seven. As only five are known to be saved, the probable loss of life will be between thirty-seven and forty-five passengers; and the master and his wife, and seven of the crew, will make the total loss between forty-six and fifty-one persons. The following are the names of some of the sufferers:—

Captain Humble and wife; the Rev. John Robb, Dunkeld; Mr. Bell, factor to Lord Kinnoul; Mrs. Allison, Peasholme-house, York, with son and grandson; Miss Martin, of No. 28, St. James's-street, Aberdeen, and one child. This lady had considerable property on her person; it is said 300 sovereigns, in some part of her dress. Mr. and Mrs. Allen, and one child, said to be last from Russia; Mr. Robert Allison, of Dundee; Mr. John and William Grant, of Louth, Lincolnshire; Mr. Paston and a friend; Mr. Scott, of Dundee, and his son, about seven years of age; Mr. Brown and Mr. McCloud; Mr. Arnett, and two friends; Mrs. Patrick, of Hull, wife of Captain Patrick, of the Clara.

There are among the sufferers, three gentlemen belonging to Perth, one to Fife, and one to St. Petersburg. A female steerage passenger lost two children, one was drowned, and the other died in her arms. Amongst the persons brought to the spot, from a distance, was one gentleman who had lost his wife, son, and grandson, another his mother and brother.

The only part of the vessel which remained, consisted of the fore-castle, part of the engine, paddle-wheels, anchor, cable, foremast and rigging. One of the boilers was washed to sea, while the other two were thrown on the rocks broken. The engine, which was 180-horse power, was greatly damaged. A quantity of new boiler plate was found among the wreck. A part is sunk a little to the south of Hawker's rock, and, as it is supposed, the bodies of several persons who have not been found are in it, a rope has been attached to it, for the purpose of raising it, in order to satisfy the anxiety of their surviving friends. The cargo is stated to have been very valuable, having been insured to the amount of 4,000*l*; but only three boxes of soap have been discovered. Parts of the wreck have been thrown on shore at Hauxley, Amble, Hartley, and other parts of the coast of Northumberland. The stern of the vessel, with the name, a hair-covered trunk, and a corded box were seen on Monday, the 10th of September, from the deck of the London Merchant steam-vessel, floating off Seaham. The stern was also seen, near the same place, from the City of Edinburgh steamer, the day before. The brig Williams, Captain Blyth, of Sunderland, from Hamburg, when about five

miles from the land, off Hartlepool, on the same day, fell in with a quantity of wreck, which is supposed to have belonged to the Forfarshire steamer. Among other materials was the poop of a vessel, together with a box about fifteen feet long, and two and a half feet square, containing a quantity of new machinery. The search is still going on for the bodies of the unfortunate sufferers, and the property of the vessel; and every assistance is rendered by the agents at Bamburgh Castle, as well as by the fishermen and revenue officers on the coast.

The Forfarshire was a new vessel, having been little more than two years at sea. She first sailed from Dundee in May, 1836; she sailed weekly between Dundee and Hull, and had engines of 120 or 200-horse power. The captain (Mr. John Humble) belonged to Shields, and served his apprenticeship to the sea in one of the collier sloops trading between that place and Newcastle. The first steamer he was in was a small tug-boat, which belonged to Shields, called the Tarset; he afterwards commanded another steamer, called the Neptune, which sailed between Hull and Newcastle. He also was some time mate of the Eclipse, the Newcastle and Leith boat already mentioned.

Grace Darling's brilliant action, while it astonished all, that beneath a woman's slender frame, so noble, so heroic a heart could beat, raised their enthusiastic delight. Subscriptions to reward this noble girl for her unparalleled bravery were set on foot, and many handsome presents from noble personages, together with the sum of seven hundred pounds, were presented to her. Ringing as the world did with her achievement, and pleased, as she doubtless was, at its approbation, she refused all the offers that were made to raise her to a higher sphere, content to remain in her sea-girt home amongst her humble friends.

Ere long, and before the applause at her noble action had died away, that fatal disease, consumption, had fastened upon her. In spite of all the efforts of her friends to remove this ever fatal complaint, she sunk under it; and, on the 20th of October, 1842, without a groan, or murmur, she died.

MUTINY ON BOARD THE BRAGANZA, CAPTAIN A. F. TURLEY, AUGUST 5, 1838.

THE American brig Braganza, of Philadelphia, commanded by Captain A. F. Turley, which sailed from St. John's, Porto Rico, with a cargo of sugar for Genoa, put into Philadelphia in distress, and having got repaired, sailed from that city on the 8th of July, 1838, with the captain; Mr. Vanderslice, first mate; Mr. Moir, second mate; and six men before the mast, including the cook. She had also as passengers, Mr. Diehl, owner of the Braganza, and his lady, and Mrs. Turley, the captain's wife. The brig proceeded on her voyage without any remarkable circumstance until the 5th of August, when in lat. between 37 deg. and 38 deg. N., and long. between 13 deg. and 14 deg. W., at two o'clock, a.m., an alarm was given by the first mate of a mutiny by the crew. The captain and second mate immediately rushed on deck to his assistance: the captain had a cutlass, the second mate had nothing whatever to defend himself with. They found the first mate lying at the cabin companion-way weltering in his blood; he afterwards succeeded in gaining the cabin. On the captain and second mate reaching the deck, they were immediately attacked by all the crew, who, being five in number, soon overpowered them; they threw the second mate over the side, but he fortunately caught a rope and regained the deck again, and retreated to the cabin completely disabled. In the mean time, the crew succeeded in overpowering the captain, and threw him overboard. During this period, the two ladies and Mr. Diehl were in the most anxious suspense, anticipating that it was their intention to come into the cabin and murder all, having no means whatever of defence. But immediately on throwing the captain overboard, they closed the cabin companion-way and skylight, by nailing and placing canvas and heavy chains on them. The persons thus confined in the cabin were Mr. and Mrs. Diehl, Mrs. Turley, and the first and second mates. The first mate had his face dreadfully cut, and his skull fractured by two strokes on the head, ap-

parently done with a hatchet. The second mate was completely disabled in the right arm by blows inflicted by a handspike. At eight o'clock in the morning, the crew, then in complete possession of the vessel, made preparations to close the cabin dead-lights by slinging a plank over the stern, at which those in the cabin remonstrated, stating that they should be smothered; the crew replied, that unless they gave up whatever they wanted, they would certainly do it. They then demanded the chronometer, sextant, and charts, together with all the money and jewellery those below possessed, which consisted of a gold lever watch, finger and earrings, and a small amount of specie, which were passed to them through the cabin windows by means of a bucket. They also required that the passengers should throw overboard all fire-arms. They also complied with this request, with which they became satisfied for a time. Upon the mate's asking where they intended to go with the vessel, and what they intended to do with them; they replied, they were going to Genoa, and that they should find out soon enough what they intended to do with them. They at the same time stated that they had no wish to injure Mr. or Mrs. Diehl; but declared their determination of sacrificing both Mrs. Turley and the first mate.

On Monday, the 6th, nothing material occurred, except that those in the cabin informed the crew that they were aware of their having altered their course; they then stated that it was their intention to run for the English Channel, and endeavour to effect a landing. The mutineers also informed their prisoners on this day, that they had the cook confined in the forecabin.

Early on the morning of Tuesday the 7th, they discovered a smoke in the cabin, which proceeded from the hold, and which soon became so dense as to render it difficult to breathe. Upon their demanding the cause, they were answered, that the mutineers were satisfied that there was more valuable property in the cabin, and, unless they gave it up, they were determined to smoke them to death. The unhappy sufferers made use of every argument to satisfy them that they had given them all, and finally succeeded; upon which they withdrew the fire from the hold, and the smoke soon passed away. Nothing further occurred on that day, nor on the 8th, 9th, or 10th. During all this period the ladies, particularly, were kept in a constant state of excitement bordering on frenzy, both night and day, from the unusual bustle and confusion on deck, preparatory, as it were, for making a descent upon them for the purpose of murder.

On Saturday the 11th, between eight and ten o'clock, they called for Mr. Diehl, over the taffrail, and stated that there was a vessel in sight from the mast-head, and proposed that he and his companions should take the jolly-boat, and endeavour to gain her. To this he objected, as, in the first place, he did not believe that there was a vessel in sight, and further he stated to them, that, in the event of their not being able to reach her, he was certain they must perish. Previous to this, and also at this period, Mr. Diehl proposed, that if they wished to save any of them, the crew should take the long-boat, and leave them to the brig, or give the passengers the long-boat, and they would run their chance. After a few minutes' conversation together, they requested that Mr. Diehl and his wife should come on deck, which they consented to do. Upon their reaching the deck no violence was used towards them; but they were all prepared with their knives and other edged tools for resistance. Immediately on gaining the deck, Mr. Diehl requested that Mrs. Turley and the second mate should be allowed to come up, to which they consented. After a conversation of an hour or so, in which the passengers urged every possible argument to induce the mutineers not to destroy them, they consented that they should take the long-boat and run their chance of getting to land, then distant, as near as could be ascertained, about 350 miles on the Portuguese coast. This proposition was accepted, and they went to work immediately to get the long-boat out, previously having fitted her out with mast, sail, water, &c., for their own use. Between two and three o'clock, everything being ready, they required them to leave, prior to

which Mr. Diehl and the second mate made use of every possible argument to induce the mutineers to allow them to take the first mate along with them, although he was in a wretched condition from his wounds; which they positively refused, stating that they would take care of him themselves. Finding their solicitations of no avail, Mr. and Mrs. Diehl, Mrs. Turley, Mr. Moir (second mate), and the cook of the brig, got into the boat and left her. At daylight on Sunday morning the 12th, they discovered two sail in sight, one of which, they judged to be the Braganza, made chase after the other; but after pursuing her until ten o'clock, they gave up the chase as fruitless. At this period they made another sail to the southward, coming towards them; after a short respite they gave chase for her, and neared her fast. About three, p.m., she discovered and bore up for them; and between three and four, p.m., they got alongside, and were received on board the brig *Hebden*, Captain William Benjamin Fowler, of Scarborough, bound from Sicily to the Clyde, by whom, and all his crew, they were treated in the most kind and hospitable manner; the mutineers having robbed them of nearly every stitch of clothes except what they had on.

THE GREENWICH PENSIONER.

A GREENWICH pensioner! Did any of my readers ever ponder on that strange composition of battered humanity and blue serge? Did they never feel something approaching very near gratitude on passing, in the metropolis, a Greenwich Pensioner, who with, his honest, carved out, unabashed front, looking as bluntly and as wonderingly at the bustle and splendour around him, as does an unsophisticated wether suddenly removed from South Downs to Cheapside, whilst shaking his woollen coat beneath the whip of the coachman to the Lord Mayor. What a mixture of gravity and wonderment is in the poor brute's countenance! how with its meek, uplifted head, it stares at the effulgent vehicle—runs leaping at the coachwheels, mistaking them for hurdles—falls, awestruck, back, at the gilt and beavered greatness of the footman's cocked hat—then, suddenly awakened from its amazement by the lurcher's teeth or the driver's stick, makes an unlucky spring of some three feet into the air, catches a glance of its figure in the mirrored walls of a silk-mercier's, and, startled at the sight, dashes through the first court, carrying perhaps a few yards upon its back, some red-faced, nankeen-gaitered little stock-broker; whose spattered small-clothes are for a time unregarded, in the mighty rush of drovers, butchers, dogs, and idlers.

Now such is the real Greenwich pensioner. When I say *real*, I mean one who abhors London worse than he does a Frenchman; who thinks there is nothing to be seen in it, unless it be Nelson's tomb in St. Paul's, or the Ship public-house, in Tooley-street.—London is to him a never-failing source of merriment; that is, whilst he is out of it. He sits at Greenwich, and looking as sagely as a starling ere he snaps at a fly, at the piled-up clouds of smoke hanging over the metropolis, or indeed almost propped upon its chimney-pots, and, stretching forth his stick, significantly points out to his former ship-mates, asking them if they do not think "there is something dark over there—something of an 'ox-eye' to the west?" He indeed never ventures to London, unless it be a fresh supply of tobacco, or to pay a quarterly visit to his grand-daughter, the upper housemaid in a gentleman's family—and who indeed thinks with horror upon his call, because the neighbours laugh at the cocked hat and the shoe buckles of her relative; but principally because Richard the baker's young man, declares he hates all sailors. The visit is never a very lengthened one, especially if the girl lives far to the west: for her grandfather has to call upon Will Somebody, who set up, with his prize-money, a public-house in Wapping; so off he starts, hurries up the Strand, touches his hat from a point of principle as he nears Somerset House; puts out more canvass, and away for Temple Bar, the pensioner has not yet, however, sat for his picture.

We have all read of crabs being despoiled of their claws, locusts of their entrails, and turtles of their brains, receiving in lieu thereof a pellet of cotton, yet retaining life, and

appearing, in the words of the experimentalizing and soft-hearted naturalist, "very lively and comfortable." Now, the real Greenwich pensioner distances all these; he is, indeed, an enigma: nature knows not what to make of him. He hath been suspended, like a school-boy's bobcherry, a hundred times over the chaps of death, and yet still been snatched away by the hand of Providence—to whom, indeed, his many hurts and dangers have especially endeared him. Ye of the "land interest," ye soft-faced young sparks, who think with terror upon a razor on a frosty morning—ye suffering old gentlemen, who pause at a linen-draper's, and pass the flannel between your fingers, as time verges towards October—ye martyrs to a winter cough—ye racked with a quarterly tooth-ache—all ye of household ailments, look upon this hacked, shivered piece of clay, this Greenwich pensioner; consider of how many of his powers he is despoiled—see where the cutlass and the boarding-pike have ploughed up and pierced his flesh; see where the bullet has glanced, singing by; and when you have reckoned up—if they are to be reckoned—his many scars, above all, look at his hard, contented, weather-barnacled face, and then, gentle spectators, complain of your rheums, your joint-twitchings, and corns!

Why, this Greenwich pensioner is in himself a record of the last forty years' war. He is a breathing volume of naval history: not an event but is somewhere indented in him with steel or lead; he has been the stick in which the English Mars has notched his cricket-matches, when 24-pounders were balls, and mainmasts wickets. See, in his blinded eye is Howe's victory on the glorious First of June; that stump of what was once an arm, is Nile; and in his wooden leg, read Trafalgar. As to his scars, a gallant action, or a desperate cutting-out, is noted in everyone of them. And what was the old fellow's only wish, as with a shattered knee he lay in the cockpit under the surgeon's hand—what was his earnest supplication to the wet-eyed messmate who bore him down the hatchway? Simply, that he would save him one of the splinters of the mainmast of the Victory, to make of it a leg for Sundays! His wish was granted; and at Greenwich, always on the seventh day, and also on the 21st of October, is he to be seen, propped upon the inestimable splinter, which, from labour, time, and bees'-wax, has taken the dark glossiness of mahogany. What a face he has! What a certain consciousness of his superiority on his own element at times puffs out of his lip, and gives a sudden twitch to his head! But ask him in what quarter sets the wind—and note how, with his one eye, he will glance at you from top to toe; and, without ever raising his head or hand to make a self-inquiry, answers you at once, as though it was a question he was already prepared for! And so, indeed, he is; it being his first business, on rising, to consult the weather. The only way to gain his entire confidence, is at once, as frankly to avow your utter ignorance, and his superiority; and then, after he has leered at you with an eye, in which there is a meeting of contempt, good-humour, and self importance, he is wholly your own; and will straightway launch into the South Seas, coast along the shores of Guinea,—where, by the bye, he will tell you be once fell in love with a negress, who, however, jilted him for the cook,—and then he will launch out about Admiral Duncan—take you a voyage with him round Cape Horn, where a mermaid appeared, and sung a song to the ship's crew; and who indeed blew aside the musket-shots that were ungallantly fired at her in requital of her melody. But our pensioner has one particular story; hear him through that, suffer yourself to be wholly astounded at its recital, and, if you were not a landsman, he would instantly greet you as his dearest friend. The heroes of this same story are our pensioner and a shark: a tremendous shark that used to be the terror of the harbour of St. Thomas's. Upon this shark, and the piece of mainmast of the Victory, is our pensioner content to rest all his importance during his life, and his fame with posterity. He will tell you that he, being caterer of the mess, let fall a piece of beef out at the port-hole, which this terrible shark received into its jaws, and twisted its body most provokingly at the delicious mouthful. Hereupon our pensioner—it was before, he reminds you, he had lost a limb—asks leave of the first lieutenant (for the captain was on shore)

to have a bout with the shark: leave being granted, all the crew are quickly in the shrouds; and upon the hammock-netting, to see Tom—"tackle the shark." Our pensioner now enters into a minute detail of how, having armed himself with a long knife, he jumped overboard, dived under the shark, which he saw approaching with distended jaws, and inflicted a tremendous wound with the knife in the belly of the fish; this is repeated thrice, when the shark turns itself upon its back—a boat is let down, and both the conqueror and the conquered are quickly received upon deck. You are doubtless astonished at this; he however, adds to your surprise, by telling you that the mess regaled off the piece of beef recovered from the fish; be more astounded at this, although mingle no doubt in your astonishment, and he will straightway promise some day to treat your eyes with a sight of a set of chequer-men, cut from the very dorsal bone of the immolated shark! To be the hearer of a sailor's tale, is something like undergoing the ancient ordeal of red-hot plough-shares; be innocent of unbelief, and you may, as was held, journey safely; doubt the smallest point, and you are quickly withered into nought.

What an odd contrast to his early life is the state of a Greenwich pensioner! It is as though a part of the angry and foaming sea should lie stagnant in a bathing-tub. All his business is to recount his former adventures—to plod about, and look with a disdainful eye at trees, and brick and mortar; or, when he would indulge in a fit of spleen, to walk down to the river's side, and let his gall feed upon the mishaps of London apprentices, who, fearless of consequences, may have ventured some five miles from home in not a "trim-built wherry." A Greenwich pensioner fresh from sea is a most preposterous creature! he gets up every morning for a week, a month, and still finds himself in the same place; he knows not what to make of it—he feels the strangeness of his situation, and would, had he the patience and the wit, liken himself to a hundred unsettled things. Compare him to a hippopotamus in a gentleman's park, and he would tell you, he had in his day seen a hippopotamus, and then, with a good-natured grunt, acquiesce in the resemblance; or to a jolly-boat in a flower-garden; or to a sea-gull in the cage of a canary; or to a porpoise upon a hearth-rug; or to a boatswain's-whistle in a nursery; or to a marling-spike in a milliner's work-room; or to a tar-barrel in a confectioner's; with any one or all of these misplaced articles would our unsettled pensioner sympathise, until time shall have reconciled him to his asylum; and even then, his fancy, like the shells upon our mantel-piece, will sound of the distant and the dangerous ocean. At Greenwich, however, the mutilated old sailor has time enough to indulge in the recollection of his early days, with what wisdom he may, to make up his mind to meet in another world those whom his arm may have sent thither long before. Death, at length, gently lays the veteran upon his back—his last words, as the sailor puts his withered hand upon his heart, are, "all's well," and sea and earth have passed away. His body, which had been for forty years a bulwark to the land, now demands of it but "two paces of the vilest earth;" and if aught could spring from the tomb characteristic of its inmate, from the grave of the pensioner would arise the stout unbending oak—it would be his fitting monument; and the carolling of the birds in its branches would be his loud, his artless epitaph.

The Greenwich pensioner, wherever we meet with him, is a fine, quaint memento of our national greatness, and our fortunate locality. We should look upon him as the representative of Neptune, and bend our spirit towards him accordingly. But that is not sufficient; we have individual acknowledgments to make to him for the comforts of a long safety. Let us but consider, as we look at his wooden supporter, that if it had not been for his leg, the cannon ball might have scattered us in our tea parlour—the bullet which deprived him of his orb of vision, might have stricken *Our Village* from our hand, whilst ensconced in our study; the cutlass which cleaved his shoulder, might have demolished our china vase or our globe of golden fish:—instead of which, hemmed round by such walls of stout and honest flesh, we have lived securely, participating in every peaceful and domestic comfort, and neither heard the roar of the cannon nor seen its smoke. Shakspeare has compared England to "a swan's nest" in the world's pool: let us be

nautical in our smiles, and liken her to a single lemon-kernel in a huge bowl of punch: who is it that has prevented the kernel from being ladled down the throat of despotism, from becoming but an atom of the great, loathsome mass?—our Greenwich pensioner. Who has kept our houses from being transformed into barracks, and our cabbage-markets into parades?—again, and again, let it be answered—the Greenwich pensioner. Reader, if the next time you see the tar, you should perchance have with you your wife and smiling family, think that if their tenderness has never been shocked by scenes of blood and terror, you owe such quietude to a Greenwich pensioner. Indeed, I know not if a triennial progress of the Greenwich establishment through the whole kingdom would not be attended with the most beneficial effects—fathers would teach their little ones to lip thanksgivings unto God that they were born in England, as reminded of their happy superiority by the withered form of every Greenwich pensioner!

LOSS OF THE LEOPOLDINA ROSA.

THE following distressing details of the loss of the Leopoldina Rosa, are supplied by a person who was on board—"The Leopoldina Rosa left Bayonne early in May for Monte Video, having on board, besides her captain and crew, 303 passengers, men, women, and children, nearly all industrious emigrants, from the Basque country, who were on their way to the plains of Uruguay. After a long passage, and when approaching her destination, the vessel was assailed by a severe storm, and during the night was thrown on one of the reefs, called the Castillos, on the eastern coast of Uruguay, at a distance of about forty leagues from Monte Video. At daylight, when Captain Frappez, the commander of the Leopoldina, could clearly perceive his situation, it was evident to him that no hope could be entertained of saving the vessel. His attention, was, therefore, exclusively directed to the crew and passengers. He first despatched a boat with a rope for the shore, but the breakers were so high that it foundered immediately; the men who were in it, however, were able to regain the vessel. He then desired a sailor, who was a good swimmer, to take a small rope to the shore tied to his body, with the intention, when landed, of drawing to him a cable attached to the other end, but the man refused as did also all the other sailors who were applied to, although the lives of more than three hundred passengers might have been saved by this act of courage. At length the crew, with the exception of only three men, made arrangements for their own safety, by means of spars, &c. Most of those who remained on board were either deterred from following the example of those who had plunged into the sea, by seeing assembled there an immense number of those wretches, the Gauchos, who watch the wrecks on the coast for the purposes of pillage, and massacre those who offer resistance; or they were parents, whose feelings would not allow them to abandon their offspring. As the day wore, the tempest increased in violence, and the waves swept the deck with fury. All who remained on board sought refuge on the poop or in the cabin, where they were huddled by awaiting death, and having for consolation only the cheering words of the captain, who from time to time visited them, and made them hope for a change in their favour. Captain Frappez never abandoned the hope of safety; and watching the horizon, predicted that the storm would subside with the setting of the sun, as it really did; but, unfortunately, although the sea in the evening became comparatively calm, the breakers at the same time became much more violent. During the whole of this terrible day, the Leopoldina resisted the fury of the waves, but towards five o'clock in the afternoon the stern gave way, and was separated from the body of the vessel. The scene now became dreadful. More than sixty persons, who were standing on the poop when this accident occurred, were in a moment cast into the sea, and nearly all of them, men, women, and children, were drowned. Night now came on, and the waves from time to time swept away several of the poor wretches who were on the portion of the vessel which remained above water. The long boat, which had up to this time been preserved, and which had offered a last chance

of escape, was carried away and dashed to pieces. This was followed almost immediately by the separation of the remaining part of the hull of the Leopoldina, and all who were on it had no other chance of avoiding death than grasping the planks, and sustaining themselves for a time upon them. Only the most robust, however, were able to avail themselves of this success. Those poor creatures who were denied this chance sunk almost immediately, and of the number who had profited by it several were forced off by the waves and drowned; others expired from exhaustion or injury as they touched the shore. Two hundred and thirty-one passengers perished, 72 escaped as by miracle. These were protected from the brutality of the Gauchos by the firmness of Don Vincinti Acosta and Don Natalio Molina, who were on the spot to render assistance. The survivors were subsequently taken on board the French schooner L'Eclair, where they were treated with great kindness. Amongst the sufferers was the captain of the Leopoldina, who remained with his vessel until she went entirely to pieces, when, seizing a plank, he endeavoured to reach the shore, but was dashed against the rocks and killed.

STORM AND APPALLING SHIPWRECK.

ON Friday, November 29, 1839, the coast of Scotland experienced a severe storm, which, it is to be dreaded, has caused extensive devastation amongst the shipping. We have just received authentic accounts of a melancholy shipwreck which happened on the coast of Fife, immediately opposite Boarhills near King's Barns, and about half-way between Fife Ness and St. Andrew's. The details of this disastrous occurrence are truly lamentable. On Friday afternoon, about five o'clock, a vessel was observed at a considerable distance from the coast, apparently labouring under great distress, and in vain attempting to round Fife Ness. The raging of the storm, and the darkness of the night, prevented the Coast Guard on shore from keeping the vessel in sight; but the only survivor of the crew gives a succinct account of the deplorable catastrophe. The vessel was the Peterel, of Stockton-on-Tees, David Parry, master, bound from Dalhousie, in North America, to Stockton, with timber. She was a new brig of about 200 tons burthen. After night closed in, the captain and crew did everything in their power to keep the vessel at sea, but in vain. She was gradually driven by the force of the gale towards the shore. At about one o'clock they let go both anchors, which were immediately dragged, and shortly afterwards the vessel was thrown with tremendous force on the rocks. The crew took to the rigging, but in a moment a resistless sea broke over the Peterel, and with awful violence split her in two, fair along the middle of the deck. In the dreadful confusion of that terrible crisis the survivor dropped from his place on the rigging upon a log floating on the surface of the water. On it, however, his life was exposed to dreadful hazard. The cargo was tossed about by the waves as if the immense logs of wood were light as straws; and the risk of being crushed to death in their collision was described as ten times greater than that of drowning. The poor fellow, however, clung to his last hope, and was at length thrown, in an exceedingly exhausted state upon the beach. With the greatest exertion he managed to crawl a short distance from the sea; and, exposed to the bitter blast of that dreadful night, almost dead with fatigue, cold and hunger, he awaited the dawn of morning. It displayed a fearful prospect to the inhabitants of the neighbourhood. The vessel was literally dashed to pieces, and the shore, to a very considerable extent, was strewn with fragments of the wreck, and considerable portions of the cargo. But a more melancholy and heart-rending sight was prepared for the spectators. The bodies of six of the crew, and that of a lady, were found on the beach, and the poor fellow—the sole survivor of the merciless havoc of the storm—was discovered almost insensible, crouching behind a dyke near the shore. His name was found to be Henry Thoms, and he is a native of Wales. He stated that the vessel, on her homeward voyage, touched at Stromness, being wind-bound,

and the lady whose body was found, had embarked at that port. Her trunk was cast on shore, and on being opened there was found inside a valuable gold watch, £400 in bills, and a quantity of wearing apparel. Her name was ascertained to be Elizabeth Westgaff, and the papers contained in the trunk lead us to suppose that she belongs to Richmond, in Yorkshire. Henry Thoms does not appear to be acquainted with the surnames of his brother seamen. The six cast on shore were fine stout fellows, about thirty years of age. Altogether there were nine of a crew, with one passenger. A black man and a boy are still missing.

THE CASKET LIGHTS

ARE built on a rock forming the extremity of a broken ledge, which extends in a westerly and northerly direction from Alderney about seven miles. From the nearest, or most northerly point of Guernsey, they bear north and by east, distant about twelve miles, and are visible in clear weather from the most distant parts of the island.

The rock is of a whitish sand-stone, drawing to a rose-colour, and assumes a singular appearance by taking a schistic form. Two transversal and parallel fissures are particularly remarkable. It rises about thirty feet above the level of the sea; and the top of the towers or lanterns about fifty.

Three towers, placed triangularly, are connected by walls forming an area, which contains a plot of ground where a few vegetables are grown in soil brought from Alderney; a small house for the accommodation of the agent of the Trinity-house, when he may have occasion to visit the establishment; a bake-house, and conveniences for the workmen who may occasionally come to make the necessary repairs, such as a carpenter's shop, &c.

In each lantern is a reflector, round which a circle of Argand lamps revolve horizontally, by a simple machine, not unlike that of a common culinary jack. The projection, *en potence*, to the right of one of the towers, shelters from the weather the pulleys and weight which work its revolver; the tower itself not being of a sufficient height from the rock, to afford play to the machinery which is necessary, so as to enable it to have a simultaneous action with that of the others.

The revolving of the lamps produces a twinkling effect, which with their number, should sufficiently distinguish these lights from others. A Russian man-of-war was, notwithstanding, lost here some years ago. This vessel was observed in the night steering for the Caskets, but bearing a little to the eastward, and consequently between the Caskets and Alderney. On passing through a narrow interstice in the ledge, so as to be clear of all the dangers, she was seen to tack, apparently for the purpose of getting to the westward of the rock, when she struck, and every soul perished!

These unfortunate people are supposed, on entering the British Channel, to have first made these lights, and that in such a direction as to keep two in one, thus mistaking them for the Lizard-lights, until they came abreast of the rock, when they opened the third, found their error, and by endeavouring to extricate themselves, were precipitated into that destruction which the spectators thought they had most miraculously avoided.

The interior economy of this place cannot, we think, fail to be interesting to our readers. The inhabitants generally consist of one family, whose duty is rather severe—watching and trimming the lamps at night—particularly in winter, when the spray of the sea flies over, perhaps to double the height of the towers, and the waves dashing with such violence as to break the panes of glass of the lanterns, although of an extraordinary thickness.

Their supplies of the necessities of life from the Trinity-house, consisting of the best salt meat, biscuit, flour, &c. &c., are very liberal, and of the first quality. They occasionally, when the weather permits, receive fresh provisions and vegetables from Alderney. When to this is added their own poultry, with the produce of their garden, the great abundance of fish which they catch from the rock in summer, and either consume fresh, or cure for their winter use, their situation is, in

this respect, most comfortable; and indeed the air of content, the personal cleanliness and cheerfulness of these people were remarkable.

One mode of fishing deserves mentioning for its ingenuity. A lobster-pot, properly loaded to insure its sinking, was placed on a float, and to each was attached a cord held by the fisherman, who suffered this apparatus to be carried away by the current, until in a proper situation, when, by twitching away the float, the pot sunk, and was pulled in after remaining a sufficient time.

Rain-water they save in cisterns, usually adequate to their wants, although in dry-seasons it has been necessary to procure a supply from Alderney.

It may be worthy of remark that pigeons quickly degenerate here in size, probably from the want of green vegetable food. An eagle which had taken up its abode on one of the neighbouring rocks, some years ago, carried off many.

In the dark winter nights it is not unusual for wild fowl attracted by the light, to dash themselves against the glass, and be taken up dead in the morning.

There are two landing places for boats, which are impracticable but in calm weather, and scarcely ever both at the same time; in consequence of which, they have certain signals to point out the safest. And on the subject of signals, it should not be forgotten that they have a telegraph, with which they communicate with Alderney.

A CALM AT SEA.

ABOUT the time of the failing of the wind, the obscure vapour which had so long prevailed, melted into a thin and yellow haze, through which a tropical sun transfused, with power unsubdued, its majesty of light, and furnace glow of heat.

It is, perhaps, chiefly owing to the oppressive influence of climate, and the languor it induces, joined with the monotony of maritime life, without exertion, that the crew of a ship becalmed in the Indian Ocean, so often lose all self-confidence, and give way to nervous impressions of despondency. It is certain at least, that such feelings are sometimes carried so far, that, grown wild with a pining desire for that home which he fancies he shall never revisit, the young voyager has been known to leave his cot, and pass over the side of the ship, under the delirious impression that the sea around him, grown vividly green from the reflection of the amber-tinted haze which then frequently prevails, is nothing less than the beloved fields that witnessed the sports of his childhood; and from this flattering delusion, the doomed wretch is only awakened as the waters engulf him in their cold embrace for ever.

Predisposed by the occurrence of so many real and fictitious dangers, the crew of the Ganges now readily gave way to the enervating influence of their situation. Without present occupation, or certainty as to the future, they huddled together in detached groups, and seeking the coolest parts of the ship, spent the tedious hours in recounting marvellous adventures, said to have been encountered by hapless mariners.

Among other prodigies, the histories of such fatal calms were related; and how the elemental lethargy had been prolonged, from weeks to months, until at last the grinding pains of famine clung to a whole ship's company.

And then they told, how, day by day, the men grew ravenous, and found the sodden leather from the ship's pumps, and their very shoes, delicious food: and then, when these were gone, and hours had rolled on hours, without a chance of hope, though each to patience was an age!—how, like a troop of wolves at bay, they circled round, and watched, with greedy joy, the last faint struggles of a messmate, expiring of the hunger felt by all.

And how before the death film had altogether dimmed his dying eyes, the limp and wasted limbs were gashed; and how, with vampire-thirst, they drained the empty veins, tore the shrivelled sinews from the bones, and gorged to madness on the soul-revolting banquet.

INHUMANITY OF EARL ST. VINCENT.

FOUR sailors, who had exhibited symptoms of mutinous conduct on board the *St. George*, were promptly and gallantly seized by two of the officers; a boat was immediately lowered down, and the prisoners were conveyed on board the *Ville de Paris*, on board of which ship they were put in irons, and kept under the poop-awning, in charge of two sentinels, and under the eye of the lieutenant of the watch. A court-martial was ordered for the following day; and when the prisoners crossed the quarter-deck to go into the boat, and be conveyed to the flag-ship of the second in command, Lord St. Vincent thus addressed them: "My friends, I hope you are innocent; but, if guilty, I recommend you instantly to set about making your peace with God; for if you are condemned, and there is daylight to hang you, you will die this day."

They were all condemned—but it was late before the trial was over; and the president of the court-martial told them that they should have till Monday morning to prepare themselves. Having said this, he carried the proceedings of the court, and the sentence, to the commander-in-chief.

Lord St. Vincent said: "Sir, when you passed the sentence your duty was complete—you had no right to say that the execution of it should be suspended;" and he instantly gave out an order that it should be carried into effect on the following morning, Sunday, at nine o'clock.

It had been the usual practice in the navy for the boat's crews of the different ships, which attended on these occasions, to draw lots which of them should go on board the ship where the punishment was to take place, to man the yard-rope, and assist in the execution; but on this occasion the admiral, in order to mark his displeasure at the conduct of the crew of the *St. George*, desired that they alone should be the executioners. He also commanded, that as soon as the culprits were suspended at the yard-arm, every ship in the fleet should proceed to the performance of divine service. Accordingly, at the appointed time the fatal gun was fired, and the unhappy men were run up in the midst of the smoke of it; each ship then hoisted a pendant at her mizen-peak, the signal for divine service, and all were assembled at prayers. Such was Sunday morning under the command of Earl St. Vincent!

The biographer, however, has not stated that this president of the court-martial—the gallant Sir Charles Thompson—was so disgusted with the treatment he received on the occasion, that he returned to England very shortly afterwards. Nor is the anecdote fully related. Sir Charles went on board the flag-ship, and on reminding his lordship that the following day was Sunday, St. Vincent replied, with asperity, "I don't want you to tell me what day it is. I know the day of the week as well as you do, sir. You have only to obey my orders." The rear-admiral retired, and the mandate took its course—

"For who shall e'er the argument confute,
Where power prevails, and no man dare dispute?"

SAILING SONG.

We have left the still earth for the billows and breeze,
Neath the brightest of moons on the bluest of seas;
We have music—hark! hark! there's a tone o'er the deep,
Like the murmuring breath of a lion asleep.
There's enough of bold dash in the rich foam that laves,
Just to whisper the slumber-wrapt might of the waves;
But yet there's a sweetness about the full swell,
Like the song of the mermaid—the chords of the shell.

We have jewels—oh! what is your casket of gems
To the pearls hanging thick on the red coral stems?
Are there homes of more light than the one where we are?
For it nestles the dolphin and mirrors the star.
We may creep, we may scud, we may rest, we may fly;
There's no check to our speed, there's no dust for our eye.
Oh! well may our spirits grow wild as the breeze,
Neath the brightest of moons on the bluest of seas!

THE FRENCH MARINER.

A BALLAD.

By Robert Bloomfield.

An old French Mariner am I,
Whom time hath rendered poor and gray.
Hear, conquering Britons, ere I die,
What anguish prompts me thus to say.

I've rode o'er many a dreadful wave,
I've seen the reeking blood descend;
I've heard the last groans of the brave;
The shipmate dear, the steady friend.

'Twas when De Grasse the battle joined,
And struck on April's natal morn:
I left three smiling boys behind,
And saw my country's lily torn.

There as I braved the storms of fate,
Dead in my arms my brother fell;
Here sits forlorn his widow'd mate,
Who weeps whene'er the tale I tell.

Thy reign, sweet Peace, was o'er too soon,
War, piecemeal, robs me of my joy;
For, on the blood-stained first of June,
Death took my eldest favourite boy.

The other two enraged arose,
"Our country claims our lives," they said,
With them I lost my soul's repose,
That fatal hour my last hope fled,

With Brueys the proud Nile they sought,
Where one in lingering wounds expired;
While yet the other bravely fought,
The Orient's magazine was fired.

And must I mourn my country's shame,
And envious curse the conquering foe!
No more I feel that thirst of fame;
All I can feel is private woe.

E'en all the joy that vict'ry brings,
(Her bellowing guns and flaming pride)
Cold momentary comfort flings
Around where weeping friends reside.

Whose blighted bud no sun shall cheer,
Whose lamp of life no longer shine;
Some parent, brother, child most dear,
Who ventured and who died like mine.

Proud crested fiend, the world's worst foe,
Ambition; canst thou boast one deed,
Whence no unsightly horrors flow,
Nor private peace is seen to bleed?

Ah! why do these old eyes remain
To see succeeding mornings rise!
My wife is dead, my children slain,
And poverty is all my prize.

Yet shall not poor enfeebled age
Breath forth revenge;—but kneel and pray—
O God, who seest the battle's rage,
Take from men's hearts that rage away.

From the vindictive tongue of strife,
Bid hatred and false glory flee;
That babes may meet advancing life,
Nor feel the woes that light on me.

LOSS OF THE LADY HOBART.

THE packet-ship, *Lady Hobart*, commanded by Captain William D. Fellowes, bound for England, sailed from Halifax on June 23, 1803, and on the 24th hauled to the northward, intending to pass over the northern part of the Great Bank of Newfoundland, with a view to avoid the enemy's cruisers.

On the 26th, at seven, a.m., being then in latitude $44^{\circ} 37'$, and longitude $51^{\circ} 20'$, they discovered a large schooner, under French colours, with her deck full of men, standing towards them. From her manner of bearing down upon them, they concluded that she had been apprised of the war, which had just then commenced, and took the *Lady Hobart* for a merchant brig. They accordingly cleared the deck for action, and at

eight, the schooner being within range of her guns, the *Lady Hobart* fired a shot at her, when the schooner struck her colours. Having sent some men on board to take possession of her, she proved to be *L'Amiable Julie*, of Port Liberté, of eighty tons burthen, a new and strong-built vessel, from the island of St. Pierre, laden with salt fish, and commanded by Charles Rossé.

After taking out the captain and crew, the prize was given in charge to lieutenants John Little and William Hughes, of his majesty's navy, who were passengers on board the *Lady Hobart*, and who very handsomely volunteered their services, taking with them two seamen and two of the prisoners to assist in navigating the prize. At ten o'clock the same morning, they saw two schooners a-head, fired a gun, and brought them to;

LOSS OF THE LADY HOBART PACKET, CAPTAIN FELLOWES, ON AN ISLAND OF ICE, JUNE 28TH, 1803.

when finding them to be English, and bound to St. John's, the French prisoners were divided between them, with the exception of the captain, mate, and a boy, nephew to the captain, who earnestly entreated that they might remain on board the packet.

On Tuesday, June 28, it blew a hard gale from the westward, with a heavy sea, hazy weather, and intervals of thick fog. About one o'clock in the morning, when the ship was going at the rate of seven miles an hour by the log, she struck against an island of ice with such violence, that several of the crew were pitched out of their hammocks. The captain was roused from his sleep by the suddenness of the shock, and instantly ran upon deck, and ordered the helm to be put hard a-port, when the ship struck again upon the chest-tree, and then swung round upon her heel, the stern-post being stove in, and the

No. 24.

rudder carried away, before they could succeed in their attempts to haul her off. At this time, the ice appeared to hang quite over the ship, forming a high peak, which must have been at least twice the height of their topmast head. The length of the island, as near as they could judge, was from a quarter to half a mile.

The sea was now breaking over the ice in a frightful manner, and the water rushed in so fast, that in a very few minutes the hold was completely filled. Every exertion was made to lighten the ship; the guns were hove overboard, the anchors were cut away from the bows, two sails were got under the ship's bottom, both pumps kept going, and they also baled with buckets from the main-hatchway, in the hope of preventing her from sinking; but notwithstanding all their efforts, she settled down in the water to her fore-chains in less than a quarter of an hour.

Their situation now became perilous in the extreme. The captain, who was aware of the danger of a moment's delay in hoisting out the boats, immediately consulted with Captain Thomas, of the royal navy, who was a passenger, and Mr. Bargus, the master, as to the propriety of making any further efforts to save the ship, and also as to the possibility of taking the mail into the boats, in the event of their being able to get them over the ship's side. They agreed that no time ought to be lost in hoisting the boats out, and that, as the vessel was then settling fast, the preservation of the crew should be their first consideration.

That tribute of praise, which the steady discipline and good conduct of all on board so justly merit, ought not to be omitted. From the first moment of the ship's striking, not a word was

uttered expressive of a desire to leave the wreck. The orders of the captain were promptly obeyed; and though every moment increased the danger of perishing, each man waited his turn to get into the boats, with a coolness and composure which was never surpassed, and scarcely ever equalled.

Having fortunately succeeded in hoisting out the cutter and jolly-boat, the sea still running very high, they placed the ladies in the former. One young lady, Miss Cottenham, was so terrified, that she sprung from the gunwale and pitched into the bottom of the boat with considerable violence; but although such an accident might have been productive of effects equally fatal to herself and them all, it was not attended by any bad consequences. The few provisions which had been saved from the men's berths were then put into the boats, which were

quickly veered astern. The main-deck forward was by this time under water; and nothing but the quarter-deck appeared. The men were then ordered into the boats, and the mail, after being lashed to some iron pigs of ballast, was thrown overboard.

The ship was now rapidly sinking, when the captain, having used every exertion to save his men, called out to them to haul up and receive him, as, fearing the cutter might be stove under the counter, he intended to drop himself into her from the end of the trysail boom. He desired Mr. Bargus, the master, who remained with him on the wreck to go over first; but in this instance he replied, that he begged leave to disobey his orders, adding, that he must see the captain safely over before he attempted to go himself. On such noble behaviour, the captain, in his despatches, observes, "Such conduct, at such a

moment, requires no comment; but I should be wanting to myself and to the service, if I did not faithfully state to your lordships (the postmasters general,) every circumstance, however trifling; and it is highly satisfactory to me to have this opportunity of recording an incident so honourable to a meritorious officer."

The sea ran so high at the time the boats were hoisted out, that they hardly dared flatter themselves they should get them out in safety. Indeed, nothing but the steady and orderly conduct of the crew could have enabled them to effect an undertaking which was attended with so much difficulty and danger; and it is but justice to observe, that not a man in the ship attempted to make use of the liquor, which every one had in his power. As an instance of this resolution and self-denial on

the part of the men, one of them, John Tipper, was observed emptying a demi-jean, or five-gallon bottle, which on inquiry proved to be rum. He said he was emptying it for the purpose of filling it with water from the scuttle cask on the quarter-deck, which was the only fresh water that could be got at, a circumstance highly creditable to the character of a British sailor; and the water thus procured afterwards became their principal supply.

They had scarcely quitted the ship, when she suddenly gave a heavy lurch to port, and went down head foremost, the boats narrowly escaping being swallowed up in the vortex caused by the sinking of the vessel. The colours had been hoisted at the maintop-gallant-mast-head with the union downwards, as a signal of distress, so that if any vessel should happen to be near them at the dawn of day, she might perceive their calamitous situation, and afford them relief.

It is impossible to describe the feelings and sensations of these unfortunate people, thus suddenly exposed in two open boats upon the vast Atlantic Ocean, and bereft of all assistance, but what their own exertions could, under Providence, afford them. Men accustomed to vicissitudes are not soon dejected; but there are trials which human nature alone cannot surmount. The consciousness of having done their duty, and a reliance upon the mercies of a kind Providence, enabled them to endure their calamity, and with the confident hope of better fortune, they animated each other to increased exertions to attain it.

While they were employed in deliberating upon their future course, a curious circumstance occurred, which, as it caused them a considerable degree of uneasiness, deserves to be mentioned. At the moment when the ship was sinking, she was surrounded by an amazing number of whales, which at this season of the year repair to the coast of Newfoundland, in quest of a small fish called capelin. As the whales approached the boats, the men were extremely apprehensive that they might strike and materially damage them, as frequent instances have occurred in the fishery, where boats have been cut asunder by a single blow from a whale. They therefore shouted as loud as they could, and employed every effort to scare them away, but all to no effect; for the whales appeared to be pursuing them, and remained about the boats for more than half an hour, when they disappeared without having done them any injury.

After surmounting difficulties and dangers which baffle all description, they rigged the foremast, and prepared to shape their course in the best manner that circumstances would admit, the wind blowing precisely from the point towards which it was necessary to sail to reach the nearest land. The crew were distributed in the boats in the following manner:—

In the cutter, which was twenty feet long, six feet four inches broad, and two feet six inches deep, were embarked three ladies, the captain of the *Lady Hobart*, Captain Richard Thomas, of the royal navy, the commander of the French schooner, which they had taken two days before, the master's mate, gunner, steward, carpenter, and eight seamen, being eighteen persons in all; whose weight, together with that of the provisions, brought the gunwale of the boat within six or seven inches of the water. From this confined space, some idea may be formed of their crowded state; but it is scarcely possible for the imagination to conceive the extent of their sufferings in consequence of it.

In the jolly-boat which was fourteen feet from stem to stern, five feet three inches broad, and two feet deep, were Mr. Samuel Bargus, master; Lieutenant-Colonel George Cooke, of the first regiment of guards; the boatswain, sail-maker, and seven seamen; being eleven persons in all.

The only provisions which they had time to save, consisted of about forty or fifty pounds of bread, one demi-jean, and a small jug of water, part of a small barrel of spruce beer, one demi-jean of rum, a few bottles of port wine, two compasses, a quadrant, a spy-glass, a small tin mug, and a wine-glass. The deck-lantern, containing a few spare candles, had also been thrown into the boat; and the cook having taken the precaution to secure his tinder-box, together with a few matches that were kept in a bladder, they were thus enabled to steer by night.

Scarcely an hour elapsed from the time the ship struck till she foundered; and the boats left the fatal spot just as the day

dawned. As near as they could estimate, they were about 350 miles from St. John's, Newfoundland, and had the wind have continued westerly, as there appeared every prospect of its doing, it would have been found necessary to exercise the most rigid economy in the consumption of their provisions. For this purpose the captain addressed them on the propriety of at once submitting to privation, which must soon be inevitable, and concluded by ordering half a biscuit and a glass of wine to each individual, which was to be the whole allowance for the ensuing twenty four hours, all of them agreeing to leave the water untouched as long as possible.

While they were employed in hoisting out the boats, the captain had ordered the master to throw the main-hatch tarpauling into the cutter, which being afterwards cut into lengths, enabled them to form a temporary bulwark against the waves. The carpenter had also been ordered to carry with him as many tools as he could; he accordingly, among other things, put a few nails in his pockets, with which they repaired the gunwale of the cutter that had been stove in hoisting her out.

Soon after daylight, they made sail with the cutter, and took the jolly boat in tow, standing close-hauled to the northward and westward, in the hope of reaching the coast of Newfoundland, or of being picked up by some vessel. They passed two islands of ice, and shortly afterwards, said prayers, fervently returning thanks to the Almighty for their providential deliverance. At noon, they were, by observation, in lat. 46° 33' N., St. John's bearing about W. $\frac{1}{4}$ N., distant 350 miles.

Wednesday, June the 29th, was ushered in with variable winds from the southward and eastward. They had passed a long and sleepless night, and at the dawn of day, the captain found himself with twenty-eight persons looking up to him with anxiety for the distribution of their scanty allowance, and also for the direction of their course. Upon examining their provisions, they found the bag of biscuit much damaged by salt water, which made it necessary for them to diminish their allowance; and to this precaution they all cheerfully assented. It was at this moment that they became more sensible to the horrors of their situation, but grateful to Providence they returned thanks for past mercies, and offered up prayers for their future safety.

Soon afterwards a thick fog came on, which continued the whole day, with heavy rain, but as they had no means of collecting it, it afforded them no relief; and their crowded and exposed situation was rendered still more distressing by their being thoroughly wet, as no person had been permitted to take more than a great coat or a blanket, besides the clothes on his back.

The oars in both boats were kept constantly going, steering a W.N.W. course, and every one anxiously looking out for a sail. At noon, a quarter of a biscuit and a glass of rum were served to each person. St. John's bore W. by N. $\frac{1}{4}$ N., distant 310 miles—no observation. One of the ladies again read prayers, particularly that for deliverance after a storm.

On Thursday, June 30th, at day-break, they were all so benumbed with wet and cold, that a glass of rum and a mouthful of biscuit were served out to each person. The ladies, who before had refused to taste the spirits, were now prevailed on to take the stated allowance, which afforded them much benefit, and enabled them the better to resist the severity of the weather. The air was raw and cold, with thick fog and sleet, and the sea was mostly calm. They had kept at their oars all night, and continued to row during the whole of this day. The jolly-boat having unfortunately put off from the ship with only three oars, and having but a small sail, which had been converted from a foresail into a top-gallant steering-sail, without needles or twine, the cutter was obliged to keep her constantly in tow. The cutter had likewise lost two of her oars in hoisting out, and was now so deep in the water that, with the least sea, she made so little way, that they were unable to profit much by the light winds.

One of the men in the jolly-boat called out that they had found part of a cold ham, which had not been discovered before; a morsel, about the size of a nutmeg, was immediately distributed to each person, but the captain had the remainder thrown overboard, as he was fearful that it might create an intolerable

thirst, which they had no means of assuaging. At noon, they judged they were on the north-eastern edge of the Grand Bank, St. John's bearing W. by N. $\frac{1}{4}$ N., distant about 246 miles. On this day divine service was performed, in which all fervently joined.

On Friday, July 1st, it blew a hard gale from the W.S.W. during the greater part of the day, with a heavy sea from the same quarter. The weather was excessively cold, and the spray of the sea freezing as it flew over the boats, rendered their situation truly deplorable. The want of nourishment, coupled with the cold and wet weather, had produced a most painful depression of spirits, and rendered them almost incapable of exertion; added to which, the very confined space in the boat would not allow them to stretch their limbs, that several of the men whose feet were much swelled, called out repeatedly for water; but on being reminded of their former resolution, and the absolute necessity of strictly adhering to it, they acknowledged the propriety of its being refused to them, and the water remained untouched.

At the commencement of the gale they stood to the northward and westward; but the cutter was so low in the water, that they were obliged to cast off the jolly-boat's tow-rope, and very soon lost sight of her in the fog. This unfortunate circumstance caused all of them the utmost distress; as they were uncertain of ever again meeting their companions in misfortune; and to add to the misery of their situation, they lost with the boat, not only a considerable part of their stores, but also their quadrant and spy-glass. About four, p.m., the gale increasing, with a prodigiously heavy sea, they brought the cutter to, by heaving the boat's sail loose over the bow, and veering it out with a rope bent to each yard-arm, which kept her head to the sea, and broke the force of the waves before they reached them.

In the course of this day there were repeated cries of a strange sail being in sight; and although the captain was aware that it was next to impossible to discern any thing, owing to the thickness of the fog, yet, being urged by many of the seamen with such apparent certainty, he was induced to put the boat before the wind; the rather to convince them of their error, than with any expectation of their hopes being realized. But the captain being convinced of the dangerous consequences of such deviations, remonstrated with them on the subject, representing in language as forcible as he could command, that the depression arising from disappointment infinitely overbalanced the momentary relief proceeding from such delusive expectations, and exhorted them not to indulge in such fancies. Under all these circumstances, the ladies, with a heroism that no words can sufficiently do justice to, afforded the best examples of patience and fortitude.

They all joined in prayer, which tended greatly to calm their minds, and inspired them with the consolatory hope of an alleviation to their sufferings. On these solemn occasions they were all bareheaded, notwithstanding the showers that were incessantly falling. At noon, St. John's bore W. by N. $\frac{1}{4}$ N. distant 148 miles.

On Saturday, July 2, having rained hard during the night, the cold became so intense that almost every person in the boat was unable to move. Their hands and feet were so swelled that many of them turned quite black, owing to their confined state and constant exposure to wet and cold. At day-break each person was served with a quarter of a biscuit, and a third of a wine-glassful of rum, and before noon, a small quantity of spruce-beer, from which they derived great benefit. During the early part of the day, it blew strong from the southward and westward, with thick fogs, which, towards noon, was succeeded by moderate breezes from the northward and eastward.

At half-past eleven, a.m., they discovered a sail to the eastward, standing to the north-west, the sight of which inspired them all with the hope of immediate deliverance, and animated them with new life. The captain immediately ordered the people to sit as close as possible, in order that they might not appear too much like an armed boat; and, having tied one of the ladies' shawls to the boat-hook, he raised himself, as well as he could, and waved it from the bow as long as his strength would permit. Having hauled close to the wind, they neared each other fast, and in less than a quarter of an hour, to their

joyful surprise, they perceived that it was their long-lost consort, the jolly-boat. They would have recognised her sooner, but an additional sail had been made for her out of one of the bed-sheets, which had been accidentally thrown into the boat, and was set as a bonnet to the foresail.

It would be impossible to describe the various sensations alternately expressed in every countenance—joy at the unexpected re-union with their long-lost friends and companions in misfortune, and disappointment to all their hopes of relief from their perilous situation. As soon as they approached, the cutter threw out a tow-rope to the jolly-boat, and bore away to the north-west.

They now mutually inquired into the state of their respective crews, after the late dreadful gale; those in the jolly-boat had suffered from swelled hands and feet, the same as the others, and had experienced the greatest anxiety for the fate of the cutter, as they concluded she must have perished. The most singular circumstance was, that having steered for two nights without any light, they should, after such tempestuous weather, meet again; which could only be attributed to the interposition of Divine Providence: but fearing a similar accident might occur, they made a more equal distribution of the provisions; the cutter having received of the jolly-boat two bottles of wine and some biscuit, gave them some rum in return.

The late occurrence had raised their hopes of deliverance to the highest pitch, but the excitement beginning gradually to subside, a corresponding despondency succeeded to such a state of artificial elevation, that no argument or entreaty could rouse some of the men to the ordinary exertions of making sail.

The captain now, for the first time, served out a wine-glassful of water to the French captain and several of the people who appeared to have suffered most, and earnestly cautioned the crew not to taste the salt water; some of them, nevertheless, took large draughts and became delirious, while others were seized with violent cramps in the stomach and bowels.

This day divine service was again performed at noon, St. John's bore W. by N. $\frac{3}{4}$, distant 110 miles.

On Sunday July 3rd, the cold was intense; indeed, it is hardly possible for language to describe the sufferings and distress of this miserable crew from cold, wet, hunger, and thirst. At eight, p.m., having a strong breeze from the southward, the cutter stood under all the canvass they could spread, with the jolly-boat following in her wake and pulling her oars to keep up with them. The French captain, who had been for some days labouring under a despondency which admitted of no consolation, in a fit of delirium jumped overboard, and instantly sunk; and the cutter was going at such a rate, with the oars lashed to the gunwale, that it would have been impossible to have attempted to save him, even if he had floated. One of the prisoners also, in the jolly-boat, became so outrageous that it was found necessary to lash him to the bottom.

This circumstance deeply affected them all; indeed, the most trifling accident was sufficient to render their irritable state more painful. The captain of the Lady Hobart was seized with a violent shivering, which returned at intervals, and having refused all sustenance, his situation became very alarming; however, towards night he enjoyed, for the first time, three or four hours sleep; perspiration took place, and he awoke as from a dream, free from delirium, but painfully alive to all the horrors that surrounded them.

The sea continued to break over the boats so much, that those who had strength enough, were obliged to bale without intermission. Those in the stern of the cutter were so confined that it was difficult for any one to put his hand into his pocket, and most of the crew lay in water at the bottom of the boat.

The return of day brought them no relief but its light. The sun had only once cheered them during the whole of their perilous voyage, and those who obtained a few hours of uninterrupted sleep, awoke to all the consciousness of their misery.

A very heavy gale of wind came on from the southward, with a tremendous sea, so that the utmost vigilance was necessary in managing the helm, as the smallest deviation would have broached the boats to, and hurried them to destruction. They scudded before it, expecting each returning wave to overwhelm them; but, through the providence of Almighty God,

they weathered the storm, which, towards night, began to abate. They had now nearly run the whole distance they had supposed themselves from St. John's, but the thickness of the fog prevented them from seeing to any extent.

Towards evening they passed several pieces of rock-weed, and soon afterwards Captain Thomas saw the wing of a backdown, an aquatic bird, that frequents the coast of Newfoundland, and is much eaten by the fishermen. This circumstance inspired them with great hopes of their approaching the land; and every person was employed in attentively observing what passed the boats. Soon after, a beautiful white bird, web-footed, and not unlike a dove in size and plumage, hovered over the mast-head of the cutter, and, notwithstanding the pitching of the boat, frequently attempted to perch on it, and continued to flutter there till dark. This circumstance, trifling as it may appear, was considered by them all as a propitious omen, and awakened in them a superstition to which sailors are said to be at all times too much addicted.

As they had every reason to conclude that they were well in with the land, the few who were able to move, were called upon to make a last exertion to save their lives by rowing, and take advantage of the little breeze which they then had. It was strongly urged, that should the wind come off the shore in the morning, and drive them to leeward, that all efforts to regain it might be too late; for, independent of their feeble state, the provisions could not, with the most rigid economy, last more than two days; nor could the water which had remained untouched, except in the instances before mentioned, hold out much longer. They had been six days and nights constantly wet and cold, without any other sustenance than a quarter of a biseuit and one wine-glass of liquid for twenty-four hours. But the men who had appeared totally indifferent to their fate, now summoned resolution, and as many as were able to move, applied themselves to the oars.

On the morning of Monday, July 4, the fog grew so thick that they could not see far from the boat. During the night the cutter had been under the necessity of casting off the jolly-boat's tow-rope; and having lost sight of her, this unlucky accident gave them some uneasiness. Several of them repeatedly declared that they heard breakers, and others the firing of guns, as of a ship in distress, but this afterwards proved to be the noise of the blowing of whales, of which they saw a great number.

Soon after daylight, the sun rose in view, for the second time since they quitted the wreck, and at length the fog began to disperse, when they caught a glimpse of the land about a mile distant, between Kettle Cove and Island Cove, in Conception Bay, fourteen leagues from the harbour of St. John; and almost at the same moment they had the inexpressible satisfaction to discover the jolly-boat and a schooner standing off towards them from the shore.

It is almost impossible to describe their sensations at this interesting moment. Many burst into tears, some looked at each other with a stupid stare, as if doubtful of the reality of what they saw; while several remained in such a lethargic state, that no language, however animating and consolatory, could rouse them to exertion.

At this moment the captain, though overpowered by his own sensations, yet impressed with the recollection of their sufferings, and the sight of so many deplorable objects, proposed to offer up their thanks to heaven for their miraculous deliverance. To this they all cheerfully assented, and as soon as he had opened the prayer-book, which he had secured the last time he went down into the cabin, a universal silence prevailed: a spirit of devotion was manifested in such a striking manner on this occasion, that to a sense of religion in uncultivated minds, must be ascribed the discipline, good order, and exertion, which even the sight of land could not produce.

The schooner being now within hail, and being made acquainted with their situation, she hove-to, received them on board, and took their boats in tow; but as the wind blew with great violence off the coast, they did not reach the landing place at Island Cove till four o'clock in the afternoon. All the women and children, with two or three fishermen, the remainder being absent, repaired to the beach, and appeared deeply affected at their wretched situation. They assisted in

lifting them out of the vessel and carrying them over the crazy rocks, over which they were obliged to pass in order to reach their habitations.

It was fortunate for them, that they fell in with the land about Island Bay; as the coast a few miles further northward was inaccessible, and lined with dangerous reefs of rocks, for which they would have steered had they seen them in the night.

The three ladies, Colonel Cooke, Captain Thomas, and Captain Fellowes, were conducted to the house of Mr. Lilly, a planter, who received them with great attention and humanity; but as this small village afforded neither medical aid, nor fresh provisions, Captain Fellowes resolved to lose no time in proceeding to St. John's; for which purpose he hired a small vessel, and placing in her the most infirm, they embarked on July 7, in three divisions, the master's mate having charge of the cutter, and the boatswain of the jolly-boat. Such, however, was the exhausted state of almost the whole party, that the day was considerably advanced before they could get under way.

At two, p.m., they made sail with the jolly-boat in tow and the cutter in company, standing along the coast of Newfoundland with a favourable breeze; but towards dusk it began to blow in squalls off the shore, when they lost sight of the cutter, and were soon obliged to come to an anchor outside of St. John's harbour. They entertained great apprehensions for the safety of the cutter, as she had no grapnel, and they feared that she might be driven out to sea.

The party above-mentioned, conducted by Mr. Lilly in the jolly-boat, left the schooner where she anchored, and, notwithstanding the bad weather and extreme darkness, reached the shore about midnight. There being no house open at that late hour, they for some time wandered about the streets, till at length they obtained admittance into a small house, where they passed the remainder of the night upon chairs, as it contained but one miserable bed for the ladies.

At daylight, to their infinite satisfaction, they observed the cutter and schooner entering the harbour; the former having had the good fortune to fall in with a fishing vessel, to which she made fast during the night.

Early in the morning, their circumstances being made known, hundreds of people crowded down to the landing-place. Nothing could exceed their astonishment when they saw the boats which carried twenty-nine persons over such a boisterous sea; and when they beheld so many miserable objects, they were unable to conceal their emotions of pity and concern. Captain Fellowes waited upon Brigadier-General Skeritt, the commander of the garrison, who, on being informed of their situation, immediately ordered down a party of soldiers to take the people out of the boats, and with the utmost kindness and humanity directed beds and every necessary article to be prepared for the crew.

The greatest caution was found necessary in administering nourishment to the men, as several of them were so frost-bitten as to require constant surgical attendance. It was therefore determined that they should continue at St. John's till they were in a fit state to be removed to Halifax, for which purpose the captain hired a schooner.

Being anxious to return to England, Captain Fellowes engaged the cabin of a small vessel bound to Oporto, on board which he embarked on July 11, with Mrs. Fellowes, Colonel Cooke, Captain Thomas, Mr. Burgus, the master, and the colonel's servant, who, during the voyage, lost several of his toes in consequence of what he had suffered. The ship's company were left in the charge of the master's mate, with directions to conduct them to Halifax, where they would be enabled to procure a speedy conveyance to their own country.

On July 26, Captain Fellowes' party fell in with an American ship, the Bristol trader of New York. The owner, Mr. William Cowley, being made acquainted with their distressed situation, and their being shipwrecked, immediately hove-to, received them on board with a benevolence and humanity that reflected honour on his character, and brought them safe to Bristol, where they had the happiness to arrive on August 3d.

Thus, by the merciful interposition of Divine Providence, the crew of the *Lady Hobart* were rescued from dangers the most appalling, under circumstances the most disadvantageous; and of twenty-nine persons whose lives were committed to two open boats, only one perished, and that by his own act. Never had a body of men so much cause to be gratified for the blessings of Him who rides on the whirlwind and directs the storm.

LOSS OF H.M.S. ATALANTE,

CAPTAIN FREDERICK HICKEY, NOV. 10, 1813.

THE following account is extracted from a narrative of Capt. Basil Hall's voyage in H.M.S. *Leander*, and exhibits, in a forcible manner, the great advantage in cases of difficulty and danger, of the strict discipline which should be observed on board a man-of-war, and forms a striking contrast to the foregoing narrative.

On the 9th of May, we reached Halifax, off which port we were detained in a very disagreeable way; for we had the misfortune to be kept three whole days off the harbour, in one of those Nova Scotia fogs, which are celebrated all over the world. I can hardly give, by description, an idea how gloomy they are; but I think their effects may be compared to those of the sirocco, with the further annoyance, that while they last, we are not able to see far beyond our noses. They are even worse than rain, for they seem to wet one through sooner; while they make every thing appear dreary, and certainly render all the world lazy and discontented.

On the day we made the land, we had great hopes of being able to enter the harbour, as the wind was fair; when, all at once, we were surrounded by so thick a mist, that, for the three succeeding days, we could not see above twenty yards on any side.

There are few things, indeed, more provoking than these fogs off Halifax; for, as they happen to be companions of that very wind, the south-east, which is the best for running in, the navigator is plagued with the tormenting consciousness, that if he could be allowed but a couple of hours' clear weather, his port would be gained, and his troubles over. The clearing up, therefore, of these odious clouds, or veils, is about the most delightful thing I know; and the instantaneous effect which a distinct sight of the land, or even of the sharp horizon, when far at sea, has on the mind of every person on board, is quite remarkable. All things look bright, fresh, and more beautiful than ever. The stir over the whole ship at these moments is so great, that even persons sitting below, can tell at once that the fog has cleared away. The rapid clatter of the men's feet springing up the hatchways at the lively sound of the boatswain's call to "make sail!" soon follows. Then comes the cheerful voice of the officer, hailing the topmen to shake out the reefs, trice up the stay-sails, and rig out the booms. That peculiar and well-known kind of echo, also, by which the sound of the voice is produced back from the wet sails, contributes, in like manner, to throw a joyous elasticity of spirits, greater, I think, than is excited by most of the ordinary occurrences of a sea life.

A year or two after the time I am speaking of, it was resolved to place a heavy gun upon the rock on which Sambre light-house is built; and, after a good deal of trouble, a long twenty-four pounder was hoisted up to the highest ridge of this prominent station. It was then arranged that, if, on the arrival of any ship off the harbour in a period of fog, she chose to fire guns, these were to be answered from the light-house; and in this way a kind of audible, though invisible, telegraph, might be set to work. If it happened that the officers of the ship were sufficiently familiar with the ground, and possessed nerves stout enough for such a groping kind of navigation, perilous at best, it was possible to run fairly into the harbour, notwithstanding the obscurity, by catching the sound of these guns, and attending closely to the depth of water.

I never sailed in any ship which ventured upon this feat; but I perfectly recollect a curious circumstance, which occurred, I think, to his majesty's ship *Cambrian*. She had run in from sea towards the coast, enveloped in one of these dense fogs. Of course they took for granted that the light-house and adjacent

land, Halifax included, were likewise covered with an impenetrable cloud or mist. But it so chanced, by what freak of Dame Nature I know not, that the fog, on that day, was confined to the deep water; so that we, who were in the port, could see it, at the distance of several miles from the coast, lying on the ocean like a huge stratum of snow, with an abrupt face, fronting the shore. The *Cambrian*, lost in the midst of this fog-bank, supposing herself to be near the land, fired a gun. To this the light-house replied; and so the ship and the light went on, pelting away, gun for gun, during half the day, without ever seeing one another. The people at the light-house had no means of communicating to the frigate, that, if she would only stand on a little farther; she would disentangle herself from the cloud, in which, like Jupiter Olympius of old, she was wasting her thunder.

At last the captain, hopeless of its clearing up, gave orders to pipe to dinner; but as the weather, in all respects, except this abominable mist, was quite fine, and the ship was still in deep water, he directed her to be steered towards the shore, and the lead kept constantly going. As one o'clock approached, he began to feel uneasy, from the water shoaling, and the light-house guns sounding closer and closer; but, being unwilling to disturb the men at their dinner, he resolved to stand on for the remaining ten minutes of the hour. Lo and behold! however, they had not sailed half a mile further, before the flying-jib-boom end emerged from the wall of fog, then the bowsprit shot into day-light, and, lastly, the ship herself glided out of the cloud into the full blaze of a bright and "sunshine holiday." All hands were instantly turned up to make sail; and the men, as they flew on deck, could scarcely believe their senses when they saw behind them the huge bank, right a-head the harbour's mouth, with the bold cliffs of Cape Sambre on the left, and, farther still, the ships at their moorings, with their ensigns and pendants blowing, but light and dry, in the breeze.

A far different fate, alas, attended his majesty's ship *Atalante*, Captain Frederick Hickey. On the morning of the 10th of November, 1813, this ship stood in for Halifax harbour in very thick weather, carefully feeling her way with the lead, and having look-out men at the jib-boom end, fore-yard-arms, and everywhere else from which a glimpse of the land was likely to be obtained. After breakfast, a fog signal-gun was fired, in the expectation of its being answered by the light-house on Cape Sambre, near which it was known they must be. Within a few minutes, accordingly, a gun was heard in the N.N.W. quarter, exactly where the light was supposed to lie. As the soundings agreed with the estimated position of the ship, and as the guns from the *Atalante*, fired at intervals of fifteen minutes, were regularly answered in the direction of the harbour's mouth, it was determined to stand on, so as to enter the port under the guidance of these sounds alone. By a fatal coincidence of circumstances, however, these answering guns were fired, not by Cape Sambre, but by H.M.S. *Barrosa*, which was likewise entangled by the fog. She, too, supposed that she was communicating with the light-house, whereas it was the guns of the unfortunate *Atalante* that she heard all the time.

There was, certainly, no inconsiderable risk incurred by running in for the harbour's mouth under such circumstances, even if the guns had been fired by the light-house. But it will often happen that it becomes an officer's duty to put his ship, as well as his life, in hazard; and this appears to have been exactly one of these cases. Captain Hickey was charged with urgent despatches relative to the enemy's fleet, which it was of the greatest importance should be delivered without an hour's delay. But there was every appearance of this fog lasting a week; and as he and his officers had passed over the ground a hundred times before, and were as intimately acquainted with the spot as any pilot could be, it was resolved to try the bold experiment; and the ship was forthwith steered in the supposed direction of Halifax.

They had not, however, stood on far, before one of the look-out men exclaimed, "Breakers a-head! Hard a-starboard!" But it was too late, for, before the helm could be put over, the ship was amongst those formidable reefs known by the name of the Sister's Rocks, or eastern ledge of Sambre Island. The

rudder and half of the stern-post, together with great part of the false keel, were driven off at the first blow, and floated up alongside. There is some reason to believe, indeed, that a portion of the bottom of the ship, loaded with 120 tons of iron ballast, was torn from the upper works by this fearful blow, and that the ship, which instantly filled with water, was afterwards buoyed up merely by the empty casks, till the decks and sides were burst through or riven asunder by the waves.

The captain, who, throughout the whole scene, continued as composed as if nothing remarkable had occurred, now ordered the guns to be thrown overboard; but before one of them could be cast loose, or a breeching cut, the ship fell over so much that the men could not stand. It was, therefore, with great difficulty that a few guns were fired as signals of distress. In the same breath that this order was given, Captain Hickey desired the yard tackles to be hooked, in order that the pinnace might be hoisted out; but as the masts, deprived of their foundation, barely stood, tottering from side to side, the people were called down again. The quarter-boats were then lowered into the water with some difficulty; but the jolly-boat, which happened to be on the poop undergoing repairs, in being launched overboard, struck against one of the stern-davits, bilged, and went down. As the ship was now falling fast over on her beam ends, directions were given to cut away the fore and main-mast. Fortunately, they fell without injuring the large boat on the booms—their grand hope. At the instant of this crash, the ship parted in two, between the main and mizen-masts, so that the poor *Atalante* now formed a mere wreck, divided into three pieces, crumbling into smaller fragments at every send of the swell.

By this time a considerable crowd of the men had scrambled into the pinnace on the booms, in hopes that she might float off as the ship sunk; but Captain Hickey, seeing that the boat so loaded could never swim, desired some twenty of the men to quit her; and, what is particularly worthy of remark, his orders, which were given with the most perfect coolness, were as promptly obeyed as ever.

Throughout the whole of these trying moments, indeed, the discipline of the ship appears to have been maintained, not only without the smallest trace of insubordination, but with a degree of cheerfulness which is described as truly wonderful. Even when the masts fell, the sound of the crashing spars was drowned in the animated huzzas of the undaunted crew, though they were clinging to the weather gunwale, with the sea, from time to time, making a clean breach over them, and when they were expecting every instant to be carried to the bottom!

As soon as the pinnace was relieved from the pressure of the crowd, she floated off the booms, or rather was knocked off by a sea, which turned her bottom upwards, and wheeled her into the surf amidst the fragments of the wreck. The people, however, imitating the gallant bearing of their captain, and keeping their eyes fixed upon him, never, for one instant, lost their self-possession. By dint of great exertions they succeeded not only in righting the boat, but in disentangling her from the confused heap of spars, and the dash of the breakers, so as to place her at a little distance from the wreck, where they waited for further orders from the captain, who, with about forty men, still clung to the poor remains of the gay *Atalante*, once so much admired!

An attempt was next made to construct a raft, as it was feared the three boats could not possibly carry all hands; but the violence of the waves prevented this, and it was resolved to trust to the boats alone, though they were already to all appearance quite full. It became now, however, absolutely necessary to take to them, as the wreck was disappearing rapidly; and in order to pack close, most of the men were removed to the pinnace, where they were laid flat at the bottom, like herrings in a barrel, while the small boats returned to pick off the rest. This proved no easy matter in any case, while in others it was found impossible; so that many men had to swim for it; others were dragged through the waves by ropes, and some were forked off by oars and other small spars.

Amongst the crew there was one famous merry fellow, a black fiddler, who was discovered, at this critical juncture,

clinging to the main-chains, with his beloved Cremona squeezed tightly, but delicately, under his arm; a ludicrous picture of distress, and a subject of some joking amongst the men, even at this moment. It soon became indispensable that he should lose one of two things—his fiddle or his life. So, at last, after a painful struggle, the professor and his violin were obliged to part company!

The poor negro musician's tenacity of purpose arose from sheer love of his art; but there was another laugh raised about the same time, at the expense of the captain's clerk, who, stimulated purely by a sense of duty, lost all recollection of himself, in his anxiety to save what was entrusted to his care, and thus both he and his charge had nearly gone to the bottom. This zealous person had general instructions, that whenever guns were fired, or any other circumstance occurred likely to shake the chronometer, he was to hold it in his hand, to prevent the concussion deranging its works. As soon, therefore, as the poor ship dashed against the rocks, the clerk's thoughts naturally turned exclusively on the time-piece. He caught up the precious watch, and ran on deck; but being no swimmer, was obliged to cling to the mizen-mast, where he stuck fast, careless of every thing but his important trust. When the ship fell over, the mast became nearly horizontal, and he managed to creep along till he reached the mizen-top, where he seated himself in some trepidation, grinning like a monkey who has run off with a cocoa-cut, till the spar gave way, and he was plunged, chronometer and all, right overboard. Every eye was now turned to the spot, to see whether this most public-spirited of scribes was ever to appear again; when, to the great joy of all hands, he emerged from the waves—watch still in hand! but it was not without great difficulty that he was dragged into the boats, half drowned.

With the exception of this fortunate chronometer, and the admiral's despatches, which the captain had secured when the vessel struck, every thing on board was lost.

The pinnace now contained seventy-nine men and one woman, the cutter forty-two, and the gig eighteen, with which cargoes they barely floated. Capt. Hickey, of course, was the last man who left the wreck; though such had become the respect and affection felt for him by the crew, that those who stood along with him on the last vestige of the ship evinced great reluctance at leaving their commander even for a moment in such a perilous predicament. So speedy, indeed, was the work of destruction, that by the time the captain reached the boat, the wreck had almost entirely "melted into the yeast of waves." As she went down, the crew gave her three hearty cheers, and then finally abandoned the scattered fragments of what had been their house and home for nearly seven years.

The fog still continued as thick as ever; and, as the binnacles had both been washed overboard, no compass could be procured. The wind also being still light, there was great difficulty in steering in a straight line. Had there been a breeze, it would perhaps have been easier to have shaped a course. In this dilemma a resource was hit upon, which, for a time, answered pretty well to guide them. It being known, loosely, before leaving the wreck, in what direction the land was situated, the three boats were placed in a row pointing that way. The sternmost boat then quitted her station in the rear, and pulled a-head till she came in a line with the other two boats, but took care not to go so far as to be lost in the fog; the boat which was now furthest astern, then rowed a-head as the first had done; and so on, doubling along one after the other. This tardy method of proceeding answered only for a time; for at length they found themselves completely at a loss which way to steer. Precisely at this moment of greatest need, an old quarter-master, Samuel Shanks by name, recollected that at the end of his watch-chain there hung a small compass-seal. This precious discovery being announced to the other boats by a joyous shout from the pinnace, and the compass being speedily handed into the gig, to the captain, it was placed on the top of the chronometer, so nobly saved by the clerk. As this instrument worked on jimbles, the little needle remained upon it sufficiently steady for steering the boats within a few points.

The course now secured insured their hitting the land, from

which they had been steering quite wide. Before reaching the shore, they fell in with an old fisherman, who piloted them to a bight called Portuguese Cove, where they all landed in safety, at the distance of twenty miles from the town of Halifax.

The fishermen lighted great fires to warm their shivering guests, most of whom being very lightly clad, and all, of course, dripping wet, were in a very sorry predicament; many of them, also, were miserably cramped, by close packing in the boats.

Some of them, especially of those who entered the boats last, having been obliged to swim for their lives, had thrown off every thing but their trousers: so that the only respectably-dressed persons out of the whole party was old Shanks, the owner of the watch and compass-seal—a steady, hard-a-weather sailor, who, throughout, took the whole affair as deliberately as if shipwreck had been an every-day occurrence. He did not even take off his hat, except, indeed, to give his good ship a cheer as she went to the bottom.

Their subsequent measures were soon decided upon. The captain carried the three boats round to the harbour, taking with him the men who had suffered most fatigue, and those who were worst off for clothes. The officers then set out with the rest, to march across the country to Halifax, in three divisions, keeping together with as much regularity as if they had been proceeding upon some previously arranged piece of service. Very few of the party could boast of shoes—an inconvenience which was felt more severely than it otherwise would have been, from their having to trudge over a country but partially cleared of wood. Notwithstanding all this, there was not a single straggler; and the whole ship's company, officers, men and boys, assembled in the evening at Halifax, in as exact order as if their ship had met with no accident.

I have been more particular in describing this shipwreck, from its appearing to offer several uncommon and some useful details, well worthy, I think, of the notice of every practical man in the profession.

It is rather an unusual combination of disasters for a ship to be so totally wrecked, as to be actually obliterated from the face of the waters in the course of a quarter of an hour, in fine weather, in the day time, on well-known rocks, and close to a light-house; but without the loss of a single man, or the smallest accident to any one person on board.

In the next place, it is highly important to observe, that the lives of the crew, in all probability, would not, and perhaps could not, have been saved, had the discipline been, in the smallest degree, less exactly maintained. Had any impatience been manifested by the people to rush into the boats, or had the captain not possessed sufficient authority to reduce the numbers which had crowded into the pinnace, when she was still resting on the booms, at least half of the crew must have lost their lives.

It was chiefly, therefore, if not entirely, to the personal influence which Capt. Hickey possessed over the minds of all on board, that their safety was owing. Their habitual confidence in his fortitude, talents, and professional knowledge, had, from long experience, become so great, that every man in the ship, in this extremity of danger, instinctively turned to him for assistance, and, seeing him so cheerful and so completely master of himself, they relinquished to his well-known and often-tried sagacity the formidable task of extricating them from the impending peril. It is at such moments as these, indeed, that the grand distinction between man and man is developed, and the full ascendancy of a powerful and well-regulated mind makes itself felt. The slightest hesitation on the captain's part, the smallest want of decision, or any uncertainty as to what was the very best thing to be done, if betrayed by a word or look of his, would have shot, like an electric spark, through the whole ship's company—a tumultuous rush would have been made to the boats—and two out of the three, if not all, must have been swamped, and every man in them drowned.

Captain Hickey and his crew had been serving together in the same ship for many years before, in the course of which period they had acquired so thorough an acquaintance with one another, that this great trial, instead of loosening the discipline, only augmented its compactness, and thus enabled the commander to bring all his knowledge, and all the resources of his

vigorous understanding, to bear at once with such admirable effect upon the difficulties by which he was surrounded.

There are some men who actually derive more credit from their department, under the severest losses, than others can manage to earn by brilliant success; and it may certainly be said that Captain Hickey is one of these; for, although he had the great misfortune to lose his ship, he must enjoy the satisfaction of knowing that his skill and firmness, rendered effective by the discipline he had been so many years in perfecting, enabled him to save the lives of more than a hundred persons.

LOFODEN ISLES.—THE MALSTROEM.

THE most extensive group, as well as the most valuable, for their commercial importance, are the Lofoden Isles, renowned, from the earliest ages, as the great fishing station of the north. Their appearance is rugged and dismal, resembling piles of rocky mountains heaped upon each other, covered with snow, and rising abruptly from the bosom of the deep, to an elevation varying from 100 to 4,000 feet. Hindoe, Langoe, Andoe, and Senjen, are the largest; but East Vagoe is the central point for the fisheries, and it has continued so since the dawn of Norwegian history. They are separated from the mainland by the tempestuous channel of West Fiord, at the entrance to which, between the lower point of the group and the small island of Moscoe, is the celebrated Moskenstroem or Malstroem, so terrible in the annals of northern navigation. The ancient belief of its being a subterranean abyss, penetrating the globe, or communicating with the Gulf of Bothnia, has, among other fables, been long discarded; and the true cause of this dangerous whirlpool is, the conflicting agitation of the waves, as the tide rises or falls, against the rocks, which confine the sea to a narrow passage. These straits do not afford a sufficiently quick outlet to the immense body of water, which presses, like a wedge, between its shelving barriers; the ebb returns with prodigious force; and, when their motion is opposed by high winds, the struggling billows mount into the air, and precipitate themselves in cataracts, or whirl into eddies, whose powerful suction draws down fish, boats, and every thing that approaches it, to the bottom of the vortex. Large pines, absorbed by the current, have re-appeared, after being chafed in the rocky caverns, until their trunks were bruised and torn, as if covered with bristles. In calm weather, the furious turmoil nearly ceases; but in storms, the dashing and roaring of the waves are heard at a great distance, and the wary mariner dreads to approach within seven miles of this destructive collision of the elements. Although exaggerated descriptions have been given of the Malstroem, its real dangers are unquestionable. But it is not the only phenomenon of the kind in those seas.—Saltenstroem, near Badoe, is equally perilous, and not less fatal to the natives. In all the sounds between the islands of Lofoden, the tide flows in with the impetuosity of the most rapid rivers, and, on that account, the outermost bear the name of streams, as Napstroem, Sandstroem, Gimsoestroem, and Sundklastroem.

ON A SHIPWRECKED FRIEND.

I looked on the pale blue waves of the main,

I looked on the bright expanse of the sky,

And every thing seem'd devoid of pain,

And the waves were rolling placidly;

But my heart was sad within me, and

I heard a bitter sigh.

I thought on him, who in youthful bloom

Was wrecked on the eddying gulf of the deep:

How brief his span, how harsh his doom—

My tears flow'd fast,—'twas sweet to weep.

Cold were his youthful limbs, and hushed

In a deadly sleep.

I looked again on the pale blue wave,

But fierce was the storm and the tempest cry;

"How many find an untimely grave

In thy false waves, whose hearts beat high,

When first they saw thee, but too late have

Mourn'd thy treachery."

LOSS OF THE ADMIRAL ROWLEY.

In the latter part of the year 1780, occurred one of those dreadful hurricanes, which, though common in the West Indies, so far exceeded in the terrific effects of its visitation, any of those previous scourges of Providence, that it was generally designated the hurricane of hurricanes. So frightful were its ravages, that the following vessels of the British navy were sacrificed to its fury. The Thunderer, 74; Stirling Castle, 64; Phoenix, 44; La Blanche, 42; Laurel, 28; Andromeda, 28; Deal Castle, 24; Scarborough, 20; Beaver's Prize, 16; Barbadoes, 14; Chameleon, 14; Endeavour, 12; and Victor, 10 guns. For several days, previously to its bursting forth, all the well-

known precursors of this awful visitation tended to warn the inhabitants to take every prudent precaution to secure their lives from impending destruction, and that portion of their property which was liable to be swept away by the overwhelming fury of the blast.

At length the dense mass of pitchy clouds, which had for some time overhung the sky, began to announce their surcharge: a deadly and awful stillness, accompanied with a burning heat, the effect of those long calms in tropical climates, seemed to the panic-struck spectator to pervade the whole face of nature; while the re-echoed peals of thunder on the volcanic mountain, called Mount Misery, which is 3,711 feet perpendicular from the summit to the base, together with the liquid fire, apparently pouring out of the clouds which surrounded the mountain in

LOSS OF THE ADMIRAL ROWLEY, CAPTAIN POWER, OFF ST. KITT'S, 1780.

every direction, caused the most intrepid to lift up their hands and hearts to an all-merciful God, in earnest supplication for deliverance from the threatened danger.

Prior to the loss of the Admiral Rowley, it had been the general rule for vessels engaged in trade with the West India islands, not to attempt making more than one voyage annually, on account of the devastation committed by the hurricanes; but as they were sometimes comparatively trifling in their effects, Captain Power was desirous of making two voyages in one year, by venturing to ride out the storm, if one should occur, taking especial care that his vessel should be in proper trim to receive it, by handing down the topmasts and yards, leaving the ship under bare poles, as represented in the engraving, having nothing above deck but the fore, main, and mizemasts, with the bowsprit.

At the commencement of the hurricane, the Admiral Rowley was lying, as above described, in Basseterre Roads, off Basseterre, the capital of St. Kitt's, when the wind, which is there usually easterly, suddenly sprung up from the north, dispersing the sultry vapours which were becoming intensely oppressive, and re-invigorating the fainting inhabitants with refreshing air. It has been proved by the study of natural philosophy, that the hurricane is produced by the previous intensity of rarefactions, being nothing but an effort of nature to restore equilibrium.

Captain Power was not at this time on board of the Admiral Rowley, but the chief-mate, who was then in charge of the vessel, immediately gave the ship the whole length of the cable, by which she was then riding at anchor, and which precaution every seaman would feel justified in doing, upon the considera-

tion, that in case of a sudden change of the wind, the vessel would have sufficient room to swing and ride in an opposite direction. Instead, however, of being prepared for any emergency that might arise, and using every exertion for the preservation of the ship and the zealous discharge of his duty, alas! the poor mate was intimidated by the awful scene around him, and the dismal prospect of their almost immediate destruction, that he gave himself up to the miserable refuge of intoxication, and in the excessive indulgence in ardent spirits thought to drown or deaden the sense of danger, instead of struggling for the rescue. In a short time afterwards, the wind, which at these times is very variable, suddenly turned diametrically opposite; away swept the ship towards the shore at a furious rate, running round upon the same length of cable from the south, which had been used from the north; the consequence of which was, that she struck with tremendous violence upon a reef of rocks at a short distance from the shore. But will it be credited—can it be believed by any one in the slightest degree connected with nautical affairs, that owing to the intoxication of the mate, this fine ship was suffered to go on shore, with her best bower-anchor hanging from her bows; although the sailors who were on board declared, that letting it go was the last alternative for the preservation of the ship? but they did not venture to act without the command of their superior officer.

The Admiral Rowley became a complete wreck, and very soon after striking on the reef of rocks, she went to pieces, having on board at the time a valuable cargo, which was totally destroyed, the crew having been able with great difficulty to save their own lives. The captain, owing to his anxiety and exertions, was seized with a fever, and in a very few days afterwards, paid the debt of nature. The mate lived several years after the wreck, but on shore; for whenever he endeavoured to gain employment at sea, the story of the best bower-anchor was invariably brought to his recollection.

We are indebted to the Reverend Alexander Power, of the Academy, East-hill, Wandsworth, the only surviving son of Captain Power, for the above particulars, and the design of the engraving. We trust that it may act as a lesson to those who have the command of vessels, of the necessity of avoiding intoxicating liquors, when the lives and property of so many of their fellow creatures are entrusted to their care.

VOYAGE OF CAPTAIN BACK TO THE ARCTIC REGIONS.

In the early part of June, 1836, Captain Back, the adventurous arctic traveller, went out in his majesty's ship Terror, in search of Captain Ross, and returned from his perilous undertaking on the 7th of September, 1837, when he arrived at Dublin, and immediately embarked for Holyhead, to be the bearer of his own despatches. He accordingly arrived in London on the 9th, and communicated the result of his voyage to the Admiralty. From his statement, it appears that the expedition had met with the greatest hardships, and endured the severest privations. Towards the latter end of August, 1836, she was encountered by the ice, her crew at that time consisted of sixty men, including officers, who were several times exposed to the most imminent perils from the constant concussion of huge masses of ice, which were dashed against the vessel with tremendous violence, threatening them with either a violent and sudden death, or, in the event of escape from this danger, to await slow but certain destruction by the appalling means of famine and cold. Deprived of fresh provisions or vegetables of any kind, disease spread amongst them with a rapidity only equalled by its virulence. At one time as many as twenty-five of the crew lay afflicted with that well-known scourge of those extreme latitudes, the scurvy, to which three of them fell victims. In this perilous situation the vessel lay for four months, now drifting to and fro, near Cape Comfort, then driven by the current of ice along Southampton Island as far as Sea-Horse Point, off Baffin; and then again, at the mercy of the wind and tide, through Hudson's Straits, by Charles's Island, along the Labrador coast.

On the 6th of August, they passed Resolution Island; and from the 28th of September they lay surrounded, exposed to all the horrors of the arctic climate, with the thermometer 40 deg. below Zero, until the ice commenced breaking in February, 1837. On March 15th, they experienced the greatest shock they had yet encountered, a mountain of ice striking the ship with the utmost violence, and rending away every intermediate barrier, without the slightest perceptible resistance. Such was the force of the shock, that they were obliged to lash the decks to each other, to prevent them from separating, and the planks rising from their fastenings; the stern-posts, dead-wood, and after-part of the keel were knocked away. In consequence of the repeated collisions the water gained on the ship, and she was shaken from stem to stern; a chain cable was passed round her to keep her together, and the men were kept constantly at the pumps to free her from the water, which at one time rose to seven feet in the hold. By the impetus of the ice, the bow was lifted clean out of the water, as far as the mainmast; and her stern, as far as the seven-foot mark, was placed in the same predicament, and in this condition she continued for more than a hundred days. At the expiration of that period, they got a thirty-five-foot ice-saw, worked by shears, and commenced the fatiguing operation of cutting through the ice under her, which, in thickness, measured more than thirty feet. By the 11th of July, they had completed so much of their task, that but two or three feet of the stern remained, when the ship righted, and they immediately made sail on the vessel; but an enormous wedge of ice remained fast to her starboard side between the fore and main chains, that they were obliged to have again recourse to the saw, as they were not able to free her from the incumbrance by any other method. By means of purchases applied to this vast lump, it rose from under the water as it was freed, and, according to the laws of gravitation, being the lighter body, floated on the water, throwing the vessel on her beam ends; and heeling her over fully twenty-seven degrees, the water poured in with frightful rapidity, and in alarming quantities. All hands, without distinction, were immediately called into requisition; some proceeding to saw through the piece of ice, the cause of their fresh misfortune, while others commenced working the pumps. These fatiguing, but indispensable operations, they continued with unremitting exertion until five o'clock on the morning of the 14th, when the men were so totally exhausted and completely dispirited by their incessant labour, that they could work no longer, having up to that period cut through the ice to within ten feet: they were therefore called in for rest and refreshment.

They had not been more than a quarter of an hour removed from the work when a sudden disruption of the ice took place, and the mass separated from its bed, crushing with terrific violence against the ship's side, tearing to pieces the lashings and spars that intervened to protect her against this casualty, which had, in some degree, been foreseen: the strong shores, or logs, and three-and-a-half inch ropes, were snapped like packthread, and, but for the merciful interposition of Providence, not a single being out of the whole ship's company would have survived to narrate the circumstance; for had they not have been called in but a few minutes before, they would all have been inevitably crushed by the mass of ice on which they had just been labouring. As the ice separated from her, she righted and drifted along. A temporary rudder was fitted up, her stern posts having been carried away from the six-foot mark, as well as the dead wood broken off; and her stern frame was so shaken, that her run had to be secured by two-and-a-half and three-and-a-half inch ropes, shores, and screw bolts, and when fairly got to sea, a stream chain was passed round her, three feet before, and another abaft the mizen-mast.

In the early part of the passage home across the Atlantic, they fortunately experienced mild weather; but, subsequently, it became rather unfavourable, and the ship began to leak very fast. At one period, when it became necessary to call the men from the pumps in order that they might shorten sail, which occupied them for about twenty minutes, the carpenter reported six to seven feet water in the hold. In an instant there was a rush to the pumps, and all hands were busily employed at them until they arrived at their destination.

At first they directed their course to the Orkneys; but the wind proving adverse, they bore up for Lough Swilly, where they arrived on the 3rd of September, 1837. On entering the harbour, the exhausted crew could scarce remain one moment longer at the pumps, their unremitting labour at which had secured their safety. The coast-guard, on being apprised of their distressing condition, immediately boarded the vessel, and afforded timely relief to the worn-out mariners; and her majesty's cutter, the Wickham, entering soon after, sent twenty of her men on board for the same purpose. They endeavoured to beach her, but, unable to effect their purpose, were obliged to leave her, having her main-deck housing thrummed under her bottom.

The expedition had only seen the natives twice, once on their entrance to the Frozen Straits, and once at their departure. On both occasions they trafficked with them, and it would seem to profitable account; an old piece of iron producing skins in abundance, and those who had not this commodity to offer, were willing to barter their children for even a less article of value, if possible.

LOSS OF THE L'AIMABLE MARTHE, CAPTAIN DORE, SEPTEMBER 13TH, 1786.

On July 24th, 1786, M. Durand, formerly governor of Isle St. Louis, left the Senegal for Havre, on board the brigantine L'Aimable Marthe. The crew consisted of the captain, a lieutenant, a carpenter, a mate, and three seamen. The passengers, besides M. Durand above-mentioned, were Messrs. Gourg, naval commissioners, at Senegal; Longer, captain of a frigate; Bernard, a young negro; and M. Durand's cook.

On the morning of September the 12th, after an uncommonly long and dangerous passage, they were in full expectation that in the course of the night they should arrive at Havre. Buoyed up with this pleasing hope, they gave themselves up to that pleasure which navigators always experience after a long and tedious voyage; but the captain was out in his reckoning, and soon found, to his no small astonishment that they were in the Bristol channel. The weather was stormy, the sea ran high, and the rapid gusts of wind which swept over them indicated an approaching tempest.

At three o'clock they were in sight of Lundy Island, and attempted to take refuge in it, but their efforts were unavailing, when they directed their course for the Bay of Tenby, which they entered, though their hopes of finding shelter here were disappointed, and they could not withstand the violence of the wind and sea. They were, however, near enough to the shore to observe the inhabitants collecting upon it, and expressing their regret that they could not afford them any assistance. They had dropped their bower-anchor; but they were under the necessity of cutting the cable, and then their loss seemed inevitable. They, nevertheless, attempted to reach the Isle of Caldy; and, for this purpose, kept tacking the whole night, during which the weather was dreadful: the wind at W.S.W., and blowing so strong, that they could only let out the main and mizensail. They were then in three fathoms water, but after tacking on different points, they found themselves, at two o'clock, in Loughor Bay, with only two fathoms; the sea was furious, and every instant covered the vessel, while the rain came down with such violence, that it soon became impossible to work the ship. She, therefore, soon ran on shore, and struck the ground so violently, that it laid her open, unshipped the rudder, and decided their fate.

In order to lighten the vessel, they now cut away the masts, when they found that she remained fixed in six feet water; but was every instant covered with waves of an enormous size, which seemed ready every instant to overwhelm her. In this dreadful crisis some fell to making rafts, others seized on pieces of wood, and all endeavoured to avoid that death which seemed to be inevitably prepared for them. Several—although in a French vessel, where such scenes were uncommon—were seriously concerned about their future state; and one of them being very anxious respecting the fate of a negro boy, who had never been christened, baptized him with some

fresh water, and then held him fast by the arms, with a view that they might die and arrive together in the other world.

About three o'clock the storm began to subside, and the waves broke with less violence against the vessel. They then perceived that it was low water, but the darkness of the night prevented them from distinguishing where they were, or ascertaining the place of their shipwreck; nevertheless, without knowing what distance they were from land, some thought it probable that they might get to it, and resolved to make the attempt. A small canoe was therefore let down, and M. Durand was the first to get into it: he was followed by M. Longer and the lieutenant, but finding there was not sufficient water to work the boat, they got out of it, and walked for about an hour in the sea, preceded by two sailors, who sounded at every step, and served as guides. After passing through different depths of water, but not sufficient to stop them, they at length reached the dry land in safety, and sent back the two sailors to inform their companions that they were safe, and to invite them to follow the course they had taken.

On quitting the vessel, M. Durand and the others had left their clothes on board, that they might not hinder them from swimming if they should find it necessary. The former had nothing on him but a pair of trousers, in one of the pockets of which he put a letter with his address, in order that his family might be informed of his fate, in the event of his being drowned and cast on shore. This was the only precaution which he thought it necessary to take. They at length found themselves in an unknown spot, four in number, almost naked, and without any means of subsistence.

The night continued to be very dark, and the rain poured down in torrents; they continued, however, to walk for two hours without knowing whither they were proceeding. They soon after reached a mansion, which they walked round several times, but could not find any door open, or a place in which they could obtain shelter, though they made noise enough to have been heard by the inhabitants, if they had not been in a very sound sleep. At last, with some difficulty, they discovered a little gate which led into the court. M. Durand raised the latch, the gate opened, and, to their inexpressible pleasure, they found themselves in a large walk which led to the vestibule of the mansion. He knocked at the door with all his strength, when they heard the barking of dogs inside, and the sound of the domestics stirring, who appeared to be running to the chamber of their master, as if to inform him that the house was attacked by robbers, as they only spoke to them through a garret window.

They were asked, first in English and afterwards in broken French, for what reason they had entered the park at such an early hour. M. Durand, in a feeble voice, and with a lamentable accent, answered that they were unfortunate Frenchmen, whose ship had been wrecked, and that they requested an asylum. "If that be the case," answered the person who first spoke, "you may make yourselves easy; I will order my doors to be opened, and you shall receive all the assistance of which you stand in need."

Soon afterwards the doors were thrown open, when all the servants appeared in the hall, armed with muskets and sabres, which was a prudent precaution, lest our navigators should have deceived them by their tale of shipwreck, for the sake of gaining admission. When, however, they saw them naked, almost frozen, and objects rather of pity than of fear, they threw down their arms, and gave them the most hospitable reception. They were at first conducted into the kitchen, where, before a large fire, they warmed their frost-bitten limbs, and re-animated their stiffened joints. Soon afterwards the mistress of the house and the female domestics brought them linen and other apparel which they divided amongst each other as well as they could. A table was then laid out, on which they were supplied with plenty of victuals and drink, which, as they were almost famished, they devoured with great eagerness.

After this welcome repast, M. Durand was shown into a chamber, while his companions, accompanied by Captain Trollope, the master of the house, went down to the shore to endeavour, if possible, to save something from the wreck. On

their return, M. Durand learned that the vessel had gone to pieces about three o'clock, that all the crew were saved, but that most of them had taken another direction. M. Durand's cook and boy had lost themselves, and three days elapsed before they were able to find their master.

About noon the lady of the mansion sent to know if M. Durand would take some tea. He requested to be served with it in his apartment; but she insisted that he should come down stairs and take it with her, which compliment he had some difficulty in bringing himself to accept, as he was still in a most deplorable condition, and not fit to be seen. About five in the afternoon, Captain Trollope returned, bringing with him several of his neighbours and some of the crew. They had only been able to save a very few things from the wreck; but they restored to M. Durand a bag, with about five hundred dollars, and a box containing his papers, which were dried in the oven. His boy John, also, saved a bag with nearly twelve hundred livres; a packet of virgin gold from Senegal, which M. Durand afterwards sold in London for about one hundred guineas; an ape, a yellow parrot, and some ostrich's eggs. He lost, however, a choice collection of plants, unknown in Europe; several bottles of distilled palm wine; some water taken from the Senegal at Isle St. Louis and Podor; several tons of the earth from the gold mines at Galam and Bambouk; a collection of the scarcest reptiles, birds, and fishes; and drawings of the costumes, arms, equipages, &c., of all the hordes in that part of Africa.

About six o'clock they sat down to an excellent dinner, where the kindness and hospitality of their excellent host and hostess dispelled all the dismal recollections of their late disaster, and afterwards they got merry with wine.

The next day M. Durand, attended by his benevolent host, went to Caermarthen, where he purchased a new wardrobe, and equipped himself from head to foot. The same day, also, they received an express from the merchants of London, who, having heard of their shipwreck, sent to offer him their services. The liberality of their kind host rendered these proposals unnecessary, for which, however, they returned their most sincere thanks.

The mansion where M. Durand and his companions met with such an hospitable reception, stands in a delightful situation; about three miles distant from Langhorn, in Wales, where they were shipwrecked. During their stay here, the generous inhabitants incessantly endeavoured to dispel from their minds the remembrance of their misfortunes, and every day was distinguished by some new festivity; hunting, fishing, gaming, and feasting, succeeded each other without interruption; and the only care seemed to be how fresh pleasure could be procured.

After passing eighteen days in this delightful abode, without being suffered to incur the least expense, M. Durand and his companions embarked for Bristol, at the very place where they had been wrecked. The generous master of the mansion, besides the hospitable manner in which he had entertained them, was desirous also of serving them after their departure. For this purpose, he gave them letters of introduction to Bristol, Bath, and London; in consequence of which they were everywhere received with the highest respect and attention.

THE BROTHERS.

It was in the year 1779 that I belonged to the Glasgow, of twenty guns, when she was stationed in the West Indies. I was then seventeen years old; and though I say it myself, who perhaps ought not to say it, yet I was as good a looking fellow as ever weathered the Palisade, at Jamaica, or sucked a monkey at Barbadoes. My brother Bill was on board with me; he was a year younger than myself—but he was such a fellow! Lord love you, his heart was all for me; he was a brother and a friend:—I could spin you such a yarn about him! Well, my brother Bill was stationed in the fore-top, and so was I; he was in the starboard-watch, and I in the larboard; we were both light hands, and therefore regular cloud-brushers, always

the highest up, always at the light sails aloft. We had been cruising off St. Domingo, when, finding that we had no luck there, we steered away for Jamaica, and came to an anchor in Montego Bay. There we found the Badger at anchor. We shortened sail, man-of-war fashion altogether, for the cat had taught some of us to skip. Bill and I were on the fore-top-gallant-yard furling the sail, when the first lieutenant called out to one of the midshipmen to run below and see what smoke that was coming up the after-hatchway. Well, I had done my duty aloft, and had come down on the fore-castle, when there was the devil's own rumpus about beating to quarters, calling the firemen with there buckets; and before we had time to say Jack Robinson, the flames followed the smoke and the ship was on fire. The purser's steward had done the thing. It came up the main-hatchway in one line of light, flying up aloft, catching every rope, and in a moment the whole ship from hull to trucks was in a blaze. There was considerable confusion, as you may suppose, and the men aloft, frightened by the sudden blaze, endeavoured to lower the quarter-boats; but, before they could do this, the deck became so hot that they took the shortest way of leaving the ship, by jumping overboard. I was all "no how;" I did not know what to do. The panic had spread forward, and those who preferred a dry berth to a swim, crowded on the fore-castle, had got ready to lower themselves into the boats of the Badger, which put off immediately the accident was perceived. Nelson himself was in one, as cool as if he had no sun or fire to warm him: he picked up those who had thrown themselves overboard.

It was now *sove hi poo*, as the Crapauds say, and each man endeavoured to save some of his traps as well as himself. I made a dive below in hopes of getting near the mess-chest; but the smoke was so thick, that I came up crying as if the cooper had knocked off my eyelids. I was just in time to avoid being roasted; for now the fire had extended forward, and the flames run up both sides of the fore-rigging, and there was a general jump overboard; it was like so many rockets going up together, and the whole for'ard was in a blaze, whilst the melted pitch came dropping down like a shower of boiling rain. I had got upon the starboard cat-head, making ready to part company with the ship, when I heard a scream aloft, and I saw my brother on the topmast cross-trees, standing against the mast, and clinging close to it to avoid the fire;—he had lost his mind, and I so alarmed I could not assist him. Several in the boats cried out to him not to mind a singe, but come down by the topmast-stay: but he was too frightened to hear. I saw the poor boy, my own brother, his mother's favourite, clinging like a cat to the masts to avoid the surrounding flames. I made a rush at the fore-rigging, but the boiling pitch prevented my running up; every moment made it worse; his death was inevitable, without God's mercy should interpose, and prompt him to run out to the top-gallant yard-arm and jump overboard. "Here, here!" said I, extending my arms,—“here, Bill, jump down, and I'll catch you,—send out to the yard-arm and jump overboard.” The fire had already caught his clothes; he had no jacket on.—I see him now,—I see him with his long hair blown by the sea-breeze, his face pale with fear, the fire just burning his trousers,—I see him now endeavouring with his hands to stop the progress of the flames; and, oh, God! I see him at this moment winding up his courage to the last pitch, looking down upon me; and, as I live here, I saw a tear fall from his eye. I could not speak, I could not move; I did not feel the hot boiling tar which showered down upon me; I did not feel the increased heat which was almost melting me. I stood with my arms extended to catch him. “Jump, Bill,” said I: “the water is soft enough, never mind the height; you will be up again before the sharks know you are down.” And he did jump—ay, he jumped, by heavens! like a man—he was down in a second. I tried to catch him, my hands stretched to their utmost;—I grazed his trousers, and saw his brains shattered to atoms against the shank of the best bower-anchor. He fell overboard, and I was after him before he touched the water: he went to the bottom like a stone, and I was taken up by one of the boats, swimming in the water coloured by my brother's blood.

THE MARINERS.

RAISE we the yard and ply the oar,
The breeze is calling us swift away;
The waters are breaking in foam on the shore;
Our boat no more can stay, can stay.

When the blast flies fast in the clouds on high,
And billows are roaring loud below,
The boatman's song, in the stormy sky,
Still dares the gale to blow, to blow.

The timber that frames his faithful boat,
Was dandled in storms on the mountain peaks;
And in storms, with a bounding keel, 'twill float,
And laugh when the sea-fiend shrieks, and shrieks.

And then in the calm and glist'ning nights,
We have tales of wonder, and joy, and fear,
And deeds of the powerful ocean sprites,
With which our hearts we cheer, we cheer.

For often the dauntless mariner knows
That he must sink to the land beneath,
Where the diamond on trees of coral grows,
In the emerald halls of Death, of Death.

Onward we sweep through smooth and storm;
We are voyagers all in shine or gloom;
And the dreamer who skulks by his chimney warm,
Drifts in his sleep to doom, to doom.

PIRATES OF CUBA.

THE following horrible particulars of the pirates of Cuba were given by a seaman who had been forced into their service:—

A quarrel took place between two of the crew, and a desperate fight with knives ensued, of which the rest were cool spectators. The battle was for a long time doubtful; at length one fell with a severe stab in the left breast, bleeding profusely. I was instantly called upon to administer to the wounded man; and it was in vain for me to declare that I knew nothing of the healing art. The captain swore at me, and said he knew to the contrary; for the master of the *Zephyr* had informed him that I had cured and saved the life of his sailmaker, who had fallen down the hold; and, therefore, if I did not cure him, he would serve me in the same manner. I saw it would be useless to make any reply, and therefore, having procured bandages, I staunched the blood and dressed his wounds in the best manner I was able. I was then obliged to turn my attention to his antagonist, who had not escaped unhurt.

The captain went below, and inquired of the least injured of the wounded men the cause of their quarrel. He told the pirate, "that his antagonist was one of the party formed by the chief mate to assassinate him and the whole crew, and take possession of the ship and plunder." That officer, he informed him, had gone to the Havannah for the express purpose of bringing some more men, and that they were to put the plan into effect, when himself and the crew were either asleep or inebriated. I saw that his brutal temper was excited by this information; his eyes flashed fire, and his whole countenance was distorted. He vowed destruction against the whole party, and rushing upon deck, assembled the crew, and imparted what he heard. The air rang with the most dreadful imprecations; they simultaneously rushed below, and dragged the helpless, wounded wretch upon deck, and, regardless of everything, proceeded to cut off his legs and arms with a blunt hatchet, then mangling the body with their knives, threw the yet warm corpse overboard. Not contented with having destroyed their victim, they next

sated their vengeance on his clothes, and everything belonging to him, which they cut into pieces and threw into the sea.

While off cape Buenavesta, a boat full of men, of the chief mate's party, appeared coming towards the schooner, when the captain ordered his men to fire, and five were killed; another jumped overboard, but was taken, and most barbarously treated. Wounded and bleeding, he was exposed naked to the scorching heat of a July sun of a tropical climate, in order to make him confess.

The man persisted in his plea of innocence, declared that he had nothing to confess, and entreated them all to spare his life. They paid no attention to his assertions, but, by order of the captain, the man was put into the boat, pinioned, and lashed in the stern, and five of the crew were directed to arm themselves with pistols and muskets, and to go in her. The captain then ordered me to go with them, savagely remarking that I should now see how he punished such rascals, and giving directions to the boat's crew to row for three hours, backwards and forwards, through a narrow creek formed by a desert island and the island of Cuba. "I will see," cried he, exultingly, "whether the mosquitoes and the sand-flies, will not make him confess." Prior to our leaving the schooner, the thermometer was above ninety degrees in the shade, and the poor wretch was now exposed naked to the full heat of the sun. In this state we took him to the channel, one side of which was bordered by swamps full of mangrove trees, and swarming with the venomous insects before mentioned.

We had scarcely been half an hour in this place, when the miserable victim was distracted with pain, his body began to swell, and he appeared one complete blister from head to foot. Often, in the agony of his torments, did he implore them to end his existence, and release him from his misery; but the inhuman wretches only mocked and laughed at him. In a very short time, from the effects of a solar heat, and the stings of the mosquitoes and sand-flies, his face had become so swollen that not a feature was distinguishable; his voice began to fail, and his articulation was no longer distinct. I had long suspected that the whole story of the conspiracy was a wicked and artful fabrication; and the constancy with which this unfortunate being underwent these tortures, served to confirm my suspicions. I resolved, therefore, to hazard my interference; and, after much entreaty and persuasion, prevailed upon them to endeavour to mitigate his sufferings, and to let the poor wretch die in peace, as the injuries which he had already sustained, were sufficient of themselves to occasion death. At first they hesitated; but, after consulting some time among themselves, they consented to go to the other side of the island, where they would be secure from observation, and untie him and put something over him. When we had reached that place, we lay upon our oars, and set him loose; but the moment he felt the fresh breeze, he fainted away. His appearance at this time was no longer human; and my heart bled at seeing a fellow creature thus tormented. When our time was expired, we again tied him as before, to prevent the fury of the captain for our lenity, and once more pulled for the passage on our way to the vessel. On our arrival, his appearance was the source of merriment to all on board; and the captain asked if he had made any confession. An answer in the negative gave him evident disappointment, and he inquired of me whether I could cure him. I told him he was dying. "Then he shall have some more of it before he dies," cried the monster, and directed the boat to be moored within musket-shot in the bay. This having been done, he ordered six of the crew to fire at him. The man fell, and the boat was ordered alongside. The poor wretch had only fainted; and when they perceived that he breathed, a pig of iron was fastened round his neck, and he was thrown into the sea. Thus ended a tragedy, which, for the miseries inflicted on the victim, and for the wanton and barbarous depravity of his fiend-like tormentors, never, perhaps, had its equal.

THE MIDDY'S INTRODUCTION.

"Deep in that fabric where Britannia boasts
O'er seas to waft her thunders and her hosts,
A cavern lies, unknown to cheering day,
Whose only sunshine is a taper's ray;
Where wild Disorder holds her wanton reign,
And careless mortals frolic in her train."

Of all situations which open to the aspiring mind of youth, none is so interesting, so fraught with conflicting feelings, as the first entry of a young novice on board a ship of war; 'tis like bursting into a new world, yet without quitting the old one. The day on which my inauguration took place happened to be the anniversary of the birth of Royal George. The captain permitted me to accompany him in his own boat, and, when we reached Spithead, the ships, dressed in their gayest colours, commenced saluting. Oh, what a view was this for an enthusiastic mind! It spoke of glory in a voice of thunder; and, when looking at the British ensign waving in the breeze, I felt a glow of conscious pride at being enrolled among the gallant defenders of its dearest rights. The barge cut through the azure wave, and swept up alongside the 'Albion.' The boatswain's shrill pipe sounded, and four lads sprung over the side to extend the gang-way man-ropes. So I followed up the captain, and found the officers on the quarter-deck uncovered, the marines drawn up with presented arms, and the band playing 'Rule Britannia,' to salute their brave commander. My senses were bewildered with astonishment:—"This is a young friend of mine," said Captain Montague, presenting me to the first lieutenant: "I hope you will find him all you can wish." And now, sir, you may go and visit your future companions." "Mr. Evans (said the first lieutenant, calling to a midshipman on the larboard side of the deck, whose weekly account had been fresh pipe-clayed, and now he was employed in trimming the collar of his shirt, so that his eye just peeped point blank above it)—Mr. Evans."—"Sir," replied the cockpit beau, touching his hat. "As soon as you have done adjusting your lee boards, and bowed all taut, take this young gentleman round the ship, and then conduct him to your mess-berth."—"Ay, ay, sir; ay, ay," said Evans; and, then, in a lower tone, "I'll show him the lions;" and away we went together. After examining the wonders of the wooden world, and swallowing as many marvellous stories as would fill a volume, we descended to the cock-pit, and were guided by the glimmering rays of a candle to the midshipmen's berth. "Allow me to introduce Mr. B." said my conductor, pushing open the door, and thrusting me in. "Halloo! why, Evans, what gulpin have you got there?" exclaimed a squat tawny figure, who was nearly enveloped in smoke and stifled in grease. "'Tis a new mess-mate," squeaked a little youngster. "A new messmate!" replied the other, "then let's have a survey," taking down from a nail, the frame of what had once been a large and beautiful mirror, and, raising it to his eye by way of quizzing-glass, he uttered a yell that filled me with horror. "Evans," said he; "Evans, I'm fainting at the sight! Bear a hand on deck, and order the captain to man the boat, and send him ashore again directly." I shrunk back. "Halloo, ship-mate, don't lag astern!" said Evans, pushing me forward; "don't mind that old swab, 'tis only Tim Bucket, the blind fiddler."—"Me blind!" rejoined the other, flourishing his pipe in a tragical manner; "you know that you are Brutus that spake this; or, by the gods, this speech were else your last!" and down he sat. I was now literally hauled into the berth, and placed directly by the side of this terrific being. "Let's look at your teeth," said he. It was complied with. "Ha, I thought so!—teeth like a shark—eat more in a day than I could chew in a month. Here, boy—you boy!"—"Yes, sir," replied a miserable-looking object, poking his head in at the berth door. "Go, you rascal, and lock the bread-bag up, or we shall soon have a southerly wind in it." Then turning to me: "Here, sir, take this card, with my compliments, to the

purser's steward, and ask him to measure your mouth for a spoon. And bear a hand, d'ye hear? for the burgoo is almost ready; there'll not be much to spare when the doctor's mates come out of the sick bay."—"Which way am I to go?" inquired I: "I can't find the stairs." However, the boy of the mess was ordered to attend me to the midshipman of the watch, who directed me to the purser's steward. He sent me to the cook; the cook despatched me to the boat-swain's yeoman; and he again to the carpenter's mate for a two foot rule. I now bid very fair to make a complete tour of the ship, and run the gauntlet through all the petty officers; but the gunner understanding my difficulty, apprised me of the trick, as one to which all fresh-comers were exposed; advising me to bear it patiently, and return joke for joke. Again I descended. "Well, have you got your spoon?" inquired my tormentor.—"No!" repeated he, starting upon his feet; "how's that?"—"Ask the gunner," was the reply. "Here, doctor," rejoined the first, turning to a genteel young man of pleasing countenance: "Here, doctor, you must open a vein for him; but no, no, avast; where's the cobbing-board? I understand the art of *Play-bottom-he* best. Ay, ay, my spark, two dozen for impertinence to your superior officer. Here's a greenhorn hasn't been caught above two hours, and comes Westminster-hall over me already; but I'll soon make you a subject for dissection."—"Who is this young gentleman?" inquired the assistant surgeon.—"Who? why it's some great man in disguise come to sea to wear his old clothes out. However, give us your fist, my boy—don't sit mute;" and he grasped my hand like a smith's vice, till I roared with anguish, to the great diversion of all present. "Here," continued he, "take hold of the grog," handing it across the table. I was unwilling to let slip so favourable an opportunity of showing good friendship and courting forbearance, so took the glass; but hadn't time to convey it to my lips before it was hastily snatched away. "There, there, that's enough, you must only smell it; I never allow any body to drink with me." The ward-room steward appeared with an invitation from the first lieutenant to dinner. This was a very seasonable relief, and gladly accepted. Oh, how different was my reception!—"the feast of reason and the flow of soul." The remainder of the day passed away with much pleasantness; and at ten o'clock I again descended, with a palpitating heart, to my hammock. Recollections of my parents, of my home, of my friends, now rushed upon my mind, as I surveyed the dark and gloomy place which was to be my future abode. It doubly embittered the moment, and I was nearly playing the infant with my eyes; but the sentry opening his lantern to retrim his lamp, a gleam danced upon the bright buttons of my uniform, and instant conviction flashed upon my mind that manly fortitude was characteristic of a British sailor. Advancing towards my swinging bed, I stripped, and desirous of displaying my agility, made one spring into it. Poor novice! over it went; down I came, breaking my shins upon the cable. A burst of laughter echoed from all sides. "A clean capsiz, by Jove!" said one. "Strong gales and squally," cried another. "Foundered in the lee scuppers," said a third. "Dowse the glim," cried a fourth; and instantly we were in total darkness. I reproached them with bitterness of heart for their ungenerous treatment of a stranger, and received in reply a bucket of cold water. Roaring with all my might for some time, I had at last the satisfaction of seeing some one descending the main hatchway with a lantern. "Halloo!" cried the old quarter-master, climbing over the cables. "Halloo! what pig's struck here! Another such a squall would rouse old Davey, and make him twist your neck into granny's knots." The words were scarcely uttered when down he went, an old sail having been thrown over him from above, and all was again in total darkness. "Ha, you scape-grace?" cried old Harvey, struggling. "Ha you scape-grace, you'll come to the gangway some day for your tricks, you will!" "Halloo!" Sanders! halloo! turn out, man, and lend us a hand."—"De'il smash me if Sanders gangs a foot—I canna be fash'd. If you play w' kittens you must foresight to be scratchet; but there's Paddy Howard—rouse him

out, mon, turn him out." "Och, by my conscience," cried Pat, "you're a soft-headed swab, so you are. Faith, and I'll turn out without calling. Arrah, where are you, jewel?" "Here I am," said Harvey. "By the toe of my grandfather, and so you are; and now I'll go and fetch a light."—"Ay, ay, bear a hand, mate, bear a hand." Pat was some time absent, during which the old man swore, raved, and growled, with all the sublime pathos of a bear. At last the light appeared: "Bear a hand with the glim, you bog-trotter, do." He was obeyed; and though I was drenched to the skin and shivering with cold, sitting astride the muddy cable, yet to have kept from laughing at the scene which presented itself was utterly impossible. Pat Howard, a tall raw-boned figure, full six feet high, with the remnant of a shirt upon his shoulders, reaching no lower than his loins, under which a blanket was rolled round, resembling a petticoat, and leaving an amazing length of train behind, one arm entirely void of covering, thick bushy hair and whiskers, with a pair of hands and a beard outtravelling the shades of night, now made his appearance. "Halloo, Pat!" cried Harvey; "why you look like a comet revolving round the rays of a farthing candle." This drew my attention to the speaker. He was neither sitting, lying, nor kneeling, but appeared to be in all three postures at the same time. His efforts to get disengaged had forced his head through the sail, and his struggles had twisted it several turns round his throat, threatening strangulation, but displaying a most formidable cravat. On being relieved from this superfluous article of dress, how was I surprised to find the old boy had been all this while actually hanging by the middle in a running noose thrown over him, and hauled taut upon deck for this purpose! "Lower away!" bellowed Pat, turning the old quarter-master round on his jack like a roasting capon, "lower away handsomely." It was done, and he stood once more on his legs. "I'll trounce the young rogue for this!" exclaimed Harvey, "I'll keel-haul the young lubber! No more sleeping in his watch!"—"Whisht,—whisht,—dinna mak a blathering about it, but gang your ways, and let honest men sleep," said Sanders; while Pat assisted me in arranging my hammock and shifting my dress. Pascoe now appeared: "Why, Harvey, what's the matter here?"—"Matter!" cried the enraged veteran; "I'll tell you what, young sir, you've played these tricks too long, and now—"—"You'll go and have a glass of grog," exclaimed the midshipman, interrupting him. "Ay, ay, with all my heart; but no more of the monkey."—"I kenn'd as much—I kenn'd as much," roared Sanders; while with a heavy heart and dear-bought caution, I once more essayed to enter my bed, and with Pat's assistance succeeded. But sleep departed from me. The novelty of my situation, the discipline I had undergone, with the smarting of my shins, all combined to keep me awake; and 'twas not till very near morning that I closed my weary eyes, and forgot all my cares and troubles in a sweet refreshing slumber.

MAKING A FORTUNE.

MARK BRATTS, who had for more than a twelvemonth paid courtship to poor Jane, had obtained her father's consent to their union, whenever he could realize a sufficient sum to begin the world with in a prudent and respectable way. The precarious life of a fisherman, however, appeared to Mark to hold out but little prospect of wealth enough either to gain or to support a wife; and he resolved upon obtaining the object of his wishes as speedily as possible in some other way. A man named Simpson, a notorious smuggler in the neighbourhood, was known to have amassed a considerable property; and Mark resolved to offer himself to serve as one of the crew on board his lugger, hoping that in a trip or two he might earn sufficient to claim his promised bride. He was accepted aboard; and the day following the little vessel spread her light sails to the breeze, and took her course for Holland. Mark possessed a little money which he laid out in a venture, trusting thereby to clear so much as would enable him to claim as his bride the object of his love. It was a stormy day when the inhabitants of Llan-dudno were roused by the report of guns from seaward, the wind blowing furiously right on shore. It was about the time that the smuggler's vessel was expected, and those interested in her safe arrival hastily ran to this promontory to ascertain if she

was in sight, or in danger, for a king's cutter was known to be cruising on the coast. It was just dawn; the sea was running mountains high; and within a league of the rocks, they perceived two vessels within half a mile of each other. The first was a small lugger carrying a press of canvass that seemed to run her hull under as she made directly for the headland, and her masts bent like reeds to the fury of the tempest. As she approached the headland, a number of kegs piled one upon another on the decks, were observed to vanish into the deep by the dozens, being flung overboard by the busy crew. They were within a mile of the shore, when the revenue cutter, hauling her wind, poured a broadside of grape-shot into the smuggler, so well directed that several were seen to fall from their stations in various parts of the vessel. Still they carried every stitch of canvass, knowing that there was water enough for the light lugger to cross the bar after they had rounded the point, and that the revenue cutter would be sure to strike upon the sands if she attempted to follow them half a mile further, being of much heavier tonnage. Besides, she was already in some peril, by venturing so far in shore, with a gale blowing heavily from the north-east. She was soon within hail of the head, and the cliffs were covered with human beings, gazing eagerly upon the little craft beneath it, when suddenly a chain-shot from the cutter carried away her mainmast, which fell over the side. To cut away the stays and clear the wreck was the work of a minute, and the smuggler's bark swept like a sea bird round the great Orme's Head, into the Bay of Conway; but not until their pursuers had sent another broadside into her hull as they stood off shore. As the Typhon, the name of the king's vessel, turned from the pursuit, the daring outlaws sent up a shout of triumph, which was echoed from those upon the rocks; and after a slight shock which the lugger received, as she crossed the sand-bank, they floated safely in smooth water. But where was Jane? Foremost of that crowd which gathered on the rocks, when the firing was first heard, flew the light form of the loving maiden, like a young eagle glaring for its mate. She stood upon the extreme verge of the cliff, unconscious of every thing save the peril of her lover—her eyes fixed upon the vessels, straining as they would crack their strings, to discover the form of him who had her heart in keeping; and as the vessel glided under the headland, she hung over the brink of the precipice, gazing upon the dead and dying, with whom the decks were strewn. But she saw him not. With the swiftness of the sea mew, she followed the course of the smuggler along the shore; and when at last she saw the white sails gathered to the yards, and the vessel riding safely at anchor in the rocky bay, she leaped into a boat and rowed herself to its side. A moment, and she jumped upon the deck, calling wildly for poor Mark. But no one answered her. With hair dishevelled, and eyes glancing fire, she turned each dead man's face up to the sky. At length a headless trunk met her distracted gaze. A bright gold ringlet of hair, tinged with the smuggler's blood, and fastened to the breast of his shirt, the blue pea-jacket she gave Mark at his departure, and the brass buckles which her father wore, and presented to him as a pledge of future favour, all flashed conviction on her mind, that it was the mutilated form of her lover. A wild scream, which struck terror into the hearts of the daring crew, proclaimed her heart was broken; and falling on his mangled corpse, she instantly expired.

THE TWO OCEANS.

Two seas amid the night,
In the moonshine roll and sparkle,
Now spread in the silver light,
Now sadden, and wail, and darkle.
The one has a billowy motion,
And from land to land it gleams;
The other is sleep's wide ocean,
And its glimmering waves are dreams.
The one with murmur and roar
Bears fleets round coast and islet;
The other, without a shore,
Ne'er knew the track of a pilot.

AN EVENING SCENE AT SEA.

How fair is the scene, and in grandeur transcendent!
 The expanse of the ocean begirt by the sky;
 The blue vault of ether in glory resplendent,
 And the sun's parting radiance all burst on the eye!

No breezes now whisper, no rippling is flowing,
 Save the ring where the salmon just sprung from the wave;
 Yon broad shield of fire see the welkin is glowing,
 And sinking serene to the deep amber cave.

On the golden fringed sky as the last beam is dancing,
 And yet dim's the lustre of vesper's fair star;
 A mild purple tint on yon canvass is glancing,
 And from the smooth deep shoots reflected afar!

But now the fresh zephyrs bestir the still ocean,
 And rock the grey Mew on its surface asleep;
 While the moon-beams remote with a quick trembling motion,
 Announce her ascent from the bed of the deep!

In modest effulgence she slowly advances,
 And though half obscured in a thin crimson veil;
 Her visage more sweet through this artifice glances,
 And her tresses of silver float loose in the gale.

Up the portal of heaven now bright she is riding,
 And the stars in obeisance retreat from her blaze;
 How great is that Power o'er their motions presiding,
 Hark! in silence of night rolls the tide of his praise!

SUFFERINGS OF CAPTAIN YOUL.

When the Fly cruiser, belonging to the East India Company, with despatches, was captured by the French privateer, La Fortune, in the Gulph of Persia, at the latter end of 1804, the packets were thrown overboard, to prevent them falling into the hands of the enemy.

It appears that Mr. Flower, who was a passenger on board the Fly, had taken very correct bearings of the ship's situation, at the time the letters were thrown overboard. When landed soon after, at Bushire he communicated his observations to Captain Youl and Mr. Loane; and they being all strongly impressed with the idea of the possibility of recovering the packet, purchased a vessel, and having provided creepers, and other necessary apparatus, set sail towards the spot where the packet had been dropped, near the Isle of Khen.

At the end of three days their labours were crowned with success; they instantly weighed anchor, and were proceeding down the gulph, on their way to Bombay, with the recovered packet, when they were unexpectedly attacked by two pirate boats belonging to Jochassum, and full of armed Arabs, who, boarding the vessel, and cutting and stabbing all whom they met, forced the whole crew overboard. Nine, out of sixteen, were wounded, and all must have perished miserably, had not a long-boat, which accidentally picked them up at sea, been in tow at the time. In it they took refuge, and the Arabs finally took them into one of their boats, and landed them at Ejamaum, a small town on the Arab side, about thirty miles from Noselkeim: it has a good harbour, and appears to be their place of rendezvous. There they were detained thirty-three days, subject to every hardship; and at the end of that time, to complete their misery, were about to be sold as slaves, when a Wahabee chief, who heard that they were English, and who had known the British resident at Bussora, interfered, and procured them a passage to Khen. They were landed at that island, after having been stripped of everything except their shirts and trousers, and the packet, the great source of their labours and sufferings. Two days were now devoted to drying the letters, which had been about five weeks in the sea, and their purpose was not yet effected, when ten Jochassum boats appeared in sight. The unhappy men, instantly carrying off the packet, sought shelter among the rocks, where they remained for two days and nights,

exposed to every hardship, and nearly perishing with hunger and thirst.

Meanwhile, the pirates burnt and laid waste the villages on the island, which forced the wretched inhabitants to pass over to the main land; so that on the departure of the pirates, our sufferers were left the undisturbed and solitary possessors of the island. After waiting four days longer for an opportunity of crossing the continent, they obtained a passage to the neighbourhood of Ararack; on their arrival at that place, they learned that the pirate boats had anchored there, and were committing the same havoc as at Khen. Thus pursued by misfortune, they were forced to walk to Cheroo, a distance of nearly forty miles. This town is under the government of Sheik Aga Mahomed, who, at first, received them in a friendly manner: but finding them without money, and stripped of everything valuable, he drove them from the house which he had provided for them, and treated them with the most unfeeling cruelty and contempt. For some nights in excessive bad weather, they had no covering but an inverted boat, under which they took refuge.

Finding at length no probability of being enabled to proceed on their voyage by sea, they determined to walk on foot to Bushire. After two days march from Cheroo, they reached Nochyloo, without shoes or stockings; where, to their great surprise and joy, they found that Sheik Rama had invited them to his island of Busheab, and supplied them with everything his house afforded with the kindest hospitality. Nevertheless, in consequence of their past sufferings, they were all seized with a fever and ague. The extreme state of debility to which, from their long hardships, they were all reduced, joined with the want of medicine and medical advice, made their illness extremely severe; and though Sheik Rama gave them a boat, in which they arrived at Bushire, on the 4th of January, 1805, Captain Youl, worn out with sickness and fatigue, died on the 5th, and was followed to the grave by Mr. Flower, on the 7th. Some of the seamen likewise died; but Mr. Loane recovered.

The Bombay government ordered a very liberal allowance to be paid to the parties concerned, and to the families of such of them as died.

RE-CAPTURE OF THE BRIG MARY.

The brig, Mary, R. Tucker, was captured by an American privateer, off the coast of Portugal, who took the crew, except the master and a lad, and put on board six Americans. When off the Azores, four of them being below, the master and boy determined to attempt the re-capture of the vessel, for which purpose they had previously secured a bayonet, with which they despatched the two men on the deck. Those below hearing the scuffle, one of them succeeded in getting on deck; this man the master seized, and got over the side of the ship, while the boy threw the hatch over and fastened it down, which gave them complete command of the vessel, and were enabled to reach Fayel in six days.

SONG OF THE WATER SPIRITS.

[There is a beautifully poetical superstition prevalent in some of the islands of the Indian Ocean, that the hour of the tempest is the season of rejoicing among the spirits of the deep, and that previous to the bursting of the storm, the low moaning of the wind is their warning voice to mortals.]

Retire, retire!

For in his chariot the mighty spirit,
 That doth the blue depth of ocean inherit,
 Is passing by.

Retire, retire!

For in this night the sea king shall
 Hold his stupendous carnival
 Upon the trembling sea.

Retire, retire!

For it is not given to mortal eye,
 The secrets of the deep to try,
 Retire or perish!

SUFFERINGS OF EIGHT SEAMEN IN GREENLAND.

On the 1st of May, 1630, three ships left England under the command of Captain William Goodler, and having a fair wind, arrived safely at their destined port in Greenland, on the 11th of June following; their orders were, to stay at the Foreland until the 15th of July, and in case they should not by that time meet with success in fishing, then to send one of the ships to the eastward, to a place about eighty leagues distant, which at the latter end of the year is much frequented by whales. A second of the three ships was designed for Green Harbour, about fifteen leagues to the southward of the third ship, the *Salutation*, on board of which were the eight seamen, the subject of the following narrative, appointed to stay at the Foreland until the 20th of August; but the captain having made a good

voyage at Bell Sound, despatched a shallop with orders for them to join him there, that they might take in some of his train oil, by joining their forces, make the fleet so much stronger for the defence of the merchants' goods homeward-bound, the Dunkerquers being very strong and rife at sea in those days. Accordingly, on the 8th of August they directed their course to the southward, towards Green Harbour, there to take on board twenty of their men who had been sent into the smaller vessel to assist in navigating her.

The wind being contrary, they were obliged to lie to. On the 15th the weather was calm and clear, the ship being a few leagues from Black Point, and about five from a place called the Maiden's Paps, which abounds in venison, the master sent eight of them in a shallop to hunt and kill deer for the ship's provision. These were William Fakely, Gunner; Edward Pelham,

ADVENTURES OF EIGHT ENGLISH SEAMEN, LEFT BY ACCIDENT IN GREENLAND, IN 1630.

gunner's-mate; John Wise and Robert Goodfellow, seamen; Thomas Ayres, whale-cutter; Henry Bett, cooper; and John Dawes and Richard Kellet, landmen. They left the ship, and taking with them a musket, two lances, a tinder-box, and a brace of dogs, they directed their course towards the shore, where they arrived in four hours; the weather being at the time fair and clear, and in every respect favourable to their intentions. That day they killed fourteen deer, and being weary with rowing and hunting, they made a repast on such provisions as they had brought with them, resolving to rest on shore that night, and to return on board the next day.

In the meantime, however, the weather grew thick, the wind shifted to the south, and drove a great quantity of ice between the shore and the ship, which, to avoid the danger to which she was exposed, was obliged to put off to sea, so that the men on

shore entirely lost sight of her. Uncertain as to their fate, and the weather growing still thicker, they considered it their best course to hunt along the shore, and make the best of their way to Green Harbour, where they might go on board the other vessel, until their own should come into port.

Thus coasting along, they killed eight more deer, which they took on board the shallop, and on the 19th arrived at Green Harbour; but, to their great surprise and astonishment, they found that the ship was gone. They were utterly at a loss how to account for her departure, as they knew that she had not sufficient provisions on board to last till she reached home.

Finding themselves thus disappointed in their expectations, and it being within three days of the time fixed for the departure of the vessels from the coast, they resolved to proceed with all possible expedition to Captain Goodler, at Bell Sound;

and in order to make the better way, they threw all their venison overboard. Bell Sound is situate about sixteen leagues to the southward of Green Harbour, and the first night they had proceeded about halfway to a point of land called the Low Ness, where there came on so thick a fog, that they were obliged to lie-to between two rocks, from the night of the 17th till the following day at noon; when the weather having cleared a little, they prosecuted their voyage; but having no compass, and neither of them being pilot enough to know the land, they overshoot Bell Point at least ten leagues to the southward, towards Horn Sound.

Some of them, meanwhile, conceived that it was impossible they could be so long in proceeding eight leagues, and were confirmed in the opinion that they had gone beyond the place they

intended, by observing that the land trended away towards the east. They therefore, contrary to the judgment of their gunner, William Fakely, who had been in the country five or six times before, altered their course, and steered away to the northward. They had now actually approached within two miles of Bell Point, when Fakely looking about declared they were on a wrong course, and most of the company being persuaded by the positive manner in which he spoke, they turned the boat's head a second time to the westward, which was the cause of all the subsequent misery and hardships they endured.

Thus, on the 20th of August, they were a second time running as far to the southward as before; but as there was no likelihood of their discovering the place they were in search of, they again turned the shallop to the northward, Fakely still persisting in his former

opinion, in which they no longer placed any confidence, and he refused to steer the boat any more. The weather continued, fair, and an east wind springing up they took advantage of it, and set sail. The wind increasing, carried their shallop along with great velocity, so that on the 21st they arrived at Bell Point, when the wind shifted and blew right out of the sound at E.N.E., with such fury, that they were obliged to take in their sail, and by the help of their oars approached to within two miles of the shore.

They found that this was the place they had been so long seeking, nor could Fakely himself forbear to acknowledge his error. They immediately sought a harbour for the shallop and having brought her into it, two of the men were despatched by land to the tent at Bell Sound, which was ten miles distant from the place where they landed, to see

whether the ships were still there. Of this, however, they had little hope, as the period fixed for their departure was past, and the wind had been favourable for putting to sea. The men upon their arrival found their fears verified, that the ships had left the road, and returned to their companions with the melancholy tidings; but as it was impossible that the vessels might be at Bottle Cove, three leagues distant on the other side of the sound, they resolved to proceed there. They arrived at that place on the 22nd, but finding no ships, they had little hope of deliverance from the dangers in which they were involved. If they had resolved to follow the ships, they had neither pilot nor compass to direct them, and would be exposed to the most imminent danger of perishing by the drifting ice; if, on the other hand, they resolved to stay at Bell Sound, they would have no other prospect than that of a miserable and

lingering death, as they were totally unprovided with the means of passing the winter in such an inclement climate.

Nor were their apprehensions altogether without foundation. They well knew that neither Christian nor Heathen had ever before inhabited that desolate region; they also remembered that the merchants had offered great rewards to any persons who would venture to pass the winter on this coast, besides providing them with everything necessary for such an undertaking, yet they could never find any so hardy, as to expose their lives to such a perilous experiment. They had also heard that the Russia Company had once procured the reprieve of some criminals convicted of capital offences, to whom they promised not only pardon for their crimes, but likewise considerable gratuities, if they would undertake to remain one whole year in Greenland, and that every way provided for, both in clothes and victuals, and all things needful for their preservation. These poor wretches, to escape immediate execution at home, resolved to make trial of the adventure. Upon their arrival there, however, the aspect of desolation which this dreary region exhibited, struck them with such horror, that they resolved rather to return to England, and to expiate with their lives the crimes they had committed, than to remain there, though with the assured hope of obtaining pardon. The captain who carried them out, being a humane man, would not compel them to stay, contrary to their inclinations, but carried them back to England, where, through the intercession of the Russia Company, they escaped that death to which they had been condemned.

To men in their situation, these recollections were not calculated to afford much encouragement: and another circumstance more terrible to them than both the former, for it was likely to be their own case, tended greatly to augment their apprehensions, this was the lamentable fate of nine men, who had been abandoned in the same place, and by the same master, who had left these eight men behind, who had all died miserably upon the place, their carcasses having been found mangled by the savage bears and hungry foxes, which are the only inhabitants of this comfortless country. Their lamentable end was, indeed, sufficient to have daunted the spirits of the most resolute and enterprising.

Their fears, however, did not proceed entirely from the dreadful example of others, but the consideration of their want of everything necessary to sustain the life of man, struck them to the heart. They were not only unprovided with clothes and food, but entirely destitute of a habitation capable of sheltering them from the chilling cold. After spending some time in silent anguish, knowing that delay could only be productive of new dangers, they began to conceive hope, even out of the depths of despair. Rousing their benumbed faculties, they began to consider the most probable method of preserving themselves in that place, seeing that all hopes of returning to England that season were then quite frustrated. It was unanimously agreed to take the opportunity of the next fair weather, and to proceed to Green Harbour, to hunt and kill venison for part of their winter provision.

Accordingly, on the 25th of August, the wind and weather being both fair, they set off for Green Harbour, where they arrived in twelve hours. Having landed, the first thing they did was to construct a tent with the sail of their shallop, pitched up and spread upon the oars; under this shelter they resolved to rest that night, and the next day to return to their hunting. The weather proving fair and clear, they made their sleep the shorter, and, in the morning, equipping their shallop as well as they could, they proceeded to Cole's Park, a place about two leagues distant; and which Ayres assured them abounded with venison. They did not find so many deer as they expected from his report, but killed seven that day and four bears, whose flesh they likewise intended to lay up for provision.

The weather beginning to be overcast, and not likely to continue favourable for hunting, they returned the same night to Green Harbour, where they made a tent as before, and betook themselves to rest. The next morning, finding the weather to be clearing up, six of them prepared to go a hunting with their two dogs, leaving Fakeley and Dawes in the tent to provide some refreshment against their return.

On their departure from the tent, they rowed towards Cole's Park. In the way, on the side of a hill by the sea side, they discovered seven deer feeding, on which they landed, and by the help of their dogs, killed six of them. The weather being then again overcast, they thought it of little purpose to go any farther at that time, but resolved to hunt along the side of the hill, and at night returned to their tent. As they proceeded they killed six more deer, when it began to blow and rain, and to be very dark; upon which they hastened towards the tent with a view to rest for that night, and on the next day to renew their hunting. This design being prevented by the unfavourable state of the weather, they got the bears and venison which they had killed on board the shallop, and finding another boat which had been left behind by some ship, they loaded it with the greaves of whales, boiled the same year, which they found in great quantities strewed upon the ground. Dividing themselves into two equal companies, Fakeley, with John Wise, and two landsmen, took charge of one shallop, while Pelham, Goodfellow, and two men went on board the other, intending with the next fair weather to return to Bell Sound, where they designed to winter. Every thing was ready for their departure, when they were overtaken by so intense a darkness, that they were obliged to remain that night where they were; and the following day being Sunday, they resolved to rest in order to observe it with the greater respect.

The weather on Monday morning being fair and clear, they set off at day-break; but after rowing about four hours, the sky began to be overcast, and the wind blew so hard that it was impossible for them to reach Bell Sound. The next morning they reached Bottle Cove, where they were obliged to remain, as the violence of the wind prevented them from proceeding farther. Having fastened the head of one of the shallops, to the stern of the other with a rope, they cast anchor and went on shore, leaving the boats riding in the Cove. In the meantime the wind increasing, blew with great violence into the cove, and the sea ran so high that their anchor came home, and the shallops being dashed against the shore, sunk with all their provisions. Some of it having been washed out of the boats by the waves, they found it floating up and down the beach. Their feelings can only be conceived, when, running out of the tent, they saw the best part of their provisions, the only hope of their lives, which they had taken such pains and run such risks to procure, in danger of being utterly lost, or, at any rate, spoiled by the salt water. In this dilemma, they saw no other way of saving the remainder of their store, ready to be washed away by the billows, than to run into the sea and thus get to their shallops, which they drew on shore by means of a hawser, and then ranged along the coast, seeking and taking up such of their provisions as had been washed out of the boats.

On the 3rd September, the wind having died away, and the weather proving more favourable to their design, they launched their shallops, and on the same day reached Bell Sound, where their first business was to secure their provisions. Their next occupation was to take a particular survey of the place, and especially the great tent, that being the intended place of their habitation the ensuing winter. The great tent, as they called it, was a kind of house built of timber in a very substantial manner, and covered with Flemish tiles; it was about eighty feet in length and twenty feet in breadth, and had been erected for the coopers to work and lodge in, during the time they were making casks for barrelling the train oil. The weather soon after their arrival became very cold, and the frost was so severe that they durst not venture on another voyage to Green Harbour, as they were apprehensive that the Sound would freeze, and thereby prevent them from returning to their tent; for they knew it would be in vain to attempt the journey by land, as the country was so extremely mountainous.

In order that they might better secure themselves from the cold, they resolved, with all possible expedition, to build a smaller house within the larger one. They commenced, therefore, by taking down a small building which stood near the other, in which the men lodged while they made the oil. They took away the materials, which furnished them with one hundred and fifty deal boards, besides posts and stanchions or rafters, and from three chimneys of the furnaces for boiling

oil, they brought a thousand bricks. They also found three hogsheads of very fine lime, and fetched another from Bottle Cove: this they mixed with the sand of the sea shore, and made very excellent mortar. They immediately set to work, but the cold was so intense that they were obliged to keep up two large fires to prevent the mortar freezing. Fakeley and Pelham undertaking the masonry part, they began to raise a wall of the thickness of one brick against the inner planks of the side of the tent, and while they were laying the bricks, the rest of the company were otherwise employed, some in taking down the bricks, others in making them clean and carrying them to the tent in baskets, some in making mortar and cutting boards to build the other side, and some in curing their venison.

Having built the two outermost sides of the tent with bricks and mortar, and the former being nearly all used, they were obliged to construct the other two sides in the following manner. They first nailed the deal boards on one side of the post or stanchion, to the thickness of a foot, and on the other side in the same manner; then filling up the vacant space with sand, it became so tight that not a breath of air could penetrate.—The vent of the chimney led into the greater tent, being the breadth of one deal board, and about four feet in length. Their small tent was about twenty feet in length, sixteen in breadth, and about ten feet in height. The roof was of deal boards, laid over five or six times, the middle of each plank covering the joining of the two underneath, so that no wind could possibly find its way between. As for the door, besides making it as close as it would shut, they lined it with a bed which they found there, and which prevented the entrance of the air, whether it was open or shut. They made no windows, so that all the light they received was from the vent of their chimney, through the greater tent, by removing two or three tiles from the roof. Their next work was to set up four cabins, where they lay two and two, on the deer-skins dried, and which they found to be extremely warm and comfortable. The next subject which occupied their attention, was that of fuel; they examined all the shallops which had been left ashore by different ships, and found seven of them so crazy as not to be serviceable for another year; these they made bold with, and broke up, and then carried them into their house, where they stowed them away over the beams, in the manner of a floor, intending also to stow the rest of their firing over them, so as to make the outer tent warmer, and to keep the snow from drifting into it through the tiles.

The weather having now become much colder, and the days very short, or rather no day at all, they began to stave some empty casks, which had been left there the year before, which they did to the extent of one hundred tons, at least; they also made use of some planks, and two old coolers for cooling oil, and whatever they thought might be spared, without detriment to the next year's voyage. They thus collected all the firing they possibly could, with the exception of the shallops and coolers, the destruction of which might have materially affected the success of the next year's voyage, to the great injury of the company, whose advantage these men, being their servants, invariably consulted. Considering the length of time they were likely to remain in this dreary situation, they felt the necessity of husbanding their stock as much as possible; to effect which, they soon discovered the following method. When they raked up their fire at night, with a large quantity of ashes and embers, they put a piece of elm-wood into the middle of it, which, after lying sixteen hours, they found, upon breaking it up, that it was all on fire: this method they regularly continued, and their fire never went out for about eight months.

Being now provided with as good a habitation as they could reasonably expect, and a fair supply of fuel, a small quantity of drift-ice appeared in the sound, on the 12th of September: on a piece of this ice they discovered two sea-horses asleep, and instantly launching one of their boats, they hastened to attack them; after rowing some time, they came so near that the shallop touched one of them, when Fakeley struck a harpoon into the old one, which the rest soon dispatched with their lances. The younger, being unwilling to leave her dam, continued to swim about the boat till they also killed her with

their lances. They then hauled them into the boat, and, rowing ashore, flayed their prizes, and cut them into pieces. On the following day they also killed another in the same manner.

The night had now increased so much, and the cold became so intense, that they lost all hope of obtaining any more provisions before the spring, as they could only now and then expect to kill a bear that might chance to straggle near them.—Having, therefore, taken a more accurate survey of their stock of provisions, which they found much too small for their company, and the time they had to remain, they agreed to come to an allowance, to stint themselves to one reasonable meal a day; and on Wednesdays and Fridays to allow themselves only the fritters or greaves of the whale, which was a very loathsome food; and on this diet they continued for about three months.

Their clothes and shoes were by this time worn to pieces, and it was therefore necessary to invent some method of repairing them. This they effected by contriving thread of rope yarn, and needles of whale-bone. The nights were now very long, and by the 10th of October, the cold was so intense, that the sea was frozen over. Being thus prevented from pursuing their usual occupations, and having nothing upon which to exercise their minds, their imaginations began to be harassed with a thousand distressing ideas. They had now more than sufficient leisure to bewail their miserable condition, to reflect on their separation from their wives and children, and to imagine how afflicting to them, and to their parents, must be the thoughts of their fate. At other times they cheered themselves with the consolation which their friends might derive from the hope that it would please the Almighty to preserve them till the following year. Sometimes they varied their griefs, now complaining of the cruelty of the master of their vessel who left them in these distresses, and then not only excusing, but lamenting both him and his company, as they feared they might have been overtaken by the ice, and thus miserably perished.

Tormented thus in mind with doubts, fears, and griefs, and in body with hunger, cold, and want, the hideous monster despair began now to present himself to their imaginations in his most terrible form, and endeavoured to seize them as his prey. Reflecting, however, that they ought not to give themselves too much to grief, they redoubled their prayers to the Almighty for strength and patience in their miseries, and by his blessing, banishing those desponding thoughts, they again cheered themselves up to use the best means for their preservation.

On again inspecting their provisions and dreading lest their fuel should fail them, they thought it best to roast half a deer every day, and stow it in hogsheads, leaving as much raw as would serve them to roast a quarter every Sunday, and the same for Christmas-day, and other such like occasions.

To their great mortification they found that all their whale fritters were almost spoiled by the wet, which they had taken; and had grown mouldy by lying so close together. They also discovered that they had not a sufficient quantity of bear and venison to allow themselves five meals a-week, as heretofore; they therefore abridged their stomachs of another meal, so that for three months afterwards they fed three days in the week on the unsavoury and mouldy fritters, and feasted the other four on bear and venison; and, to add to their distresses, they not only were in want of meat, but began now to want light also: all their meals were suppers; even the glorious sun, as if unwilling to behold their miseries, concealed his face under the sable veil of the darkest night.

From the 14th of October, to the 3rd of February, they never saw the sun, nor did he, during that period, ever appear above the horizon. The moon, however, when not obscured by clouds, shone both day and night as bright as she appears in England. The sky it is true was frequently very much overcast all the winter time, so that they could not always see the moon so well, nor discern in what point of the compass she was. They had, indeed, a kind of daylight which glimmered upon them, about eight hours a day; this was in October; but from that time till the 1st of December, even that light was shortened ten or twelve minutes a day. From the 1st to the 20th of December, there appeared no light at all; but that whole period was one continued night; all they could perceive was, that now and then, in clear weather, a glare of white, like the dawn of day,

appeared towards the south; but not any light. This continued to the 1st of January, when they could perceive that the day began to increase a little.

During this period of darkness, they could not tell with certainty when it was day or when night, excepting by an observation which Pelham, the gunner's-mate kept, in the following manner. First bearing in mind the number of the epoch, he made his addition by a day supposed, though not absolutely to be known, on account of the darkness, by this he judged the age of the moon, and kept such an account of the time, that when, afterwards, the ships arrived, and they met their countrymen, he could tell them the day of the month as exactly as they could tell him.

At the beginning of this dark and irksome season, they sought some means of preserving a light. This they accomplished, when, having found a piece of sheet lead over the seam of one of the coolers, they ripped it off, and made three lamps of it. These they supplied with oil, which they found in the cooper's tent, and making wicks of rope-yarn, they kept them continually burning, which was a great comfort to them in their extremity.

Thus, although they neglected nothing that could contribute to their preservation, yet they could not secure themselves from that depression of spirits which was naturally produced by the reflection on their wretched condition. In the painful feeling of their misery, they sometimes indulged in reproaches against those who had involved them in such distress; but at other times they considered it as a punishment for their former wicked lives, and humbling themselves before the mighty hand of God, they cast themselves down in prayer, two or three times a day, which was a practice they continued during the whole course of their misery.

The new year now commenced, and as the days lengthened the cold increased, till at length it became so intense, that it raised blisters on their flesh, as if they had been burned; and if they touched iron it would adhere to their fingers, like bird-lime. Sometimes, if they only went out to fetch a little water, the cold would seize them in such a manner that they would return with their bodies as sore as if they had been cruelly beaten.

During the early part of the winter, they found water under the ice that lay upon the beach. The water issued from a cliff of ice and ran into a hollow in the beach, where it was covered with a thick ice, which they daily broke with pickaxes at a certain place, and took as much water as they wanted for drinking. This continued till the 10th of January, when they were obliged to make shift with snow-water, which they obtained by putting hot irons into the snow, and this was their drink until the 20th of May.

By the end of January, the length of the days had increased to seven or eight hours. About this time they took another survey of their provisions, which they found to be so short that they could not expect them to last above six weeks longer. This again filled them with apprehensions of famine; but, as in all their other extremities, they had recourse to the great Father of all, whom they knew could help them, although at that time they saw no room for hope.

In this manner they passed their time till the 5th of February, which, though a fair clear day, proved intensely cold. It was near noon when the clouds which had obscured the morning sky being dispersed, Aurora, with her golden face, once more smiled upon them. The glorious sun with his glittering beams began to gild the tops of the lofty mountains, and the whiteness of the snow lit up the brilliancy of the sun's rays, afforded the most cheering and animated spectacle; and, to add to their joy, they observed a she-bear with a cub approaching their habitation, on which, seizing their lances, they sallied forth to meet her. The old one soon discovered and hastened towards them, but they gave her such a gallant reception with their lances, that she fell down biting the snow with rage, but the cub ran away and escaped. The weather was so intensely cold that they could not remain out any longer; retiring, therefore, to the tent, they first warmed themselves, and then returned to secure their prize. Having flayed her, they cut the carcase up into pieces of about a stone weight, one of which

served them for their dinner, and upon this bear they lived for three weeks. It proved to be very good eating, and even better than the venison: but upon eating the liver, their skins peeled off, though it is a remarkable circumstance, that several who were ill before eating of the liver, recovered their health immediately after.

This supply being exhausted it became absolutely necessary to seek some other provision, or to begin upon their cask of roasted venison, which they were very unwilling to do, for fear it should be consumed before the fleet arrived from England. These fears, however, were soon banished, as their habitation was soon visited by great numbers of bears. They counted, at different times, at least forty of these animals, of which they killed seven, one on the 2nd of March, another on the 4th, and on the 10th, one of extraordinary size, being not less than six feet in height. These they flayed and roasted on wooden spits, as they had no other kitchen furniture, except a frying-pan, which they found in the tent; and the flesh proved to be as good savoury meat as any beef could be. Having now a tolerable stock of provisions, they increased their allowance, eating frequently two or three meals a day, which gave them new strength and spirits.

The days had now lengthened considerably; and several kinds of birds, which had deserted those parts during the winter, began to resort thither for the purpose of breeding. On the arrival of these birds, the foxes, which all the winter remain in their burrows under the rocks, make their appearance in search of prey. They set three traps for these animals, baiting them with the skins of the birds, which they found on the snow; for the legs of this fowl, which is about the size of a duck, are placed so near the rump, that when once it alights upon the ground, it is seldom or ever able to rise again. In this manner they caught about fifty foxes, all of which they found to be good eating. They also took a bearskin, and laying the flesh side upwards, they made springs of whalebone, in which they caught above sixty of the above mentioned birds.

On the 16th of March, one of their two mastiff dogs left the tent, in the morning, and never returned to them, so that they were ignorant of what became of him.

The weather having grown warm, by the 1st of May, they were able to go abroad in quest of more provisions. They therefore went out every day, but met with nothing till the 24th of May, when, discovering a buck, they thought to have hunted him down with their dog, but he had become so fat and lazy, that he would not pursue the deer. Seeking farther, they found a number of the eggs of the willock, a bird about the size of a duck, but there being only two of them, they could not carry home above thirty. The next day they intended to have returned for more, but it proved so cold, with an easterly wind, that they could not stir out of the tent.

Staying at home, therefore, on the 25th, they that day omitted their ordinary practice in fair weather, of going every day or every second day, to the top of a mountain, to see whether the main ice in the sound was broken. This had not been the case till the preceding day, when a violent wind coming from the sea, broke the ice, and then shifting to the east, carried it out to sea, and for a great way cleared the sound. The ice, however, still lined the shore to the distance of at least three miles from their tent.

On the 26th of May, they being then all at home, two Hull ships entered the sound. The master knowing that some men had been left behind the year before, and anxious to learn if they were still living, sent off a shallop, and ordered the men to row as fast up the sound as possible and then to proceed to the tent by land. Upon their arrival, they found the shallop which had been hauled from the tent to the water, with the intention of seeking for seahorses, the first fair weather, and equipped with every thing necessary for the expedition; and although they doubted the possibility of any men being able to survive a winter in Greenland, still this sight gave them some room for hope. Taking their lances, therefore out of the boat, they advanced towards the tent.

Those in the tent heard nothing of them, as they were assembled in the inner tent, and about to go to prayers, excepting Thomas Ayers, who was still in the outer tent. The Hull men, on coming up, hailed with the usual seaman's cry, "Hey!"

which he answered. This threw them into the greatest amazement; and those within hearing the noise, immediately run out of the tent, all black as they were with the smoke, and their clothes torn to rags with wearing them so long. The uncouth appearance which they presented increased the surprise of the Hull men; but perceiving they were the very men that had been left there the year previous, they joyfully embraced them, and accompanied them into the tent, where these strange adventurers set before their deliverers the best fare they could, which was venison roasted about four months before, and a cup of cold water, which, for the sake of the novelty, they kindly accepted.

Having satisfied, as well as they were able, the numerous inquiries which were made, they agreed to return with the Hull men on board the ship, when they were welcomed in the heartiest and kindest English manner. They remained on board till the arrival of the London fleet, which they were told was expected to arrive the next day.

After waiting three days, which seemed inexpressibly tedious, so desirous were they of hearing from their wives and children, the London fleet, to their great joy, arrived in the port on the 28th of May. They immediately went on board Captain Goodler's ship, where that gentleman received them in the kindest manner, giving orders that they should have anything in the ship, that might do them good, and renew their strength; at the same time furnishing them with clothes at his own cost.

After a fortnight's rest and refreshment, they all perfectly recovered their health and strength, upon which the captain sent Fakely, Wise, Ayres, and Goodfellow, according to their desire, to the ship to which they had belonged. It was naturally to be expected that after enduring such hardships, partly through the master's means, they would be as kindly welcomed as the prodigal that was lost and found again; but they had no sooner entered the ship, than he called them runaways, and used other harsh and unbecoming expressions. The others remained with Captain Goodler, from whom they experienced the kindest treatment.

They were now contented to remain in this inhospitable region till the 20th of August, when, with joyful hearts, they embarked for their native land; and though sometimes crossed with contrary winds, they at length came safely to anchor in the river Thames; and thus by the blessing of God, all eight of them reached home safe and sound.

LOSS OF THE DE GRAVE, CAPTAIN YOUNG.

THE De Grave, a fine ship, of the burthen of seven hundred tons, and carrying fifty-two guns, passed through the Downs on February the 19th, 1701. She was commanded by Captain William Young, and destined for Fort St. George, in the East Indies, where she arrived in safety. She sailed from thence to Bengal, where they had the misfortune to lose the captain and first mate, in consequence of which the command devolved upon the late captain's son, who was second mate, and Mr. John Benbow, one of the sons of Vice-Admiral Benbow, who had gone out as fourth mate, became second mate from Bengal.

They sailed for the Cape of Good Hope, but the ship ran aground in attempting to go out of the river, and she stuck fast; however, the next high tide she floated again, and put to sea with little or no damage, as was then imagined; but very shortly after she was discovered to be so leaky, that they were obliged to keep two chain pumps constantly going. They sailed in this condition for above two months before they reached the island of Mauritius, then inhabited by the Dutch, who received them very kindly, gave them all the assistance in their power, and permitted them to erect and fit up a tent upon the shore, into which, having unladen the ship in order to search for the leak, they brought the greater part of the cargo; but, after a long scrutiny, they were unsuccessful in finding the leak. They remained about a month at the island of Mauritius, and then taking on board about fifty Lascars, sailed directly for the Cape of Good Hope. There were then about one hundred and seventy hands on board, and though the Lascars were not of much service in

point of navigation, yet they were of great utility in relieving the English seamen from the labour of pumping. The resolution which they had thus rashly taken of putting to sea before the leak had been stopped, or even discovered, proved fatal to them; for, in a few days afterwards, the water gained upon them to such a degree, that, notwithstanding the pumps were kept incessantly going day and night, it was with the utmost exertions they kept the vessel above water, though they were still six hundred leagues from their intended port.

The ship's company, upon the belief that common danger put them all on an equality, represented to Captain Young the utter impracticability of carrying into execution his design of proceeding to the Cape; and that, under the circumstances, the wisest course would be to make the nearest land, which was that of Madagascar, to the southward of which they had sailed about a hundred leagues. The captain thought proper to comply with this advice, and endeavoured to run the ship on shore; but this was also found to be impracticable: they, therefore, when within a quarter of a mile of the coast, first let go an anchor, then cut down all their masts and rigging, and threw their guns and heavy goods overboard, in the hope of being able to make the ship swim nearer, but this being found to be impossible, and having already lost their long-boat and pinnace, they resolved upon making a raft, which they effected in the course of the night; and, on the following morning, Mr. Pratt, the chief mate, went on shore in a little boat, accompanied by four men, and taking with him a rope, by which they proposed to warp the raft. Before they were able to reach the land, the boat was stove to pieces, but the men escaped and secured the rope, by which they brought the raft on shore with the remainder of the ship's company, except the captain, who remained on board the ship till the last moment, and did not quit her till he found she was going to pieces, when he threw himself into the sea and swam ashore.

Immediately on their landing, the crew were made prisoners by the king of that part of the island, and were carried about fifty miles up into the country, where they found a Captain Stewart and a Captain Drummond, with a few of their ships' crew, in the same situation as themselves, and who soon gave them a better insight into their situation, by assuring them that the king would never permit them to return again to Europe, and that he intended to make them serve him as soldiers or slaves, in the prosecution of his wars with the neighbouring tribes. This intelligence, it may well be imagined, instead of allaying their fears, struck them with the utmost consternation.

In this miserable state of affairs, a consultation was held by Captains Drummond, Stewart, and Young, in conjunction with Mr. Pratt and Mr. Benbow, in which Captain Drummond stated it as his opinion, that the only expedient by which they could recover their liberty, was to seize the black king and march off with him prisoner to some other province of the island, where ships more frequently touched at; and to this project they agreed. Mr. Benbow highly approved of the proposition, and assisted with great courage in the execution of it, which was performed with greater ease than they could reasonably have expected; and the king, the queen, and their son, were made prisoners; but at the instance of Captain Young, from motives of compassion, the queen was released. It is hardly possible to conceive an enterprise displaying more boldness in the design, and greater courage and intrepidity in the execution than this, where fifty or sixty white people, and not above half of them armed, openly and daringly carried off a black prince out of the midst of his capital, and in the sight of some thousands of his subjects, better armed than themselves. They were, however, restrained from firing upon the whites by the threat of Captain Young to kill their king if they attempted it.

Great as had been the ability exercised in carrying the foregoing scheme into effect, they were guilty of great mismanagement afterwards; for, upon a proposal being made by the negroes to ransom their king for six guns, it was agreed to deliver him up, upon a supposition that the blacks would not then follow them any further; and, notwithstanding Mr.

Benbow was strongly opposed to this arrangement, and showed them the mischievous consequences which must necessarily ensue from such an injudicious measure; it was carried into effect. The king being given up, the blacks still continued to follow them, though at a greater distance, until at length it was agreed that they should also give up the prince, presuming that this would certainly put an end to the pursuit. They, however, took with them, by way of hostages, three persons, who, as they were informed by the blacks, were three of the principal men in the country. Two of them very soon afterwards made their escape, and the blacks, so far from discontinuing the pursuit, came closer up to them than ever, and even fired on them, which they had not done before.

The weakness of their own conduct, and the wisdom of Mr. Benbow's advice, were now apparent to all of them; and as it was obvious that, under existing circumstances, they had no chance left but to fight, they began to arrange their little army in order of battle. Thirty-six armed men were divided into four bodies, which were commanded by the three captains and Mr. Benbow; but after an engagement, which lasted from noon till about six o'clock in the evening, a treaty was entered into. The proposition on the part of the negroes was, to have their arms given up to them, and promising, on that condition, to give them their liberty; and this proposition, though in itself of such mischievous tendency, and strongly opposed by the better judgment of Mr. Benbow, yet they were mad enough to accept it, at the persuasion of Captain Young.

When this arrangement came to be put into execution, Captains Drummond and Stewart, with four or five of their men, refused to deliver up their arms, and marched off unperceived in the night, accompanied by Mr. Benbow, and arrived at Port Dauphin in safety. The remainder of the party were cruelly murdered, none of them escaping, with the exception of Robert Drury, a boy of fifteen or sixteen years old, whom they preserved and made a slave. Mr. Benbow, after remaining several years among the negroes, where he lived after their manner and went naked, made his escape on board of a Dutch vessel, the captain of which had been well acquainted with his father, and, for his sake, treated him with great kindness and respect. After a few months he arrived safely in England, and lived many years afterwards.

LOSS OF THE MICHAEL, CAPTAIN HUTTON, JANUARY 7, 1701.

The Michael, of London, of the burthen of 330 tons, commanded by Captain Richard Hutton, sailed from the Downs on January 5, 1701, bound for Lisbon, for the purpose of taking in a cargo of St. Ube's salt. At starting they had a fine east wind, but by the time they got to the South Foreland, it shifted to the north-west.

The next morning, between four and five o'clock, they were off the Isle of Wight, when the wind freshened, and increasing to a violent storm, the weather became thick and sleety; they were accordingly forced to reef their topsails, and at eight o'clock, the gale still increasing, they took them in. Having taken in their mainsail about half-past eleven, they now ran with their foresail until about two o'clock in the morning, when suddenly the ship struck upon the Caskets, near Alderney, and so precipitous was the concussion, that the bowsprit was the first thing that touched.

Surprise at the suddenness of the shock, and consternation at the probability of their fate, now seized the crew: and though ignorant how to act, or what to do, each one prepared to shift for himself. Five men got out on the mainmast, and four others dropped from the fore-yard; but the remainder, consisting of the captain and six men, shared the fate of the unfortunate vessel, which was suddenly dashed to pieces; nor could those who were saved, by any possibility, afford the slightest assistance to their perishing companions, on account of the excessive darkness of the night.

The nine men thus providentially rescued from a watery grave, viz., Thomas Mead, chief mate; Stephen Hutchins, se-

cond mate; John Mow, John Baldock, Ambrose Rawlinson, Nathaniel Freeman, William Trotter, and Isaac Leader, seamen; and the cabin boy; were, from the loss of their clothes, exposed to the inclemency of the weather; they were also destitute of bread and provisions, with no lodging but the hard rock, and no shelter but two huts, which they made out of some pieces of board; these in some degree kept the wind from them, but were no protection against the rain, nor the spray when the tide was up. At low water they were forced to seek their food amongst the holes of the rocks, where they found a species of shell-fish called limpets, but not a sufficient quantity for their subsistence. They also fed upon a sea-weed which grew upon the rocks, somewhat similar in appearance to mallows.

After they had been five days upon the rocks, their increasing wants obliged them to kill their dog, which had been wonderfully preserved on a small rock near them; and the flesh of this poor half-starved animal was eagerly devoured by the wretched survivors, without being either roasted or boiled.

For fourteen days they continued in this miserable manner; and though during all this time they suffered severely from the want of food, yet they had an abundant supply of fresh water, from the incessant rains which continually filled the holes in the rock, out of which they took plentiful draughts!

Their small quantity of provisions beginning daily to decrease, they had nothing before their eyes but the dismal prospect of perishing by famine; and what added to their anguish and despondency, was their having once had a sight of the Express Advice-boat, which overlooked them in spite of all their endeavours to make themselves visible. They were also aware that all vessels sailing near this place carefully avoided the rocks on which they were, and this consideration made them almost despair of receiving future assistance.

On January 20, John Taskard, master of a ship at Lymington, set sail from Guernsey, bound to Southampton. When he came in view of the Caskets, he was told by his son that he could see men upon them; which induced the old man to take up his glass and look at the rocks; when, providentially, he espied one of the wretched sufferers waving his cap; upon which he immediately steered for the rock. There being a great sea at the time, he came to an anchor to the leeward of the rock, and to the inconceivable delight of the shipwrecked crew, sent his little boat, which took them all off the rocks, and carried them on board his vessel. So great were their transports of joy, at such almost unlooked-for relief, that on entering the boat, they could scarcely speak; nor could they make use of their feet, which were all swelled and sore, with the exception of Stephen Hutchins, the second mate, who was a stout man, and by whose encouragement the others were chiefly supported during their calamities.

On the 21st they all arrived in safety at Southampton, where they were taken care of and treated with great humanity by the mayor of the town.

"STIMULATING" A SHIP'S CREW.

AFTER one of Sir Edward Hughes's drawn battles with M. Suffrein, in the East Indies, the British admiral sent to the captains of the fleet, desiring them to stimulate their respective crews previous to the next day's expected encounter. As his commander was desperately wounded, it fell to the lot of the late Captain C. H. Lane, then a lieutenant, to carry this into effect; and he did it irresistibly.

All hands were immediately piped on deck; when Mr. Lane, holding in his hand Sir Edward's order, in *hoc modo loquitur*—"My brave fellows, I have received the admiral's commands to stimulate you. I do not clearly understand his meaning; but if it is that I am to tell you to beat those *parley-vous*, tomorrow, I am sure he might have saved himself the trouble; but, my lads, I am ordered to stimulate you, and you must therefore consider yourselves stimulated accordingly."

Roars of hearty laughter, and three tremendous cheers attested that the lads enjoyed the humour of the address, though they had fought severely, and passed the day dinnerless; and we must give them full credit for their cheerfulness.

SHIPWRECK AND SUFFERINGS OF M. DE BRISSON.

IN the month of June, 1785, M. de Brisson left France, in the ship *St. Catherine*, Captain Le Turc, for Isle St. Louis. At midnight, on the 10th of July following, they found themselves between the coast of Africa and the Canary Islands, in a sort of creek formed by rocks. Under an impulse of alarm, the captain steered the ship towards the shore, and, being driven with great force by the currents, she struck three times, and then remained fixed and motionless. She resisted the attacks of the sea, during the whole of the night, although at every instant it seemed ready to swallow her up. Towards morning the storm abated, when M. de Brisson, with all the crew, got to land; and these unfortunate people, finding themselves in a desert and unknown country, ascended the

highest rocks, but could perceive only an immense white sandy plain, on which a few plants, bearing a small seed, in shape and size resembling that of mustard, were scattered. These plants, which the Moors call *avezoud*, and of which they make a sort of paste to regale themselves, branch forth like coral. At a distance appeared several hillocks, which, overspread with a sort of wild fern, resembled a thick wood.

Advancing towards these hillocks, they found a number of camels feeding, from which they inferred that the country was inhabited. To the poor seamen, who were almost perishing with hunger and thirst, this was an important discovery. Some of the natives, who were watching the camels, soon perceived the Europeans, and, giving the alarm, the latter were shortly surrounded by Moors, who, in the excess of their joy, uttered the most terrific shouts. The unfortunate

SHIPWRECK AND SUFFERINGS OF M. DE BRISSON, AND HIS COMPANIONS, ON THE COAST OF CAPE BLANCO.

sufferers, being dispersed about, were ferociously seized, and stripped; those who attempted resistance being wounded and struck to the earth.

At the time of this barbarous treatment, M. de Brisson perceived a Moor unarmed, whom, from his dress, he recognised to be one of those who had accompanied the king, Alikouri, on a visit which he had paid him at Isle St. Louis. De Brisson therefore ran and threw himself at his feet, as did M. Devoize, the second officer of the ship, and five of the crew who had not left him. They soon found, however, that they were as unfortunate as their companions; for the Moor received them with contempt, and, in an angry tone, inquired of M. de Brisson, who he was, whence he came, and what brought them all there? He answered, by sketching the form of a ship on the sand, and, by the assistance of gestures, and

a few Arabic words which he had picked up at Isle St. Louis, he made the Moor comprehend, that they had been shipwrecked, and, imploring his aid to convey them to their place of destination, added that he had the means of compensating him for his trouble. The last remark was perfectly understood by the Moor, to whom it afforded great pleasure. He immediately softened his features, and placed his fingers between those of M. de Brisson, as a proof of friendship, and that they would remain united for ever. The Moor now demanded the property to which M. de Brisson had alluded, and received two watches, one of them a repeater, two chains, a gold stock buckle, two pair of silver shoe buckles, a brilliant ring, a silver goblet and cover, and two hundred and twenty livres in cash. Affecting an air of mystery, he secreted the treasure in his blue shirt, being more pleased with the money

than with all the other articles, and promised M. de Brisson that he would never abandon him. By surrendering his property, he had expected to gain the kindness of those into whose hands he had fallen; instead of which he found it a source of great misfortune. The Moor inquired at what part M. de Brisson had been shipwrecked; and on being informed he called several of his people, and made a sign to them to follow him. M. de Brisson, from the manner in which they approached, was aware that his protector was a man of some consequence, and he afterwards found that he was one of the priests, called a talba.

The moors, on reaching the sea-shore, shouted with joy; but so great was their eagerness for plunder, that they soon quarrelled among themselves. Several of them swam off to the wreck, with the view of obtaining what they could; those who remained on shore expressing their fears of not receiving their share. The women in particular were quite outrageous.

The news of the shipwreck soon spread itself over the country; the savages, in great numbers, made towards the shore; and several lives were lost in their contentions respecting the plunder. The women, enraged at not being able to get to the ship, fell upon the unfortunate Frenchmen, and partly stripped them, disputing all the time who should possess the clothes of M. de Brisson, they being better than those of his companions.

The talba, who had become the master of the shipwrecked crew, although a priest, was a warrior by profession. Finding that the number of savages increased every minute, he felt himself under the necessity of joining with two friends for the purpose of securing that portion of the plunder which he had got together. Arrangements having been made, both for dividing the plunder and the slaves: the three Moors retired from the others for the purpose of sharing their booty. The Frenchmen were then led to a miserable hut, covered with moss, about a league distant from the sea, where they were crowded together, and rigorously searched, lest they might have concealed some valuables. Nothing being found on them, they were stripped quite naked, and even robbed of their shirts and handkerchiefs. M. de Brisson then learned that the talba, his master, was called Sidy-Mahamet-Del-Zouse, of the tribe of Labdesseba, the most ferocious of any in the desert, and the irreconcilable enemy of the Wadelims, who are not much their superiors in civilization.

Sidy-Mahamet having buried the treasure which he had acquired, in the sand, returned to the beach to get his share of the plunder of the ship. During his absence, a troop of Wadelims attacked the retreat of the Europeans, pulled them out by the throat and the hair of the head, and then began to fight with each other for the few clothes which had been left on M. de Brisson. In their jealousy and rage, they not only stripped him to the skin, but pursued him behind some heaps of sand, knocked him down, almost beat him to death, and were preparing a rope to strangle him; when one of the men whom the talba had left with him, came running out of breath, and accused them of having violated the asylum of Sidy-Mahamet, carried off his slave, and trodden under foot the sacred book of their religion. He told them, that the talba, enraged at the indecency of their sacrilegious conduct, had demanded that the old men of both parties should assemble to try the criminals in council, and that the only means of appeasing his wrath would be to give up his slave. This menace had a good effect, and the captive was instantly liberated. The Moor who had thus interposed in his behalf, was called Nonegem: he conducted M. de Brisson to the place where the council was assembled, and, the trial immediately commencing; the liberator, as avaricious as he was cunning, contended that the Frenchman was his slave, as he had rescued him from those who would have carried him off. He grounded his pretensions also on having seen M. de Brisson give his master several articles of value. Enraged at these impertinent remarks, and particularly at the exposure of his little treasure, Sidy-Mahamet cast a look of fury and indignation at Nonegem, and exclaimed, "This Christian is mine; he threw himself into my arms of his own accord, and I have promised to protect him, and to take him to King Alikouri.

I pledged my word that I would do this; and I look up to the tribunal for a decision in my favour, instead of for Nonegem, who ought to be severely punished." Nonegem replied, "As the slave cannot be mine, he shall die by my hand." On this he drew a poniard, intending to dispatch the captive, who stood appalled with terror. Without betraying the least emotion, however, Sidy-Mahamet threw over himself a sort of chaplet, of considerable length, and took up a little book which hung at his waist: in an instant the women rushed towards M. de Brisson, tore him from Nonegem, and delivered him over to the enraged priest, dreading lest he should issue an anathema against his adversary. This conduct of the women, and authoritative act of the talba, were immediately approved and applauded by the whole of the council. It should be observed, that the talbas, marabouts, or priests, always wear a long string, containing a hundred and fifteen little black balls, which they use in the same manner as the Catholics use chaplets.

M. de Brisson was now taken to his companions, who were in the neighbourhood. He found them in a pitiable state, almost starving; as, during the three days which they had been confined, their only food had been a small portion of wheat flour, spoiled by sea-water, mixed with some barley-meal, which had been for a long time kept in goat-skins. While partaking of this wretched meal, a friend of Sidy-Mahamet came and apprised them of the approach of the Wadelims, advising them to hide themselves without delay, as those people were coming from all parts to seize upon the slaves and treasure. Profiting by this advice, the talba, together with the Europeans, hid themselves behind some sand-hills, where they remained, until some Moors of their own tribe, who were anxiously employed in preserving the plunder, came to reinforce them. A guide then set out before the Frenchmen, and, by erecting little pyramids of stones at certain distances, pointed out to them the road which they had to take. This precaution was adopted for the purpose of avoiding the outskirts of the enemy, particularly those of the Wadelims; who, whether friends or enemies, are equally to be dreaded on account of their avarice. At break of day, all those who possessed Christian slaves came with them, and, having joined the Frenchmen, the whole body marched off for the interior of the country, where the families of their respective owners resided.

To the Europeans this journey was extremely fatiguing; they were almost dying with hunger and thirst, by which, on moving the tongue, they experienced such pain, that they were fearful of asking even the most simple question. Being under the necessity of following the steps of the camels, whose pace was hastened, they were exhausted by fatigue; yet, to avoid being surprised, they were compelled to make several counter-marches, by which they occupied a fortnight in making a journey which was generally performed in five days.

After having climbed mountains of a prodigious height, covered with small greyish flints, as sharp as those of muskets, they descended into a sandy plain nearly covered with thistles, where the cavalcade rested. M. de Brisson having walked till his feet were excoriated, could proceed no further; upon which his master made him get up behind him on a camel, the rough movements of which inflicted on him the most excruciating pain; and, being naked, and having no means of preventing the friction of the camel's hair, he was soon so chafed that the blood ran down the sides of the beast. This sight afforded much amusement to his master, who, the better to enjoy it, urged the camel to a quicker pace. At length, unable any longer to endure the torture, M. de Brisson threw himself off upon the sand, experiencing no other injury by the fall than a few scratches from the thorny thistles.

Towards evening they met their guide and halted, when M. de Brisson, no longer able to move, and suffering all the horrors of starvation, threw himself behind a bush, and implored the termination of existence. They soon forcibly pulled him from his retreat, to make him unload the camels; but, tired of his life, he resisted their efforts, and knocked down the Moor who disturbed him: on which the latter ran off and fetched his master, who, however, assured his captive that he had nothing to fear.

The shipwrecked seamen, while sitting under the bushes, witnessed some preparations which appalled them with terror. The Moors put a quantity of stones into a brasier, and, having made them red hot, they lifted up a large stone, and dug a hole in the ground, occasionally shouting with laughter, and repeating the name of Brisson. They at length called him, and made him approach the hole which they had digged; but how great was his surprise when he saw them draw forth from the hole, in which he thought they were going to bury him, a large skin full of water, a sack of barleymeal, and a newly-killed goat. His alarm subsided, the sight of the provisions inspiring him with new life: he saw them fill a large wooden bowl with water, into which they put a quantity of meal, and then, by throwing into it the red-hot stones, they made it boil; by which means they produced a sort of gruel, which they kneaded in their hands and swallowed without chewing. A very small quantity of brackish water, with some of the same steeped meal, served for the repast of the captives, the goat being reserved for the following day. Their guide, who went before them, had procured those provisions from a neighbouring village, and had concealed them beneath the stones. M. de Brisson observed that the resentment of the Moor whom he had struck was converted into acts of kindness and attention, as he brought him a larger share of food than was allotted to the others. At the close of the meal they all laid themselves down to sleep behind the bushes.

On the following morning, at daylight, a signal was given for their departure; and M. de Brisson, with the other slaves, were ordered to assemble the camels and load them. This having been performed, the troops set off, and at noon stepped in a plain, which afforded not a single tree to shelter them from the rays of the sun. After unloading the camels, the slaves were employed in digging up roots to make a fire; a labour which, from all the trees, roots, and grasses of this country being thorny, is exceedingly troublesome. At length, the fire having imparted a sufficient degree of heat to the sand, they entirely covered the goat with it; and while the slaves were keeping up the fire, their masters regaled themselves with the raw fat of the animal, which they seemed highly to enjoy. When the goat was dressed, the Moors, without even taking the trouble to strike off the sand, devoured it with a most incredible voracity; after which they threw the bones to the slaves, telling them to make haste and get their dinner, that they might reload the camels.

Towards evening they descried some tents on a little eminence. The inhabitants of this village, as it proved to be, came in crowds to meet the travellers; but, far from expressing compassion towards the unfortunate captives, they overwhelmed them with insults, and subjected them to the most inhuman treatment. Two of M. de Brisson's comrades were treated with extreme cruelty, the women being more ferocious than the men. The owners made but slight resistance; rather congratulating themselves that the slaves, instead of the purthens of the camels, became the objects of their attention. M. de Brisson, who was at a little distance from his camel, perceiving a man aiming at his face with a double-barrelled musket, presented his breast and told him to fire; on which the assassin, struck by his firmness, let the piece fall from his hands. At the same instant, de Brisson was struck on the head by a stone, and for a moment lost his senses; but, on recovering himself, he burst into a rage, and loudly called for vengeance. Terror was spread through the village, the offending inhabitants of which took flight. One of them, however, before he ran off, gave de Brisson a blow on the head with his musket, which made him vomit blood. The unfortunate man was unable to recognise the fellow who had injured him; but, by his complaints, he excited the curiosity of several of the savages, who seemed pleased with the answers which he gave to their numerous questions.

To prove that he knew the king Alikouri, and that he had been his friend at Isle St. Louis, de Brisson attempted to imitate the *eguems*, or buffoons, whom that prince had in his suite: by this kind of drollery he afforded much pleasure to his master, who made him repeat his imitations several times, and at last employed him this way to divert the people, who,

he feared, would steal his property. De Brisson was immediately surrounded by crowds of men, women, and children, who gave him a little camel's milk, as a reward for his exertions.

The travellers, having remained one day in this village, obtained a supply of three or four days' provisions from the inhabitants, notwithstanding the cold reception which they had at first experienced. They then proceeded eastward, passing over large plains, covered with white, flat, and round flints, not a single plant being visible: the horizon appeared to be loaded with a reddish vapour, which resembled, in different parts, the flames from volcanoes. The small pebbles, pricking the feet of the Frenchmen, occasioned a sensation similar to the burning occasioned by sparks. The air contained neither birds nor insects; and the silence which prevailed was so profound, as to produce a sort of terrific effect on the mind. If by chance a breath of air arose, the traveller immediately experienced an extreme lassitude, his lips becoming chapped, his skin parched, and his whole body covered with painful carbuncles. The Moors, who had retired to these regions in order to avoid the payment of certain tributes, were afflicted by the atmosphere as much as their slaves; for so inhospitable is the country, that even the most ferocious animals will not enter it.

On leaving the first of these plains, they entered another, where the wind had raised the sand into hillocks, the intervals of which produced a few odoriferous plants, which the half-famished camels voraciously devoured. They afterwards came to a valley surrounded by mountains, in which, for the first time, they discovered some brackish fetid water: such was their thirst, however, that they drank it with indescribable pleasure. Towards evening they had the good fortune to fall in with a hospitable horde, from whom they experienced a favourable reception, and who pointed out the route for the remainder of their journey; a very seasonable piece of information, as their guide had lost his way.

The brother-in-law of de Brisson's master, one of the chiefs of the district, took particular care of the slaves, and sent them a meal of ostrich flesh and camel's milk. He appeared affected at the fate of M. de Brisson, and said to him, with much tenderness, "Unfortunate Christian! my brother has long been my debtor; if you will attach yourself to me, I will make arrangements with him to obtain you." This proposition, though it affected de Brisson, made him tremble, as it indicated a long captivity, while he had flattered himself that his present state would soon be changed: he therefore entreated his master not to consent to such an arrangement. "Be easy," replied the Moor, "you shall not leave me, unless to go to Senegal or Morocco, and that shall soon take place." This assurance gave indescribable joy to the captive.

Having rested three days with the tribe called Laroussye, they continued their journey towards the residence of their conductors; where they arrived at the expiration of sixteen days, almost reduced to skeletons, after suffering the most dreadful fatigue and misery. On their approach, the travellers were perceived ascending a hill, and several black slaves came to meet them. At a short distance, the children made the air resound with shouts of joy; and the women placed themselves erect at the entrance of the tents, to give their husbands a respectful reception. As the latter approached, the women came forward, and, with a submissive aspect, each placed her right hand on her husband's head, which she kissed, after prostrating herself to the ground. At the close of this ceremony, they looked with much curiosity towards the slaves, and then insulted them in the grossest manner, spitting in their faces, and throwing stones at them. The children, imitating the example of their parents, pinched them, pulled their hair, and tore their flesh with their nails.

A division was now made of the slaves; Messrs. Devoise, de Brisson, and Beaudre, were taken by Sidy-Mahammet. As soon as his family had done caressing him, M. de Brisson asked which of the women who surrounded him was his favourite; on which he pointed her out. The captive then approached her, and presented her with a double handful of cloves, which her husband had carefully kept for her, that he might meet with a favourable reception—these women being passionately

fond of aromatic scents, particularly that of cloves. She received the present with the most insulting *hauteur*, and then kicked him from the tent. A minute afterwards, she commanded the slaves to unload the camels; and then set one to clean a sort of kettle, and sent another to pull up roots for fuel. While she was giving these orders, her dear husband was fast asleep, with his head on the lap of one of his concubines.

The unfortunate Frenchmen, though thus condemned to an excess of fatigue, misery, and opprobrium, nevertheless, occasionally experienced some relaxation, owing to the interference of their master; but the cruelty of his wife was incessant, and at length became unbearable. The Moors never inhabit the same place for a length of time; but when the half-starved herds have devoured all the pasturage, they change their position, and remove to a spot which is more favourable. The care and labour attendant upon such changes were the task imposed upon the French slaves; and from the frequency of these movements, they were absolutely exhausted. One day, Devoise and Beaudrè, were beaten almost to death, and left senseless on the sand, because they were unable to perform the required services. For a long time they were compelled to the dire necessity of seeking their food along with the cattle; and on these occasions their only nutriment was plants and snails. De Brisson was possessed of sufficient strength and firmness of mind to resist all these hardships; but he was soon also compelled to harness the camels to the plough, to attend to the tillage and sowing of the lands; and his master, when he finished his own jobs, would let him out to other Moors for a portion of milk. He would inevitably have fallen under the fatigue, if some hope of liberty had not remained with him, and if he had not been enabled occasionally to steal some barley and mutton, in addition to the small quantity of food which they allowed him.

The unfortunate Devoise, being older, and not so strong in constitution, could not long withstand such hardships. Daily he prayed for death, which at length came to his relief. M. de Brisson paid him the last duties of humanity. Beaudrè also died, and his body was devoured by ravens and serpents.

M. de Brisson at length obtained the permission of his master to write to Mogadore, which the Moors call *Soria*. He addressed his letter to the French consul, and gave a melancholy account of the hardships which he suffered. It was conveyed by a Jew, who travelled through that part of the desert; for the Jews who are born in the desert live on good terms with the Moors, and adopt nearly the same customs; but the Jewish inhabitants of the towns, being more rigid observers of their religious maxims, receive far worse treatment. A second favour, more important than the former, occurred by chance. Another Sidy-Mahammet, who was sheriff of the tribe of Trarzas, had occasion to pass through the place where M. de Brisson was enslaved, and they recognised each other. The sheriff spoke so highly of him to the brother-in-law of his master, Sidy-Sellem, that the latter, who was naturally humane and compassionate, made a second attempt to purchase him, and the bargain was at length concluded. The price of transfer was five camels. Sidy-Sellem was the first who informed M. de Brisson of the change, which was soon confirmed by his former master, and they separated on the best terms. Brisson, on returning with his new owner, met with a companion of his misfortune, who had been baker of the wretched ship, and they travelled together under the protection of Sidy-Sellem. Their master had given them a camel to ride on, without a saddle, and they proceeded in this manner for some days; but the motion of the animal was so fatiguing that they were obliged to quit it and travel the rest of the way on foot. This journey was difficult, but much less so than the former, as their master took them through villages where water was plentiful, and the people were less brutal. Brisson, however, had a shocking encounter with some Moors of the tribe of Telkannes. They fired two muskets at him, which luckily missed him; two Moors then seized him, and were about to carry him off, when Sidy-Sellem, who was at some distance behind, came forward, on the report of the guns, and loudly complained of the outrage; but the Moors told him that they had taken the slave

for a thief who had run away. Sidy-Sellem pretended to believe them, and the travellers continued their journey.

The Moors of this tribe are the worst off of any in the desert. They live amongst hills which are formed entirely of sand raised by the wind; and it is so difficult to penetrate into their retreats, that it is a common saying, that they endeavour to conceal themselves from the rays of the sun: the plains in the neighbourhood contain great numbers of enormous serpents, which do not permit the cattle to approach them.

At length the travellers reached the town of Goudadum, which is the refuge for all the rebels of the desert: it is divided into two parts, each of which has a governor; but the only superiority between them is that which is given by fortune. All the houses are built alike, and receive their light from the door and the roof, which is uncovered. Four large walls surround the space which contains the houses, and the whole circumference has only one gate, which is guarded by large dogs; each individual has also a dog for his own security, because they have as much to fear from their neighbours as from strangers. The town, however, carries on a considerable trade, and has several markets, which resemble our fairs: they have for sale great quantities of the most beautiful wool, and fine woollen stuffs, of which they make their clothing. The merchants who carry them into the interior of the country give in exchange camels and gold from the mines of Bambouk; they also receive for those articles wheat, barley, dates, horses, tobacco, salt, gunpowder, combs, mirrors, and other articles of hardware. This commerce is chiefly carried on by Jews, who are exposed to the most outrageous insults, which they nevertheless bear patiently, on account of the great advantages which they derive from the traffic. The travellers remained eight days at Goudadum. From thence to Mogadore, they met with nothing but villages, and castles built on the summits of high mountains. At a distance these look like superb palaces; but on approaching them, their walls are found to consist of nothing but mud, and are built in the most shapeless and disgusting forms. They were now not so well fed; and the nearer they approached to a town, the less was the hospitality which they experienced. At length, after a journey of sixty-six days, they arrived at Mogadore, where Messrs. Dupras and Cabannes came to them, and assured them that their misfortunes were at an end. They took with them Sidy-Sellem and his son, and their house became the asylum of the whole party. The same day, M. de Brisson and the baker were presented to the governor of the place, who informed them that they must proceed to Morocco, as the emperor desired to see all the Christian slaves, and give them their liberty.

Eight days afterwards, Sidy-Sellem and the party set off for Morocco; they were furnished with mules, a tent, provisions, and men to wait on them; and, after a journey of four days, they reached the capital. They immediately repaired to the house of the French consul-general, where they were to remain till they could be sent to France; and were afterwards taken before the emperor, whom they found sitting in a sort of coach body. He looked at M. de Brisson for some time, and then told him that he had been wrecked through his own fault, by not keeping far enough from the shore. He then asked for ink and paper, and traced with a reed the four principal points of the compass, to indicate that Paris was northward; after which he scratched about dozen Roman characters, and gave the paper to M. de Brisson, asking him if he could read it? On repeating a few other questions, to show how well he was informed, he observed, that the rebels of the desert had ill-treated him, and desired to know what they had taken from him. M. de Brisson told him all that had happened; on which he said, "I do not command in the country where you have been taken; that is, the people are beyond my authority." He wished to know how M. de Brisson had got to his capital; and on being told, he ordered Sidy-Sellem to be brought before him. He asked him, if he had given a high price for the Frenchmen, and what he intended to do with them. To which Sidy-Sellem replied, that he had no other intentions than to prostrate himself at

the feet of his sovereign, and do the homage of a slave. He then inquired, whether the Wadelims and Lebassabas had any other Christian prisoners. Sidy-Sellem, in the most submissive manner, answered, that there were several whom he could easily collect, if the emperor would give him orders. The emperor, however, dropped the conversation; but he ordered the Frenchmen to be guarded for the present, and supplied with provisions from the royal kitchen. The next day, the consul claimed them, and they were given up. M. de Brisson and the baker embarked for France; and Sidy-Sellem retired, well satisfied with the generosity of the consul.

THE OLD SEAMAN.—A SKETCH FROM NATURE.

I LIKE a sailor. He is the oldest boy that wears a jacket; frank, generous, playful, and somewhat pugnacious. Not that he will fight for nothing; but he will battle for glory, for that is like a ship's name; or, if men wear wooden shoes, he will drum them for it, though he should get a leg made of the same leather. Talk of "our wives and liberties,"—he will fight for "Doll of Wapping," and get into a French prison. But for laurel—or wreaths of it, he would rather win rolls of pigtail; and as for palms—"*Palma qui meruit ferat*,"—he has lost his hand and the palm with it. Immortality is not his aim; but he is a Dryad up to his knees; and so far, he will not die like "*all flesh*." Gout, or cramp, or rheumatism, what are they to him?—he is a stoic as far as the timber goes. Wooded, but not watered, for he hates grog, except for the liquor that is in it.—He looks like a human peg-top; you might spin him with a coil of cable. Talk of your improved rollers, and drilling machines, and sowing machines, he is the best dibble for potatoes—but that will soon enough be discovered of him when he comes to his parish. One of his arms, too, is a fin; and he has lost an eye. It is the starboard one, and looks as if it had the wind in it—but it was blown out with gunpowder. He was in the Spitfire, off Cape Cod, when she took fire in the gun-room, and flew up like a rocket! He went aloft almost to his cherub, and when he came down again he was half-dead and half-blind; one window, as he said, was as dark as night; but he makes light of it. All his bereavements—eye—arm—leg—are trifles to him: one, indeed, is a standing jest. He often takes off his wooden leg. Diogenes was nothing to him as a philosopher: he is proud even of his misfortunes. Whilst others bewail their scratches and plaster their razor cuts, he throws open his blue jacket, and shows the deep furrowed scars, and exclaims, "talk not to me of *seams*!"

To see an old seaman is to see a man. An old soldier, in the comparison, looks like an old woman—perhaps, because his uniform is red like her cloak. But a sailor has fought with more adversaries—the fire of the foe—the ice of the North Pole—the struggle of the winds, and the assault of the wild waters. The elements are his playmates, and his home is the wide sea. "He is," says Sir T. Overbury, "a pitched piece of reason, caulked and tackled, and studied to dispute with tempests." He has encountered shrieking hurricanes—billows, like mountains with the white sheet a-top—and rocks, like the door-posts of death! He has circumvented the quick-sand, and been too cunning for the deep! Wind, wave, rock, showers of shot, bayonet and cutlass—he has withstood them all, either by force or skill. What a fine flesh and blood trophy—and some wood too—is he of various victories! The roaring sea, the howling gale, the thundering cannon—his old adversaries—sing his triumph over them. What has he not braved and endured? We "love him for the dangers he has passed," as the gentle Desdemona loved her husband, the Moor, the more he recounted of his perils. He can talk too of—

Rough quarries, rocks, and hills whose heads touch'd heav'n;

And of the cannibals that each other eat.

The Anthropophagi, and men whose heads

Do grow beneath their shoulders.

A good lie, to do him justice, is no labour to him; but, on

the other hand, he is as freely credulous. It was he who saw the man hunted by devils into Vesuvius, or Ætna, as it is written and witnessed upon oath in his log-book. Tell him that sparrows may be caught with salt upon their tails and he will believe you; for he knows that cod-fish are so taken. He has great faith in the kraken. If you will credit him, he has hooked one larger than the sea's bottom, with the best bower-anchor; and he has seen the sea serpent and the mermaid. Some, at least, of his wonders he can show you: he has a flying-fish in his chest, and a young dolphin—besides cock-roaches, which eat up one's linen in the West Indies; but the blue shark he has given to a friend. The green parrot, too, he has parted with, but with more kindness than discretion; for he sent it to an old aunt, and she was pleased with the gift; but the bird, it turned out, blasphemed, and she was still more shocked at the giver. It is worth one ear to listen to him when, with these marvels, he talks over his voyages, his engagements, his adventures, and above all, his residence among the savages; and how he made Christians of them—and some of them, as he says, d—d good ones too! On this matter he is eloquent; won to it, perhaps, by the remembrance of the flattering court paid to him by the great king Eea Tooa, and the pearly smiles of the black princesses. Only on one subject is he more eloquent—HIS SHIP. There he luxuriates: there he talks poetry! It is a doubt whether he could describe his mistress better. She sits upon the spray—speaking pastorally—like a bird. She is the fleetest of the fleet. Tacking, or close hauled, or under bare-poles, there is none can compass with her. To see her in full dress—sky-scrapers, and royals, and stud-sails, is to fancy one of those lady-ships, who, from Trojan galleys, were changed into sea-nymphs:

She walks the waters like a thing of life,
And seems to dare the elements to strife.

For all that he has endured, our marine has only been a gunner's-mate; but "one man is born with a silver spoon in his mouth, and another with a wooden ladle." Poor Bill was not a spoon-bill. He was brought up to the sea; for he was born on board ship, cradled on the ocean, schooled in the fleet, and should have married a mermaid, but, as the tale goes, she jilted him, and he took up with Nancy Dawson, with whom he fell in love because she was so like the ship's figure-head. At twelve years old he was wrecked in the Agamemnon: at fourteen he was taken in the Vengeur; and at thirty he was blown up in the Spitfire. What a sea-fortune! But he never quarrelled with his profession, nor—as his mother sometimes advised him—*threw up the sea*. He was never sick of it. At last, in the engagement off Trafalgar, under the immortal Nelson, he lost his arm by a shot; but, binding it up, he persisted in remaining upon deck, if it were only, as he said, to have satisfaction for it—the next broadside carried away both his legs. He was then grafted. Now he is ancient and quite grey; but he will not confess to age; "It is through going to the North Pole," he says, "for there the hares turn white in winter." Such a fragment as he would be a fit inmate of the noble hospital at Greenwich; but he is an out-pensioner, and wanders through the country: he preferred it.

It was at a farm-house, in Berkshire, that I met with him, and learned these snatches of his history. The dogs barked, as they do at a beggar; and the people of the house said, "There comes old Bill!" and in came this "Ancient Mariner," thrusting a fistful of ballads before him. He stumped in with a fine smiling assurance, and heaving his old glazed hat into the middle of the floor, took possession of a low elbow-chair by the fire. His old bronzed forehead was rugged and weather-beaten like a rock, and the white hair sprinkled over it like the foam of his own ocean. A lean puckered eye-lid seemed to squeeze the light out again from one little grey twinkling eye: but the other was blind and blank. His face was red, and cured by the salt sea air, and warranted "to keep in any climate;" but his cheeks were thin, and his nose and chin were sharp and prominent. Still he smiled, and seemed to wear a happy heart that had never been among breakers, and he sang one of his old sea songs with a firm jolly voice. He only wanted more

rum and tobacco to set the world at defiance; and he thought it hard he could not have them. "Have you no parish?" asked the farmer, who was himself an overseer. "Parish!—ay, to be sure I have," said the old tar, "every man has his parish; but no one likes to go to it that has got his limbs, thank God, and can go about picking where he pleases." "But they will relieve you." "Ay, ay, I know that," said the sailor, shaking his head; "they offered me as good as eight shillings a week, if I would give 'em up my pension, and go into their House of Correction; but I liked my liberty better." "But you would at least have a house over you; and as much soup and gruel—" "Soup and gruel!" said the old man, with a brisk volley of oaths; "soup and gruel!—what! a man here that has fought for his king and his country, and lost his precious limbs, and ate beef and biscuit, to be fed upon pap and spoon victuals! No, damme—but come, hand us over a drop of that ale to sop my crust in."

WRECK OF THE "SEVERN" SCREW-STEAMER.

Two new iron steamers, the *Severn* and *Avon*, fitted with the Archimedean screw and high-pressure engines, were started in opposition to the old line of steam-packets between Bristol and Newport, South Wales, on Saturday, May 4th, 1844. When about to start, the *Severn* was lying at her berth, near the Newport bridge, with her bow towards the bridge, her stern being down the river, or in the direction of Bristol. At this time the tide was running up the Newport river very strongly, at about seven knots an hour; and of course near to the bridge the current produced by the tide shooting through the arches of the bridge was much stronger. The signal for starting having been given, the captain commenced swinging the vessel round, and cast off the stern-chain, depending upon the bow-rope, and the power of the engine for bringing her round with her head to the tide, and thus getting her under weigh. At this moment, when the order was given to back her, it was found that the screw would not revolve; the vessel immediately swung round, and, carried with the run of the tide, struck with her bow the wedgelike buttress of the bridge, and recoiling, almost instantly struck with her side against another buttress with such force that everyone on the bridge fully expected to see her turn clean over. At this moment, the scene was truly distressing—the spectators on shore, as well as their friends on board, screaming dreadfully. Boats were instantly put in requisition, and the passengers, upwards of fifty in number, were fortunately all got on shore; but not without great difficulty. The pumps were then rigged, and exertions made to save the steamer, other persons being employed in the meantime in removing luggage, &c., which was safely effected. In about an hour and a half, however, she was seen to go down, the captain and crew having only just jumped into some boats, previously to her sinking; indeed, they stayed by her so long that their boats were swamped; but the crew were fortunately picked up and rescued, though not until some of them had been drawn under the bridge, and to some distance above it.

The cause of the catastrophe is thus explained in the "Times" report, the information having been received from a gentleman connected with her engineering department, and who was on board at the time of the accident. He says that on the arrival of the *Severn* at Newport, on Saturday, it was intended to put a new screw into her; when the captain stated it to be so late upon tide, that if it were done, he should not have time to swing her round in the slack tide. The intention was then abandoned, and shortly after, while the cargo was being landed, the vessel grounded, upon which the captain, finding that she could not be swung until the next tide, the screw she was then working with was removed, and a new one put in; and, this gentleman says, that almost immediately up to the time of the water covering the screw all was free and everything right, for he himself turned round the screw by hand. The steam was then got up, and no danger was apprehended. Upon the orders being given on Saturday evening, the screw was put in motion, but before it had made a single revolution it stopped, and the vessel drifted up the river. She then struck forward, but only bent

the iron; the after-strain was, however, so great, that it shortly became a rent, and her fore compartment instantly filled with water (the vessel being built in water-tight compartments). Every exertion was made, until the water rushing over her decks, she filled and sank, rolling heavily over. Still no cause could be assigned for the non-action of the screw; but, on the tide leaving her, a chain was discovered firmly twisted round the screw, which had thus caused her destruction. How the chain came there is a complete mystery, as all her mooring chains have since been examined and are safe, and the captain and crew say that they had no such chain on deck. The vessel subsequently rolled over with every tide, and had a rent in her side from the deck to her keel, large enough for men to walk in and out.

At low water, as the wreck lay dry, the owners were enabled to examine her damages. It was then discovered that she had a transverse fissure in her larboard bends, the iron plates of which were rent asunder, from two to three feet wide, and from six to seven feet long, caused by her coming in contact with the pier, and the constant friction produced by the action of the tide upon the vessel. During the whole of Saturday night, men were engaged in repairing the breach and lightening the vessel, but the tide returning on Sunday morning, carried the vessel back against the bridge, sweeping away a large portion of her bulwarks; for a few moments she righted, but such was the force of the tide, that she fell over on her larboard side, and her masts coming in contact with the bridge, they snapped asunder, and, with her standing rigging, were carried away with the tide. During the whole of Sunday, the workmen were engaged in covering the breach with boards, and caulking every joint, stopping all the ports, scuppers, hatchways, and making every effort to get out and keep out the water on the return of the tide; a number of empty barrels were put into the hold, with a view to buoy her up; strong warps and chains were attached and a steam-tug procured, so that on the flood-tide they might be enabled to bring her head to the stream; but, notwithstanding every exertion made, the assistance of the tug-boat and fifteen stout brewery horses, such was the force of the tide that it was found impossible to move her. On the ebb of the tide, the vessel was carried down the river forty or fifty yards, upon a hard gravelly bottom, considerably abrading her keel and bottom plates; and on the flow she was carried back to her old position against the bridge, where she now remains, on her beam-ends, a complete wreck. The vessel, it is believed, belongs to Messrs. Stothem, Slaughter, and Co., of Bristol, and was considered to be one of the finest boats leaving that port.

SHIPWRECK OF TWO ENGLISH VESSELS IN THE YEAR 1700.

FATHER TACHARD, one of the six Jesuit mathematicians who, by the order of the king of France, accompanied the embassy sent to the king of Siam in 1685, returned to India, for the last time, at the beginning of the eighteenth century, accompanied by several Jesuits destined for the missions of India and China. The Princess, the vessel in which they sailed, left Port Louis on March 7th, 1701.

Their voyage was prosperous till they arrived at the Comorro Islands, where they were obliged to remain at anchor a long time at the island of Johanna, and afterwards tack about for a month in the channel of Mozambique. On the 14th of August, they set sail from Johanna with a fair wind, but they had scarcely proceeded seven or eight leagues when it again fell calm: the currents carried them towards the island of Moali, and afterwards to the west coast of Angasi, the most extensive of the Archipelago of the Comorro Islands, where for several hours they lay at anchor.

Their anchoring in this place proved a remarkable dispensation of Providence in behalf of two poor Englishmen, who had been upon the island two years, destitute of everything, and exposed to the insults and cruelty of the barbarous natives. The captain of the Princess had sent the long-boat on shore for something that was wanted, and lay-to, waiting for her three or four hours. On the return of the boat, they were greatly surprised to see on board of her, two men quite

naked, of a haggard and death-like appearance; one of them appeared to be about thirty years of age, but the other did not seem to be more than twenty. These men, upon being questioned, stated that they had been shipwrecked near the island of Mayote, having been carried upon sunken rocks by the violence of the current. One of them belonged to an English East-Indianman, and the other came from Boston, where he had joined some English buccaneers. The loss of these two vessels occurred in consequence of the pilot of each of them having mistaken the Island of Mayote for that of Moali. Those of the passengers and crews who escaped were treated by the natives with great humanity, as long as their numbers rendered them formidable; but being soon reduced in numbers, by various disorders, produced, in some, by the insalubrity of the climate, in others by intemperance, and in some, by melancholy and vexation, till there were not more than fifteen or sixteen, the barbarians were no longer intimidated, and soon sought the means of depriving them of all they had with difficulty saved from the wreck, and even of their lives.

Of these truly miserable men, seven were French, three Germans, and the remainder English or Dutch. Their numbers daily diminished, and seeing one after the other die of misery, they came to the resolution, at all events, to leave the island where they were, as they had no hope of being visited by a European vessel, the port being inaccessible even to ships of the smallest size. With this view they constructed a boat, out of the remains of the two vessels, of sufficient magnitude to hold them all, as well as the chests of specie which they had preserved. Their preparations being completed, they had intended to embark the following day, when the king of the island, suspecting their intention, sent to demand their boat, which, he said, he liked very much, though it was obvious that this was only a pretext for seizing their money. The Europeans immediately assembled on the shore, in their little hut; and after a consultation among themselves, they unanimously agreed to return the king of Mayote as civil a denial to his request as possible. They were aware that after this step their destruction would most certainly be attempted, and it was therefore necessary that they should use more vigilance and caution than ever. Upon the barbarians receiving their answer, and knowing that they must be in want of powder, because they did not go out shooting so frequently as at first, they immediately collected in great numbers, surrounded their little hut, and made a furious attack upon them, while the besieged, who had some little powder remaining, made a long and vigorous defence.

The barbarians were so enraged at the determined resistance of these men, now driven almost to desperation, and their not being able to force the entrenchment, that they resolved to set fire to the hut: this they soon carried into effect, and as it was constructed only of thick mats, and covered with straw and the bark of trees, it was quickly enveloped in the devouring element. Most of those within were miserably burnt, while those who escaped half-roasted were not more fortunate, as they were put to death without mercy. Of the whole company, only three Englishmen escaped, which they did by concealing themselves till the fury of the combat and the carnage had ceased. The natives afterwards took compassion on them, and furnished them with a small boat and four men, by which they were conveyed to Angasi, the largest of the Comorro Islands.

The unfortunate men met with a favourable reception from the king of the western part of the island, where they landed. At first he maintained them at his own cost, but soon being weary of this hospitality, he dismissed them to seek their own subsistence. For eighteen months they lived upon coconuts, and the milk which they procured from the cows which had strayed from home. One of the three, being of a weaker constitution, was unable to bear up long against the hardships of such a life: he soon fell sick and died, upon which his two companions prepared to perform the rites of interment; but the natives of Angasi, persuaded that the soil of their island would be profaned by the corpse of a European, would not permit them to carry their intentions into effect, and they were obliged to consign the body to the deep.

Such were the details of their misfortune given by these two Englishmen. They were on the shore when the boat landed, but perceiving that those on board of her were Frenchmen, and consequently enemies to their nation, they were silent, fearing that they might refuse to take them away; but at length, seeing the boat put off again, they swam towards her, calling to the men to wait for them, and exerted themselves so effectually that they soon overtook her. They were received and brought on board, where the narrative of their distresses, and the deplorable state in which they still were, excited general commiseration; every one was solicitous to afford them relief and supply them with provisions and clothes. Upon their arrival at Surat, the elder of the two repaired to the English factory; and the other, who said that his father was a Dutchman, but had settled at Boston, went to reside among the Dutch.

PLEASURES OF THE SEA.

WALKING with a lady on the quarter-deck when the ship is rolling, in endeavouring to save yourself, pull the lady over you. This untoward circumstance draws from you the most earnest apologies, which only increase the virulence of the fair spinster, and you are obliged to pocket the charming epithets, "Stupid fellow," "Awkward creature;" and part to speak no more.

Showing your agility before the assembled passengers, by ascending the rigging, find your way down much quicker than you went up, by slipping from the ratlines, which have been recently tarred; by which fall you are minus some few inches of skin from your nose, hands, and shins, besides spoiling your new suit of clothes.

Being rather scanty of clean linen, resolve to have a general wash, for which purpose you tow over the major part of your little kit, when, from the injudicious manner in which you have tied the knot, you have the mortification of seeing the whole riding on the hoary billows—one satisfaction only remaining to you, that you know where they are.

SAILORS.

THE eccentricity of British sailors is proverbial, and displays itself in the heat of action, and the calm of peace. How many interesting anecdotes are related of these bulwarks of Britain; and how many more a close observer in one of our seaports might record! After the battle of Camperdown, in which the plan of breaking the line was adopted so successfully, it became a favourite amusement with the sailors who came on shore, to hire coaches, or post-chaises, and mounting the roofs, form a line, and cross each other in the streets. The top of a coach, is the post of honour with a British tar. A sailor in his way to town some years ago, rode on the top of a post-chaise, until a heavy rain induced him to go inside. He overtook a marine, who asked him to give him a lift. "That I will," said the sailor, getting out, and again mounting the roof of the coach, "go down below, but shiver my timbers if any marine shall ever board a vessel I am in."

Careless of danger, an English sailor sees nothing but victory and prize-money in an engagement. "There," said a British tar, when his captain did not deem it advisable to attack a Spanish vessel under a large convey, "There goes fifty pounds of my money for ever."

Ever jealous, and ever proud of his country, a British sailor will not see it second in anything. After a severe engagement with the Dutch fleet, under De Ruyter, which was a drawn battle, the vessels of each fleet lay alongside each other, incapable of further hostility. A Dutchman, anxious to show his agility, ran up to the top of the mainmast, and stood on his head on the summit. A British sailor, jealous for the honour of his country, mounted his mast with equal agility, but in attempting to invert his position, he fell, the ropes broke his fall, and he reached the deck without receiving any injury. Turning to the Dutchman, who had witnessed his exploit, he said, "There, do that if you can."

During the campaign in Egypt, some sailors in the harbour of Alexandria, took it into their heads that they would go and

drink a bowl of punch on the top of Pompey's pillar. How to get there, was, however, a matter of some difficulty, but not too great for a sailor to surmount. A paper kite was made fly directly over the pillar. A two-inch rope was then tied to one end of the string, and drawn over the pillar by the end to which the kite was affixed. By this rope, one of the seamen ascended to the top, and in less than an hour, a kind of shroud was constructed, by which the whole company went up and drank their punch, amidst the shouts of the astonished multitude who had collected round the spot. The sailors, eight in number, left the initials of their names engraved on the pillar. They discovered what was not before known, that there had formerly been a statue on the pillar, the foot and ankle of which are still remaining.

NARRATIVE OF THE LOSS OF THE SIDNEY.

WHICH RAN UPON A DANGEROUS ROCK OR SHOAL, MAY 20, 1806.

THE Sidney left Port Jackson on the 12th of April, 1806, bound to Bengal. Intending to proceed through Dampier's Straits, her course was directed as nearly as possible in the track of Captain Hogan, of the Cornwallis, which, as laid down in the charts, appears a clear safe passage. On the 20th of May, at one a.m. in latitude 3 deg. 20 min. South, long. 146 deg. 50 min. East, we ran upon a most dangerous rock or shoal; and this reef is not noticed in any map or chart, it appears that we were its unfortunate discoverers.

"On Sunday, over the taffrail, we found twenty-five fathoms water; over the larboard gangway, six fathoms; over the starboard side, only nine feet; and over the bows, twelve feet. One of the boats was immediately got out, with a bower-anchor; but on sounding ten fathoms distance from the ship, found no ground at sixty fathoms.

"It must have been high water when we struck; for at that time there was no appearance of any reef or breaker; but as the water subsided, the shoal began to show itself, with a number of small black rocks. The ship had been striking very hard, and began to sue forward. At three a.m. there was six feet water in the hold, and increasing rapidly; at five o'clock the ship was settling aft, and her top-sails parting from the floor-heads.

"Upon consultation with my officers, it was the unanimous opinion, that the ship was irrecoverably gone, and that no exertions could avail for her safety. We therefore employed all hands in getting the boats ready to receive the crew, one hundred and eight in number. Eight bags of rice, six casks of water, and a small quantity of salted beef and pork, were put in the long-boat, as provisions for the whole. We were prevented from taking a large stock, as, from the number of people, the three boats were barely sufficient to receive the whole with safety.

"We remained with the Sidney till five p.m. on the 21st of May, when there were three feet water on the orlop deck: we now thought it full time to leave the ship to her fate, and to seek our safety in the boats. Accordingly, Captain Forest embarked in the long-boat, with Mr. Trounce, second officer, and seventy-four Lascars; Mr. Robson, first officer, and Stalkart, third, with sixteen Lascars, were in the cutter; and the jolly-boat was allotted to fifteen Dutch Malays, and one Seapooy.

"Being desirous to ascertain the position of the reef, by making the Admiralty Islands, shaped our course accordingly, steering N. by E. half E. During the night it blew fresh, and the long-boat making much water, we were obliged to lighten her, by throwing overboard a great quantity of lumber, and two casks of water. The three boats kept close in company, the long-boat having the jolly-boat in tow. The wind increased as the morning advanced, and a heavy swell rising at ten a.m. the jolly-boat sunk while in tow by the cutter, and all on board, to the number of sixteen, unfortunately perished. It was lamentable to witness the fate of these unhappy men, and the more so, as it was not in our power to render them the smallest assistance.

"At noon, on the 22nd, we saw the Admiralty Islands, N.N.E. distant three or four leagues; and as we had run about

fifty-eight miles in the boats, up a N. by E. half E. course, the situation of the shoal, on which the Sidney struck, was accurately ascertained, and will be found as laid down.

"From the Admiralty Islands, we continued standing to the westward; and, on the 25th, made a small island; we stood towards it, and, from its appearance, I was induced to land, hoping to obtain a supply of water. Mr. Robson, myself, and twenty of the best of our hands, armed with heavy clubs, brought from New Caledonia, our fire-arms being rendered useless from exposure to heavy rains, approached in the cutter, and landed through a heavy surf, to the utmost astonishment of the inhabitants, who, as far as we can judge from appearance had certainly never before seen people of our complexion. The men were tall and well made, wearing their hair plaited and raised above the head—they had no appearance of Malays, nor of Caffres; and excepting their colour, which was of a light copper, they had the form and features of the natives of Europe; they were entirely naked. We saw a number of women, who were well formed with mild, pleasing features.

"We were received on the beach by about twenty or thirty of the natives, who immediately supplied each of us with a cocoa nut. We then succeeded in making them understand we wanted water, upon which they made signs to us to accompany them towards the interior of the island; we did so; but after walking above a mile, they conducted us into a thick jungle; and, as their number was quickly increasing, I judged it imprudent to proceed further, and returned to the beach, where I was alarmed to find the natives had assembled, to the number of one hundred and fifty, or upwards, armed with spears, eight or ten feet long. One of them, an old man of venerable appearance, and who seemed to be their chief, approached and threw his spear at my feet, expressive, as I understood it, that we should part with our clubs in like manner. Perceiving at this time a crowd of women to have got hold of the stern part of the cutter, and endeavouring to haul her on shore, from the grapple with which we had come to, we hastily endeavoured to gain the boat; the natives followed us closely, some of them pointed their spears at us as we retreated to the boat, and some were thrown, though happily without effect; and to us they appeared to be very inexpert in the management of their weapons. On my getting into the water three or four of the natives followed me, threatening to throw their spears; and when I was in reach of the boat, one of them made a thrust, which was prevented from taking effect by the interference of Mr. Robson, who warded off the weapon. When we had got into the boat, and were putting off, they threw at least two hundred spears, only one of which took effect, which gave a severe wound to my cook, entering immediately above the jaw, and passing through the mouth.

"Having thus escaped from this perilous adventure, we pursued our course, and got as far as Dampier's Straits, as favourably as our situation could admit. Being now within reach of land, the Lascars became impatient to be put on shore. It was in vain that I endeavoured to persuade them to persevere; they would not listen to argument, and expressed their wish, rather to meet with immediate death on shore, than to be starved to death in the boats. Yielding to their importunity, I at length determined to land them on the N.W. extremity of the island of Ceram, from whence they might travel to Amboyna, in two or three days. On the 9th of June, being off that part of the island, Mr. Robson volunteered to land a part of the people in the cutter, to return to the long-boat; and the cutter to be then given to such farther part of the crew as chose to join in the party first landed. Mr. Robson, accordingly, went on shore with the cutter; but, to my mortification, after waiting two days, there was no appearance of his return, or the cutter.

"We concluded that the people had been detained either by the Dutch or the natives; yet as the remaining part of the Lascars were desirous to be landed, we stood in with the long-boat, and put them on shore, near the point where we supposed the cutter to have landed the people.

"Our number in the long-boat was now reduced to seventeen, viz. myself, Mr. Trounce, Mr. Stalkart, fourteen Lascars, and others. Our stock of provisions consisted of two bags of

rice, and one gang cask of water: with this stock we conceived we might hold out till we reached Bencoolen, for which port we determined to make the best of our way. We fixed the allowance of provision to each man, at one tea-cup full of rice, and a pint of water *per diem*; but we soon found it necessary to make a considerable reduction in this allowance.

"We proceeded on through the Straits of Bantam, meeting, in our course, several Malay prows, none of which took notice of us, excepting one, which gave chase for a day, and would have come up with us, had we not got off, under cover of a very dark night. Continuing our course, we passed through the Strait of Sapay, where we caught a large shark. Our spirits were much elated by this valuable prize, which we lost no time in getting on board; and, having kindled a fire in the bottom of the boat, he was roasted with all expedition; and such was the keenness and extent of our appetite, that although the shark must have weighed 150 or 160lbs. not a vestige of it remained at the close of the day. We suffered most severely from our indulgence; on the following day, we were all afflicted with the most violent complaint of the stomach and bowels, which reduced us exceedingly, and left us spiritless and languid, inasmuch, that we seriously despaired of our safety.

"On the 2nd of July, I lost an old and faithful servant, who died from want of sustenance. On the 4th, we made Java Head; and at the same time, caught two large boobies, which afforded all hands a most precious and refreshing meal. On the 9th, at midnight, came to off Pulo Penang, on the west coast of Sumatra. At daylight we endeavoured to weigh our anchor, and run close in shore; but we were so much exhausted, that our united strength was insufficient to get up the anchor. We made a signal of distress, on which a sandpan with two Malays, came off. As I was the only person in the long-boat who had sufficient strength to move, I went on shore with the Malays. On landing, I found myself so weak, that I fell upon the ground, and was obliged to be carried to an adjoining house. Such refreshments as the place afforded, were immediately sent off to the long-boat; and we recruited so quickly, that in two days we found ourselves in a condition to proceed on our voyage. On the 12th of July we weighed, and, on the 19th anchored off Rat Island, at Bencoolen.

"Here I met with an old friend, Captain Chauvet, of the *Perseverance*, whose kindness and humanity I shall ever remember, and gratefully acknowledge. On the day following my arrival, I waited on the president, Mr. Parr, from whom I received every kindness and attention.

I left Bencoolen on the 17th of August, in the *Perseverance*, for Penang, where I arrived on the 27th, and where I was most agreeably surprised to meet with my late chief mate, Mr. Robson: who, with the *Lascars*, landed on Ceram, and had safely reached Amboyna, where they were received by Mr. Cranston, the Dutch governor, with a humanity and benevolence that reflect honour on his character. The governor supplied them with whatever their wants required; he accommodated Mr. Robson at his own table; and on his leaving Amboyna furnished him with money for himself and people, refusing to take any acknowledgement or receipt for the amount. He also gave Mr. Robson letters to the governor-general of Batavia, recommending him to his kind offices. Such honourable conduct from the governor of a foreign country, cannot be too widely promulgated.

"From Amboyna Mr. Robson embarked in the Dutch frigate, *Pallas*, for Batavia, fell in with, and was captured by his Majesty's ships *Greyhound* and *Harrier*, and brought to Prince of Wales' Island.

"From Penang I went to Bengal, with the *Varuna*, Capt. Denison, and arrived safely in Calcutta, a few days ago."

LOSS OF THE SALADIN.—SUSPECTED PIRACY.

THE above vessel, 243 tons commanded by Captain Mackenzie, bound from Valparaiso to London, was lost on the 21st of last May, near Ireland harbour, Nova Scotia. Since then, circumstances have transpired which lead to a very strong impression that, a horrible act of piracy and murder was committed previous to her destruction, which has engaged the naval and civil authorities of Halifax since the time of her loss, and, although nothing at present of a positive character

has transpired to fix the crime upon a portion of the ship's crew, there is much reason to fear that, if not guilty of the more serious crime, they are not quite blameless as regards the lesser one. So strong was this impression entertained by the authorities at Halifax, that the crew had been taken into custody, and had undergone an examination, and from the evidence collected, in the words of the writer of a letter received at Lloyd's, "There can be but one opinion as to the fate of the officers." From the particulars furnished by Lloyd's agent, it appears that this vessel, was bound from Valparaiso to London, with a cargo of 70 tons of copper, guano, and 8,500 dollars in specie, and some bars of silver; that she left the former port on the 17th of February last; that Captain Mackenzie, her commander, died about the middle of April, and the mate about three days after; the second mate and two men were subsequently lost from the foreyard; that no log had been kept after the 14th of April, about the time the captain died, or any notice of sickness on board up to that date, (circumstances it will be perceived, of a very suspicious nature,) and that the complement of men when the vessel was lost was six. She went on shore, however, during a thick fog, which certainly gives some reason to suppose that she may have been lost accidentally; but, at the same time, it does not do away with the impression that such an opportunity may not have been waited for.

The Admiralty Court at Halifax had taken possession of the cargo saved from the wreck in consequence of the suspicion of piracy. All the letters on board which were supposed to contain invoices, bills of exchange, or bills of lading, are said to have been torn open by the crew, and that many were missing, as also, about one thousand dollars. The articles saved from the wreck, consisted of 730 pigs of copper, seven bags containing about 7,564 dollars, thirteen large and one small bars of silver, two chronometers, one gold, and one silver watch, with all the material, &c. The most suspicious indications of one of the most revolting crimes to civilized nations having been committed, is the sudden death of the captain, for sudden it would imply to have been the case, from the fact that no mention of sickness having been made in the log-book at any period of the voyage previous to his death. The next suspicious circumstance, is the death of the mate, upon whom, by the decease of her commander, devolved the charge of the vessel, &c., and subsequently that of the death of the next officer in authority on board, which, though it is alleged to have occurred, together with that of two of the crew from falling off the foreyard, when all things are taken into consideration, afford some grounds for supposing it to have been anything but an accident, and this appears to have been the view taken at Halifax upon the subject.

The *Saladin* belonged to Messrs. Johnson and Cargill, of Newcastle.

SAILORS AND THEIR MONEY.

It was a usual saying of King Charles II. that sailors got their money like horses, and spent it like asses. The following story is somewhat an instance of it. One sailor coming to see another, on pay-day, desired to borrow twenty shillings of him. The monied man fell to, telling out the money in shillings, but a half-crown thrusting its head in, put him out, and he began to tell again; but then an impertinent crown-piece was as officious as his half-brother had been, and again interrupted the tale; so that, taking up a handful of silver, he cried, "Here, Jack, give me a handful when your ship's paid; what a pox signifies counting it?"

EPITAPH ON A SAILOR.

Here lies honest Jack, to the lobsters a prey,
Who lived like a sailor, free, hearty, and gay;
His rigging well-fitted, his sides close and tight,
His bread-room well furnished, his main-mast upright;
When death, like a pirate built solely for plunder,
Thus hailed honest Jack, in a voice like thunder:—
"Drop your peak, my old boy! and your topsails throw back,
For already too long you've remained on that tack,"
Jack heard the dread call, and without more ado,
His sails flattened in, and his bark she bronched too.

LOSS OF THE COMMERCE.

The brig *Commerce* commanded by Captain James Riley, sailed from the mouth of Connecticut river on the 6th of May, 1815, on her voyage to New Orleans. When in the gulf-stream, the brig was drifted out of her course sixty miles in a few hours, during which she several times touched her keel on the S.W. part of the Craysford reef, but fortunately received no damage. As this was the first time in the course of the captain's experience, that any vessel he had been in, had unexpectedly struck the bottom, he felt so surprised that he could scarcely believe what had happened was really true. The vessel, however, safely arrived at New Orleans, and from thence they had a pleasant voyage to Gibraltar.

On the 23rd of August, 1815, they set sail from Gibraltar,

with the intention of going by the way of the Cape de Verd Islands, to complete the lading of the vessel with salt. On the morning of the 24th they passed Cape Spartel, at from ten to twelve leagues, and steered off to the W.S.W. It was the intention of the captain, as they had a fair wind, to make the Canary Islands, and pass between Teneriffe and Palma; but although they got two observations at noon, neither of them could be much depended upon, as the weather was very thick and foggy. The thickness of the fog also prevented them from seeing any land, and on the 27th they found that they were in the latitude of $27^{\circ} 30' N.$, having by the force of the current differed in their latitude one hundred and twenty miles, and thus passed the Canary Islands without seeing any of them. From this the captain concluded that they must have passed through the intended passage without discovering the land on either

LOSS OF THE COMMERCE, CAPT. JAMES RILEY, AUG. 29, 1815.

tide, more particularly as it was in the night which was very dark; or, to use his own words, "as black as pitch;" nor could they conceive a contrary opinion, as they had a fair wind all the way, and had steered but one course ever since they left Cape Spartel.

Soon after this they got an observation, but on the 28th the fog became as thick as ever, and the darkness seemed, if possible, to increase. Captain Riley got up his reckoning toward the evening, and carefully examined it all over, to make sure that he had committed no error; and caused the mates to do so with theirs. Having, by this means, ascertained that they were correct in their calculations, he altered their course to S.W. which ought according to their reckoning to have carried them nearly on the course he wished to steer, which was for the easternmost of the Cape de Verd Islands; but the weather becoming more

foggy towards night, and it being so thick that they could scarcely see the end of the jib-boom, he rounded the vessel to and sounded with one hundred and twenty fathoms of line, but found no bottom. They consequently continued on their course, still reflecting on what could be the cause of their not seeing land, as he had never before passed the Canaries without seeing them, even in thick weather, or at night-time.

Captain Riley now came to the determination to haul off to the N.W. by the wind, at ten o'clock at night, as they would then be by the log only thirty miles north of Cape Bassedor. He came to this determination about nine o'clock, and thought, at the time, that his fears had never so much prevailed over his judgment and his reckoning. He ordered the light sails to be hauled and the steeringsail-booms to be rigged in snug, which

was done as fast as it could be by one watch, under the immediate direction of Mr. Savage.

They had just got the men stationed at the braces for hauling off, as the man at the helm cried "ten o'clock." Their trysail-boom was on the starboard side, but ready for jibbing; and without dreaming of any danger being near, the helm was put to port. The captain had been on deck all the evening himself. The vessel was running at the rate of nine or ten knots, with a very strong breeze and high sea, when the main boom was jibbed over, and just at that moment he heard a roaring sound. The yards were braced up, and all hands were instantly called up. The captain at first imagined it was a squall, and was very near ordering the sails to be lowered down; but to their dismay, he directly afterwards discovered breakers, foaming at a most dreadful rate under their lee. For an instant they were flattered by a hope,

that as there were no breakers in view ahead, they would still be able to fetch her off, and the anchors were consequently made ready; but these hopes vanished in an instant, as the vessel was carried by a current and a high sea directly towards the breakers, and she struck. All the sails were taken in as rapidly as they were able to effect it; the best bower-anchor was let go, and every precaution taken to avert the impending destruction of the vessel; but surge after surge came thundering on, and, in spite of her anchors, drove her partly with her head ashore. Such was the violence with which she struck, that the shock made every man start from the deck.

Fully aware of the utter impossibility of saving the ship, and confident that she would very shortly bilge, and fill with water, the captain ordered all the provisions which could be got at to be brought on deck, in the hope of saving some of them; and

as much water as possible to be drawn from the large casks. They then staved several quarter-casks of wine, and filled them with water. In these attempts he was warmly seconded by the whole of the crew; all were obedient to every order given, and the most perfect calmness pervaded their whole proceedings. As the vessel was only in ballast trim, she was stout and high; but the sea was so high that it combed over her stern and swept her decks with every wave; notwithstanding which they managed to get the small boat in on deck, and to sling her to keep her from staving. They also cut away the bulwark on the larboard side, so as to prevent the boats from staving when they should get them out, and cleared away the long-boat, and hung her in tackles, the vessel all the time continuing to strike very heavy and filling fast. They had, however, secured five or six barrels of bread, and three or four of salted provisions.

They had, as yet, been so busily employed, that no pains had been taken to ascertain what distance they were from the land; nor had any of them yet seen it: but, in the meantime, all the clothing, chests, trunks, &c. were got up, and the books, charts, and nautical instruments, were stowed in them, in the hope of their being useful to them in future.

The vessel being now nearly full of water, the surf making a complete breach over her, and fearing she would very soon go to pieces, Captain Riley prepared a rope, and having got a glimpse of the shore, at no great distance, put it into the small boat, and taking Porter with him, they were lowered down on the larboard side of the vessel, where she broke the violence of the sea, and made it comparatively smooth. They shoved off, but on clearing away from the bow of the vessel the boat was overwhelmed with a surf, and they were plunged into the

foaming surges. They were instantly driven along by the current, aided by what the seamen call the underflow, or recoil of the sea, to the distance of about three hundred yards to the westward, covered, nearly all the time, by the billows, which, following each other in quick succession, scarcely gave them time to draw their breath, before they were again literally swallowed by them; till at length they were thrown, together with their boat, upon a sandy beach. After recovering their breath, which they had nearly lost, and ridding their stomachs of the salt water, which had found its way into them, their first care was to turn the water out of the boat, and haul her up the beach out of the reach of the surf.

They found the rope that was made fast to her still remaining; this they carried up along the beach, directly to leeward of the wreck, where they fastened it to sticks, about the thickness of handspikes, that had drifted on shore from the vessel, and which they drove into the sand, by the help of other pieces of wood. Before leaving the vessel, the captain had directed that all the chests, trunks, and everything that would float, should be hove overboard; and this the men were now busily employed in doing, the vessel lying about one hundred fathoms from the beach, at high water.

In order to save the crew, a hawser was made fast to the rope they had on shore, and which Captain Riley and his mate hauled to them, and made it fast to a number of sticks which they had driven into the sand for the purpose; it was then hauled on board the wreck and made fast. This being accomplished, the long-boat was lowered down, in order to save the provisions, which had already been stowed in it, and two hands steadied her by ropes fastened to the rings of her stern and stern-posts over the hawser, so as to slide, keeping her bow to the surf; in which manner they reached the beach, carried on the top of a heavy wave. The violence of the shock against the beach stove the boat, but by great exertions they saved the three barrels of bread in her, before they were much damaged, and also two barrels of salted provisions.

There were now four of them on shore busied in picking up the clothing and other things which drifted from the vessel, and carrying them out of the reach of the surf. It was by this time daylight, and high water; the vessel careened deep off shore, and the captain made signs to those on board to have the masts cut away, in the hope of easing her, that she might not go to pieces. They were accordingly cut away, and fell on her starboard side, making a better lee for a boat alongside the wreck, as they projected considerably beyond her bows. The masts and rigging being gone, the sea breaking very high over the wreck, and nothing left to hold on by, the mates and six men, who were left on board, though still secured as well as they could be on the bowsprit, and in the larboard forechannels, were yet in imminent danger of being washed off by every surge. The long-boat was stove, and it being impossible for the small boat to live in such a sea, the great object now was to save the lives of the crew by means of the hawser. The captain, therefore, made signs to them to come one by one on the hawser, which had been stretched out for that purpose. John Hogan was the first that ventured, and having pulled off his jacket, took to the hawser and made to the shore. When he had got clear of the lee of the wreck, every surf buried him, combing many feet above his head; but he still held fast by the rope, with a death-like grasp, and as soon as the surf had passed over him, proceeded on towards the shore. At that moment another surf, more powerful than the first; unloosed his hands, and threw him within the reach of those who were on the beach, when they laid hold of him and dragged him to the shore; they there rolled him on the sands, until he discharged the salt-water from his stomach, and he shortly afterwards revived. The captain kept in the water, up to his chin, steadying himself by the hawser, while the surf passed over him, to catch the others as they approached; and thus, with the assistance of those already on shore, he was providentially enabled to save all the rest from a watery grave.

All hands being now safely landed, their first care, after returning thanks to the Almighty for his merciful deliverance of them from death, was to secure the provisions and water which they had succeeded in getting on shore, as they knew

it was a barren land. They carried them up to a distance of fifty yards from the water's edge, and formed a kind of tent over them by means of their oars and steering-sails. They now encouraged a hope that they should not be discovered by any human being on this inhospitable coast, but that, by repairing the long-boat, and taking advantage of a time, when the weather was calm, they might embark and reach some of the Cape de Verd Islands, or some European settlement down the coast.

While they were thus employed in securing what they had been fortunate enough in saving, they saw a human figure approach their clothing and other goods which lay scattered along the beach for a mile to the westward of them. It was a man, who directly he reached the spot, began plundering their clothing. Captain Riley went towards him with all the signs of peace and friendship which he could make; but the stranger was exceedingly shy, and made signs for him to keep his distance, while he, all the time, seemed intent upon plunder. The savage was unarmed, and Captain Riley continued to approach until he was within about ten yards distance from him.

The native who had thus so intruded upon them, appeared to be about five feet seven or eight inches in height, and of a complexion something between that of an American Indian and a negro. The only article he had about him to cover his nakedness, was a piece of coarse woollen cloth that reached from below his breast nearly to his knees. His hair was long and bushy, more resembling a pitch-mop than anything human, sticking out, in all directions, six or eight inches from his head; his face resembled that of an orang-outang, more than that of man; his eyes were red and fiery, and lighted up with a peculiar expression of malignity, ferocity, and cunning; his mouth, which stretch nearly from ear to ear, was well lined with sound teeth and a long black curling beard, which descended from his upper lip and chin down upon his breast, and gave him a most horrid and frightful appearance. Captain Riley could not but imagine that those well set teeth were sharpened for the purpose of devouring human flesh, particularly as he conceived he had before seen, in different parts of the world, the human face and form in its most hideous and terrific shape. He appeared to be very old, yet fierce and vigorous; and was soon joined by two old women of similar appearance, whom the captain supposed to be his wives. These two looked a little less frightful, though their two eye-teeth stuck out like hog's tusks, and their tanned skins hung in loose plaits on their faces and breasts, but their hair was long and braided.

A girl who appeared to be from eighteen to twenty years of age, and was nothing near so ugly as her elder companions, and five or six children of different ages, apparently from six to sixteen years, were also in company, and were all of them entirely naked. They brought with them a good English hammer, with a rope lanyard through a hole in its handle, which had most probably belonged to some vessel that had been wrecked on that coast. They had also with them a kind of axe, and some long knives, slung on their right sides, in a sheath suspended to their necks. They now felt themselves of sufficient force to act with impunity, and commenced a bold and indiscriminate plundering of everything they could lay their hands on. They broke open trunks, chests, and boxes, and emptied them of their contents, carrying the clothing on their backs up to the sand hills, where they spread them out to dry.

They tore open the feather beds, which they emptied of their contents, as they wanted only the cloth which formed the covering, and appeared to be highly amused with the flying of the feathers before the wind; indeed it seemed, by their manner, that they had never before seen such things.

Captain Riley had shipped an adventure of silk-lace veils and silk handkerchiefs, and these were among the goods which had been cast upon the beach. The former of these the man, women, and children tied round their heads and legs, and all appeared to be delighted with their good fortune. The crew were exasperated at the bare-faced robbery which was going on, and wished to take vengeance on the natives for their insolence.

ence and plundering; but the captain convinced them of the folly of driving off these wretches, as they would return with numbers and murder them on the spot. He therefore let them take whatever they pleased, with the exception of their water and provisions, which, as they could not live without them, he was determined to defend to the last extremity. On their first reaching the shore, he divided one thousand dollars among the crew, in the hope that it might prove useful to them in helping them to get released from the inhospitable shore on which they had been thrown, and to reach their homes. Their first determination was now to endeavour to effect the necessary repairs to the long boat, which had been stove on reaching the beach; and as the wind lulled in the afternoon, at low water one of them succeeding in reaching the wreck, where he procured a few nails and a marling-spike, with which he got safe ashore.

On an examination of the boat, it was found that the timbers were in so crazy a state, and the nails which held them together so eaten by the rust, that she would not hold together nor support her own weight in turning her up in order to get at the bottom. Captain Riley, however, tacked her timbers together as well as he could, which was very imperfectly, as he had bad tools to work with, and the crew being no longer restrained by his authority, having broached a cask of wine, and taken copious draughts of it, to dispel their sorrows, were most of them in such a state, that instead of assisting him they only tended to increase his embarrassment. However, he at last got the boat turned up, and found that one whole plank was out on each side, and very much split. He tacked the pieces in with the assistance of Mr. Savage, Horace, and one or two more, and then chinned a little okum into the seams and splits, as well as they could, with their knives, continuing their work upon her until it was quite dark.

Night had now spread her sable mantle over the face of nature, the savages had retired, and all was still, save the restless and unwearied waves which dashed against the deserted wreck, and tumbled among the broken rocks a little to the eastward of them, where the high perpendicular cliffs, jutting out into the sea, opposed a barrier to their violence, and at the same time threatened inevitable and certain destruction to every ill-fated vessel and her crew, that should unfortunately approach too near their immovable foundations, and which the Commerce and her crew had only escaped by a few rods. In speaking of this part of his adventures, Captain Riley says, that from the time the vessel struck, to this moment, he had been so entirely engaged by the laborious exertions which their critical situation demanded, that he had had no time for reflection, till now it rushed like a torrent over his mind, banishing from his eyes that necessary sleep which his fatigued frame so much required. He was too fully conscious of the unwelcome truth that he was on a barren and inhospitable coast; before him lay the tempestuous ocean, whose bosom was continually tossed and agitated by wild and furious winds, blowing directly on shore, without the aid of vessel or boat sufficient for their escape; for he thought it impossible that their shattered long-boat could live at sea, even if they should succeed in urging her through the tremendous surges that broke upon the shore with such violence, that the whole coast trembled with the shock. Behind them were savage beings bearing human form, indeed, but in its most terrific appearance, whose object he knew, from what had already passed, would be to rob them of their last resource—their provisions; and he did not doubt but that they would be sufficiently strong in the morning not only to accomplish what he fancied they meditated, but to take the lives also of the unfortunate crew, or seize upon their persons and doom them to perpetual slavery, till death should in mercy rid them of their miseries.

It was the first time he had ever suffered the horrors of shipwreck, and he had left a wife and five young children, on whom he doated, and who depended entirely on his exertions for their subsistence. His children would have no father's, and perhaps no mother's care to direct them in the paths of virtue, to instruct their ripening years, or to watch over them and administer the balm of comfort in the time of sickness; no generous friend to relieve their distresses and save them from indigence, degradation, and ruin. These sad reflections

caused him great distress of mind, nor could he cease to shudder at these imaginary evils which his own melancholy thoughts added to his real ones, until he was forced mentally to exclaim, "Thy ways great Father of the universe are wise and just; and what am I, an atom of dust, that dares to murmur at thy dispensation?"

The night passed away as slowly and tediously as though misery had lengthened it into ages; but at length the eastern horizon exhibited signs of approaching daylight chasing darkness before it, not to usher to their view the cheering prospect of approaching relief, but to unfold new scenes of suffering wretchedness and distress. As soon as it was fairly light, the old man came down to them, accompanied by his wives, and two young men, apparently of the same family. He was armed with a spear of iron, having a handle made of two pieces of wood spliced together, and tied with cords. This was in length about twelve feet. On approaching them, he held the spear balanced in his hand, making motions as if he intended to throw it at them; he then ordered them off to the wreck, at the same time pointing to a large drove of camels that were descending the heights to the eastward of them, while his women were running off whooping and yelling with a horrible noise, throwing up sand in the air, and beckoning to those who had charge of the camels to approach. The captain ran towards the beach, and seized a small spar that lay there, in order to parry off the old man's lance, as a handspike was not long enough; who, in the meantime, approaching the tent in a fury, where the people still were, and by slightly pricking one or two of them with his lance, and pointing at the same time towards the camels, succeeded in frightening them, which appeared to be his object, as he did not wish to call for help, lest he should be obliged to give up part of the spoil to those who assisted in his capture. They made their way as speedily as possible to the small boat, while the captain parried off the old man's spear with his spar, and kept him at a distance. There is not the slightest doubt but that the savage would have hurled the dart at him, but for the fear of losing it altogether.

The small boat was now dragged to the water, but the first sea instantly filled it; they had, therefore, no resource, except trying to get either to the eastward or westward. Abandoning their provisions, they tried to retreat eastward, but were opposed by this formidable spear. Though youth and numbers were on their side, yet being unarmed they could make but little progress, for the old man was active to an extraordinary degree, considering his apparent age. He would fly from them like the wind, and return with equal speed; and was also joined by the other Arabs, who assisted him in driving the poor unfortunate mariners to the shore, while the women and children kept up a continued hideous yelling. They now turned over the long-boat, which, as before mentioned, had been slightly patched up, and all embarked in her for the wreck, which they succeeded in reaching with the boat half full of water. All hands got on board the wreck, with the exception of the captain and another, who could hardly keep the boat from sinking, though they were baling her with two buckets. The old man and his small party were now joined by other Arabs, armed with scimitars, who came running from the eastward, all of whom hallooed to the sailors, brandishing their naked weapons, and bidding them defiance. The old man then came down to the beach, and with his axe staved in the heads of all their water-casks and casks of wine, allowing their contents to run into the sand; and then gathered up all the trunks, chests, instruments, books and charts, with which they formed a pile, and setting fire to it, consumed the whole. Being thus deprived of their provisions and water, and everything they had saved from the wreck, they found no other alternative open to them, but to endeavour to get to sea in their leaky boat, without water, provisions, or instruments, or assistance of any kind, or to stay where they were, and be washed off the wreck by the fury of the sea.

In this dreadful emergency, yet not quite reduced to despair, they made preparations to leave the brig, by getting a few bottles of wine and some slices of salt pork. As they had also lost their oars, they split a plank, in order to make substitutes

for them, and then attempted to shove off; but, in an instant a surf struck the boat, and she filled. The sight of their deplorable situation seemed to excite pity even in the breasts of the savages, who had driven them from the shore; they came down to the water's edge, bowed themselves to the ground, beckoned to the sailors to come on shore, at the same time, making all the signs of peace and friendship, of which they were capable; but finding they would not be induced to trust themselves on shore, one of the Arabs ran and fetched a goat skin of water, with which the old man went into the water up to his armpits, and beckoned Captain Riley to come and fetch it, and drink. Being thirsty, and finding they had no other chance of obtaining water, Captain Riley went by means of the hawser to the beach, where the old man met him, and gave him the skin of water, which he immediately carried off to the wreck. This done, the old man expressed a wish to go on board the wreck; Captain Riley seeing no possibility of escaping except with their assistance, again went on shore, where the old man and his companions expressed every possible demonstration of good-will and peace towards these distressed seamen. He suffered the old man to pass to the wreck, while he remained on the beach; and when the people hauled the old man on board, he endeavoured to make them understand that they must retain possession of him until he, the captain, was released from the Arabs on shore; but unfortunately the noise of the surf prevented them from hearing his commands.

After the old Arab had fully satisfied his curiosity, by looking with the greatest possible attention at everything he could see, which was nothing more than the wreck of the contents of the hold floating about in her, and making a strict inquiry for baftas, for fire-arms, and for money, he came on shore. When he had got very near the beach, and Captain Riley was about to rise to meet him, he was suddenly seized by two of the stoutest Arabs, grasping him like lions, while at the same instant the women and children presented their daggers, knives and spears to his breast. To strive against such fearful odds, would have been instant death, and he was, therefore, obliged to remain quiet, while the countenances of all those around him assumed the most horrid and malignant expressions of demoniacal fury. They gnashed their teeth at him, and struck their daggers within an inch of every part of his head and body. All this time he was held fast by the young men, whilst the old one seizing a sharp scimitar, laid hold of his hair, at the same instant, and made a motion as if to cut his throat or his head off. The poor horror-stricken captain believed his last moments were come: but the old man, after lightly drawing his scimitar across the collar of his shirt, which he slightly cut, released him.

When the old man had quitted his hold, and the captain hailed his people, their hopes began to revive, and one of them came on to the hawser to know what they should do. He told him he must instantly bring on shore all the money that they had on board; but unfortunately being in water, at some distance, and on account of the noise which was occasioned by the surf, the sailor could not hear the concluding part of the order, which was they should not part with any of the money until the captain had been fairly released. The man returned on board, and all hands being naturally anxious to procure their commander's release put their money, which they still had about them, to the amount of about a thousand dollars, into a bucket, and slinging it on a hawser, Porter shoved it along before him near to the beach, and was about to bring it up to the place where Captain Riley sat; who, however, with considerable difficulty, prevented him from doing so, as the surf made such a roaring that he could not hear him, though he was then only a few yards distant; but he at last understood the captain's signs, and remained in the water until one of the young Arabs went and received it from him. At this time the old man was seated alongside of Captain Riley, holding a scimitar pointed to his breast.

The bucket of dollars was instantly brought and poured into one of the old man's blankets, when he bade the captain rise and go with him, both the old and the young men urging him along by both arms, with their daggers drawn before, while the women and children were behind him, with the spear and their knives at

his back. In this manner they made him go over the sand drifts, to the distance of three or four hundred yards, where they seated themselves and him upon the ground. The old man next proceeded to count and divide the money, which he did by making three heaps of it, counting into each heap by tens, and so dividing it exactly. He then gave to the young men one-third or heap; one to his two wives, and the other he kept to himself. Each of them secured their own share by wrapping and tying it up in some of the clothing which they had plundered the sailors. During the process of dividing the spoil which was intended as the ransom of Captain Riley, they had let go his arms, though they were still standing around him; his first thought was that if he could not effect his escape, that his fate was decided: he knew they could outrun him if he leaped from them, and was too fearfully conscious that should he attempt and fail, they would plunge their weapons into his heart. He, however, resolved to risk it, and with that view made a slight movement at a moment when he thought all eyes were turned from him; but one of the young men, seeing his manœuvre, made a lunge at him with his scimitar; he eluded the force of the blow by falling backward on the ground, notwithstanding which the weapon pierced his waistcoat. The Arab was about to repeat it when the old man bade him to desist.

The money being now distributed and tied up, they made Capt. Riley rise with them, and were all going together from the beach, holding him by the arms, with naked daggers all around him. There appeared no possible means of escape, when the thought suddenly suggested itself to him of tempting their avarice; he accordingly, by signs gave them to understand that there was more money in the possession of the crew, the idea of which seemed to please them: for they instantly returned with him to the beach again, and sent off the money to a place of security by a young man and a boy. When they had approached to within a hundred yards of the beach, they made Captain Riley seat himself on the sand between two of them, who held his arms, and bade him order the money on shore. He knew that there was none on board the wreck or in the boat, but he imagined that if he could get Michael Antonio on shore he should be able to effect his escape. He hailed accordingly, and made signs to the crew for one of them to come near the shore; but as they saw, by every movement of the natives, that his situation was dreadfully critical, not one of them was inclined to venture. The captain waited more than an hour under repeated threats of immediate death, and was made to halloo with all his might, until he became so hoarse that he could scarcely make himself heard by those around him. At length the pity of Mr. Savage for his condition overcame his fears, and he ventured on the hawser, and reached the beach in safety. He was about to approach Captain Riley, when he would most certainly have been seized as the Captain was, but he endeavoured to make him understand by signs that he must stay in the water, and keep clear of the natives if he valued his life; but Mr. Savage, not being able to hear him, and not comprehending the meaning of his signs, those who were keeping guard over Captain Riley supposing him to be giving the other orders to fetch away the money, obliged him to get up and approach a little nearer, until he made him understand what he wanted. Mr. Savage then returned on board the wreck, and the captain was taken back to his former station.

After the lapse of rather more than an hour, Antonio left the vessel and came to the beach, where he had no sooner arrived than the natives flocked around him, with the expectation of getting more money; but soon finding that he had none, they commenced beating him violently, and the children cutting him with knives. In vain he fell upon his knees and begged for his life; the inhuman Arabs paid no regard to his entreaties, till Captain Riley, in the hope of saving him from their fury, told him to let them know by signs that there was money buried where the tent stood; and where a new spy glass, a hand-saw, and several other articles had been buried, together with a bag of four hundred dollars. The natives, on comprehending his signs, immediately went to the spot and commenced digging.

The captain was seated on the sand in the no very enviable position of having the old man on his left, with his spear up-

lifted in his right hand pointing to his heart, and on his right stood the stoutest of the young men with a naked scimitar in his right hand pointing to his head. Both weapons were within six inches of him, and his guards within a foot of him on each side. His first consideration was, that as soon as anything should be found by those who were digging, they would naturally speak and inform those who guarded him of the circumstance, and as he was pretty certain that both of them would look round, as soon as the discovery of the treasure should be announced, he carefully drew up his legs under him, but without exciting suspicion, in order to be ready for a start, as they had let go his arms some time before. The place where they were digging was partly behind them on the right, and, as he expected, upon their making a noise, both his guards turned their heads and eyes from him, towards those who were digging, when he instantly sprang out from beneath their weapons and flew to the beach. He was running for his life and soon reached the water's edge, where knowing that he was pursued and nearly overtaken, he plunged into the sea with his head foremost, and swam underneath the surface of the water as long as he could hold his breath, then rising to the surface he looked round on his pursuers. The old man was within ten feet of him up to his chin in water, and was in the act of darting his spear through the captain's body; when a surf providentially rolling over saved his life, and dashed the Arab and his comrade on the beach. Captain Riley was at some distance westward of the wreck, but swimming as fast as possible towards her, while surf after surf broke in towering heights over him, he was enabled, by almost superhuman exertions to reach the wreck, when he was taken into the boat over the stern by the assistance of the crew. He was so far exhausted, that he could not immediately witness what passed on shore, but some of the crew observed that the Arabs stood almost motionless on the beach at the edge of the water, until the captain was safe in the boat, when they ran towards poor Antonio and plunging a spear into his left breast, downwards, laid him dead at their feet. They then picked up what things remained, and all of them made off together.

Hostilities had now commenced, and they could not doubt but that the merciless ruffians would soon return in great numbers, and murder them all, as they had already done the unfortunate Antonio. The wind blowing strong, and the surf breaking outside and on the wreck twenty or thirty feet high, the hope of getting to sea in their crazy long-boat was indeed but faint. She had been thumping alongside the wreck, and on a sand-bank all day, and taking in as much water as two men constantly employed with buckets could throw out. The deck and outside of the wreck were fast going to pieces, and the other parts could not long hold together. The tides, by being low, together with the sand-bar that had been formed by the washing of the sea from the bow of the wreck to the beach, had very much lessened the danger of communicating with the shore during the day; but it was now returning to sweep everything from the wreck, aided by the wind, which blew a gale on shore every night. To remain on the wreck or to go on shore was almost certain death. The boat could no longer be kept afloat alongside; and being without provisions and water, if they put to sea they must soon perish. They had neither oars nor rudder to the boat, nor compass nor quadrant to direct their course, but as it was their only chance, they resolved to try and get to sea, expecting, nevertheless, that they would be swallowed up by the first surf, and thus be launched into eternity altogether.

In the first place a man was sent on shore to get the two broken oars that were still lying there, while another made his way into the hold in search of fresh water. He dived in at the hatchway, which was covered with water, and after coming up under the deck on the larboard side, found, as he expected, just room enough to breathe, and to work among the floating feasks, planks, and wreck of the hold. After much labour he found a water-cask partly full, and the bung tight, with which a small keg, after much trouble, was filled, and a good drink given to each man. The man now returned with the oars, and then went again, of his own accord, and got the bag of dollars. They got the small boat's sails into the boat, with a spar that

would do for a mast, and the brig's fore-topmast staysail, the keg of water, a few pieces of salt pork, a live pig, weighing about twenty pounds, and a few damaged figs. Everything being now ready, the captain earnestly endeavoured to encourage the crew in their dangerous attempt, representing to them, that it was far better for them to be swallowed up altogether by the ocean, than to be brutally murdered by the relentless savages.

As they surveyed the dangers that surrounded them, wave followed wave, breaking with a dreadful crash just outside of them, that there appeared no possibility of their getting safely beyond the breakers, without a special interference of Providence in their behalf, and which interference, in any case, the captain had always before doubted. Every one trembled with dreadful apprehension, and each imagined that the moment they ventured past the vessel's stern, would be his last. The captain then said, "Let us pull off our hats, my shipmates and companions in distress." It was done in an instant, when lifting up his eyes and his soul towards heaven, he thus fervently prayed:—

"Great Creator and Preserver of the Universe, who now seest our distresses, we pray thee to spare our lives, and permit us to pass through this overwhelming surf into the open sea: but if we are doomed to perish, thy will be done; we commit our souls to the mercy of thee our God who gavest them: and, oh, universal Father, protect and preserve our widows and children."

At this very moment the winds, as if by Divine command, ceased to blow. They immediately hauled the boat out. The dreadful surges that were nearly brushing upon them, suddenly subsided, making a path for their boat about twenty yards wide, through which they rowed her out as smoothly as if she had been on a river in a calm, whilst on each side of them, and not more than ten yards distant, the surf continued to break twenty feet high, and with unabated fury. They had to row nearly a mile in this manner, when all were so fully convinced that they were saved by the interposition of Divine Providence, in this particular instance, that all joined in returning thanks to the Supreme Being for his bountiful mercy.

As soon as they reached the open sea, and had gained some distance from the wreck, the surf returned, combing behind them with the same force as on each side of the boat. They then fitted up the mast which they had brought with them, and set the small boat's mainsail.

They were now fairly launched on the bosom of the wide ocean; and, trusting in that Providence who had already shown them such an especial mark of his over-ruling hand, they sailed from that inhospitable shore where they had experienced nought but relentless cruelty.

Captain Riley and his fellow-sufferers had not long departed from the scene of their misfortunes, before the wind veered to the eastward, and thereby enabled them to fetch past the point of the cape, though the boat had neither keel nor rudder. It was sunset when they got out, and night coming on; the wind, as usual, increased to a gale, before morning, so that they expected every moment to be swallowed up by the high sea which was running. In this emergency a consultation was held as to their most advisable course of proceeding, when, after mature deliberation, it was resolved to keep to sea.

After two days of stormy weather, it became more moderate on the 31st, though the weather was still very thick and hazy. Their pig nearly dead for the want of water, they killed it, taking especial care however to save the blood, which they divided among them and drank, as their thirst was now becoming almost insupportable. They also divided the pig's liver, intestines, &c. between them, and ate some of them, as they were fresh, to satisfy, in some measure, their extreme thirst. Thus this day passed away, having as yet seen no vessel to relieve them. They had determined to save their urine for drink, which they accordingly did, in some empty bottles, which they had in the boat, and found great relief from the occasional use of it; for being obliged to labour by turns to keep the boat above water, their thirst was much more severely felt than if they had remained still. The night came on very dark and lowering, and the sky seemed big with an impending tempest;

the wind blew hard from the N.E., and before midnight the sea combed into the boat in such quantities, that several times she was more than half full of water. All hands were earnestly employed in baling out the water with hats, and anything else they could find, each firmly believing that his final hour had arrived, and confidently expecting that every approaching wave would bury him for ever in a watery grave.

The boat rocked like an old basket, letting in water at every seam and split, her timbers working out or breaking off. The nails that had been put in while they were last on shore were kept from entirely drawing out, merely by the pressure of the water, acting on the outside of the boat. Vivid flashes of lightning shot across the gloom and rendered the scene doubly terrific.

Amidst these accumulated horrors the morning broke; it was the first of September. Thirst pressed upon them, which they could only allay by wetting their mouths twice a day with a few drops of wine and water, and as many times with their own urine. All this day and the succeeding night the wind continued to blow with increasing violence, and the boat to work and leak as much as before. Worn down with fatigues and long continued hunger and thirst, scorched by the burning rays of the sun, and no vessel appearing to relieve them, their little store of water diminishing as well as their strength, every hope of succour by meeting with a vessel entirely failed them, so that in the afternoon of the 2nd of September, the captain represented to his companions, that as they were still alive after enduring so many trials, it was his advice to put about and make towards the coast again; that if they continued at sea they must inevitably perish, and that they could but perish in returning to the land; that they might still exist four or five days longer, by means of the water and provisions that remained, and that it might be the will of Providence to send them on the coast where their vessel had been wrecked, and where, perhaps, means were prepared to bring about their deliverance and restoration to their country and their families. All seemed convinced that it was so, and they immediately put about with a kind of cheerfulness such as had not brightened their countenances since the occurrence of their first disaster.

On the morning of the 7th they discovered land, and continued to approach it, driving along to the southward by a swift current, roaring like a strong tide in a narrow rocky passage, until sunset. The surf was breaking high among the rocks near the shore, and they being now very near the land, and seeing a small spot that bore the appearance of a sand beach, they made towards it. They were instantly carried on the top of a tremendous wave upon the sand, so that when the surf retired they were high and dry. Without them, and in the track they came, numerous fragments of rock reared their craggy heads, over which the surf foamed, as it retired, with a dreadful roaring. They got out of the boat and carried up the little remains of their water and provisions, and the night coming on soon after, they busied themselves in preparing a place in the sand to lie on, where, after wetting their mouths with water, and eating a few slices of pork they laid down to rest.

On the morning of the 8th of September, as soon as it was light, being much refreshed by their undisturbed sleep, they agreed to leave all they had that was cumbersome and heavy, and try to make their way to the eastward, in the hope of finding a place to dig for water, while they had strength yet remaining; or to get to the surface of the land above them, where they hoped to find some herbage or vegetable juice to allay, in some degree, the burning thirst, which now became more painful than ever, by their catching a few muscles that were found on the rocks and which were extremely salt.

Having agreed to keep together and to render each other mutual assistance, they divided among them the little water they had, each one receiving his share in a bottle, in order to preserve it as long as possible; and then taking a small piece or two of pork which they hung on their backs, either in a spare shirt or a piece of canvass they bent their way towards the east, leaving all their clothes, but those they had on and their jackets. Before starting, the captain buried the bag of dollars, and induced each man to do the same by every one he

had about him, as he was convinced that money had been the cause of their former ill-treatment, by tempting the natives to practice cruel and treacherous means, in order to extort it from them. They now proceeded, as well as they were able, close to the water's side.

The land was either nearly perpendicular or jutting over their heads, rising to the height of five or six hundred feet. Their journey was perilous in the extreme; sometimes forced to climb over masses of sharp and craggy rocks, from two to three hundred feet in height, then to descend again by letting themselves down from rock to rock, until they reached the water's edge; now waiting for a surf to retire, while they rushed, one by one, past a steep point up to their necks in water, to the rocks more favourable on the other side, by clinging fast hold to which they kept themselves from being washed away by the next surf, until, with each other's assistance, they clambered up beyond the reach of the billows. The beating of the ocean and the force of the currents, against this coast, had undermined the precipices in such a manner, that vast masses of rock, sand, and gravel had given way and tumbled to the shore. Rocks falling on rocks had formed chasms through which, at times, they had to pass for a long distance, and surmounting one obstacle it only seemed to open to their view another still more dangerous. At one place they were obliged to climb along on a narrow ledge of rocks, between forty and fifty feet high, and not more than eight inches broad, those at their backs, being perpendicular; and a little higher up huge pieces that had been broken off from near the surface, and stopped on their way down by other fragments, seemed to totter, as if on a pivot, directly over their heads, whilst the least slip must have plunged them into the dreadful abyss below, where the foaming surges would instantly have dashed them to pieces against the rocks. Their shoes were nearly all worn off, their feet were lacerated and bleeding, the rays of the sun striking on their emaciated bodies, heated them, as they thought, nearly to dissolution; and under the towering cliffs there was not a breath of air to fan their blood, which was almost boiling.

Thus passed this day with them, and when night came on it brought with it new distresses. They had advanced along the coast not more than about four miles this day, with all the exertions they were capable of, without finding any change for the better, in their local situation, whilst their strength was continually diminishing, and no circumstance occurred which could in any way revive their hopes.

They spent the two succeeding days in clambering among the rocks under the high cliffs, suffering from hunger, till, after unremitted exertions, they found a place by which they were enabled to ascend to the plain above, where no object was seen as far as the eye could reach—not a tree, a shrub, or a blade of grass that might afford the smallest relief to expiring nature. They travelled along the edge of the cliff till a little after sunset, when, as the captain was encouraging his men to proceed, one of them exclaimed, "I think I see a light." It was the light of a fire.

Joy thrilled through their veins like the spark of an electric shock, and hope once more revived them; they however, determined to wait till the morning before they presented themselves to the Arabs. On the morning of the 13th of September they agreed to go forward and meet the natives, who, as soon as they discovered them, came running towards them in the most frantic manner, with drawn scimitars, and stripped them of every thing they had on, amid the most frantic yells. A fierce contention then ensued between the savages with respect to dividing the plunder and the prisoners, they cut each other with their scimitars in the most horrid manner, so that the blood ran down in streams.

After watering their camels and loading them, and their other preparations being concluded, the Arabs departed for the interior; and the unfortunate crew of the *Commerce* were forced to walk and drive the camels, while the sand was so soft and yielding, that they sunk up to their knees at every step. Thus they mounted the sand hills, the blazing heat of the sun's rays dashing on their naked bodies, and reflected from the sand, their feet and legs cut to the bone by the sharp craggy rocks and stones, in addition to their excessive weakness, which the dysentery had increased, rendered their passage up

through this chasm or hollow so severe, that they were almost deprived of life. Captain Riley became so exhausted, that he was obliged to stop in the sand, until, by the application of a stick to his back, by their drivers, he was forced up to its level where they made the camels lie down to rest.

The Arabs had been much amused at observing the difficulty of the sailors in ascending the height, and kept up a continual laugh, while they were whipping them forward. Their women and children were also on foot, and went up without the smallest difficulty or inconvenience, though it was extremely hard for the camels to mount; and before they got to the top, they were covered with sweat and froth.

Having selected five camels for the purpose, one for each of those who were to ride, they put them on the humps, to which they were obliged to cling by grasping the long hair with both hands. Captain Riley states, that the back-bone of the one he

was on was only covered with skin, and as sharp as the edge of an oar's blade; his belly being distended with water, made him perfectly smooth, leaving no projection of the hips to keep him from slipping off behind, and his back was as steep as the roof of a house, and so broad across as to keep his legs extended to their utmost stretch. In this manner he was slipping down to his tail every moment; he was, however, forced to keep on, while the camel rendered restive at the sight of his strange rider, was all the time running about among the drove, and making a most woeful bellowing; and as they have neither bridles, halters, nor anything whereby to guide or govern them, all he had to do was to stick on as well as he could.

The Arabs, both men and women, were very anxious to know where they had been cast on shore, whether to the eastward or westward; and being satisfied on that point, as soon as they had placed them on the camels and given the women

directions how to steer, they each mounted his camel, seated themselves on the small round saddle, and then crossing their legs on the animal's shoulders, set off to the westward at a good trot, leaving the poor prisoners in charge of the women, some of whom were on foot, and urged the camels forward as fast as they could run. The heavy motions of the camel, not unlike that of a small vessel in a heavy head-beat sea, were so violent, aided by the sharp back-bone, as very soon to excruciate parts of their bodies. The inside of their legs were also so dreadfully chafed, that the blood dripped from their heels; while the intense heat of the sun had scorched and blistered their bodies, so that they were covered with sores, without anything to administer relief. Thus bleeding and smarting under the most excruciating pain, they continued to advance in a south-east direction, on a plain, flat, hard surface of sand, gravel, and rock, covered with small sharp stones.

It seemed as if their bones would have been dislocated at every step; hungry and thirsty, the night came on, and no indication of stopping: the cold night wind began to blow, chilling their blood, which ceased to trickle down their lacerated legs, yet acting on their blistered skins, increased the intensity of their pains beyond description. They begged to be permitted to get off, but the women paid no attention to their entreaties, intent only on getting forward. They designedly slipped off the camels when going at full trot, risking to break their necks by the fall, and trying to excite their compassion to get a drink of water, which the Arabs call sherbet; but the women paid no attention to their prayers, and compelling those who had fallen to remount, they kept the camels running faster than before.

Captain Riley observes, that this was the first time he had attempted to walk barefoot since he was a school-boy, and here

they were compelled to keep up with the camels, running over the stones, which were nearly as sharp as gun-flints, and cutting their feet to the bone at every step. It was here that his fortitude and philosophy failed to support him; he cursed his fate aloud, and wished that he had rushed into the sea before he gave himself up to these merciless beings in human form. It was now too late; he would have put an immediate end to his existence, but had neither knife nor any other weapon with which to perform the deed. He searched for a stone, intending, if he could find a loose one sufficiently large, to knock out his brains with it, but his search proved in vain. This paroxysm passed off in a minute or two, his reason returned, and he recollected that, his life was in the hands of the power that gave it, and that "the Judge of all the earth would do right." Then running with all his remaining strength, he soon came up with the camels, regardless of his feet and the pain he was suffering; and felt perfectly resigned, and willing to submit to the will of Providence and the fate that awaited him.

At daylight on the 15th September, they were all called on to proceed. The females struck their tents, and packed them on camels, together with all their goods, while they made the poor seamen walk and keep up with the camels, though they were so stiff and sore all over, that they could scarcely refrain from crying out at every step, such was their intense agony; and still pursuing their route to the south-east. In the course of the morning the captain met Mr. Williams, in a most dreadful state; he had been riding for about three hours in the most excruciating torture: he was still entirely naked, his skin had been burned off, and his whole body was so exceedingly inflamed and swelled, as well as his face, that he could only be recognised by his voice. He said that he had been obliged to sleep naked in the open air every night, that his life was fast wasting away amid the most dreadful torments, that he could not live one day more in such misery, and that his mistress had that morning taken pity on him and anointed his body with grease. "But," said he, mournfully, "I cannot live. Should you ever get clear of this dreadful place, and be restored to your country, tell my dear wife that my last breath was spent in prayers for her happiness." He could say no more, for tears choked his utterance. His master at this instant arrived, and drove on his camel, which was a large one, and moved forward with very heavy motions; and as he turned from him, the captain could see the blood trickling down the sides of the camel and off his feet.

In this way, sometimes riding, sometimes walking, they continued to wander over the desert in different directions, suffering intensely from the heat of the sun by day, and the cold winds at night. Receiving no nourishment during this period, with the exception of about half a pint of camel's milk per day, hunger had preyed on them to such a degree, that they even bit off the flesh from their arms. In one instance, the captain was forced to tie the arms of one of the men behind him, and in another instance, two of the men having caught one of the boys, about four years of age, out of sight of the tents, were about to dash out his brains with a stone, for the purpose of eating his flesh: he luckily came up and rescued the child from their voracity. They were so frantic with hunger, as to insist upon having one meal of his flesh, when they would die willingly.

At length, on the 21st of September, about the middle of the day, two strangers arrived, riding two camels loaded with goods. Their names were Sidi Hamet and Seid, from the confines of Morocco. Hamet was fortunately on his way to Morocco; and after much debate and altercation with the owners, he succeeded in purchasing five of the wretched sufferers, viz. Captain Riley, Mr. Savage, Horace, Clark, and Burns, with a view of carrying them to Swerah or Mogadore, where Captain Riley assured him, they would be redeemed the moment they arrived. This stipulation was confirmed to the satisfaction of Hamet, after having exacted from Captain Riley the most solemn protestations that he spoke the truth, assuring him, that if it proved otherwise, his own life, and the perpetual slavery of his companions, would be the forfeit. Sidi Hamet's means did not allow him to purchase any more of the crew, and they were left behind, scattered in different parts of the desert. The sufferers had no reason to regret their change of master; Hamet was,

comparatively, a humane man. He bought an old camel, nearly dead with age, which he killed, and allowed them a plentiful repast on its blood and entrails; he made shoes for them of its skin, and gave each a piece of old blanket or goat's-skin to protect him from the sun. Thus clad and refreshed, they started on their northern tour across the desert. The company consisted of Sidi Hamet, Seid, a young Arab, the five prisoners, and three camels; and they began their march about the 1st of October.

In a few days they arrived at a part of the desert which was very sandy, so that they sunk in nearly up to the knees at each step, in sand that was scorching hot. The camels were, therefore, stopped, and all of them mounted on them, when, on their rising up, they saw before them vast numbers of immense sand-hills, stretching as far as the eye could reach, from the north to the south, heaped up in a most terrific manner; they soon arrived among them, and were struck with horror at the sight: huge mountains of loose sand piled up like drifted snow, towered two hundred feet above their heads, on every side, and seemed to threaten destruction to the whole party. The loose sands blew before the trade-winds, cutting their flesh like hailstones, and very often covering them from each other's sight, while the gusts which followed each other in quick succession, were rushing by.

After a painful march on the desert they came in sight of the ocean, about the middle of October, and travelled along the coast. On the 17th, the black tops of high mountains appeared in the distant horizon, to the eastward, and soon after they came to the cultivated land.

On the 22nd of October they went forward, driving their own camels only, and Hassan having taken the young one, they had but three remaining, so they rode by turns, crossing the deep hollows which had been worn down by the rains and other causes, until the afternoon, when they were forced to have recourse to the sea-beach to get past one of those deep places, whose sides were so steep as to render a passage down it impracticable. When they gained the beach they found themselves on a narrow strip of land, which was then dry, the tide being out; this extended in length eight or ten miles, but from the water's edge to the perpendicular cliffs on their right, not more than ten yards: these cliffs appeared to be about one hundred and fifty feet in height. As they proceeded along this narrow beach, and had passed over half its length, the huge cliffs overhanging them on their right, and the ocean on their left, just as they were turning a point, they observed four men, each armed with a scimitar and a musket, spring from beneath some jutting rocks to intercept their march. Their masters were at this time on their camels, but they instantly jumped off, at the same time preparing their guns. To retreat would betray fear and lead to inevitable destruction, so they determined to advance two against four, and Sidi Hamet, though in so weak a state as to be thought incapable of walking, before he saw these men, now ran towards them with his musket in his hand, while Seid, the cruel coward, lagged behind; so true it is that the most generous and humane men are always the most courageous. The foe was but a few paces from them, and stood in a line across the beach. Sidi Hamet holding his gun ready to fire, demanded if it were peace, while he eyed their countenances to see if they were deceitful. One of them answered, "It is peace," and extended his hand to receive that of Sidi Hamet, who gave his right hand, suspecting no treachery; but the fellow grasped it fast, and would have shot him and Seid in a moment, but at this critical juncture two of Hassan's men came in sight, running like the wind towards them, each having a good double-barrelled gun in his hand, all ready to fire. The robbers saw them as they turned the point, and the fellow who had siezed Sidi Hamet's hand instantly let go, turning the affair off with a loud laugh, and saying he only did it to frighten him. His excuse was deemed sufficient, merely because they were not sufficiently strong to resent the insult; and they accordingly proceeded on: but these fellows, who were stout and active, hovered around the poor prisoners, endeavouring to separate them from their masters, with the view of seizing on them as their own; which Sidi Hamet observing, ordered them to keep

close to the camels' heels, while he and his company kept between them and the banditti.

When the robbers found the master too vigilant for them, they took French leave, running along the beach with incredible swiftness, and taking up and throwing stones, that would weigh from six to eight pounds, with a jerk that made them whiz through the air like cannon-balls. They threw them against the rocks, which resounded with the blow, and many of the stones were dashed to pieces as they struck, that they would certainly have killed a man at the distance of fifty yards.

Soon after this event, the brothers drove off some camels which they were obliged to restore. The disappointment about which produced a terrific quarrel respecting the division of their slaves. They clutched each other like lions, and with fury in their looks, each tried to throw the other to the ground; though Seid was the largest and stoutest man, they writhed and twined in every shape until both fell; but Sidi Hamet was undermost. Fire seemed to flash from their eyes, while they twisted round each other like a couple of serpents, until Sidi Hamet, by superior activity or skill, disengaged himself from his brother's grasp, and both sprang upon their feet. Instantly they snatched their muskets at the same moment, and each retiring a few paces with great rapidity and indignation, tore the cloth covers from their guns, and presented them to each other's breasts with dreadful fury. Sidi Hamet having had a moment's reflection, whilst priming and cocking his piece, discharged both barrels in the air, and presented his naked breast to Seid, who declined firing; but wreaked his vengeance on Mr. Savage and the boy Horace, the latter of whom he seized by the breast and dashed him on the ground with all his force. The violence of the blow was such that he lay stretched on the ground apparently dead, and was with great difficulty recovered.

After suffering great hardships, the party arrived at Widnoon, or River Noon, in the southern part of Suse; and in three days after, they reached the village of Stuca. Fortunately, Mr. Wiltshire, the English consul at Mogadore, agreed to ransom them, and they proceeded towards that place.

They continued their journey without any material interruption until they arrived in the vicinity of Mogadore or Swearah. Here their deliverer, who had received news of their coming, dismounted from his horse, and was prepared to behold some of the most miserable objects that his imagination could paint. He led his horse along the south angle, and near the wall; Rais was by his side, when at an opening past the corner, Captain Riley heard Rais exclaim, in Spanish, "There they are." At this sound they looked up and beheld their deliverer, who, at that instant, had turned his eyes upon them. He started back with surprise, and, for a moment, the blood seemed to fly from his face; but recovering himself a little, he rushed forward, and clasping Captain Riley to his breast, exclaimed, "Welcome to my arms, my dear sir; this is truly a happy moment." He then took each of the others by the hand, and welcomed them to their liberty, while tears trickled down his manly cheeks; and the sudden rush of all the generous and sympathetic feelings of his nature, nearly choked his utterance; then raising his eyes towards heaven, he said, "I thank thee, great Author of my being, for thy mercy to these my brothers." He could add no more; his whole frame was so agitated, that his strength failed him, and he sunk to the ground. They, on their part, could only look up towards heaven in silent adoration, while their hearts swelled with indescribable sensations of love and gratitude to the all-wise, the all-powerful, and ever-merciful God of the universe, who had conducted them through so many dreadful scenes of danger and suffering, had controlled the passions and disposed the hearts of the barbarous Arabs in their favour, and had finally brought them to the arms of such a friend. Tears of joy streamed from their eyes, and Rais bel Cassin was so much affected at this interview, that in order to conceal his weeping, he hid himself behind the wall; for the Moors as well as the Arabs hold the shedding of tears to be a womanish and degrading weakness. After a short pause, when Mr. Wiltshire had in some measure recovered, he said, "Come, my friends, let us go to the city, my house is already prepared for your

reception." The mules were led up, and they were placed on them, and rode off slowly towards Mogadore.

On their arrival at Mogadore, Mr. Wiltshire conducted them to his house, had them all washed, clothed, and fed, and spared no pains nor expense in procuring comfort, and administering with his own hand, night and day, such refreshments as their late sufferings and debility required. Of the miserable condition to which these men had been reduced, one instance will suffice to show. Captain Riley says, "I was weighed at the instance of Mr. Wiltshire, and fell short ninety pounds, though my usual weight for the last ten years had been over two hundred pounds. The weight of my companions was less than I dare to mention, for I apprehend it would not be believed that the bodies of men, retaining the vital spark, should not have weighed forty pounds."

LOSS OF THE SHIP, GANGES,

Which foundered off the Cape of Good Hope, May 29, 1807, T. Harrington Commander, and of the Miraculous Preservation of all the Crew.

The Ganges had been in a leaky state for some time previous to the unfortunate accident which happened to her; indeed so much so, as to render it indispensably necessary that she should proceed under easy sail, and that the most prudent and cautious measures should be adopted by the captain and officers in the conduct of her.

On the 21st of May, 1807, it was Captain Harrington's misfortune to separate in a gale of wind from his Majesty's ship Concord, and the Hon. Company's ships, viz. Bengal, Lady Jane Dundas, Asia, Walthamstow, and Alexander. The next morning, the Hon. Company's ship St. Vincent, only being in sight, Captain Harrington placed himself under the orders of Captain Jones, who, with the most watchful and unceasing care, continued to keep as near the Ganges, as circumstances would admit, from that time till the day on which she foundered.

On that day (May 29) they had light airs, and cloudy at p.m.; a light breeze and fair at a.m.; the swell much gone down, but the ship still rolling dreadfully, and rendering it dangerous for boats to take persons on board, whether astern or alongside.

At a quarter past noon, the St. Vincent being still nearly four miles from the Ganges, there being seven feet water in the well; the stern post being now four inches off the dead wood, and the ship ungovernable by the helm; got the launch at all risks alongside, having in vain attempted to put the ladies on board of her out of the stern gallery, though the railing was cut away for the purpose.

At length, at three-quarters past noon, the launch left the Ganges, with all the passengers, except a Mr. Rolliston, of the Bombay Civil Establishment, who insisted, in a manner the most friendly to Captain Harrington, and the most honourable to himself, in remaining on board until he and his officers quitted the ship.

At one p.m. the yawl left them with the sick people, and some others of the ships company and soldiers of his Majesty's 77th regiment still working at the pumps, with unabated vigour and good will. At three p.m. they had 8 feet water in the well, and the ship was settling fast. At half-past four they had nine feet water in the well, and the launch being seen on her return, the people were called up from the pumps.

Both cutters were now hoisted out, and sent off as full as prudence would admit, with orders not to return. At five, the launch, yawl, and one of St. Vincent's boats, came alongside, and by half-past five they all left the ship completely filled, the third and fifth officers being in charge of the launch and yawl.

Immediately after the departure of the boat, the remainder of the crew were mustered, and there being forty-nine men still on board, (the captain, Mr. Rolliston, the first, fourth, and sixth officers included) the pumps were set again to work, as the night was closing in fast, and the St. Vincent still at some distance from them.

At six p.m. the captain, in company with the chief officer, gunner, and carpenter, visited the gun-room for the last time, and found that the head of the stern-port had forsaken the transom full six inches; the gun-board-seam of the counter was two inches open, for six or seven feet down at least; the wood ends five inches off the stern-port, and all the counter-timber gone at the heels.

At half-past eight p.m. the *St. Vincent* boat and the yawl, once more came alongside, and then were the pumps finally quitted by the captain's orders. The two boats having been filled, were despatched to return no more. About five minutes afterwards the launch came up, and at three-fourths past eight the captain, Mr. Rolliston, first, fourth, and sixth officers, with all that remained of the ship's company, quitted the unfortunate *Ganges*, with three cheers from all; and twenty minutes afterwards they got on board the *St. Vincent* in safety, where they were most humanely and affectionately received by Captain Jones.

At the time of the last party's quitting the *Ganges*, she had ten feet water in the well, and had settled half way up her bends, so that she was wholly ungovernable by the helm; and the poop, quarter-deck, and upper-works, generally were in motion. Thus her destruction was inevitable.

At daylight, the *St. Vincent*, having made but little progress in the night, saw the *Ganges* about five miles off, with her masts, yards, and sails in the same situation as the preceding evening. At seven a.m. Captain Jones, in compliance with Captain Harington's request, bore up towards her, and at nine, the latter, accompanied by Mr. Rolliston, the chief, and fourth officers, and a full complement of men for the boat, pulled towards her in the launch, with the hope of saving some part (however small) of the property on board. As they approached the ship, they observed the water running out of the scuttles on the gun-deck, and the fore-castle was at times buried in the waves. Under such circumstances, the ship being evidently in a sinking state, they conceived it most prudent to relinquish their object, and therefore immediately returned to the *St. Vincent*, at that time not more than a quarter of a mile distant.

About four minutes before noon they got alongside of her again, and fortunate it was they did so; for scarcely had the launch been secured in that situation, before the *Ganges*, with three close-reefed top-sails set upon her fore and main-yard square, cross-jack-yard braced up, and mizen stay-sail-sheet aft, fore-sail in the brails and helm lashed a-lee, in a most extraordinary manner, paid off before the wind, and, in the lapse of one minute, sunk entirely, going down head foremost, with all her mast standing, except the main-top-mast, which, on the main-yard touching the water, broke off at the cape and fell forwards, leaving on the minds of upwards of four hundred persons, who were witnesses to this most awful scene, an impression, which perhaps, by the feeling heart can be conceived, but never by the ablest pen be faithfully described! This unfortunate vessel was lost off the Cape of Good Hope, in lat. 38 deg. 22 min. S long. 19 deg. 50 min. E. of Greenwich.

Though not less than two hundred and nine persons were on board the *Ganges* a few hours before she sunk, yet our readers will, no doubt, feel great satisfaction when we state that not a single life was lost. This general, as well as miraculous preservation, must give them additional pleasure, when they consider the then state of the weather, which must have rendered the hoisting out of the boats extremely difficult and dangerous. The officers discharged their several duties, in the most exemplary manner; the passengers nobly and handsomely offered their meritorious services in a very trying and perilous situation, and entered into them immediately on being accepted, in a manner highly honourable to themselves and exceedingly gratifying to the captain; and with respect to the ship's company (among whom may be classed a number of men of his Majesty's 77th regiment working their passage home), they united all the good qualities of British seamen and British soldiers, when placed together in scenes of danger and distress, till they could no longer be of service to the cause in which they were engaged.

ACCOUNT OF A CANADIAN CANNIBAL.

THE hardships, at one time, endured by those adventurers, who in the dreary countries around Hudson's Bay, in North America, were engaged in commerce with the Indians, were sometimes very great. The severity of the winter, beginning as early as October, and continuing till April, the scarcity of provisions, and the risk they were continually exposed to, from the treachery or the hostility of the native tribes, all contributed to their sufferings, and the danger and unpleasantness of their situation. It required great art to deal with the savages. Notwithstanding the cruelty of the latter, they were capable of exhibiting remarkable instances of generosity and kindness; but they had no self-denial, and were constantly importuning the traders for rum, which, when they received, they drank in immoderate quantities. When they were intoxicated, neither life nor property, within their reach, were safe. Frequently a whole party of them drank it till all the most ferocious passions and propensities of their nature were excited; when, sounding their terrific war-whoop, they attacked one another, and killed men, women, and children indiscriminately. In consequence of which, the servants of the Canadian companies were strictly prohibited from selling spirituous liquors to the Indians; but the use of rum in their bartering transactions was found useful, as the traders often purchased furs and skins, and other commodities, much cheaper after plying the poor creatures with drams and intoxicating draughts.

During the continuance of the intense cold, the traders in the remote districts, when their provisions became short, and the traps they had set in the woods failed in producing anything, frequently had no resource but the arrival of Indians to supply their wants, or send out a party to forage for themselves. They were sometimes, in consequence, reduced to great privations, and in such circumstances, the appearance even of a straggling savage or two, was anxiously looked for and welcomed with joy.

The poor uncivilized and untutored children of the woods, were not so thoroughly brutal and treacherous as were many of the French-Canadians who were in the employment of the traders. The crimes of which some of these men were guilty, are a disgrace to human nature; and we have now to record two most atrocious acts committed by one of them, who did not long escape the punishment due to the enormity of his guilt. The principal features of the following narrative are extracted from Long's travels.

Near the Skunk's-head lake, which is between Lake Nipigon and Lake Manotoye, a Mr. Fulton, a trader, resided. During the cold season, he, and those with him, were reduced to great hardships from the want of provisions; inasmuch that he was obliged to divide his men into two parties, by casting lots in the usual way, as to which party should hunt and fish, and which should remain with him. The fishing party consisted of Charles Janvier, Francis St. Auge, and Lewis Dufroy, all natives of Canada; who being provided with axes, ice-cutters, and fishing materials, set off, and at the expiration of eight days, arrived at a convenient place, where they built a hut, in which they lived for some time tolerably well; but fish failing them, and having no success in hunting, they were almost starved. In this situation, the diabolical purpose entered into the heart of Janvier, who, being the strongest man, supported hunger better than his companions, that he would kill the first Indian who should come in his way. This resolution he did not scruple to announce to his companions, who endeavoured to dissuade him from it. In the height of their distress, Janvier perceived a savage at some distance, with a load at his back, and instantly returning to the hut, apprized his poor dispirited partners of their approaching relief. The Indian arrived, took off his load, which was only two otters and a couple of hares, and gave them to Janvier, who received them with great satisfaction; and when he had skinned them, they boiled them in the kettle without cleaning them, so extreme was their hunger. This seasonable relief was soon devoured, and from the eagerness with which Janvier ate, and the satisfaction which

appeared in his countenance when he looked at the savage, the men were in hopes he had forgot the rash determination he had formed, and flattered themselves his mind was not so depraved as to entertain a thought of doing an injury to the man whose timely assistance had saved their lives. The next morning, the Indian told them he was sorry he could not assist them further, having no ammunition, but that he was going to Mr. Fulton for a supply.

Janvier, his heart being untouched even by the kindness he had received, now prepared to carry his dreadful design into execution. He desired the unsuspecting Indian to assist him in placing a large log of wood on the fire, as his companions were unable to do it from weakness, caused by their long sufferings. The savage cheerfully complied, and stooping to take it up, Janvier, watching his opportunity, knocked him down with an axe, and dragged him to the door of the hut, where he cut him up, and with the most unfeeling barbarity, put as much of the flesh of his deliverer into the kettle as he thought sufficient for a meal. When it was ready, he compelled Dufroy and St. Auge to partake of it, and obliged them to kiss the cross which hung at his breast, and swear by all the saints never to reveal the transaction, threatening at the same time, that if they did, they should share the same fate.

Intimidated by his threats, and the certainty that he would fulfil them, they solemnly promised perfect compliance with his injunctions. Impelled by extreme hunger, they overcame their first aversion to the unnatural food, and ate immoderately of the horrid meal; they soon after fell sick, and were overtaken with violent retchings. During their illness they complained to each other, in whispers, that it was eating the Indian's flesh that had caused their sickness. Janvier, overhearing them, called them fools and rascals, and asked them if they were afraid that the

savage would come to life again; and with an insolent sneer, desired them to tell him "which they thought the best part of a man?" The poor fellows, seeing the monster they had to deal with, could only reply that they were very sick, and could not tell the cause. In a few days, having no other provisions, the Indian was eaten up, and Janvier determined, if no other food could be obtained, to have more human flesh. To this end, he sought an opportunity to quarrel with St. Auge—Dufroy not daring to interfere in the dispute. Janvier willing, however, to appear as plausible in the eyes of Dufroy as possible, widened the breach very artfully; till pretending he was no longer able to contain his anger, he asked Dufroy if he did not think St. Auge deserved the Indian's fate for daring to say he would reveal the circumstances he had so solemnly sworn to conceal. Dufroy, dreading the consequence of differing with him, said he thought St. Auge to blame. Upon which Janvier immediately struck St. Auge with an axe, and killed him as he did the Indian. He then cut him up, and boiled a part, of which he obliged Dufroy to partake, he being afraid to show any reluctance. Fortunately for Dufroy, who had become naturally very apprehensive that he would be the next victim, the weather became more mo-

derate, and having caught plenty of fish, he took courage, and proposed returning to their master, to which Janvier consented. Intoxicated with ideas of his superiority, Janvier compelled Dufroy to drag him in an Indian sly to Mr. Fulton's house. A cruel imposition upon him, and a dreadful labour to a weak, emaciated man; but knowing he was unable to resist, and being threatened with death if he disobeyed, Dufroy made a virtue of necessity, and did what the tyrant desired him with seeming cheerfulness. On the journey he was frequently reminded of his oath, and the fatal consequences that would attend him, if he should ever divulge the secret, which Janvier assured him would cause his instant destruction.

Mr. Fulton was much rejoiced at their return, being in want of his men, as the Indians were daily coming in with their winter hunt; but missing St. Auge, he made inquiry after him, but received no explicit answer. He then addressed Janvier directly, as to the reason of his absence. The latter replied, that St. Auge was gone on a hunting excursion with a chief whom Mr. Fulton knew, and that he would soon return. One of the Canadians present contradicted him by saying, that could not be true, as the chief referred to had left Mr. Fulton's house only the day before their return. Janvier then said he might be mistaken in the

chief, as he was not well acquainted with him; and Dufroy, for fear of a discovery at that time, changed the conversation, in hopes of pleasing Janvier.

Several days elapsed, and St. Auge not returning, Janvier was again questioned, who told them as before, and appealed to Dufroy for the truth of his assertions, which the latter was obliged to confirm. Mr. Fulton, not being perfectly satisfied examined them apart. From Janvier, of course, he could not obtain any information; but Dufroy hesitated, and at last said he had sworn not to reveal the circumstances of his absence, but that St. Auge would never return. Mr. Fulton endeavoured to convince him that the violation of an oath so imposed was no crime, and in the end he convinced the Canadian that the allegation was so far from being binding in the sight of God, that it would be a sin of a most heinous nature in him to conceal the truth; adding, as an additional argument to induce him to disclose the matter, that if he himself was perfectly innocent, he could not have any honest motive for secrecy, and that he had no occasion to dread the resentment of Janvier, as he (Mr. Fulton) would engage to protect him from all hazard by the discovery. Thus persuaded and encouraged, Dufroy disclosed the whole affair; but requested Mr. Fulton's secrecy, which he promised, until the conversation should be renewed; when it was agreed that Dufroy should relate every particular in Janvier's presence. The latter was repeatedly urged by the rest of the men, to give them some information respecting the absence of St. Auge; but he remained obstinately silent. Some of them went so far as to accuse him, in plain terms, of knowing too much about him, but he treated their insinuations with indifference.

Mr. Fulton having disposed of all his goods, prepared to leave

[MR. FULTON SHOOTING THE CANADIAN.]

his wintering ground, and every thing being properly arranged, the party set out. The first night after their departure, Mr. Fulton loaded a brace of pistols, and having previously acquainted his men with Janvier's atrocities, informing them of Dufroy's confession, and the punishment he intended for the villain, he came out of his tent, and stood by the fire, round which the Canadians were seated. The conversation about St. Auge being purposely renewed, Mr. Fulton remarked it was cruel to leave him in the woods with the Indians, and especially blamed Janvier, as he was the foreman of the party, and, therefore, responsible for the others. Janvier, nettled at the subject being again mentioned in such a particular way, for guilt is soon angry, replied that St. Auge was able to take care of himself, and that he had no controul over him. Dufroy was then censured, and Mr. Fulton said he ought to know something of the cause of the disappearance of his companion; upon which, in accordance with a plan previously agreed upon, he divulged the whole transaction, and gave a full account of every particular of Janvier's conduct. Janvier attempted to wound Dufroy with a dagger which he drew from a side pocket, but he was prevented, and the weapon wrested out of his grasp. He persisted in denying the charge, which he did with the most solemn assertions, and the most unparalleled effrontery. Mr. Fulton then thought it a proper time to interfere and to cover Janvier, if possible, with confusion, he asked him "which was the best part of a man?" Janvier started; but not losing his self-possession, he replied with ready insolence, that those who had eaten human flesh could easily tell. But being repeatedly urged, and at length thrown off his guard, he exclaimed in great wrath. "the feet," and attempted to make his escape; but he was soon secured. The party, encouraged by his partial confession, and by the signs of guilt which he had unequivocally evinced, pressed the charge, until at length he confessed the crimes he was accused of, and declared, that in a similar situation, he would kill his brother.

Mr. Fulton could no longer suppress his resentment, and going up to Janvier, he told him that he was an abandoned villain; first, for killing a harmless Indian, who had generously relieved his wants, and afterwards eating him like a cannibal; that, not content with these atrocious acts, he had added to his guilt by another foul and deliberate murder, on a defenceless man, his companion; fellow-labourer and friend; that he was a disgrace to human nature, and ought not to be suffered to live a moment longer. Then, turning towards the others, he said, "He has confessed the murders with which he was charged. He is deserving of death—he hath earned it—shall such a monster be allowed to live!" "No, no," cried they all, "let him pay the penalty of his guilt!" Without allowing Janvier time to reply, Mr. Fulton drew a pistol from his belt, and shot him through the head. The men were ordered to bury him, which they did with every mark of indignity and dishonour, tumbling his body into the hastily opened grave, as if it had been that of a dead dog. In the morning, Mr. Fulton continued his journey, and surrendered himself to the nearest commanding officer, who, on a close examination into the whole circumstances of this extraordinary case, honourably acquitted him, and ordered his immediate discharge, but recommended him not to venture again into those parts where the Indian was killed, lest the savages should hear of the transaction, and resent the death of one of their tribe.

SHIPWRECK OF THE ST. JAMES, OFF THE COAST OF AFRICA, IN 1586.

In the month of May, 1586, intelligence was received at Goa, of the loss of the admiral's ship, the St. James. The account of this disaster stated, that after doubling the Cape of Good Hope, the captain, thinking there was no danger, proceeded under full sail without observing his charts, or at least not with the attention he ought. Having a favourable wind, he made much way in a short time, but was driven out of his course, towards the rocks called Bassas de India, distant about 50 leagues from the island of Madagascar, and seventy from the continent.

Perceiving they were so near these rocks, and in imminent danger of striking upon them, several of the passengers, who had frequently traversed those seas, were much alarmed. They represented to the captain, that being in the midst of rocks, it was extremely dangerous to suffer the ship to run under full sail, particularly during the night, and in a season when tempests were very frequent. The captain regardless of their prudent remonstrances, exerted his authority, ordered the pilots to follow his commands, adding that the king's commission entitled him to obedience, and that his opinion ought to be taken in preference. However, the same night, the vessel was driven towards the rocks, and struck without a possibility of being got off. A confused cry of distress resounded, in every direction, from a multitude composed of five hundred men and thirty women, who having no other prospect before their eyes but inevitable destruction, bewailed their fate with the bitterest lamentations. Every effort to save the ship proved ineffectual. The admiral (Fernando Mendoza), the captain, the first pilot, and ten or twelve other persons instantly threw themselves into the boat, saying they would seek upon the rocks a proper place for collecting the wreck of the ship, with which they might afterwards construct a vessel large enough to convey the whole of the crew to the continent. With this view they actually landed on the rock, but being unable to find a spot proper for the execution of their design, they did not think proper to return to the ship, but resolved to steer towards the African coast. Some provisions which had been thrown in haste into the boat, were distributed among them; they then directed their course towards the continent of Africa, where they arrived in safety, after a voyage of seventeen days, and enduring all the horrors of famine and tempestuous weather.

Those who remained on board, finding that the boat did not return, began to despair of saving their lives. To add to their distress, the vessel parted between the decks, and the pinnace was much damaged by the repeated shocks she sustained from the fury of the waves. The workmen, though very expert despaired of being able to repair her, when an Italian, named Cypriano Grimaldi, leaped into her, accompanied by ninety of the crew, and assisted by most of those who had followed him, instantly set to work to put her into a condition to keep the sea.

Those who could not get on board the pinnace, beheld her bearing away from the wreck with tears and lamentations. Several who could swim threw themselves into the sea, in the hopes of overtaking her; and some were on the point of getting on board, when their more fortunate comrades, fearing they should be sunk with the weight of all those who endeavoured to obtain admittance, pushed them back into the sea, and with their sabres and hatchets cut, without mercy, the hands of such as would not quit their hold. It is impossible to describe the anguish of those who remained on the floating fragments of the wreck, and witnessed this barbarous scene. Seeing themselves cut off from every resource, their cries and lamentations would have melted the hardest heart. The situation of those in the pinnace was not much better, their great number, the want of provisions, their distance from the land, and the bad condition of the crazy bark that bore them, contributed to fill them with gloomy presentiments. Some of the most resolute, however, to prevent the anarchy and confusion which would have aggravated their misery, proposed to their companions to submit to the authority of a captain. To this they all agreed, and immediately chose a nobleman of Portuguese extraction, but born in India, to command them, investing him with absolute power. He instantly employed his authority in causing the weakest, whom he merely pointed out with his finger, to be thrown overboard. In the number of these was a carpenter, who had assisted in repairing the pinnace; the only favour he requested was a little wine, after which he suffered himself to be thrown into the sea without uttering a word. Another, who was proscribed in the same manner, was saved by an uncommon exertion of fraternal affection. He was already seized, and on the point of being sacrificed to imperious necessity, when his younger brother demanded a moment's delay. He observed that his brother was skilful in his profession, that his father and

mother were very old, and his sisters not yet settled in life; that he could not be of that service to them which his brother might, and as circumstances required the sacrifice of one of the two, he begged to die in his stead. His request was complied with, and he was accordingly thrown into the sea. But this courageous youth followed the bark upwards of six hours, making incessant efforts to get on board; sometimes on one side and then on the other, while those who had thrown him over endeavoured to keep him off with their swords. But that which appeared likely to accelerate his end proved his preservation. The young man snatched at a sword, seized it by the blade, and neither the pain, nor the exertions made by him who held it, could make him quit his grasp. The others, admiring his resolution, and moved with the proof of fraternal affection which he had displayed, unanimously agreed to permit him to enter the pinnace. At length, after having endured hunger and thirst, and encountered the dangers of several tempests, they landed on the coast of Africa, on the twentieth day after their shipwreck, and there met with their companions who had escaped in the first boat.

The rest of the crew and passengers left on the wreck likewise attempted to reach the land. Collecting some loose rafters and planks, they formed a kind of raft, but were overwhelmed by the first sea, and all perished, excepting two, who gained the shore. Those who had reached the coast of Africa had not arrived at the end of their sufferings: they had scarcely disembarked when they fell into the hands of the Caffres, a savage and inhuman people, who stripped and left them in the most deplorable state. However, mustering up their courage and the little strength they had left, they arrived at the place where the agent of the Portuguese, at Sofala and Mozambique, resided. By him they were received with the utmost humanity, and after repose a few days after their fatigues, they reached Mozambique, and repaired from thence to India. Only sixty arrived out of all those who had embarked in the *St. James*; all the rest perished, either at sea, of fatigue, or hunger. Thus the imprudence of an individual occasioned the loss of a fine vessel, and the lives of above four hundred and fifty persons.

Upon the captain's return to Europe, the widows and orphans of the unfortunate sufferers raised such loud complaints against him, that he was apprehended and put into prison; but he was soon afterwards released. The former catastrophe was not a sufficient lesson for this self-sufficient and obstinate man. He undertook the command of another vessel in 1588, and had nearly lost her in the same manner, and in the same place. Fortunately at sun-rise he discovered the rocks, towards which he was running with the same imprudence as in his former voyage. But on his return from India to Portugal he was lost, together with the vessel he was on board of, thus meeting with the just punishment of his culpable obstinacy and misconduct.

SHIPWRECK OF THE PROVIDENCE, CAPTAIN BROUGHTON, IN A VOYAGE OF DISCOVERY TO THE NORTH PACIFIC OCEAN, IN THE YEAR 1797

CAPTAIN (at that time lieutenant) Broughton sailed with Captain Vancouver, on his voyage of discovery, as commander of the *Chatham* tender, in 1791, and was sent home from Nootka, with despatches, by Captain Vancouver. In October 1793, he was appointed to the *Providence*; a ship which had been commanded by Captain Bligh, and which had lately returned from the West Indies, after having conveyed the bread-fruit from Otaheite. The *Providence* was completely equipped for the purpose of sailing on a voyage of discoveries; but Captain Broughton did not ultimately sail on his mission till February 1795. His orders were secret, with an additional one to put himself under the command of Captain Drury, of his Majesty's ship *Trusty*, and to proceed to sea with his convoy, then bound for the Mediterranean. Capt. Broughton proceeded by Teneriffe and Rio Janiero: on the 10th of June, made Gough's island, and, August 18th anchored in Port Stephen's, where our voyagers remained a week. Here they found, residing with the natives, four Englishmen, who had deserted in a boat from Port Jackson five years before. Being

assured of good treatment, they were with much difficulty prevailed on to come on board. Some of them were married; but they left their wives and children with little regret. On the 27th of August, the *Providence* reached Port Jackson, where she remained till the 13th of October. Thence she directed her course to the north of New Zealand, touched at Otaheite, and on the 1st of January, 1796, reached the Sandwich Islands. Here Captain Broughton learned, from an American vessel, that Captain Vancouver, with the *Discovery* and *Chatham*, had sailed for England. At Owyhee, Captain Broughton obtained ample supplies of hogs, which were sent off from Tamaah-maah, by the influence which John Young, a British seaman, who had been a resident in the island for six years, had over that chief. The cattle which had been left on the island had bred, and were in excellent order; the goats had multiplied prodigiously. Captain Broughton added a male and female to their number, leaving some geese, ducks, and pigeons. It is the opinion of Captain Broughton that any vessel may now touch at Owyhee in safety, and be amply supplied with refreshments. On the 22nd of February the *Providence* sailed for Nootka Sound, and anchored there on the 17th of March. The ship requiring much repair, she was there hove down, and did not quit the Sound till May. Capt. Broughton then proceeded along the north-west coast of America, and stopped in the bay of Monterey.

"It was now necessary," says he, "I should come to some determination respecting my future proceedings. My orders from the Admiralty were, that I should survey the southern coast of the south-west part of South America, upon the idea that Captain Vancouver, who had similar orders, would not be able to fulfil them. But as I now had certain intelligence that he had left this port eighteen months before, and that both the ships, *Discovery* and *Chatham*, under his command, were in good condition; I had not the smallest doubt of his ability to comply with his instructions, particularly as I had information of his sailing from Val Paraiso, in latitude 30 deg. S. for that purpose. As this was the case, my proceeding in future depended upon my own discretion; and I wished to employ his Majesty's sloop under my command, in such a manner as might be deemed most eligible for the improvement of geography and navigation. I therefore demanded of the officers their sentiments in writing, respecting the manner in which these discretionary powers allowed to me might most effectually be employed. The result of their opinions, I was happy to find, coincided with my own, which was to survey the coast of Asia, commencing at the island of Sakhalin, situated in 50 deg. north latitude, in the southern part of the sea off Ochotz, and ending at the Nanking river, in 30 deg. north latitude. My intention was also to complete the survey of the adjacent islands, viz. the Kuriles, and those of Jesso and Japan, left unfinished in Capt. Cook's last voyage. I thought such a survey would be very acceptable to geographers! for the limits of both the continents of Asia and America would then be known, as far as navigation was practicable, and a knowledge of the Northern Pacific Ocean would be completed. Another reason for my undertaking this voyage was, that as yet the astronomer had met with no opportunity of complying with his instructions from the Board of Longitude, in making observations, and ascertaining unknown places; our line of navigation having hitherto led us to follow the track of Captain Vancouver. In any other part of the Northern Pacific Ocean there appeared little to be done, except that of settling the position of a few islands, in themselves of little consequence; but a survey of the coast of Asia, and the adjacent islands, promised to be of more service to the science of geography than that of any islands left unexplored in those seas. As this survey could not probably be completed before the middle of the year 1798, I proposed spending my time in that pursuit till Christmas, and then go to Canton for stores and provision, and continue the survey early in the year."

Captain Broughton accordingly steered for the Sandwich Islands and thence sailed across the Northern Pacific Ocean, to the Japanese and Kurile islands, which he continued surveying during the months of September, October, and November; and in December he arrived at China. In July, however, at the island of Onchow, the boat's crew being on

shore to barter for provision, an unprovoked murder of two of the marines, by the natives, took place. The cause of this barbarous act was not ascertained.

At China, Capt. Broughton purchased a very fine schooner, of between eighty and ninety tons; and in April, 1797, as soon as the monsoon permitted, he sailed to prosecute his voyage, with fifteen months' provisions on board both of the vessels. In May, however, a dreadful and unexpected accident happened, which had nearly terminated their farther progress; we mean the loss of the Providence, which struck upon a reef of rocks, off some island distinguished in the charts by the name of Typinsan, about a hundred leagues from the east part of Formosa. The following account of this misfortune, which commenced with May 16, is given by Capt. Broughton.

"Light airs and fine weather. At 5 h. the boat returned, as we stood to north-west, with a fresh breeze.

"May 17. We steered east, with the intention of examining the north side of the islands we had passed to the south last year; and the schooner's signal was made to steer E. by S.; at two p.m. we just discovered a small sandy island from the deck, bearing S. 15 deg. E. 5 leagues. At 3 h. we saw another island, bearing E.; and we hauled E.N.E., and at 4 h. the schooner's signal was made to haul her wind on the larboard tack. At half past five, we hauled our wind, and shortened sail for the schooner to be put up with us. At seven p.m. an hummock making like an island, beyond the extreme of the other island, bore S. 60 deg. E. and at the extreme point of land seen bearing E., now bore S. 10 deg., W. about five leagues. At this time the mate of the watch, from the mast-head, reported that there was no land to be seen to the east or north of the Hummock Islands, nor in any other direction; neither was there the smallest danger in view from the appearance of the coast to the S.E. on our lee-beam. I therefore stood on, meaning to tack at 8 h. and ply to the windward till day-light. The moon we expected to rise at midnight, and the schooner was not yet up in her station. The ship lay N.E. half north, going at four knots and a half, with her main tack on board. Immediately after taking the bearing, I left the deck to protract our situation, which I found to be on the north side of the island we had passed on the third of December last year (called by the natives Typinsan), and which blowing weather prevented our having any communication with.

"About half-past seven, while water was seen a-head, and upon each bow, and reported to the officer of the watch (Lieut. Vashon); and almost directly after, the ship struck upon a reef of coral rocks. Having felt the shock, which was not yet violent, I instantly went upon deck, and by the way met Mr. Vashon coming to acquaint me with the disaster. The officers and men were upon deck in a moment, and the sails instantly braced a-back. It appeared to me that the helm was a-weather, and the ship's head about E.N.E., sails all full. Had the helm been put a-lee, on seeing the danger, I think we should have escaped it.

"The proper signals were made to the schooner, and the master sent to anchor her as near as possible to heave by her. The ship soon after paid off, with her head to the eastward, and we hauled up the mainsails, shivering the other sails, to let her go round without acquiring head-way. Before she paid off to the southward she again struck, fore and aft, and remained fixed at last with her head due south. Breakers were then upon each bow, and we had from five to fifteen fathoms in the starboard chains, and only two and a half fathoms at times both a-head and astern. Having choaked the rudder, the top-masts were struck, and we began hoisting the boats out, the lower yards having been kept for that purpose. At this time the ship did not strike violently, and only made nineteen inches water. Unfortunately the wind freshened from the N.N.W., and the sea began to break with great force, which soon knocked the rudder off; we secured it with hawsers. It was now nine o'clock, and we only waited the schooner's anchoring to attempt heaving off, and in the meantime began hoisting out the long-boat, during which period the ship made water very fast; and the violent shocks she received rendered it doubtful whether the masts would stand. The water increased so much upon the pumps, that before the long-boat

was out we had seven feet water in the hold. At this time the schooner had anchored near us in twenty-five fathoms, and the master returned on board, when the ship suddenly changed her position, swinging round from south to north, by the east, and striking more violently than ever. Before we could carry our hawsers to the schooner, the carpenter reported the water was up to the orlop deck, and the ship having bilged forward, we therefore gave up the idea of attempting to heave off; for had we succeeded, the ship must have inevitably foundered.—The spare pumps were down the fore-hatchway, but the water still increasing upon the gun-deck, rendered all our exertions useless. The officers were unanimous with me in opinion that nothing could be done to save the ship, and to cut away the masts would have no effect upon her, as she was settling fast forward, from her being bilged, as we imagined, in her larboard bow. It now became highly necessary to preserve the people; and the boats were ordered ready for their reception, while they were employed in trying to collect arms and ammunition, with armourers' and carpenters' tools; but the ship lying nearly on her beam-ends, and the gun-deck being full of water the washing of the bulk-heads to and fro, chests, &c. prevented their saving many. On one side of the ship we had only six feet of water, and on the other three and a half fathoms. The fore-part of her was immersed in the sea, and the surf breaking over the upper deck. As nothing more could be procured for the present, the ship's crew were sent into the boat, which was happily effected without any accident; and soon after eleven o'clock they reached the schooner in safety, but with the loss, both to officers and men, of everything belonging to them. The pinnace returned for myself and the remaining officers; and at half an hour after midnight we quitted the Providence, leaving her a perfect wreck to the mercy of the sea.

"The moon rose at about 12 h. and the wind increased; but having both anchors down in foul ground, we thought it prudent to take one of them up. At four a.m. we parted the other cable; and fortunately resting the right way, we made sail, and most happily escaped another shipwreck, which must have proved fatal to many of us. We were now doubly thankful in our present situation, miserable as our prospects were; but by comparison of what our fate had nearly been, we had every reason to be contented with our lot, and to rejoice in our preservation."

WRECK OF THE WINDSOR CASTLE STEAMER.

It appears that the Windsor Castle sailed from Granton to Dundee on Tuesday, October 2nd, 1844, with a great number of passengers, to witness the embarkation of the Queen. The passage to Dundee was performed both safely and with expedition, and about four o'clock in the afternoon the Windsor Castle left the west protection wall of Dundee with passengers to the number of nearly 250, on her return home. The vessel steered directly out to the royal squadron, which had not yet got under weigh, and sailed five or six times round the Albert and Victoria, in order to gratify the passengers with a view of her majesty and her royal consort, both of whom appeared on the deck, and graciously acknowledged the enthusiastic and oft-repeated cheers of those on board the Windsor Castle.

The royal yacht left the roadstead at half past four o'clock, followed by the other steam-vessels, and by the Windsor Castle, When off the town of St. Andrew's, the Victoria and Albert followed by the Black Eagle, the Princess Alice, the Stromboli, and the Eclair, were seen far a-head, rapidly fading from the sight. It was now half-past seven o'clock; the vessel had reached the East Neuk of Fife, and all things were apparently going on safely and speedily (a party were dancing to music on deck), when suddenly a loud cry was heard from those in the fore-castle to stop and back the engine, which was scarcely done when the vessel, still under the impulse of its former velocity, came with a tremendous crash against the beacon on the North Carr Rock. Instantaneously the air was rent with shrieks from the women and children, the men rushing backwards and forwards in great confusion. Some passengers clung to each other, appalled with the prospect of immediate destruc-

tion; others, with great presence of mind; began to lay hold of carpet-stools, pieces of wood, and other lumber lying on the decks, by which they might support themselves in the event of the vessel sinking, while several gentlemen divested themselves of nearly all their clothes, so that they might with more chance of success be able to sustain themselves on the ocean. At the moment the vessel struck, a large party were below at dinner. When the sea-water had attained a considerable depth in the engine-room and the main cabin, the vessel lurched to one side; upon observing which, the passengers rushed to the high side of the vessel, which was thus swung over to the same side, causing the passengers to betake themselves again to the opposite side; and thus the vessel was kept rolling from side to side, the sea-water being by the motion lashed up on either side of the vessel's hold. In this awful and helpless condition, the helm was put hard a-port; and after a lapse of nearly twenty minutes, passed in gloomy suspense, the Windsor Castle grounded, most providentially, as was afterwards found, between two large rocks, a little to the east of Kilminning, and about two miles from Crail. The only boat belonging to the steamer was then lowered, by which the female passengers were conveyed ashore in six voyages. Boats and other aid were then obtained from Crail, and the remainder of the passengers were providentially landed in safety. Up to this time the weather had continued favourable; but it now began to blow a violent gale, which continued all night, causing a heavy sea to beat against the vessel; consequently, the steamer, on the return of the tide, shifted from its first position, and was driven violently on a ledge of rocks close by, against which it continued to grate till it was broken in the back, and became a total wreck. It is stated that had the vessel struck the North Carr Rock stem on, she would immediately have split in two. As it was, she made a sliding stroke over the rock, some of the iron stanchions of the beacon, by the concussion, opened up the joining of two plates immediately under the bulkhead, through which the water rushed into the vessel.

The Windsor Castle is stated to have been built on the Clyde, and to have been one of the strongest iron vessels of her size afloat.

Mr. Landells, at the moment the vessel struck, was in the after cabin, in conversation with the steward; and before they got on deck she went right over on her beam-ends. Mr. Landells adds:—"My first thought was to fill my life-preserving coat, which I did directly; and, on looking round, saw the beacon against which we had struck, which I at first took for the funnel of another steamer, which I supposed we had run foul of. The captain immediately ordered her head to be put in shore, and we made all speed towards it. By this time I had mounted to the top of the paddle-box, where I remained till we came in sight of land, when all fear left me. I cannot give you any idea of the scene on deck: all were looking with eager eyes towards the shore, except a group of perhaps twenty or thirty persons, that seemed to have given way to complete despair, yelling, shouting, and wringing their hands. In the fore part of the ship, I saw twelve persons holding on by a plank. They had lifted one end off the deck, and placed it on the gun-whale of the ship: thus they patiently waited the result. On the vessel being stopped, the screams were again as loud and and terrific as when we first struck; the ship gave one or two rolls, and then settled very quietly upon the rock. Three large fishing-boats from Crail came very quickly towards us, having the wind and tide in their favour. When they left, there were yet about ten or twelve of us remaining on deck. The boatmen promised to return as soon as they could; they had got about two miles to go before they could land, and we had no hope of getting off till they returned. As the tide had fallen, so that neither the small boat nor the large one could land near the wreck, I now went forward with some friends on board to see what sort of a place we were in. The moon got out, and we were delighted to see the vessel was quite dry at the bows. I then got down to the bows by a rope and landed safely; several people came towards us with torches. It was a romantic scene: the huge black-looking ship, the moon lighting the sea, the black rocks, and the people with torches, altogether made a fine effect. To get to the shore was yet a difficult task, as the rocks were so very rough; but we succeeded and got to

our inn. I went down to the wreck next morning, and was surprised to find it covered with water. I waited till the tide went down a little, and got a boat, and went on board to see if I could save my box. The vessel had broken in two, and everything was floating about in the greatest confusion: we had a pretty cabin, and it was quite painful to see the beautiful furniture and things floating about at the mercy of the sea. We saved a few passengers' luggage, but I could not find my own, and returned to shore, thinking it had washed away on my landing, one of the coastguard men told me there were two boxes at a cottage a little way off, and, to my joy, one of them was mine. I put it on my shoulder, and had to carry it about three miles along a coast, the like of which I never saw before, or wish to see again."

This catastrophe presents another instance of the inefficient manner in which steam-vessels are provided with the means of escape in case of accidents. "In this case; it is truly awful to think that, had the vessel gone down immediately, there was no apparent means by which, in any human probability, one of 250 individuals on board could have been saved. There was only one boat, and that so small as to be incapable of holding more than half a dozen persons, which in the frenzy of the moment would have been, undoubtedly, swamped by the eager multitudes rushing into it. Does not such a state of matters call upon the government to devise some means of compelling every seagoing steam-vessel to carry at least two or three good boats? The paddle-box boats of Captain Smith have been found in several instances of invaluable service, and every steam-vessel should be provided with them, or with other efficient means of preserving life in cases of danger. The Windsor Castle had also no apparatus for making signals, neither gun nor rocket was on board, and vain was the attempt of the despairing multitude, by uniting their voices, to bring help from the nearest land, which, at least, was four miles distant from them!"

An Irish serjeant was once sent to keep a look out after the enemy. Not having made his appearance at the proper time, the officer of the picket went to see what had become of him, when, to his astonishment, he observed Paddy ramming several ball cartridges, occasionally peeping over a bank. The moment he observed his officer, he held up his fore finger, as a signal for silence. The officer, looking over the bank, saw a body of French cavalry approaching, and added: "You stupid fellow! can't you see that immense body of cavalry!" "Yes, sure, and I was just after preparing my musket to tell them the time of the morning." They had scarcely time to reach their station unobserved, before the French charged them; and Paddy had a hard task to keep off the foe, to whom he was so anxious to tell the time of the morning.

ANECDOTE OF GENERAL MINA.

The following fact is highly characteristic of Spanish punctilio and of the personal honour of Mina. In 1814, when he had made his escape into France from persecution at home, he was, under some pretext or other, arrested by the order of the king of France. Louis the 18th, however, though he had not the firmness to set the Spanish patriot at liberty, was yet too just to give him up to his pursuers—he therefore permitted Mina to reside in France on his parole of honour. When, on the irruption of Bonaparte in 1815, the king was driven out of his capital, Mina, instead of feeling released from his parole, or of compromising with Napoleon, whom he considered an usurper, made his way through France to Ghent, to present himself to the king, and to receive his majesty's commands as to the place, either of confinement or parole, where he was to reside!

A SEA SURGEON.

A SEA officer, who for his courage in a former engagement, where he had lost his leg, had been preferred to the command of a good ship, in the heat of the next engagement, a cannon ball took off his wooden deputy, so that he fell upon the deck: a seaman thinking he had been fresh wounded, called out for a surgeon. "No, no," said the captain, "the carpenter will do this time."

LOSS OF THE MEDUSE.

It is almost impossible for the imagination to conceive a more complicated picture of misery and horror than that presented by the unfortunate crew of *La Meduse*, who took refuge upon the raft, and whose situation is depicted in the engraving. Indeed, there is hardly an instance in the whole history of maritime disaster, which presents, in such fearful association, the black catalogue of miseries and crimes so often attendant upon accidents at sea. The fierce passions of uneducated man, goaded into madness by desperation, and bursting in fury into acts of mutiny and murder; the gnawing pangs of hunger and thirst, till the exhausted frame, unable to move, is only excited into action by craving for the most loathsome sustenance;

the constant exposure to the burning rays of the sun, the chilling winds at night, and unceasing immersion in the sea, till the flesh breaking out in horrible disease, becomes revolting to the sight: these form a picture of human misery so dreadful to contemplate, that the reader becomes naturally incredulous of the possibility of human nature surviving such complicated horrors. It is, nevertheless, a plain statement of facts, unembellished by ornament or fiction.

The French possessions on the west coast of Africa, extending from Cape Blanco to the mouth of the Gambia, having been restored at the general peace, in 1814, an expedition, consisting of a frigate and three other vessels, was sent, in the month of June, 1816, to take possession of them. It was complete in all its parts, as the French expeditions usually are, including men of science, artisans, agriculturists, gardeners, miners, &c.

LOSS OF LA MEDUSE, FRENCH FRIGATE, IN 1816.

amounting, with the troops, to nearly 400 persons, exclusive of the crews. The naval part was intrusted to M. de Chaumareys, who had the command of the frigate, *La Meduse*, of forty-four guns.

Owing to a very relaxed state of discipline, and ignorance of the common principles of navigation, this frigate was suffered to run aground on the bank of Arguin. Attempts were made to get her off, but it was soon discovered that all hopes of saving her must be abandoned, and that nothing remained but to concert measures for the escape of the passengers and crew. Some biscuits, wine, and fresh water, were accordingly got up and prepared for putting into the boats, and upon a raft which had been hastily constructed; but, in the tumult of abandoning the wreck, it happened that the raft, which was destined to carry the greatest number of people, had the least share of the

provisions: of wine, indeed, it had more than enough, but not a single barrel of biscuit.

There were five boats; in the first were the governor of Senegal and his family, in all thirty-five; the second took forty-two persons; the third twenty-eight; the fourth, the long-boat, eighty-eight; the fifth, twenty-five; and the jolly-boat, fifteen, among whom were four children, and some ladies. The military had, in the first instance, been placed upon the raft—the number embarked on this fatal machine was not less than 150; making, with those in the boats, a total of 397.

On leaving the wreck, M. Corréard, geographical engineer, attached to the expedition, who had volunteered to accompany his men on the raft, wishing to be assured that proper instruments and charts for navigating it had been put on board, was told by the captain that ever thing necessary had been pro-

vided, and a naval officer appointed to take charge of it; this naval officer, however, jumped into one of the boats, and never joined them.

The boats pushed off in a line, towing the raft and assuring the people on board that they would conduct them safely to land. They had not proceeded, however, above two leagues from the wreck, when they, one by one, cast off the tow-lines. It was afterwards pretended that they broke; had this even been true, the boats might at any time have rejoined the raft; instead of which they all abandoned it to its fate, every one striving to make off with all possible speed.

At this time, the raft had sunk below the water to the depth of three feet and a half, and the people were so squeezed one against another, that it was found impossible to move; fore and aft, they were up to the middle in water. In such a de-

plorable situation, it was with difficulty they could persuade themselves that they had been abandoned; nor would they believe it until the whole of the boats had disappeared from their sight. They now began to consider themselves as deliberately sacrificed, and swore, if ever they gained the shore, to be revenged of their unfeeling companions. The consternation soon became extreme. Every thing that was horrible took possession of their imaginations; all perceived their destruction to be at hand, and announced by their wailings the dismal thoughts by which they were distracted. The officers, with great difficulty, and by putting on a show of confidence, succeeded in restoring the men to a certain degree of tranquillity, but were themselves overcome with alarm on finding that there was neither chart, nor compass, nor anchor on the raft. One of the men had fortunately preserved a small

ocket-compass, and this little instrument inspired them with so much confidence, that they conceived their safety to depend on it; but this treasure was soon lost to them, as it fell from the man's hand, and disappeared between the openings of the raft. None of the party had taken any food before they left the ship, and hunger beginning to oppress them, they mixed the biscuit, of which they had about five-and-twenty pounds on board, with wine, and distributed it in small portions to each man. They succeeded in erecting a kind of mast, and hoisting one of the royals that had belonged to the frigate.

Night at length came on, the wind freshened, and the sea began to swell; the only consolation now was the belief that they should discover the boats the following morning. About midnight the weather became very stormy; and the waves broke over them in every direction.

"During the whole of this night," said the survivors, "we struggled against death, holding ourselves closely to the spars which were firmly bound together; tossed by the waves from one end to the other, and sometimes precipitated into the sea; floating between life and death; mourning over our misfortunes, certain of perishing, yet contending for the remains of existence with that cruel element which menaced to swallow us up; such was our situation till break of day—horrible situation! How shall we convey an idea of it which will not fall far short of the reality?"

In the morning the wind abated, and the sea subsided a little; but a dreadful spectacle presented itself—ten or twelve of the unhappy men, having their limbs jammed between the spars of the raft, unable to extricate themselves, had perished in that situation; several others had been swept off by the violence of

the waves. In calling over the list it was found that twenty had disappeared.

All this, however, was nothing to the dreadful scene which took place the following night. The day had been beautiful, and no one seemed to doubt that the boats would appear in the course of it, to relieve them from their perilous state; but the evening approached, and none were seen. From that moment a spirit of sedition spread from man to man, and manifested itself by the most furious shouts. Night came on; the heavens were obscured with thick clouds; the wind rose, and with it the sea; the waves broke over them every moment; numbers were swept away, particularly near the extremities of the raft; and the crowding towards the centre of it was so great, that several poor wretches were smothered by the pressure of their comrades, who were unable to keep on their legs.

Firmly persuaded that they were all on the point of being swallowed up, both soldiers and sailors resolved to soothe their last moments by drinking till they lost their reason. They bored a hole in the head of a large cask, from which they continued to swill till the salt water, mixing with the wine, rendered it no longer drinkable. Excited by the fumes, acting on empty stomachs and heads already disordered by danger, they now became deaf to the voice of reason; and boldly declared their intention to murder their officers, and then cut the ropes which bound the rafts together; one of them, seizing an axe, actually began the dreadful work. This was the signal for revolt; the officers rushed forward to quell the tumult, and the man with the hatchet was the first that fell—the stroke of a sabre terminated his existence.

The passengers joined the officers, but the mutineers were still the greater number; luckily they were but badly armed, or the few bayonets and sabres of the opposite party could not have kept them at bay. One fellow was detected secretly cutting the ropes, and immediately flung overboard; others destroyed the shrouds and halyards, and the mast, deprived of support, fell upon a captain of infantry, and broke his thigh; he was instantly seized by the soldiers and thrown into the sea, and was saved by the opposite party. A furious charge was now made upon the mutineers, many of whom were cut down. At length this fit of desperation subsided into egregious cowardice; they cried out for mercy, and asked forgiveness on their knees. It was now midnight, and order appeared to be restored; but after an hour of deceitful tranquillity, the insurrection burst forth anew: the mutineers ran upon the officers like desperate men, each having a knife or a sabre in his hand, and such was the fury of the assailants, that they tore their flesh and even their clothes with their teeth. There was no time for hesitation; a general slaughter took place; and the raft was strewn with dead bodies.

Some palliation must be allowed on account of their miserable condition; the constant dread of death—want of rest and of food—had impaired their faculties; nor did the officers themselves entirely escape. A sort of half-waking dream, a wandering of the imagination, seized most of them: some fancied they saw around them a beautiful country, covered with the most delightful plantations; others became wild with horror, and threw themselves into the sea. Several, on casting themselves off, said calmly to their companions, "I am going to seek for assistance, and you shall soon see me back again."

On the return of day it was found that in the course of the preceding night of horror, sixty-five of the mutineers had perished, and two of the small party attached to the officers. One cask of wine only remained. Before the allowance was served out, they contrived to get up their mast afresh, but having no compass, and not knowing how to direct their course, they let the raft drive before the wind, apparently indifferent whither they went. Enfeebled with hunger, they now tried to catch fish, but could not succeed, and abandoned the attempt.

"It was necessary, however," said the survivors, "that some extreme measure should be adopted, to support our miserable existence; we shudder with horror, on finding ourselves under the necessity of recording that which we put into practice; we feel the pen drop from our hands; a deadly coldness freezes all our limbs, and our hair stands on end. Readers, we

entreat you not to entertain, for men already too unfortunate, a sentiment of indignation; but to grieve for them, and to shed a tear of pity over their unhappy lot."

The "extreme measure" was, indeed, horrible; for the unhappy men whom death had spared in the course of the night, fell upon the carcases of the dead, and began to devour them. Some tried to eat their sword-belts and cartridge-boxes, others devoured their linen, and others the leathers of their hats; but all these expedients, and others of a still more loathsome nature, were of no avail.

A third night of horror now approached; but it proved to be a night of tranquillity, disturbed only by the piercing cries of those whom hunger and thirst devoured. The water was up to their knees, and they could only attempt to get a little sleep by crowding closely together, so as to form an immovable mass. The morning's sun showed them ten or a dozen unfortunate creatures stretched lifeless on the raft; all of whom were committed to the deep, with the exception of one, destined for the support of those who, the evening before, had pressed his trembling hands in vowing eternal friendship. At this period, fortunately, a shoal of flying-fish, in passing the raft, left nearly 300 entangled between the spars. By means of a little gunpowder and linen, and by erecting an empty cask, they contrived to make a fire; and mixing with the fish the flesh of their deceased comrade, they all partook of a meal, which, by this means, was rendered less revolting.

The fourth night was marked by another massacre. Some Spaniards, Italians, and negroes, who had taken no part with the former mutineers, now entered into a conspiracy to throw the rest into the sea. The negroes had persuaded the others that the land was close to them, and that once on shore, they would answer for their crossing Africa without the least danger. A Spaniard was the first to advance with a drawn knife; but the sailors seized and threw him into the sea. An Italian, seeing this, jumped overboard; the rest were easily mastered, and order was once more restored.

Thirty persons only now remained, many of whom were in a most deplorable state, the salt-water having entirely removed the skin from their legs and thighs, which, with contusions and wounds, rendered them unable to support themselves. The remains of the fish and the wine were calculated to be just enough to support life for four days; but in these four they also calculated that ships might arrive from St. Louis, to save them. At this moment, two soldiers were discovered behind the cask of wine, through which they had bored a hole for the purpose of drinking it; they had, just before, all pledged themselves to punish with death whoever should be found guilty of such a proceeding, and the sentence was immediately carried into execution, by throwing the culprits into the sea.

Their numbers were thus reduced to twenty-eight, fifteen of whom only appeared to be able to exist for a few days; the other thirteen were so reduced, that they had nearly lost all sense of existence. As their case was hopeless, and as, while they lived, they would consume a part of the little that was left, a council was held, and after a deliberation, at which the most horrible despair is said to have prevailed, it was decided to throw them overboard. "Three sailors and a soldier undertook the execution of this cruel sentence. We turned away our eyes, and shed tears of blood, on the fate of these unfortunate men; but this painful sacrifice saved the fifteen who remained; and who, after this dreadful catastrophe, had six days of suffering to undergo, before they were relieved from their dismal situation." At the end of this period, a small vessel was descried at a distance; she proved to be the *Argus* brig, which had been despatched from Senegal to look out for them. All hearts on board were melted with pity at their deplorable condition. "Let any one," say our unfortunate narrators, "figure to himself fifteen unhappy creatures, almost naked, their bodies shrivelled by the rays of the sun, ten of them scarcely able to move; our limbs stripped of the skin; a total change in all our features; our eyes hollow and almost savage; and our long beards, which gave us an air almost hideous."

Such is the history of these unfortunate men. Of the 150

embarked on the raft, fifteen only were received on board the brig, and of these six died shortly after their arrival at St. Louis.

Of the boats, the whole of which, as we have already stated, deserted the raft soon after leaving the wreck, two only (those in which the governor and the captain of the frigate had embarked) arrived at Senegal: the other four made the shore in different places, and landed their people. The whole party suffered extremely from hunger, thirst, and the effects of a burning sun reflected from a surface of naked sand; but with the exception of two or three, they all reached Senegal.

The governor, recollecting that the *Meduse* had on board a very large sum of money, sent off a little vessel to visit the wreck; but as if, it should seem, that no one part of this wretched expedition should reflect disgrace upon another, with only eight days' provisions on board, so that she was compelled to return, without being able to approach it. She was again sent out with twenty-five days' provisions, but being ill found in stores and necessaries, and the weather being bad she returned to port a second time. On the third attempt she reached the wreck, fifty-two days after it had been abandoned; but what were the horror and astonishment of those who ascended its decks, to discover on board three miserable wretches just on the point of expiring.

It now appeared that seventeen men had clung to the wreck when the boats and the raft departed; their first object had been to collect a sufficient quantity of biscuit, wine, brandy, and pork, for the subsistence of a certain number of days. While this lasted, they were quiet; but forty-two days having passed without any succour appearing, twelve of the most determined, seeing themselves on the point of starving, resolved to make for land; they therefore constructed a raft, or float, which they bound together with ropes, and on which they set off with a small quantity of provisions, without oars and without sails, and were drowned. Another, who, had refused to embark with them, took it into his head, a few days afterwards, to try for the shore; he placed himself in a hen-coop, dropped from the wreck, and at the distance of about half a cable's length from it, sunk to rise no more. The remaining four resolved to die by the wreck; one of them had just expired when the vessel from Senegal arrived; the other three were so exhausted, that a few hours more would have put an end to their misery.

About the time when this dreadful event occurred, the *Alceste* frigate, which had been sent by the king of England with an ambassador on a special mission to the emperor of China, was also wrecked. But how different were the consequences in the case of the English ship to those which occurred in that of the *Meduse*. The two frigates were wrecked nearly about the same time—the distance from the nearest friendly port pretty nearly the same; in the one case all the people were kept together, in a perfect state of discipline and subordination, and every one brought safely home from the opposite side of the globe—in the other case, each seems to have been left to shift for himself, and the greater part perished in the horrible way we have just seen.

ADVENTURE WITH A PIRATE.

A NOBLE ship of 600 tons was on her outward passage to India, with a valuable cargo of specie and American goods. Before doubling the Cape, a suspicious-looking vessel was discovered dead to windward, under a press of canvass, bearing down upon the Indiaman. The experienced eye of the captain instantly enabled him to determine that she was a small light schooner, an acquaintance with which would not be desirable. He had few arms, and although his crew was true as steel, they could not contend with a well-armed pirate. The ship was therefore put before the wind, and every rag of canvass packed upon her that she could bear. The eye of the captain rested for a time upon his bending masts, covered with canvass to the very trucks—was then turned upon his gallant crew, who collected, having entire confidence in his skill and courage—and

at last settled long and stedfastly upon the chase. She gains—she gains—and there are many hours yet of daylight. A ship has the advantage of a small sharp craft with a floating sheet but yet she gains. The danger is pressing—is imminent—when lo! a new and terrible enemy appeared, far to leeward—a black cloud rises slowly from the horizon, and gives but too surely an intimation of what may be shortly apprehended. The ship cannot shorten sail, for the chase will be upon her—and the captain's plan was instantly laid. Every man was ordered to his post. The heavens grew more portentous every moment—but the pirate did not start a tack or sheet, as the captain hoped he would, and allow him to gain a little before the hurricane came on. The wind freshens—the masts yield to the tremendous pressure which they have to sustain—the teeth of the stoutest seamen are set firm in the apprehension that they will go by the board. The steady eye of the captain is fixed upon the gathering tornado. At last it comes—the ocean in the distance is white with foam, and he who was before so quiet and unmoved is now animated to tremendous exertion. "Let all go fore and aft," sung out clear and loud—"clew up and clew down!"—"lay aloft!"—were orders which followed each other in quick succession, and were as quickly obeyed. The flapping sails are rapidly secured—the wind lulls—the tornado is upon them, taking them aback. The ship falls off—she bends to the gale, until her yard arms are in the waves—she begins to move through the water with a constantly accelerated motion.

The pirate, with the quickness of perception, so common among men of their class, instantly comprehended his advantage. He was near two miles dead to leeward of the Indiaman, which made greater headway under her bare poles than he did. The hurricane could not last long; he would therefore be close on board of her when it passed over, and she must then fall an easy prey to him.

The captain of the noble merchantman saw it all. There was but one fearful way to escape. He had a gallant and staunch ship under him—she had not yet sprung a spar, nor split a sail—he had an extremely valuable cargo; and his men—he could not see them strung up to the yard-arm, on the principle that "dead men tell no tales." He therefore set his fore-topsail and close reefed main-topsail, which urged his ship through the water with great velocity. The little black pirate saw the plan, and attempted to make sail; but all would not do, and he saw that his only chance for safety was, if possible, to elude the shock at the very moment of the expected concussions.

Nearer, still nearer the shouts are heard;
They are chasing the ship with the speed of a bird:
The furrow is deep in the waters they sever,
And the ship they pursue will go down for ever!

On came the prison of souls to view,
Enveloped in clouds of a fiery hue;
Her bellying sails gave way to the blast,
And bent the lithe topsail and stately mast,
While in strong relief on the lurid glow,
Was painted each spar of the "mariner's foe."
On—fearfully on!—the warm blood froze.
As the shriek of undying thirst arose—
An instant she passed! and the trough of the sea
Received the trim form of the daring and free.

The ship came down upon him with terrific precision. "Hard to port!" shouted the pirate to the helmsman. "Hard to port!" echoed the merchantman to his. One tremendous crash—one wild, frantic shriek of despair—and all was hushed in death.

A SOLDIER'S GREAT COAT

Is almost his best friend; it warms his cold and frozen heart, keeps off the intruding blast of the night, and the chilly dew of the morning; forms a good, comfortable, and a soft pillow, and a good seat. In dark cold nights it hides his breastplate from the vivid flash of the enemy's cannon, and he can keep his watch unseen.

THE FLYING DUTCHMAN.

(A NEW VERSION.)

"There is no speculation in those eyes
That thou dost glare withal."—SHAKSPEARE.

It was on a lovely morning in October, that Jack Thompson, and his three partners, the owner and crew of the Jolly Lamplighter pilot-boat, were seen hauling her down the steep shingly beach of the small fishing village of Eisenberg, some few miles to the westward of Hamburg.

When viewed from a distance at high-water, the town appears as if just emerging from the waves, while, almost from the very strand, a precipitous rock rises up, crowned by an ancient church, whose grey and weather-beaten walls, visible some leagues at sea, have often cheered the home-sick mariner with the hope of mingling once again with the companions of his youth. Years have made but little alteration in the place; a few old-fashioned houses, sundry groups of fishermen's cottages, huddled irregularly together, a dock nearly choked with mud, and a rude pier, composed of unhewn granite blocks, form the most prominent features of Eisenberg.

Jack Thompson, the owner of the pilot-boat, which by this time had been pushed into the water, had formerly rated as an able seaman on board a British seventy-four; from thence he passed into the merchant-service, and, being cast upon the German coast in a tempest, which left not another of his shipmates to tell the story, had domesticated himself at Eisenberg, and gained his living as a pilot, by preserving other vessels from the fate which his own ship had so unhappily met with.

Although the denizen of a foreign country, Jack Thompson still adhered to the natty costume of the British sailor: his blue jacket, small hat placed jauntily upon one side of his head, his highly polished shoes, and gracefully curled love-locks, might all have passed muster upon the deck of the "Billyruffian." His companions were Germans of the true breed: Hans Gutterblutt, his mate, was of Upper Saxony, and set up for a wit. Rodolph Lintz, and Molk Vanderspiegel, being of Coblentz, were practical men, and said nothing.

"I say, Hans," said the owner, taking his place at the helm, "I say, the wind's coming round—we'll have some of the squalls off the coast to-day. What d'ye think of standing out to west'ard? I hard tell of some square-rigged craft in that direction—Dutchmen from Batavia belike—they'll want a pilot, surely, and mayhap a boat's crew."

"Oh, to be sure, Meester Van Thompson," replied the animated Hans Gutterblutt; "you are always in de richt. I do remember fifteen years at Sluys, my grandmother—"

"Pass me aft that sheet, you Jarman lubber," interrupted his chief; "Molk! sprit the the mainsail—haul away, now." The boat's keel grated through the loose sand, she glided from the shore with a free wind and a flowing sail, and dashed through the rippling waves, which had already begun to glitter in the morning ray. While the Jolly Lamplighter was holding on her rapid course, her careless crew lay stretched along the thwarts, or bent over the gunwale, gazing listlessly upon the sparkling foam that bubbled at her side: at times the hoarse but not unmusical voices of the Germans would be lifted up in some old national hymn; while the Englishman, who happened to be in a taciturn mood, keeping his watchful eyes fixed upon the sails, with an occasional glance to windward, solaced himself in silence with a quid of tobacco.

The day was now far spent, and this had been, apparently, an unsuccessful trip for our boat's crew: they had been out some leagues to sea, without the appearance of any vessel likely to require their assistance. At length, tired of the pursuit, they stood in for the harbour: the hazy evening was near its close, as they slowly worked their way against an ebb tide.

"Well, that's as rum a go as ever I seed," exclaimed Jack Thompson, suddenly starting up.

"Der Teufel!" ejaculated Hans Gutterblutt; "Der Teu-

fel!" growled Rudolph Lintz; and "Der Teufel!" re-echoed the sagacious Molk Vanderspiegel.

And the astonishment of the boatmen was well founded. Rapidly doubling the rocky point which shelters the small haven from the westerly gales, a large square-rigged vessel hove in sight, with all her canvass spread, and every spar landing.

"What is she—where did she come from?" was the exclamation of the vivacious mate.

"It's no odds where she comes from," said the owner; "she's a stranger, or she'd never poke her bowsprit among them rocks: howsomever, a good pilot might bring her safe off yet."

"Oh, Meester Van Thompson," interrupted the mate, "I am fearful she is not a Christian craft. See what a breeze of wind she have got, and we have not got von breath!"

"That is because we are becalmed here under the land. She's a jolly three-master, and a Dutchman by her build; so out with the oars, my hearties, and we'll just run alongside and hail her."

"Oh, Meester Van Thompson," shouted Hans, "do not be such rash man—she is der Teufel, or we would have seen him before—she is de 'vlying Dutchman,' and de 'phantom ship.' I remember fifteen year at Sluys—"

"Belay your jawing tackle, you jarman lubber; ye havn't as much brains as would bait a mackarel-hook. If so be as y're afeard, I'll put ye ashore on the rock, and board the barque myself."

Accordingly he ran the boat into a little creek or gully between the rocks, and the next moment he found himself deserted by a crew, who, in the hour of real danger, would never have quitted his side, but who wanted sufficient moral courage to encounter with him an unknown or supernatural enemy.

By the time that Hans and his companions had gained the summit of the cliff, the night had become dark and foggy. They looked anxiously towards the point where the strange vessel had appeared, but their most intense scrutiny could not discover any trace of her—not a spot was apparent upon the waste of waters, nor even one glimmering light to indicate the presence of a solitary boat upon the fishing station: dense masses of vapour rolled slowly in from seaward, and a heavy ground swell had begun to break upon the rocks beneath; the clouds drifted furiously athwart the murky sky, and all things seemed to prognosticate a dreadful stormy night.

"Oh, he is gone, and der Teufel has got him!" said Hans Gutterblutt, as with heavy heart, he joined his two comrades on their march homeward. "Oh, he was such a nice man, and did sing! Oh, I shall never hear him sing Jolly Dick de Lamplighter more."

The night, as was expected, had become wild and tempestuous; but towards morning the gale lulled, and the sun rose vividly upon the ocean: the waves, though the storm had passed away, still chafed and broke into sheets of white foam against the opposing cliffs of the rocky projection.

At an early hour, the disconsolate mate, with his silent companions, walked down to the pier, meditating upon the mysterious fate of his unlucky superior, when, like a spirit from the other world, they beheld Jack! the identical Jack Thompson! leaning against the stock of an old anchor, and composedly smoking his deeply-tinted Meerscham pipe. He greeted them with a nod and a knowing wink. "Tausend Teufeln!" cried Hans; "here is Meester Von Thompson, and der Jolly Lamplighter, both alive."

The report that our hero had been pilot to a phantom ship on the preceding evening spread with great celerity. Old and young crowded round him, but he evaded all their inquiries; and it was not until evening, that, seated with a few particular cronies, he gave the following recital of his adventures:—

"When I pushed off from the rock," said he, "I confess I did feel a little flabbergasted. Howsomever, there was no use in turning back; so I put the helm up, and before ye could say Jack Robinson, I was alongside the barque. A great big-bellied Dutchman she was, with studding sails set aloft and alow; but what bamboozled me most was, sink the noise or word was to be heard a-board. She was more likely

floating church-yard than a decent Dutch craft. Howsoever, I ran the yawl close under the mizen-chains, and hailed her as loud as I could bawl, 'Barque a-hoy!' 'Hilloa!' answered a black-looking swab, popping his mug over the starboard quarter. 'Does your honour want a pilot?' says I. 'Yes,' says he, very civil; 'step a-board, we'll pay you well—heave out a line there!' Well, into the chains I jumped, and who d'ye think stepped up to me but old Davy Jones himself—a regular devil with cloven hoofs, and a thundering long tail, with horns to match it!

"It was der wilde Yager," interrupted Hans.

"Hold your jaw, ye Jarman lubber," 'Well,' says he; 'what cheer, Jack Thompson,' says he, quite coolly, though his eyes were burning in his head like a couple of hand-grenades. 'Then,' says he, 'Jack Thompson, go to the wheel and work the ship.' 'Ax your pardon, but which is the skipper, sir?' says I, as bold as brass. 'I'm the skipper,' says he, making a low scrape—"at your service." 'You the skipper! well, that's a rum one, at any rate,' thinks I; 'a nice mess I've got into. Well, I was obligated to take the helm, and it warn't till then I discovered that every man of the crew was the very moral of old Davy the skipper; howsoever, to give the devil his due, they were good seamen, and did their duty like men-of-war's-men. Well, not to be spinning out a long yarn, I worked the ship out of her berth amongst the rocks, without so much as breaking a barnacle on her keel; and when fairly got into the offing, taking off my hat very civilly, I wished the captain a good voyage, and was just stepping into the yawl that lay alongside, when he stopped me. 'Jack Thompson,' says he, 'you're a rele trump, and did ye're duty like a man: here's something to drink my health with!'—and he hauled a long purse of golden shiners out of his breeches-pocket. I was rather taken aback when I saw the guineas glimmering through the net-work; howsoever, I waur'n't going to sell my precious soul in that way. 'Ax your honour's pardon,' says I, 'but I never takes money from gentlemen of your honour's quality.' 'Well, my lad,' says the skipper, not a bit vexed, 'you must at least take a glass of grog afore you go. Fireblood!' says he, to a young devil, who was sitting smoking a pipe in the main-hatchway; 'jump, and fetch me the bottle.' 'The devil bottle you,' thinks I; but there was no use in being obstipulous. Well, when the youngster came up, he filled a glass for me first. 'After your honour, sir,' says I, making a leg. 'Here's to the continuance of our acquaintance,' says he, bolting the whole, glass and all; then, filling another, and wagging his tail, he handed it to me. To be sure it smelt like rale Jamaickey, and my lips were smacking to taste it; but, recollecting it was only a scheme of the old shaver to weather upon me, I made believe to drink it, and, when I thought he was not minding, shied the tippie over my shoulder. But he was not to be done so easily: 'Jack Thompson,' says he, turning round in a terrible passion, 'd'ye think I'm to be humbugged in that lubberly fashion? Is that the way to sarve good liquor, you swab?' 'I ax your honour's pardon, sir,' says I. 'Hold your jaw, you lubber! I treated you like a gentleman, but you took neither my money nor my drink, and it shall be worse for you. You think yourself a monstrous clever fellow, Mister Thompson; but I'll show you the difference.'" With that he gave the deck three slaps with his long tail, and in the twinkling of a hand-spoke there blew a hurricane from every point of the compass, with such thunder and lightning as old Davy himself knows how to manufacture; and before I could bless myself, the whole ship, captain, crew, and all, had sunk to the bottom, like a lump of lead, and I was left on the surface swimming for my life. I saw the "Jolly Lamplighter" within an oar's length of me: I struck out like a dolphin, and in a brace of shakes was safe aboard her. It was blowing pretty fresh at the time; but I weathered out that gale, as I had done many a one before it; and now here I am, ready to laugh in Master Davy's face, and be his pilot the next time he comes into these parts."

Such was Jack Thompson's history of his adventure; which soon, by the industry of the gossips and wonder-hunters of the village, became the conversation of the country for miles round. Every one retailed it with such alterations, modifications, and

exaggerations as suited his taste, until it grew too horribly marvellous for human ears.

In a few months after his exploit, Jack gave up the "Jolly Lamplighter" to his mate, Hans Gutterblutt; purchased a large smack—seldom went to sea—sporting a gold watch of alarming dimensions, with a steel chain and fifteen seals; and, in short, became a man of note in the village, second in importance only to old Fritz Letterboxen, the postmaster. The worthy householders of Eisenberg marvelled at his sudden elevation; but they did not grow a whit the wiser, for Jack left them to wonder on, until they had fairly tired their imaginations.

I ought, perhaps, to conclude here; but, in justice to my readers, I must add, that many years afterwards it was whispered that Jack, one night in a mellow mood, had hinted that the unearthly barque was, in fact, a rich Dutch smuggler, that had got amongst the rocks in the fog; and that for his service in piloting her out, he had received a bag of ducats, which he scrupled less to accept than the purse of diabolical gold.

However that may be, it is certain that Jack cannot, to this day, relate, without a roguish leer of the eye, and a significant hitch of the trousers, the story of his adventure with the "*Flying Dutchman*."

DESTRUCTION OF THE BELLE AMY.

WALTER VIVIAN was the younger of three brothers, of a respectable and comparatively affluent family, in the middle rank of society; but who had for many years been engaged in that precarious, and afterwards illicit, traffic which the excise laws of the period were enacted to suppress. He was a well-educated young man, of excellent address, brave, spirited, reckless, generous, but, unfortunately, the dupe and the instrument of his elder brothers. The latter had been actively and extensively engaged in the contraband trade; but as their wealth increased, and as the laws were more rigorously enforced they retired from the more hazardous part of the trade, and became merely the agents of the smugglers, and the purchasers and disposers of the illicit commodities. They were the part owners of a large and beautiful lugger, called the Belle Amy, that flew over the channel like a bird, dashed over the breakers and bars where no king's ship dared to follow, and that landed more cargoes on the coast than any six of the fleet of his majesty's "honest rogues," the free traders of Cornwall. The three brothers, John, Thomas, and Walter Vivian, were partners in the profit of this trade, Walter commanded the lugger. His generous habits, his daring and enterprising disposition, won him the affections of his crew, who, young as he was, loved him as if he had been their father. His speculations were so eminently successful, that his very success excited the jealousy of his less fortunate competitors. All were active and fearless enough, but none were so fortunate as Walter Vivian and the Belle Amy. The king's cruisers were numerous and vigilant, and many a severe conflict took place, and many a smuggler was taken, and not a few burned in the offing, in sight of the owners; but the Belle Amy had hitherto escaped. She had been chased, but never taken—fired upon, but never injured—and sometimes attacked by cruisers that suffered seriously for their temerity. Vessels had been wrecked that had lain in wait for her; and many an armed flotilla, too adventurous by far, which threatened to board her, has she either blown out of the water with her guns, or cut down, man by man, as they scaled her sides. The revenue board, however, were determined to spare no exertions in order to capture her. A sloop-of-war was sent to hover over that part of the coast where she generally landed her cargoes; and it is said that secret information had been given to its commander as to the time when he might expect the arrival of Vivian.

It was a breezy night, at the end of September, two hours after sunset, the young moon in the sky partly obscured by light clouds, when a firing was heard in the bay, a light blazed on H— head, and anon the Belle Amy, under every inch of canvass she could bear, came dashing into H— harbour.

Instantly not fewer than 300 persons, men and women, old and young, were on the beach, some preparing to *run* the goods. Joy, impatience, and the mingling sensations of hope and fear, were in the countenances of all. For about half an hour before the smuggler entered, the firing had ceased. She was scarcely at her moorings, when the cliff-light already alluded to was quenched, and another, considerably to the westward, and on a peak which overhung a tremendous ridge of rocks, bare at low water, glared upon the heavens, and threw its murky light far over the foam and billows of the sea. But Captain Stanmer was not to be lured to destruction by an artifice so palpable. Just as the broadside of the *Belle Amy* was turned to the beach, and the order given to undo the hatches, four boats, well manned and armed, pulled into the harbour with as much precision as if they had come in the wake of the smuggler.

The moment these boats were discovered from the shore, a yell proceeded from the women, so wild, so shrill, so piercing, that it made the hearts of the stoutest quake. Not a moment was to be lost. The men on the beach stood in ghastly silence, while their friends aboard the *Belle Amy*—taken by surprise, and awed by the boldness of the measure—had scarcely time to run to their arms, before the boarding party was under their quarter. The boats were commanded by Captain Stanmer himself, and a conflict ensued which baffles description. For nearly an hour was the fight maintained—arm to arm, pike to pike, cutlass to cutlass—so close, that after the first discharge no re-loading of fire-arms took place. The pistol was fired and flung at the head of the assailant; while the eternal clash of steel, the groans, the imprecations, the heavy plunge of the slain in the water, proved that the strife was bloody and desperate. From some unknown cause or other, the vessel at length caught fire. The flames burst out from the fore-castle, amid the still-continued clang of swords. The spectacle was awful. The men were seen engaged at every part of the lugger—each struggling for his life, or bent upon terminating that of his antagonist—their faces lurid and distorted—wild, frantic, and horrible, in the glare of the bursting flames. How the conflict might have ended, it is hard to conjecture—the smugglers apparently had the worst of it—they seemed to be overpowered—their comrades and abettors on shore could lend them no assistance; and at this instant, too, another king's boat was seen coming to the aid of the former. But at the same important moment, also, Walter Vivian was observed among the few men who still struggled for the mastery of the *Belle Amy*'s deck, engaged hand to hand with Captain Stanmer. The flames were spreading with a rapidity which left but small space to fight upon; and a doubly awful interest was excited in the breasts of the spectators by the fear—by the almost certainty—that the lugger would blow up. Captain Stanmer was at length seen to fall—whether accidentally or not, could not be ascertained—and almost at the same moment Walter Vivian sprang from the gunwale into the sea, and swam towards the beach, where he was received, amid mingled screams and tears, by many hundreds of persons, by some of whom he was instantly conveyed to a place of safety. The fifth boat had little to do. The flames had nearly finished the *Belle Amy* before it came alongside. To attempt to save the cargo was vain—to land and attack defenceless women, at the hazard of being cut to pieces by the infuriated partisans of the Vivians, would have been fruitless—the boat consequently put to sea; and next morning scarcely a trace of the wreck was to be seen.

When the intelligence of this fatal and disastrous affair reached the government, they offered a large reward for the apprehension of the younger Vivian. The detachment of military along the coast had orders to make a rigid search for him—the number of the cruisers were doubled—the magistrates were called upon by royal proclamation, to institute an inquiry, and to assist the military in apprehending all persons suspected of being implicated, in order that an example might be made of the lawless men who had been guilty of so sanguinary an outrage. But in spite of all these precautions, Walter succeeded in escaping to a cave a few miles from the Land's End, which opened on a wild and unfrequented sea-beach: in which he lay concealed until such time as a vessel could be procured to carry him out of the country. Indeed, at that unsettled

period, it would have been a dangerous instance of loyalty for any authority in the west of Cornwall, to be officially diligent in hunting forth the outlaw. Even the appearance of being anxious for his apprehension would have been dangerous. The smuggler was universally considered the injured party. Thousands of their families depended for their bread upon the traffic—prejudices were strong against the new laws—the passions of the lower orders were in a ferment—murmurs akin to revenge were heard on all sides; and a loyal attachment to the law was very generally considered to be “more honoured in the breach than the observance.”

LOSS OF THE WINTERTON.

The following narrative affords to sea-faring men a convincing example of the necessity of incessant vigilance, and the danger of trusting in the slightest degree to conjecture when there is any uncertainty. Of what importance is it advancing during the night a few leagues, out of thousands that must be traversed in a voyage, while the indulgence of such impatience may prove the wreck of a noble ship, and the destruction of hundreds of human lives?

The *Winterton*, East Indiaman, commanded by Captain Dundas, sailed from England, in the spring of 1792, with every favourable circumstance that could flatter the expectation of those on board of a prosperous voyage; the ship was both roomy and sound, and the crew as orderly as ever undertook a voyage to India. Captain Dundas was a commander of experience, had previously sailed to India in the same capacity, and was considered in every respect a good seaman and an able officer.

Nothing of consequence occurred during their passage to the Cape, where they arrived on the 20th of July, and remained till the 1st of August. Having then completed their taking in water, and other necessities, they sailed at daylight with a fresh breeze which continued two days, when the wind became variable, but it soon returned to its original point.

On leaving the Cape it was the intention of Captain Dundas to take the outward passage to India, but the variable winds obliged him to deviate from his original design; and on the 10th he bore away for the Mozambique Channel. Being baffled for some days with light variable winds and calms, their progress was inconsiderable; but on Sunday, the 19th, a south-west breeze sprung up, which they had every reason to believe was the regular monsoon, as the ship was then in about 27 deg. of south latitude.

Before standing to the northward, Captain Dundas was particularly desirous of making the island of Madagascar, somewhere near St. Augustine's Bay, so that they might avoid the Bassas de Indias, a shoal uncertainly laid down in the charts; and with this view they steered east, by compass, from noon of the 19th until midnight. The captain was then on deck, and altered the course to E.N.E. He had two time-pieces, one of which had served him in his former voyage, and by it he had constantly made the land with the greatest degree of exactness. From these and from several sets of lunar observations taken four days before—the whole of which coincided with the time-pieces—he concluded with confidence that at midnight they were eighty miles from the nearest part of the coast.

For about two hours they steered E.N.E., when the captain came again upon deck; and observing the lower steering-sail to lift, he ordered the ship to be kept N.E. by E. The wind at that time was S.S.E., a moderate breeze, the ship going six knots an hour, and a fine clear starlight night.

Every possible attention was paid to the look-out, Captain Dundas himself with a night-glass looking carefully in the direction of the land; but so perfectly was he satisfied of the correctness of his time-pieces, that sounding was never once mentioned. A little before three o'clock he pointed out the ship's place on a chart, making it upwards of sixty miles from the land; and when he left the deck at three he gave order to steer at N.E., observing, at the same time, that they could

not on that course make more than six miles of casting before daylight, and that if they were nearer to the land than he supposed, it was impossible to avoid seeing it before any accident could occur.

The captain had not left the deck above seven or eight minutes, when the ship struck, going between six and seven knots. The shock was scarcely perceptible, except to the man at the helm; the water was perfectly smooth; no breakers or surf were heard; and yet, notwithstanding the clearness of the night, there was no land discernible. The circumstances were particularly unfortunate, it being then new moon and high water.

The jolly-boat and yawl were instantly got out, and found five fathom water not a hundred yards astern; the sails were

immediately thrown a-back, and every exertion made to get the ship off, but without success. The kedge-anchor, with a nine-inch hawser, was then carried out into five fathom, by which they strove to heave the vessel off, but all their efforts were ineffectual. In the next place, the sails were hauled, the top-gallantmasts and yards struck, the long-boat got out, the booms rafted alongside, and the upper deck entirely cleared.

Daylight now disclosed to them the dangers of their situation. The ship was on a reef of rocks, about six miles from the land, and within the outer reef, and nearly half-way to the shore, was another, which was nearly covered at high water.

The reef on which the Winterton struck, extended as far as they could see to northward, and to the south nearly the

LOSS OF THE WINTERTON, CAPTAIN DUNDAS, AUGUST 20TH, 1792.

length of St Augustine's Bay. As the tide ebbed the ship beat violently, and began to leak, upon which a party of recruits who were on board were set to the pumps, where they continued as long as they could be of any service. By eight o'clock the rudder was beat off, the sheathing came up alongside, and there were only eight feet water under the bows; but as the vessel then lay comparatively quiet they began to entertain a hope of being able to get her off with the next high tide.

After breakfast they commenced getting the guns overboard, which was done one at a time by means of the long-boat, and they were dropped at some distance from the ship, in order that she might not strike on them when she should again be elevated by the tide: at the same time a party was engaged in

heaving up the rudder and securing it alongside. After about half the guns had been got away, a strong surf was occasioned by the sea-breeze setting in fresh, so that the boats could not remain alongside: however, they continued to lighten the ship by throwing overboard such heavy articles as would float; and at high water, about three in the afternoon, they again made every exertion, but in vain, to heave the ship off. Probably it was fortunate for them that they could not succeed in their endeavours, as by this time the leak had gained so much on the pumps, that had their exertions proved successful, they would have found it impossible to keep the ship afloat, and she must consequently have foundered in deep water.

As the vessel appeared to be irrecoverably lost, it became

an object of the greatest importance to provide for the safety of the crew and passengers; and with a view to accomplish so desirable an end, as well as surrounding difficulties would admit, every effort was made to keep the ship together as long as possible. The masts were cut away in order to relieve the ship; and those spars that were saved from the heavy surf were stored up for the purpose of constructing rafts.

Their situation now became melancholy in the extreme; the ship was likely to float a wreck, for all their endeavours could but prove abortive, while every circumstance seemed to combine against them; yet, resolved to do their best, they collected a quantity of beef, bread, liquors, and other necessaries, with some barrels of gunpowder, muskets, and whatever was judged most necessary, and put them into the long-boat; but, fearful of the infatuation of intoxication to which sailors are prone, even in such an awful condition, might prove fatal to some of them, they staved every cask of spirits that could be reached.

At sunset the second mate and the purser were sent on shore in the yawl, to seek a convenient place for landing; and the other boats, with some people to watch them, were moored astern of the ship at some distance, to keep them clear from the surf. Captain Dundas observed the latitude at noon, according to which the reef where the ship had struck was about sixty-three miles north of the bay of St. Augustine in the island of Madagascar.

In the course of the evening the captain had the people assembled; and in a short address, wherein he adverted to the situation of the vessel, he directed the route they were to take after getting on shore, and stated the great probability of their meeting with a ship at the bay of St. Augustine's. He particularly insisted on the absolute necessity of paying the strictest obedience to the commands of their officers, at the same time assuring them of his advice and assistance, and concluded by stating it to be his fixed determination to abide by the ship, until he was convinced of the impossibility of saving every person on board. This manly address did not fail to produce the desired effect, and it was received with three cheers, and a general promise of acquiescence in his and his officers' commands.

About midnight they were alarmed by the cries of people in distress, and upon repairing to the deck, had the mortification to see the three boats dashed to pieces by the violence of the surf. The wind had increased during the night, which occasioned it to break out much farther than they expected. With feelings of anguish and horror they beheld the poor fellows who had been in the boats struggle to reach the ship, while the violence of the surf seemed to preclude the possibility of their preservation. With the utmost exertion of those on board the ship, they could only succeed in saving three out of ten; whilst many, almost in the act of grasping a rope, were driven far out to sea and perished. They were thus deprived of the only means of reaching the shore; and the same time the ship beat with such violence upon the rocks, that it was doubtful whether she would hold together till the morning. Their consternation and distress during the few remaining hours of darkness must be left to the imagination to conceive, and the horrors of the night were augmented by the ignorance of their real situation.

At daylight, on the 21st, they immediately began to construct rafts of what spars and planks they had, and passed the cables overboard to get at some that were upon the orlop-deck; they also cut the beams of the poop, shored the deck up, and got it ready for a raft. About nine in the morning the yawl, with the utmost difficulty, rowed off from the shore through a tremendous surf, and soon afterwards came within hail, but was desired to keep at a distance, as she could not safely come alongside. Those who were on board her reported that the beach was everywhere covered by a surf as far as they could see. Soon afterwards the boat returned to the shore, and they saw no more of her for several days. Three or four rafts then left the ship, carrying nearly eighty persons, who succeeded in reaching the shore in safety.

The sea-breeze was this day much stronger than before, and the surf consequently much heavier, which increased

towards the evening, till it became so violent, that the hawser, which held the ship-stern to, parted; and about sunset the vessel drove with her broadside upon the rocks, the sea making a complete breach over her. At seven o'clock she parted at the Chestree, when all who remained crowded upon the quarter-deck and poop. Mr. Chambers, the first-mate, though repeatedly urged to save his life, remained inactive, declaring his conviction that all his efforts would be ineffectual; and, with a perfect resignation to his own fate, requested every one to provide for his own safety. The ship soon afterwards broke up, when a scene ensued of such misery, destruction, and horror, as has been rarely equalled and, perhaps, never exceeded. The third, fourth, and fifth mates left the wreck at this instant, on a raft, which they had constructed for the purpose, and were rapidly wafted from their ill-fated ship, beyond reach of the piercing cries of misery, which, issuing from more than two hundred people, involved in the most complicated affliction, may be conceived, but language fails in attempting to portray.

Those on the raft, after driving all night in the expectation that they should soon reach the shore, were most miserably deceived, when, on the approach of daylight, they could not even see land; but, knowing the direction in which it lay, they made strenuous exertions and got on shore about three o'clock on the 22nd.

On journeying to the southward, they found that the poop had driven on shore, with sixty people on it, among whom were five ladies and several gentlemen. They could give no account of the captain; but it was subsequently ascertained from the carpenter, that after the poop went away, the star-board side of the wreck floated, broadside uppermost, when Captain Dundas was washed through the quarter-gallery, and was seen no more.

The rest of the people got on shore, some on pieces of the wreck, and others in canoes, in which the natives came off to plunder the remains of the ship; but it was not till Sunday the 26th that the last of them landed. On mustering the survivors, it was ascertained that Captain Dundas, Mr. Chambers, three young ladies, and forty-eight seamen and soldiers, had perished. Many articles from the wreck were thrown upon the beach, but the natives secured everything of value, and threatened with death those who attempted to oppose them, and not satisfied with this, they even plundered and stripped the poor destitute creatures whenever they could find an opportunity. This disposition on the part of the natives, together with the loss of their boats, rendered it totally impossible for them to save any part of the treasure or cargo.

In a few days the whole of the survivors arrived at Tulliar, the residence of the king of Baba, where, for some days, they remained in a state of the most anxious suspense for the fate of the yawl, as on that alone depended their most distant hope of relief, as the season was then so far advanced, that it was extremely improbable that any vessel would touch at the bay until the following year. They were, however, soon relieved from their anxiety by the arrival of the yawl in the river Tulliar, when they immediately got her up to the town, and placed a guard over her to prevent the natives from stealing her iron-work, which they certainly would have done had they been at any distance from the king's residence.

A consultation of the officers was now held to consider the best course to pursue under the existing circumstances, at which it was agreed that Mr. John Dale, the third mate, should proceed to Mozambique, and endeavour to procure a vessel and that every person should exert himself to get the boat ready with all possible despatch. Having no tools or other necessary articles, the carpenters could only put a false keel to her; and, with the burthen board, raise her about five inches forwards; but they managed tolerably well with regard to sails; and, fortunately, a compass had been put into the boat on the evening of the 20th of August, and a quadrant had been picked up on the beach: they could not, however, procure a chart, or a single book of navigation, but a small geographical grammar, obtained from one of the soldiers, ultimately proved the means of preserving their lives.

On the 12th of September, their preparations being complete, the third mate sailed, accompanied by the fourth officer, four seamen, and M. de Souza, a passenger, whose knowledge of the Portuguese language was likely to prove of considerable service to them. They made a tolerable progress to the northward, with a pleasant westerly breeze for about two days, and then the wind shifted to N.N.E. and never came fair again; and what added greatly to their disappointment, was the discovery that their small stock of provisions, consisting chiefly of cakes made of Indian corn, had become quite rotten and so full of maggots, that they had nothing to subsist upon but a few raw, sweet potatoes and a little sugar-cane, with half-a-pint of water a day for each man. They were obliged to restrict themselves to this short allowance, as although they had about twenty-five gallons of water when they sailed, yet the greater part of it, being contained in calabashes, was lost, from the motion of the boat upsetting and breaking them.

On the 20th of September they made the coast of Africa, in the latitude of 18° S., having been carried by the currents considerably further to the westward than they expected. They had been for three days endeavouring to get to the northward, but the wind still keeping N.E., they were unable to make any progress; and their stock of water decreasing very rapidly, they judged it imprudent to persist any longer in their design of reaching Mozambique, and changed their course to Sofala, a Portuguese settlement, situate in $20^{\circ} 30'$ S. latitude, to which they were directed by the little book before-mentioned.

During the run they put into two rivers, thinking it lay in one of them; and meeting with some inhabitants who spoke Portuguese, they were advised to apprise the governor of their wish to visit that place. The governor, when informed of their situation, immediately despatched a letter, with a seasonable supply of provisions, and a pilot to conduct them to Sofala, where they arrived on the 29th of September. Through the aid of M. de Souza, they informed the governor of their late melancholy disaster, and solicited his assistance and advice how to act. He received them with great kindness and humanity, and desiring that they would not think of anything for a few days but recruiting their wasted strength, he furnished them with clothes, of which he observed they stood in great need; but with all his hospitality, there was a certain reserve in his behaviour, for which they did not know how to account. Probably he doubted their veracity, and suspected them to be part of the crew of a French ship, come with the intention of kidnapping the natives; but their ragged and squalid appearance by no means justified such an apprehension.

His suspicions, however, soon vanished, and he then informed them that only one vessel came there annually; that she had sailed about a month before; and would not return again till the following June; adding, that as the N.E. monsoon had set in, it would be impracticable to reach Mozambique then, but that he would give them guides, if they chose, and what was necessary to undertake a journey to Senna, an inland Portuguese settlement, from whence they might have an opportunity of getting to the capital. At the same time, he represented the undertaking in so unfavourable a light, together with the length of time which was likely to intervene before any opportunity might occur of enabling them to proceed any further, that, on mature deliberation, they abandoned all thoughts of it, and directed their attention to a boat belonging to the governor, about the size of an Indiaman's long-boat, and made an application for it. The governor, at first made some scruple on account of payment, but Mr. Dale offering to grant a bill on the East India Company for the amount, he declined it, and made them a present of the boat.

With this they intended to proceed to De Lagoa Bay, which, with moderate winds, they might have accomplished in a week. They knew that, at that time of the year, some South Sea ships must have been there, as forty or fifty generally arrive in the course of the year; and were they so fortunate as to effect their object, it would not have been a difficult matter to have engaged one, or two if necessary, to transport the people from Madagascar to the Cape of Good Hope, for which place Mr. Dale had been instructed to procure a vessel had he reached Mozambique. In case they should not have

succeeded in the first project, they determined to make for the Cape, under the idea that some ship would probably pick them up before reaching it.

Having, through the kindness of the governor, procured everything necessary for their intended voyage, they set sail on the 12th of October, but their ill-fortune had not yet forsaken them. They had been three days at sea, with constant foul winds, and had not proceeded more than forty miles, when they found their boat so extremely leaky, that, with their utmost exertions, they could scarcely keep above water. After various and frequent escapes from imminent danger which they experienced, they regained Sofala, which although at so short a distance, they did not reach until the 20th of October.

Their reception was now widely different from what had attended their first arrival. The governor scarcely deigning to speak to them, sent for Mr. Dale, and Mr. Wilton, the fourth officer; and without so much as inquiring the reason of their putting back, or into what difficulties they had experienced, gave them to understand that he was preparing to despatch some letters to Killeman, and that they must immediately make themselves ready to accompany the person who was to carry them. It was in vain they represented their sickly and debilitated state, occasioned by the various and unremitting fatigues which they had lately undergone—it was in vain that they urged the necessity of rest to repair their broken constitutions and wasted strength—the governor was inexorable, and deaf to all their entreaties. They then applied to him for some kind of conveyance, when he offered a kind of palanquin to the two officers, but positively refused any assistance to M. de Souza or the seamen. This was rejected with indignation; and, having provided themselves with some cloth to purchase food for subsistence on their journey, they left Sofala on the 1st of November.

They were totally at a loss to account for the conduct of the governor, so repugant to the common feelings of humanity, and so directly at variance with what they experienced at the other Portuguese settlements; but their subsequent knowledge of the governor's character, removed their surprise at his inhospitable behaviour, as it appeared that such acts were congenial with his nature.

By the 20th of November, they had travelled above two hundred miles through a miserable tract of country, very thinly inhabited, which might perhaps have been the result of the slave trade at Mozambique. Sometimes, in the course of forty miles, there was neither a hut nor a creature to be seen, and to prevent any accident from the numerous wild beasts which infest the country, they took the precaution of surrounding themselves at night with fire. But the excessive heat of the climate, added to intense fatigue which they had endured, so totally overpowered them, that they remained for a whole fortnight in the most deplorable state, until the governor of Senna hearing they were on the way, despatched palanquins for them. They arrived there the 6th of December, where every care and attention was paid to them; but notwithstanding they received all the medical assistance which the place afforded, Mr. Wilton, a most worthy active, and promising young officer, and two seamen, died in a short time after their arrival.

On the first notice of a vessel being ready to sail, the remainder of the party left Senna, in a vessel bound for Killeman, where they arrived in a few days. From thence they embarked on board a sloop, and on the 12th February, 1793, Mr. Dale, and M. de Souza, reached Mozambique, being five months after sailing from Madagascar.

On their arrival they immediately waited upon the governor, and detailed to him the loss of the Winterton, as well as every circumstance which had occurred to them since they departed from the island of Madagascar. Mr. Dale also informed him, that he had been deputed by his unfortunate friends and shipmates to solicit the aid of the Mozambique government in their behalf, and prayed him, no less in his official than his individual capacity, to send a vessel for the relief of those in whose behalf his assistance was entreated. To this appeal the governor replied, that he felt every inclination to afford them the assistance they craved; but that he was prevented

from fulfilling his intentions, by reason that there was no ship belonging to her majesty the Queen of Portugal then in the harbour. In this situation of affairs, Mr. Dale considered himself empowered, from his official employment, to freight a private vessel to the island of Madagascar; which the liberal conduct of the governor enabled speedily to equip for the intended voyage.

As a French vessel was about to sail to the Mauritius, on board of which M. de Souza intended to take his passage, Mr. Dale embraced the opportunity of entrusting to his care official letters to the East India Company as well as to the different presidencies in India. In these he informed them of the melancholy loss of the *Winterton*, and the various exertions that had been made to alleviate the sufferings of the survivors, and to lessen the burden of those sorrows in which he had left them involved.

Mr. Dale sailed from Mozambique on the 1st of March, and after a tedious passage of twenty-three days anchored in Saint Augustine's Bay, in Madagascar; from whence he immediately repaired to Tulliar, to apprise his unfortunate companions that a vessel was arrived and ready for their reception: but it is impossible to depict the miserable state in which he found the whole of the survivors. Overwhelmed with despondency, their calamities had increased by the attacks of a malignant fever; and as no kind of surgical stores had been saved from the wreck, they were entirely destitute of medicines to alleviate its baleful effects; and being deprived likewise of the necessities of life to which they had been accustomed, the number of people, including passengers, was reduced to one hundred and thirty, although nearly double that number had been saved from the wreck.

Under circumstances so peculiarly severe, such was their emaciated condition that it was ten days before the embarkation of the survivors was completed, although every exertion was made to expedite so desirable an event. At length they sailed from Madagascar on the 3rd of April, and on the 11th arrived at Mozambique, having lost seven people by the way, two of whom were passengers.

They experienced a most flattering reception from the governor and inhabitants of Mozambique, whom their forlorn condition inspired with sentiments which do honour to humanity. They prepared an hospital for the reception of the sick, and vied with each other in soothing and unremitting attention to the ladies: but although the sick received every medical assistance that could by possibility be procured, yet the insalubrious climate of Mozambique so retarded the re-establishment of their health, that during a stay of two months about thirty of them died, while the sickness of the survivors continued.

As no ship belonging to the Portuguese government had arrived in the harbour, the governor was still as unable to afford them a vessel for their conveyance as on their former requisition. Mr. Dale, therefore, in conjunction with Mr. Dunn, the purser of the *Winterton*, and Lieutenant Brownrigg, of the 75th regiment, was reduced to the alternative of again freighting a private vessel in the name of the East India Company, in order to transport them to Madras.

On the 10th of June they sailed from Mozambique, and on the 13th anchored at Joanna, with the intention of procuring provisions and other necessities, which having accomplished, they left the island on the 19th, having experienced from its generous inhabitants every aid that was in their power, and every attention which humanity could dictate. It was at this period that they concluded all their difficulties surmounted, and a fond but delusive hope beginning to dawn upon their minds, that they anticipated a safe and expeditious passage to Madras, when on the 7th July in 5° 40' N. lat. and 63° E. long. they were captured by *Le Mutin*, a privateer, from the Isle of France. To increase their vexatious disappointments, they were till this time entirely ignorant of the commencement of hostilities between Great Britain and France.

The people of the privateer took Mr. Dale, Lieutenant Brownrigg, and twenty-two seamen and soldiers on board their vessel, and put an officer and a number of their own men on board the captured vessel, with orders to conduct her to the Mauritius with all possible despatch. The privateer im-

mediately proceeded on her cruise, during which the distress occasioned by their accumulated misfortunes, was in a slight degree alleviated by the polite attention of the French captain and his officers. She continued cruising until the 15th of July, when she entered the road of Tutecorin, where she fell in with and engaged a Dutch East Indiaman, the *Ceylon*, commanded by Captain Muntz. After an engagement which lasted about fifteen minutes, the Dutchman proved victorious, and the privateer struck, to the great satisfaction of the unhappy prisoners.

Our old allies were happy in the opportunity of liberating Englishmen from confinement; and Captain Muntz insisted upon their partaking of a handsome entertainment on board the *Ceylon*, during which he was informed of the principal circumstances, of their heavy and repeated misfortunes. They then repaired to Callancoetah, where they remained till an order arrived to prepare a large boat for their conveyance to Madras, at which place they arrived in perfect safety on the 20th of August, 1793, being exactly twelve months since their unfortunate shipwreck.

At Madras Mr. Dale embarked, with some of his unhappy friends, on board the *Scorpion* sloop of war, homeward bound. Nothing material occurred during the passage, excepting that they were chased by a French frigate, and experienced foul winds and repeated calms, by which their progress was so retarded, that it was generally supposed that the *Scorpion* had either foundered at sea, or had been taken by the enemy. At length, however, they arrived in safety on British ground, and so eager were the poor fellows to see their different relatives, that they got on shore at the Land's End, having first received protections from impressment from the captain of the sloop.

Of the fate of those who remained on board their own vessel when taken by *Le Mutin*, and ordered to steer to the Mauritius, no intelligence has ever been received in this country, notwithstanding the most diligent search was set on foot by direction of the East India Company, in order to ascertain it.

THE SOLITARY MAN OF THE OCEAN.

It was on the evening of her departure for a transatlantic voyage, that the quarter-deck of an English man-of-war, lying in the Tagus, was splendidly illuminated in honour of a farewell entertainment given by the British officers to a favoured selection of the residents of Lisbon.

No scene of gaiety presents a more picturesque appearance than that exhibited by the festive decorations of a full-sized man-of-war; and, on the present occasion, the *Invincible* was not behind her sisters of the ocean in the arrangements of her marine festivities. Her quarter-deck was covered by an awning of gay and party-coloured flags, whose British admixture of red glowed richly and gaily in the light of the variegated lamps, which, suspended on strings, hung in low rows from the masts and rigging of the vessel. Below, the tables of the ward-room were spread with the most delicate and even costly refreshments. All was mirth, and apparently reckless gaiety; and it seemed as if the sons of Neptune, in exercising their proverbial fondness for the dance, and acknowledged gallantry to their partners, had forgotten that the revolution of twenty four hours would place a world of waters between them and the fair objects of their devotion, and would give far other employment for their limbs than the fascinating measures to which they now led them.

There were, however, two beings in that assembly whose feelings of grief, extending from the heart to the countenance, communicated to the latter an expression which consoled ill with the gaiety of the surrounding scene. One of these countenances wore the aspect of an intense grief, which yet the mind of the possessor had strength sufficient to keep in a state of manly subjection; the other presented that appearance of unmixed, yet unutterable woe, which woman alone is capable either of feeling or meekly sustaining in silence. Christian Loeffler and Ernestine Frederberg had been married but

seven days, yet they were now passing their last evening together ere Loeffler sailed, a passenger in the *Invincible*, to the Brazils. Why circumstances thus severed those so recently united by the holiest ties, and why the devoted Ernestine was unable to accompany her husband, are queries that might be satisfactorily answered if our limits permitted. But the fact alone can here be stated.

The husband and wife joined the dance but once that evening, and then—publish it not at Almack's—they danced together! Yet their hearts sickened ere the measure was ended; and retiring to the raised end of the stern, they sat apart from the mirthful crowd, their countenances averted from those faces of gladness, and their eyes directed towards the distant main, which showed dismal, dark, and waste, when contrasted with the bright scene within that gay floating house of pleasure.

The revels broke up; and ere the sun had set on the succeeding day, the so recent pleasure-vessel was ploughing her solitary way on the Atlantic; her festive decorations vanished like a dream, and even the shores that had witnessed them were no longer within sight.

On the second day of the voyage, the attention of Loeffler was forcibly arrested by the livid and almost indescribable appearance of a young seaman, who was mounting the main-shrouds of the vessel. Christian called to him, inquired if he were ill, and, in the voice of humanity, counselled him to descend. The young man did not, however, appear to hear the humane caution; and ere the lapse of a few seconds, he loosed his hold on the main-yards, which he had reached, and rushing, with falling violence, through sails and rigging, was quickly precipitated to the deck. Loeffler ran to raise him; but not only was life extinct, even its very traces had disappeared, and—unlike vitality—the features of the youth had assumed the livid and straightened character of a corpse long deprived of its animating principle.

The log-book, however, passed a verdict of "accidental death, occasioned by a fall from the main-yard," on the youth's case; and as such it went down in the marine record, amidst notices of fair weather and foul, notwithstanding Loeffler's repeated representations of the young seaman's previous appearance. Christian's testimony was fated ere long to obtain a fearful credence. On the succeeding day several of the crew sickened; and ere the lapse of another twenty-four hours, death as well as sickness began to show itself. The captain became alarmed, and a report was soon whispered through the vessel that the hand of some direful, base, or revengeful Portuguese had mingled poison with the festive viands which had been liberally distributed to the whole crew at the farewell entertainment of the *Invincible*. Loeffler, although a German, was no great believer in tales of mystery and dark vengeance. A more fearful idea than even that of poison once or twice half-insinuated itself into his mind, but was forced from it with horror.

The wind which had blown favourably for the first ten days of the voyage, now seemed totally to die away, and left the vessel becalmed in the midway ocean. But for the idle rocking occasioned by the under swell of the broad Atlantic waves, she might have seemed a fixture to those seas; for not even the minutest calculable fraction in her latitude and longitude could have been discovered, even by the nicest observer, for fourteen days. All this while a tropical sun sent its burning, searching rays on the vessel, whose increasing sick and dying gasped for air; and unable either to endure the suffocation below, or the fiery sunbeams above, choked the gangways in their restless passage to and from deck, or giving themselves up in despair, called on death for relief. The whole crew were in consternation; and they who had still health and strength left to manage or clear the ship, went about their usual duties with the feelings of men who might, at a moment's warning, be summoned from them to death and eternal doom.

Loeffler had shown much courage during these fearful scenes. One night, after having for some time attended the beds of the sick and dying, he retired to his couch, and endeavoured to gain in slumber a brief forgetfulness of all the thoughts that weighed down his spirits. But a death-like sickness came over him; his little cabin seemed to whirl round as if moving on a

pivot, while his restless limbs found no space for their feverish evolutions in his confined berth. Christian began to think that his hour was coming, and he tried to raise his soul in prayer; but while he essayed to fix his thoughts on heaven, he felt that his reason was fast yielding to the burning fever which seemed almost to be consuming his brain. He called for water, but none heard or answered his cries. He crawled on deck, and, as the sun had now set several hours, hoped for a breath of the fresh air of heaven. He threw himself down, and turned his face towards the dark sky. But the atmosphere was sultry, heavy, oppressive. It appeared to lie like an insupportable weight on his chest. He called for the surgeon, but he called in vain; the surgeon himself was no more, and his deputy found a larger demand on his professional exertions than his powers, either physical or mental, were capable of encountering. A humane hand at length administered a cup of water. Even the very element was warm with the heat of the vessel. It produced, however, a temporary sensation of refreshment, and Loeffler partially slumbered. But who, can describe that strange and pestilential sleep? A theatre seemed to be "lighted up within his brain," which teemed with strange, hideous, and portentous scenes, or figures whose very splendour was appalling. All the ship seemed lit with varied lamps; then the lamps vanished, and, instead of a natural and earthly illumination, it seemed as if the rigging, yards, and sails of the vessel, were all made of living phosphor, or some strange ignited matter, which, far and wide, sent a lurid glare on the waters. Loeffler looked up long masts of bright and living fire, shrouds whose minutest interlacings were all of the same vivid element, yet clear, distinct, and unmixed by any excrescent flame which might take from the regular appearance of the rigging; while the size of the vessel seemed increased to the most unnatural dimensions, and her glowing top-masts—up which Loeffler strained his vision—seemed to pierce the skies. He groaned, struggled, tried to thrust his arm violently from him, and awoke.

He found his neck distended to torture by a hard and frightful swelling, which almost deprived his head of motion, and caused the most excruciating anguish, while similar indications on his side assured him that disease was collecting its angry venom. The thought he had often banished now rushed on Christian's mind; and a fearful test, by which he might prove its reality, now suddenly occurred to him. It seemed as if the delirium of his fever were sobered for a moment by the solemn trial he was about to make. He was lying near one of the ship lights. He dragged himself, though with difficulty, towards it; he opened the breast of his shirt. All was decided. Three or four purple spots were clustered at his heart. Loeffler saw himself lost. He cast a languid and fevered glance toward the sullen waters which rolled onwards to the Portuguese shore, and murmured "Farewell! farewell! we meet not till the morning which wakes us to eternal doom." He next called for the surgeon. With difficulty that half-worn-out functionary was summoned to the prostrate German. "Know you," said Loeffler, as soon as he saw him, "know you what fearful foe now stalks in this doomed vessel?" He opened his breast and said solemnly, "The Plague is amongst us!—warn your captain!" The professional man stooped towards his pestilential patient, and whispered softly, "We know all—have known all from the beginning. Think you that all this fumigation—this smoking of pipes—this separation, as far as might be, of the whole from the sick, were remedies to arrest the spread of mortality from poisoned viands? But breathe not for heaven's sake, your suspicions among this hapless crew. Fear is, in these cases, destruction. I have still hopes that the infection may be arrested." But the surgeon's words were wasted on air. His patient's senses, roused only for an instant, had again wandered into the regions of delirious fancy, and the torture of his swollen members rendered that delirium almost frantic. The benevolent surgeon administered a nostrum, looked with compassion on a fellow-being whom he considered doomed to destruction, and secure, (despite his superior's fate) in what he had ever deemed professional exemption from infection, prepared to descend to the second deck. He never reached it. A shivering fit was succeeded by deathly-sickness. All the

powers of nature seemed to be totally and instantaneously broken up; the poison had reached the vitals, as in a moment—and the last hope of the fast-sickening crew was no more! Those on deck rushed in overpowering consternation to the cabin of the captain. Death had been there, too! He was extended, not only lifeless, but in a state of actual putrescence!

The scenes that followed are of a nature almost too appalling, and even revolting, for description. Let the reader conceive (if he can without having witnessed such a spectacle) the condition of a set of wretched beings, pent within a scorching prison-house, without commander, without medical assistance; daily falling faster and faster, until there were not whole enough to tend the sick, nor living enough to bury the dead; while the malady became every hour more baneful and virulent, from the increasing heat of the atmosphere, the number of living without attendance, and dead without a grave.

It was about five days after the portentous deaths of the surgeon and commander, that Loeffler awoke from a deep and lengthened, and, as all might well have deemed a last slumber, which had succeeded the wild delirium of fever. He awoke like one returning to a world he had for sometime quitted. It was many minutes ere he could recollect his situation. He found himself still above deck, but placed on a mattress, and in a hammock. A portion of a cordial was near him. He drank it with the avidity, yet the difficulty, of exhaustion, and slightly partook of a sea-mess, which, from its appearance, might have been laid on his couch some days previously to the sleeper's awakening. Life and sense now rapidly revived in the naturally strong constitution of our young German. But they brought with them the most fearful and appalling sensations.

The sun was blazing in the midst of heaven, and seemed to be sending its noontide ardour on an atmosphere loaded with pestilential vapour. With returned strength, Loeffler called aloud; but no voice answered him. He began to listen with breathless attention; not a sound, either of feet or voices, met his ear. A thought of horror, that for a moment half-stilled the pulsation at his heart, rushed on Loeffler's mind. He lay for a moment to recover himself, and then collecting his powers of mind and body, quitted his couch and stood on deck. God of mercy! what a sight met Loeffler's eye! The whole deck was strewn with lifeless and pestilential corpses, presenting every variety of hue which could mark the greater or less progress of the hand of putrefaction, and every conceivable attitude which might indicate either the state of frantic anguish, or utter and hopeless exhaustion, in which the sufferers had expired. The hand, fast stiffening in its fixed clasp on the hair; the set teeth, and starting eyeballs, shewed where death had come as the reliever of those insupportable torments which attend the plague when it bears down its victim by the accumulated mass of its indurated and baleful ulcerations. Others who had succumbed to its milder, more insidious, yet still more fatal (because more sudden and utterly hopeless) attack, lay in the helpless and composed attitude which might have passed for sleep; but the livid and purple marks of these last corpses, scarce capable of being borne to their grave in the "integrity of their dimensions," showed that the hand of corruption had been even more busy with them than with the fiercer and more tortured victims of the pestilence. The "Invincible," once the proudest and most gallant vessel which ever rode out a storm, or defied an enemy, now floated like a vast pest-house on the waters; while the sun of that burning zone poured its merciless and unbroken beams on the still and pestiferous atmosphere. Not a sound, not a breeze, awoke the silence of the sullen and baleful air; not a single sail broke the desolate uniformity of the horizon: sea and sky seemed to meet only to close in that hemisphere of poisonous exhalations. Christian sickened; he turned round with a feeling of despair, and burying his face in the couch he had just quitted, sought a moment's refuge from the scene of horror. That moment was one of prayer; the next was that of stern resolution. He forced down his throat a potion, from which his long-confirmed habits of sobriety would formerly have shrunk with disgust; and, under the stimulus of this excitement, compelled himself to the revolting office of swallowing a food which he felt necessary to

carry him through the task he contemplated. This task was two-fold and tremendous. First, he determined to descend to the lower decks, and see whether any convalescent, or even expiring, victim yet survived to whom he could tender his assistance; and, secondly, if all had fallen, he would essay the revolting, perhaps the impracticable office of performing their watery sepulture.

Loeffler made several attempts to descend into those close and corrupted regions ere he could summon strength of heart or nerve to enter them. A profound stillness reigned there. He passed through long rows of hammocks, either the receptacle of decaying humanity, or—as was more often the case—dispossessed of their former occupiers, who had chosen rather to breathe their last above deck. But a veil shall be drawn over this fearful scene. It is enough to say that not one living being was found amid the corrupted wrecks of mortality which tenanted the silent, heated, and pestiferous wards of the inner decks. Loeffler was ALONE in the ship! His task was then decided. He could only consign his former companions to their wide and common grave. He essayed to lift a corpse; but—sick, gasping—and completely overcome—sunk upon his very burden! It was evident he must wait until his strength were further restored; but to wait amid those heaps of decaying bodies seemed impossible.

Night sunk upon the waters. The German began to stir in the soul of Loeffler. He was alone—the stillness was so unbroken as to be startling. Perhaps within a thousand miles there might be no living human being. He felt himself a solitary, vital thing among heaps of dead whose corpses here and there, emitted the phosphoric light of putrescence. He started at every creak of the vessel, and sometimes fancied that he descried through the darkness, the well-known and re-animate face of some departed shipmate. Still he felt that his strength was returning in a manner that appeared almost miraculous; and that same night saw many an appalling wreck of humanity consigned to decent oblivion. On the evening of the following day, but one human form tenanted that deserted ship. As he saw the last of her gallant crew sink beneath the waves, Christian fell on his knees, and—well acquainted with the mother tongue of his departed companions—he took the sacred ritual of their church in his hand. The sun was setting and by its parting beams Loeffler, with steady and solemn voice—as if there were those might hear the imposing service—read aloud the burial-rites of the Church of England. Scarcely had he pronounced the concluding blessing ere the sun sunk, and the instantaneous darkness of a tropical night succeeded. The noise of the sharks dashing from the waters, to see if more victims awaited their insatiable jaws, was the only response to the obsequies of that gallant crew which had now disappeared for ever.

A few sails were still furled, and uncertain whether they were the best or the worst that might be hoisted, Loeffler determined to leave them, preferring the chance that should waft him to any port, to the prolonged imprisonment of the Invincible.

Christian sunk down, as he concluded his strange and dismal office, completely overwhelmed by physical exertions and the intensity of his hitherto-stifled feeling. But there was no hand to wipe the dew from his pale forehead; no voice to speak a word of encouragement or sympathy.

And where was it all to end? Loeffler was no seaman; and therefore, even if one hand could have steered the noble vessel, his was not that hand. Doubtless, the plague had broken out in Portugal; and, consequently, the Invincible, who had so recently sailed from her capital, would (as in all similar cases) be avoided by her sisters of the ocean.

These thoughts suggested themselves to Christian's mind, as, gradually recovering from the senselessness of exhaustion, he lay stretched on deck, listening to the scarcely perceptible noise of the water as it faintly rolled against the side of the vessel, and as softly receded; while his soul, as it recalled the form of his best-beloved on earth, rose in prayer for her and for himself.

Week after week passed away, and still the Solitary Man of the Sea was the lone occupant of the crewless and now partially

dismantled Invincible. She had been the sport of many a varying wind, at whose caprice she had performed more than one short and useless voyage round the fatal spot where she had been so long becalmed; but still, as if that were the magical, and even malevolent centre of her movements, she seldom made much way beyond it; and light deceitful breezes were constantly followed by renewed calms. A tropical equinox, was, however, drawing near, though the lone seaman was not aware of its approach. The time which he had passed in the anguish of disease, and the aberrations of delirium, had appeared to him of much greater length than its actual duration; and as no tongue survived to correct his error, he had lost all calculations of the motions of time. He listened, therefore, with an ear half fearful, half hopeful, to the risings of the blast. At first it began to whistle shrilly through the shrouds and rigging; the whistle deepened into a thundering roar, and the idle rocking of the ship was changed into the boisterous motion of a storm-beaten vessel. Loeffler, however, threw himself as usual on deck for his night's repose; and wrapped in his sea-cloak, was rocked to slumber even by the stormy lullaby of the elements.

Towards midnight the voice of the tempest began to deepen to a tone of ominous and apparently concentrating force, which might have startled the most reckless slumberer. Sheets of lightning—playing from one extremity of the sky to the other—shewed wide-spread sheets of surge running towards the ship with a fury that half-suggested the idea of malevolent volition on their part; while they dashed against the sides with a violence which seemed to drive in her timbers, and swamped the deck with foam and billows. Whether any of these storm-tossed waves made their way below—or whether the ship, so long deprived of nautical examination, had sprung a leak in the first encounter of the tempest—Loeffler could not determine; but the conviction that she was filling with water forced itself on his mind. He again cast his eyes to the north-eastern horizon, and again uttered aloud—"Farewell! farewell!"

The storm subsided, and the moon, rising over dense masses of cloud—which dispersed from the mid-heaven, now cumbered the horizon—saw our young German lying, in the sleep of confidence and exhaustion, on the still humid deck. He slumbered on, unconscious that the main-deck was now almost level with the waves—unconscious of the dark gulph preparing to receive him. The very steadiness which the waters, accumulating within her, had given to the ship, protracted the fatal repose of the sleeper. He woke not until his senses were restored, too late, by the gushing of the waters over the deck.

Down, down, a thousand fathom deep, goes the gallant and ill-fated vessel; and with her—drawn into her dark vortex—sinks her lone and unpitied inhabitant!

It was in less than a month after this event that Loeffler awoke in a spacious and beautiful apartment, the windows of which opened upon a garden of orange and lime-trees, whose sweet scent filled the air, and whose bright verdure and golden fruit showed gay and cheerful in the sunshine. Christian believed that his awakening was in Paradise; nor was the thought less easily harboured, that the object he best loved in life stood by his couch, while his head rested on her arm. "And thou too," he said confusedly—"thou too hast reached the fair land of peace, the golden of God!"—"His senses are returning—he speaks—he knows me!" exclaimed Ernestine, clasping her hands in gratitude to Heaven.

She had just received her husband from the hands of the stout captain of a Dutch galliot, whose crew had discovered and rescued the floating and senseless body of Christian on the very morning succeeding the catastrophe we have described. The humble galliot had a speedier and safer passage than the noble man of war; and, in an unusually short time, she made the harbour of Lisbon, to which port she was bound. It is needless to add that the German recovered both his health and intellects, and lived to increase the tender devotion of his bride, by his recital of the dangers and horrors of his Solitary Voyage.

OLD ZEKE DYER'S YARN.

EZEKIEL DYER, or, as he was always familiarly called, Old Zeke, was a genuine sailor of the old school, delighting in long yarns, big quids of tobacco, and a glass of grog; not that Zeke was ever known to be "the worse for liquor;" no, no, he was a staunch advocate for temperance in his own way, namely—that every man should take "jeest as much, and no more, than he can well bare; for you see," he would say, giving his duck pantaloons an expressive hitch, and rolling his huge quid to a lodgment between his gums and cheek, that it might be no impediment to his tongue, "you see, some kind o'craft is built shoal, and carries little or nothing in the shape of cargo or ballast, while another'll be deeper made, and carries a nation sight more; now, 'twould be redickilous to put as much cargo into the shoal concern, as into the deeper—jeest so it is with a man's head; you'll see one that's clear'n upshot by one glass, and another that'll keep stiff and above board with well nigh on to a quart." Here he gave his mug a complacent sip, and a wink to the bystanders, as much as to say, "You can make the application to suit yourselves."

I remember Old Zeke when I was a child, as always being seated on a rude bench near to the "Ferry House," in a little village that bore the euphonious name of Perpooduck. Always in passing back and forth, I as much expected to see Old Zeke on the bench under the sign-post, as to see the sign. It would have been no less strange if Zeke had failed to regard us school children with a most comical cast of the mouth, intended for a smile, in which the under lip did service in the shape of a dam to hold back the supply of tobacco, and a most peculiar twinkle of his small red eye, intended as approval. I know I am describing a somewhat unattractive sort of personage, and yet Old Zeke was a universal favourite. Apparently the idlest man, in an idle and decaying village, he was, in fact, the busiest man there. Never were such long yarns as Old Zeke told! Lucky for him, that his lot fell where the people had little to do but listen. Then, not a mischievous boy in the full tide of successful experiment in his mad pranks, but would drop his head and desist, did the eye of Old Zeke fall upon him. The disobedient were subdued and reformed by the admonitions of the old man. A group of boys were always collected about him to listen to his stories; but did a neighbouring door open, and the shrill, prolonged scream of a matron summon one of them home, Zeke would stop his narration, fix his eye upon the boy, and wait till he moved to go; often adding—"That's right, Bill, or Jack," as the case might be, "always mind your mother; a mother's curse, or a mother's sigh, is heavy lading, and always sure to carry down the ship;" then, perhaps, he would leave the tale unfinished to relate one more to the point.

Perpooduck stands directly opposite the flourishing little city of P., with its white houses, and many churches, its bustling quays and quiet streets, its hospitality and exclusiveness its handsome women and talented men, and many other things, as the advertisements say, too numerous to mention. Well, Perpooduck, that is, eight or ten houses, the Ferry House, a fish-house, a decayed wharf, one shop, and a meeting-house, most forlornly perched upon the top of a bleak wasted hill, about a mile, from the worshippers, and a school-house, which almost indecorously turns its back upon the opposite city, as it in contempt of its churches, school-houses, and indeed everything appertaining thereto. Well, to start again, all this at one time was the great place,—"the town;" it was first settled, the shipping was built there, sailed from there, and the fashionables lived there. But all this was years and years ago, for even the people of Perpooduck, unpromising as they might seem to be to make such an immense discovery, actually did perceive after the rising and falling of the tide twice every twenty-four hours, for about seventy years, that the water upon the opposite side was really more bold, and better adapted to the purposes of commerce, than that upon which they lived, where the flats, for something like a half a mile, are full of "honey-pots" and little breathing holes for clams. Well, no sooner were these great discoveries made, than the fate of Perpooduck was sealed. From being "the town," she became only a miserable appendage

to her more flourishing neighbour. Everything went to decay. People looked askance at those who crossed the ferry, to know if they really were "Pooduckers," for thus was the term corrupted, or whether they were attached to the Fort, a military station at the entrance of the harbour. It was a sad time for the Pooduckers, for thus we may as well designate them.

This was the state of affairs at the time of our history, for history it is. Old Zeke had belonged to the place in its palmier days, when he had been mate to "as neat a ship as ever carried sail," but times were changed, and Zeke changed with them. The shipping declined; one after another decaying from age, or perishing at sea, and Zeke, who never thought of sailing in a ship belonging to the obnoxious side of the harbour, was finally thrown out of employment, and became a village idler; tolerated by the matrons, a crony with the men, and the favourite of all the little lovers of sea-stories, and eaters of gingerbread and candy.

Often might the old man be seen about the old fish-house, helping to turn the fish upon the flakes where they dried in the sun, or standing about the neglected ship-yard, where he had seen many a good ship upon the stocks in days gone by. At such times, his rugged and good-natured face assumed a comical expression of sentiment as he looked round where the grass was springing amid chips of timber, and the rust lay heavily upon corroding bolts and chains. The sight was sure to lead him into an enumeration of all the vessels he had there seen launched, their names, owners, and whole history, down to the final catastrophe of storm and wreck. Happy the child who caught him in these moods, for Old Zeke would be sure to relate tales of peril and "hair-breadth escapes," well worth the hearing.

At one time there was an impulse given to business even in Pooduck, and a brig was actually reared on its stocks. Great was the excitement everywhere in the village, but greatest of all in the person of Old Zeke. It would seem as if the fire of his youth were renewed. He blew the smoke from his pipe with a brisker air, jerked his pantaloons twice as often, and even set his old tarpauling jauntily upon his head. He would sit for hours on a stick of timber, listening to the click-a-click of the workmen, as if the sound were the best of music, and so in fact it was to the old man, reviving the days of youth, and relieving the monotony of age.

It was a great day when the Brig Lydia was launched—great was the throng of people, and great the exultation of the Pooduckers, Old Zeke shook his head when she stuck in her course to the sea; but when she reached it, his hurrah, thrice repeated, was loud and long. Then came the rigging. Zeke was as much on the alert, as if the property had been his own, splicing ropes, uncoiling cables, and always joining the workmen in every song, whether in tune or out, for it would be a severe day when a sailor couldn't make his own tune. Well, the brig was rigged and went to sea, and Old Zeke again renewed his rounds, from the ferry-house to the fish-house, and thence to the ship-yard, where he would stand looking off upon the water with a sad and half vacant look. Then was the time for a story, and though Old Zeke would call us all sorts of land-lubber names when we gathered about him, yet there was always a twinkle of the eye, that showed that it pleased him.

I must tell one of Old Zeke's last stories, because it was the one that made the deepest impression upon my mind; first premising, that Zeke was a firm believer in omens and presentiments, in mermaids and ghosts. As to that, so were most of his hearers, very few of us having become so unfortunately wise as to lose the zest of a wild story by any unreasonable doubts as to its verity. So, then, we were all able to listen with staring eyes, "goose flesh," and hair crawling upon our heads.

OLD ZEKE'S YARN.

I was mate in the trim ship Morgianna Richard Lee, commander. The Morgianna was as nice a craft as ever dipped the water, but a doomed ship from the very first. She was owned by old —, as big a rascal as ever escaped the halter. He cheated the workmen out of nigh about half their wages by his parlaying blarney, and that too after keeping them on

half allowance of grog. No good would come of it, and so in truth she stuck when going off the stocks, which was saying as plain as dumb thing could say, that she hadn't a long cruise to run. I was right loath to go in her, any way, but Richard Lee was to be captain, and no sailor could refuse to sail under him. He was as true as steel, nobody ever knew him to flinch, let the case be what it might; and then, he carried an eye that took the soul out of the toughest seaman that ever opened a pair of clam-shells.

"Do sailors always have to open clam?" said Tommy D., who was on a visit from the country. We all laughed, and Zeke chuckled him under the chin, and said—"Yes, when he opens his lips." But, as I was saying, Cap'n Lee had a terrible eye full and black as a squall; but then he had a true sailor heart,—didn't climb into the ship through the cabin winder, but come regally up from the forecabin.

Well, we'd been cruising about the West Ingy Islands, exchanging freight and so-forth, and on our return vyge, somewhere in latitude—"Oh, never mind the latitude, nor longitude neither," cried a dozen little shrill, sharp, eager voices, all in one breath. Well, well, we was somewhere in the Gulf-Stream. It was my watch on deck, and a pale young man, that went out for his health, because he writ poetry, and set up nights makin faces at the moon, came and stuck himself down astern of me. I didn't like it jest right, for I was thinkin of Sukey Bacon, and a nice gal she was. Howsomever, I tried to look civil, and said nothing. He had sat there about half an hour, when I, tipping an eye all around the horizon, to keep a look-out for squalls, that are always keeping the deuce to pay in them seas, I see a brisk light off to the nor-east.

"What's the kick-up off there," says I, sposin' it to be some craft a-fire. With that the young man run down, and up comes Cap'n Lee, his great eyes looking as if they was'n't never made to shut, no how.

"What have we her?" says he, seizing the speakin'-trumpet, and puttin' it to his mouth, as if he fear'd nobody; for the thing was bearing down upon us, before a light wind, and we could see her spars, and sails, and her light rigging in the midst of the flame. Soon as she came in speakin' distance, Cap'n Lee hailed her.

"Ship-a-hoy, Mr. Beelzebub; where are you from, where bound, and what's your cargo?"

My hair stood right on end, and the strange sail came down upon us, and almost touched our stern. 'Twas an awful sight. I must say she'd a ben a nice model for a ship, barrin' the pattern was made by old Nick himself; but every thing was so trim and easy, and she lay down to the water so handsome, that I was sure she must some time or other have been a sailor hull, to do the thing so handsomely. To be sure, where her hull touched the water, there was a terrible frizzlin'. Well, down she came alongside, and, sure enough, we could see old Nick himself standing to the helm, like any Cap'n; and there chained fast, with a red-hot chain, stood old —, the owner of the Morgianna. He gin us a terrible look as he went by, and lifted up both hands in a way that was piteous to behold. But I really believe his mouth was sewed up, or he would have spoke.

Cap'n Lee laid his hand, solemn-like, upon my shoulder, "Zeke," says he, "I believe Satan has got his due," and he took out the log-book, and sat down the circumstance, and the latitude and longitude, day of the month, week, and hour of the night. Well, we had a rough time of it after this, squalls and gales; was blown off two or three times. After a time we got in, and the first news we heard was, that old — was dead. Cap'n Lee looked at me, and I looked at him. We found out jest the time the old sinner died, and sure enough, 'twas jest the same hour and minnit that we saw him off there, aboard that blazing craft, smokin' with brimstone.

So much for the story of Zeke. The old man got up and walked away, for the recital had wrought powerfully upon his own imagination, and we children stood huddled together with pale faces; and little Tommy D. had grasped my arm so tightly, as to leave black and blue spots for a long time afterwards.

A FISHING SMACK RUN DOWN AT SEA.

It was three days from our sailing for the North Sea, with the wind foul, and the weather thick and squally, that, being then off Harwich, it moderated, when we made moresail, and stood on; and next morning in the cold, miserable, drenching haze of an October daybreak, we passed through a fleet of fishing-boats at anchor. "At anchor," thought I, "and in the middle of the sea!" but so it was, all with their tiny cabooses smoking cheerily, and a solitary figure, as broad as it was long, stiffly walking to and fro on the confined decks of the little vessels. It was now that I knew the value of the saying, "a fisherman's walk, two steps and overboard." With regard to these same fishermen, I cannot convey a better notion of them than by describing one of the two north sea pilots whom we had on board. This pilot was a tall, raw-boned subject, about six feet or so, with a blue face (I could not call it red) and a hawk's-bill nose of the colour of bronze. His head was defended from the weather by what is technically called a south-west—pronounced a sow-west—cap, which is in shape like the *thatch* of a dustman, composed of canvass, well tarred, with no snout, but having a long flap hanging down the back, to carry the rain over the cape of the jacket. His chin was embedded in a red comforter that rose to his ears. His trunk was first of all cased in a shirt of worsted stocking-net; over this he had a coarse linen shirt, then a thick cloth waistcoat; a shag jacket was the next layer, and over that was rigged the large cumbersome pea-jacket, reaching to his knees. As for his lower spars, the rig was still more peculiar; first of all, he had on a pair of most comfortable woollen stockings, what we call fleecy hosiery—and the *beauties* are peculiarly nice in this respect—then a pair of strong fearnought trousers; over these again are drawn up another pair of stockings, thick, coarse, rig-and-furrow, as we call them in Scotland, and above all these were drawn a pair of long, well-greased, and *liquored* boots, reaching half-way up the thigh, and altogether impervious to wet. However comfortable this *costume* may be in bad weather, on board, it is clear enough that any culprit so swathed, would stand a poor chance of being saved, were he to fall over-board. The wind now veered round and round, and baffled and checked us off, so that it was the sixth night after we had taken our departure from Harwich before we saw Heligoland Light. We then bore away for Cuxhaven, and I now knew, for the first time, that we had a government emissary of some kind or another on board, although he had hitherto confined himself strictly to the captain's cabin.

All at once it came on to blow from the north-east, and we were again driven back among the English fishing-boats. The weather was thick as butter-milk, so we had to keep the bell constantly ringing, as we could not see the jib-boom end from the fore-castle. Every now and then we heard a small, hard, clanking tinkle, from the fishing-boats, as if an old pot had been struck instead of a bell, and a faint holla of "fishing-smack," as we shot past them in the fog, while we could scarcely see the vessels at all. The morning after this particular time to which I allude, was darker than any which had gone before it; absolutely you could not see the breadth of the ship from you; and as we had not taken the sun for five days, we had to grope our way almost entirely by the lead. I had the forenoon watch, during the whole of which we were amongst a little fleet of fishing-boats, although we could scarcely see them, but being unwilling to lose ground by lying-to, we fired a gun every half-hour, to give the small craft notice of our vicinity, that they might keep their bells a-going. Every three or four minutes the marine drum-boy, or some amateur performer—for most sailors would give a glass of grog any day to be allowed to beat a drum for five minutes, on end—beat a short roll, and as often as we drove along under a reefed fore-sail, and close-reefed top-sail, we could hear the answering tinkle before we saw the craft from which it proceeded; and when we did perceive her, as we flew across her stern, we could only see it, and her mast, and one or two well-swathed hardy fishermen, the whole of the little vessel forward being hid in a cloud.

I had been invited this day to dine with the captain, Mr.

Splinter, the first lieutenant, being also one of the party. The cloth had been withdrawn, and we had all had a glass or two of wine apiece, when the fog settled down so thickly, although it was not more than five o'clock in the afternoon, that the captain desired the lamp might be lit. It was done, and I was remarking the contrast between the dull, dusky, brown light, or rather the palpable London fog that came through the skylight, and the bright yellow sparkle of the lamp, when the second lieutenant, Mr. Treenail, came down the ladder. We have shoaled our water to five fathoms, sir,—shells and stones. Here, Wilson, bring in the lead. The leadman in his pea-jacket and shag-trousers, with the rain-drop hanging to his nose, and a large knot in his cheek from a junk of tobacco therein stowed, with pale, wet visage, and whiskers sparkling with moisture, while his long black hair hung damp and lank over his fine forehead, and the stand-up cape of his coat immediately presented himself at the door, with the lead in his claws—an octagonal-shaped cone, like the weight of a window-sash, about eighteen inches long, and two inches diameter at the bottom, tapering away nearly to a point at the top, where it was flattened and a hole pierced for the line to be fastened to. At the lower end—the butt-end as I would say—there was a hollow scooped out, and filled with grease, so that when the lead was cast, the quality of the soil, sand, or shells, or mud, that came up adhering to this lard, indicated, along with the depth of water, our situation in the North Sea; and by this, indeed, we guided our course in the absence of all opportunity of ascertaining our position by observations of the sun.

The captain consulted the chart—"Sand and shells? why you should have deeper water, Mr. Treenail. Any of the fishing-boats near you?"

"Not at present, sir; but we cannot be far off some of them."

"Well, let me know when you come near any of them."

A little after this, as became my situation, I rose and made my bow, and went on deck. By this time the night had fallen, and it was thicker than ever, so that standing beside the man at the wheel, you could not see farther forward than the booms; yet it was not dark either—that is, it was moonlight, so that the haze thick as it was, had that silver gauze-like appearance, as if it had been luminous in itself, that cannot be described to any one who has not seen it. The gun had been fired just as I came on deck, but no responding tinkle gave notice of any vessel being in the neighbourhood. Ten minutes, it may have been a quarter of an hour, when a short roll of the drum was beaten from the fore-castle, where I was standing. At the moment I thought I heard a halloo, but I could not be sure. Presently I saw a small light, with a misty halo surrounding it, just under the bowsprit.

"Port your helm," sung out the boatswain, "port your helm, or we shall be over a fishing-boat!"

A cry arose from beneath; a black object was for an instant distinguishable, and the next moment a crash was heard. The spritsail-yard rattled, and broke sharp off at the point where it crossed the bowsprit; and a heavy smashing thump against our bows told, in fearful language, that we had run her down. Three of the men and a boy hung on the rigging of the bowsprit, and were brought safely on board; but two poor fellows perished with their boat. It appeared, that they had broken their bell, and although they saw us coming, they had no better means than shouting, and showing a light, to advertise us of their vicinity.

THE SEA.

BEHOLD the ocean in its might!

Is there a nobler, finer sight?

What in all nature is so free,

As the glorious bright blue sea;

When in a storm its billows rise,

Foaming and dashing towards the skies,

Or when again, 'till still as sleep,

The bright moon shining o'er the deep,

Presents a sight so grand—so free,

Each wave exclaims "Sweet Liberty!"

LOSS OF THE DODDINGTON.

THE Doddington, East Indiaman commanded by Captain Samson, sailed from the Downs, April 23rd, 1755, in company with the Pelham, the Houghton, the Edgecourt, and the Streatham all in the service of the East India Company. They cleared the channel in about a week from their departure, during which Captain Samson discovered that his ship sailed faster than any of the others; and, unwilling to lose the superiority by keeping company with them, he stood on alone, and soon lost sight of them.

On the 20th of May, he made Bonavista, one of the Cape de Verd Islands, in 16° of north lat., and on the 21st got into

Porto Pryor (Praya) Bay. It now appeared that either he had been mistaken in supposing that his ship outsailed the rest of the fleet, or that he had lost time by the course he had been steering, for the Pelham and the Streatham had reached the bay two days before him. The Houghton arrived soon afterwards; but the Edgecourt did not come in until the 26th.

On the 27th, the Doddington, Houghton, Streatham, and Pelham, having taken in their supply of water, proceeded on their voyage in company, leaving the Edgecourt in the road. They continued together until the following day, when Captain Samson thinking their course far too easterly, ordered the Doddington to be kept south; and after a fine run of seven weeks, she made the land of the Cape of Good Hope.

LOSS OF THE DODDINGTON, CAPTAIN SAMSON, JULY 17, 1755.

On the 5th of July, their departure was taken from Cape Needles, just after doubling the Cape of Good Hope, and the vessel having steered eastward about twenty-four hours, between lat. 35° 30' and 36°, the captain ordered her to be kept E.N.E. In this course she continued till about a quarter before one on the morning of Thursday the 17th of July, when she struck.

The officer from whose journal were taken the materials for this narrative, was at the time of the accident asleep in his cabin; but being suddenly awakened by the shock, he started up in the utmost consternation, and hurried upon deck, where all the terrors of his situation rushed upon him at once. The men were dashed overboard by the violence of the sea rolling over them, and the ship breaking in pieces at every

stroke of the surge. On crawling over to the larboard side of the deck, which lay highest out of the water, he found the captain, who said that in a very little time they must all perish; in a few minutes a sea parted them, and he saw him no more. He managed, by dint of great exertion, to get back to the quarter-deck, though he was very much bruised, and had the small bone of his left arm broken; the other portion of the ship being under water, and completely shattered to pieces.

In this dreadful situation, when every minute he expected would be the last of all that yet remained, he heard the welcome cry of "land!" and looked eagerly about him; but notwithstanding he saw something which he supposed had been taken for land, he believed it was only the surge of the sea on the other side of the breakers. At the same instant, the sea

broke over him with such violence, that it not only forced him from his hold, but stunned him by a violent blow on the eye. The effect of the blow was such, that he lay insensible till after daylight: but he still continued on the wreck, and on recovering found himself fixed to the plank by a nail that had been forced into his shoulder. Besides the pain of his wounds and bruises, he was so benumbed with cold, that he could scarcely move either hand or foot. He now observed that several of the crew had been enabled to get on the rocks which were near, and he called out to them as loud as he could; but they were not able to give him any assistance, so that a considerable time elapsed before he was capable of disengaging himself from the wreck and getting ashore.

This shore was a barren uninhabited rock, situate in 33° 44'

south lat., and distant about 250 leagues east of the Cape of Good Hope; and upon it were assembled Mr. Evan Jones, the chief mate; Mr. John Collet, Mr. William Webb, and Mr. S. Powell, second, third, and fifth mates; Richard Topping, carpenter; Neil Bothwell and Nathaniel Chisholm, quarter-masters; Daniel Ladova, captain's steward; Henry Sharp, surgeon's servant; Thomas Arnold, a black, and John McDowal, servants to the captain; Robert Beaseley, John Ding, Gilbert Cain, Terence Mole, Jonas Rosenbury, John Glass, Matthew Taylor, and Hendrick Scanty, seamen; Mr. John Yets, midshipman; and John Lister, Ralph Smith, and Edward Dysoy, mattresses. These persons, in number twenty-three, were the only survivors of 220 that were on board when the ship struck.

Their first care was to search for some covering among the

things that had been thrown on the rocks from the wreck, and in this they succeeded almost beyond their expectations; but the attainment of fire, which was their next necessity, was not easily accomplished. Some of them made an unsuccessful attempt to kindle two pieces of wood by rubbing them together, while others diligently searched the rocks in anxious endeavours to find something that might act as a substitute for flint and steel. After some time, they found a box containing two gun-flints and a broken file, which was a most joyful acquisition, though they were still destitute of anything that would kindle from a spark, and until a substitute for tinder could be found, the flint and steel were useless. A further search became therefore absolutely necessary, when by dint of great perseverance, they discovered a cask of gunpowder, which, to

their great disappointment, proved to be wet; but on a more narrow inspection, they found a small quantity at the bottom that had suffered no damage: and some of this bruised on a linen rag, served them very well for tinder.

A fire was soon made, and the bruised and wounded collected round it, while the others went in search of further necessities, without which the rock would have afforded them but a very short respite from destruction. A box of wax candles and a case of brandy were the first brought in, and soon afterwards another party returned, stating that they had discovered a cask almost full of fresh water, which was of greater consequence than the spirits. Mr. Jones brought in several pieces of salt pork; and others arrived driving seven hogs before them, which had been taken on

shore alive. They could also see, at some distance, several casks of water, flour, and beer; but it was not then possible to get them over the rocks.

It now became necessary to provide some shelter for the approaching night; all hands were therefore employed in making a tent of some canvass that had been cast ashore; but the quantity was so small that the tent would not hold them all, and for fear of being overflowed, they were obliged to erect it on the highest part of the island, which was covered with the dung of a water-fowl, a large species of gannet, that much frequented it. They had passed the day without food, and were now deprived of rest during the night; for not only had they sunk a foot deep into the dung, but the wind was so tempestuous that their fire was scattered, and before they could collect the embers, the rain extinguished them. On renewing their search in the morning, they found, to their great mortification, that all the casks which they had seen the preceding night, with the exception of one of flour, and another of beer, had been staved against the rocks. These, however, they secured; but the tide flowing up soon after, interrupted their proceedings; they were therefore called together to eat their first meal, and some pork was boiled for their dinner.

Sitting down thus desolate and forlorn to a repast which they were wont to share in the convivial cheerfulness which is inspired by the consciousness of plenty, they were so struck by the sense of their present condition, that they burst into passionate exclamations, and wringing their hands, looked around them in all the wildness of despair. As their thoughts amidst such tumultuous emotions, naturally hurried from one subject to another, in quest of some source of comfort, it was suggested by one of them as a ground of hope for them all, that as the carpenter was among them, he might build a strong sloop, provided he could obtain some tools and materials. All attention was immediately directed towards the carpenter, who declared his belief that if tools and materials could be found, he should be able to build a sloop that would carry them to a port of safety; and though at that time they entertained no prospect of procuring either, nor of being able to victual such a vessel, had it been built, yet no sooner had they rested their deliverance but one remove beyond total impossibility, than they seemed to think it neither improbable nor difficult; they began to eat without repining, the boat engrossed their whole conversation, and they not only debated on her size and rigging, but to what port they should steer, whether to the Cape or De Lagoa.

As soon as their repast was finished, some remained to mind the tent, while the rest eagerly dispersed in search of materials for their projected sloop, but they did not succeed in finding any that day.

On Saturday, the 19th, they secured four butts of water, one cask of flour, one hoghead of brandy, and a small boat, which had been thrown up by the tide in a shattered condition, but no tools were found with the exception of a scraper. Next day they had the good fortune to discover a hamper containing files, gimlets, sail-needles, and an azimuth compass-card; they also found two quadrants, a carpenter's adze, a chisel, three sword blades, and a chest of treasure. As a prodigious surf was rolling in all the day before, it was reasonable to expect that something would be thrown up, and search was consequently made early in the morning. At ten o'clock, all assembled to prayers, and not going out again till after dinner they found most of the government and company's packets, which they carefully dried and laid aside.

While searching about the beach, they found the body of a female, which they recognized to be that of Mrs. Collet, the wife of the second mate, who was then himself at a little distance; and knowing the mutual affection which subsisted between this couple, Mr. Jones, the chief mate, walked up to Mr. Collet, and, engaging him in conversation, took him to the other side of the rock while his companions dug a grave, to which they committed the body after reading the burial service from a French prayer-book which had been washed ashore with the deceased.

Having thus paid the last tribute to one of their unfortunate number, and concealed from their unhappy messmate a sight

which would have sensibly, if not fatally, affected him, they found means in a few days to gradually disclose to him what they had done, and restore to him the wedding ring which they had taken from her finger. He received it with great emotion, and afterwards spent many days in raising a monument over her grave, by piling up all the square stones he could find, and fixing an elm plank at the top, inscribed with her name, her age, the time of her death, and some account of the fatal accident by which it was occasioned.

On Monday, the 20th of July, they recovered some more water and pork, also some timber-plank, canvass, and cordage, which they joyfully secured for the projected boat, though still in want of many implements indispensable for the carpenter to proceed with his work. He had just completed a saw, though he had neither hammer nor nails; it happened, however, that one of the seamen, Hendrick Scanty, a native of Sweden, and who had been a smith by profession, having picked up an old pair of bellows, told his companions that by the aid of a forge, which they could build by his directions, he could furnish the carpenter with all necessary tools as well as nails, as plenty of iron could be obtained by burning it out of pieces of the wreck driven ashore. The smith began immediately to mend the bellows, and the three following days were occupied in building a tent and forge, and in collecting timber for the use of the carpenter, who was also employed in preparing the few tools already in his possession, that the boat might be begun as soon as possible.

On Thursday, the 24th, the carpenter, with the assistance of Chisholm, the quarter-master, began to work on the keel of the vessel, which it was determined should be a sloop thirty feet in length, by twelve in width. The smith also finished his forge, and laid in a quantity of fir for fuel; and he and the carpenter continued thenceforward to work with indefatigable diligence, except when prevented by the weather. The smith having, fortunately, found the ring and nut of a bower-anchor, which served him for an anvil, supplied chisels, axes, hammers, and nails, as they were required, and the carpenter used them with great dexterity and despatch until the 31st of the month, when he fell sick.

The lives of the company being so dependent on the carpenter's exertions, they watched his recovery with the utmost impatience and anxiety, and to their unspeakable joy he had so far recovered on the 2nd of August, as to be able to resume his work. In the meantime the stores which had been saved from the wreck, had become so nearly exhausted, that it was necessary to restrict each man to an allowance of two ounces of bread a-day, as it was resolved to keep the salt-pork to victual the new vessel which was preparing. Their water also fell so short, that they were obliged to have recourse to several expedients. In digging a well, they were disappointed in their hopes of finding a spring. They succeeded in knocking down several of the gannets that settled on the top of the rock; their flesh, however, was of a rank, fishy taste, and as black as a sloe. As another expedient, they made a catamaran, or float, on which they proposed to go out fishing with such hooks and lines as had come ashore. They also killed several seals, but all who partook of them were seized with sickness.

When driven to very great necessity, they killed a hog; but they were generally successful in fishing, and sometimes sent out two rafts at a time. On one occasion, Mr. Collet and Mr. Yets, the midshipman, while engaged in this manner, were driven nearly out to sea, where they must inevitably have perished. They had been out fishing on the 20th of August, until about four in the afternoon, when they weighed and endeavoured to return; but the wind suddenly freshening from the westward, they found that instead of gaining a head, they drove off very fast. Their companions on shore, though they saw their distress, knew not how to assist them; they, however, sent out another float with kellicks and ropes, which they hoped would enable them to ride till the wind moderated, but the surf was so great that three times the raft overset, and the men were obliged to swim back. All this time they saw their friends driving out to sea, and were just resigning them to certain destruction, when the carpenter sent word that he could make the little boat tight enough to float, with one man baling,

This inspired new hopes and gave them fresh courage, and every one was ready to venture to assist their comrades. The carpenter despatched the boat in a quarter of an hour, and she soon overtook the float and received the two people on board. This additional burden caused the water to gain so fast on the boat, that notwithstanding the utmost exertions, she was so full when they came in, that in a few minutes more the boat must have sunk, and all have perished.

This accident made them afraid to venture any more upon a raft, and the carpenter set to work upon the boat and put her into complete repair. Their supplies, both from sea and shore, became now very precarious; the gannets would sometimes settle in amazing numbers, like a vast cloud, and then totally disappear for several days together, which made them very desirous of finding some way to preserve them from putrefaction, so that they might store up the surplus of a successful day to serve when they could catch neither gannets nor fish. They made several unsuccessful attempts to cure both fish and fowl, by smoking; they then tried to make salt, and which very nearly proved fatal to them all. The smith had made a copper vessel for the experiment, upon which they commenced operations, ignorant of the fact that in making salt they were making verdigris, a virulent poison. They, however, succeeded in making salt, which was so intolerably offensive to the taste, from the admixture of the poison, that they threw it away; some few, however, who ventured to swallow it were seized with violent colic, retchings, and cold sweat, which sufficiently convinced them of the danger they had escaped.

On September 3rd, having been nearly seven weeks upon the rock, during which time they had frequently seen a great smoke upon the main land, these unfortunate people determined to send a boat thither to see what assistance could be obtained. For this purpose Taylor, Bothwell, and Rosenbury, set out on a voyage of discovery, the people making a great fire at night on the highest part of the rock, as a signal to them.

During the absence of these adventurers, they were thrown into the greatest possible consternation by an accident which the carpenter met with. He cut his leg with the adze so severely, that there was great danger of his bleeding to death, particularly as they had no surgeon among them, nor anything to apply to the wound. With much difficulty the blood was at length staunch, and the wound healed without the intervention of any bad symptom.

The boat was impatiently expected on Saturday, the 6th of September, as there had been above forty hours of fair weather; but nothing being seen of her by noon, the people became very uneasy. Just as they were sitting down to dinner, they were agreeably surprised by two of their own number, who came running over the rocks to announce her approach. At this joyful intelligence they simultaneously started up and ran to the beach, in the confident hope that they had succeeded in their enterprise; but they soon discovered that the boat was rowed by only one man, who plied both oars, and consequently concluded that the other two had been lost or detained. Presently, however, another was seen to rise from the bottom of the boat, and their speed was a little increased.

Dinner was now entirely forgot, and all was impatience for the arrival of their companions, which took place about an hour afterwards. The two men were Rosenbury and Taylor, who, the instant they had landed, threw themselves on the ground, and in fervent ejaculations returned thanks to the Almighty for his providential care in bringing them back to the rock, which, barren and desolate as it was, they considered an asylum from a more distressing situation. They exerted their last effort to bring the boat to the shore, when their strength forsook them at once, and they were unable to rise from the ground without assistance.

Every one was anxious to procure them refreshment as soon as they were brought into the tent, as they found the boat destitute both of provisions and water. Some fish was hastily cooked, and as soon as they had had their meal, they fell into a sound sleep, which, to the credit of their messmates, they did not disturb, although their curiosity must have been great, to hear a relation of their adventures, upon which their own deliverance so much depended.

The account which they gave, when they awoke, was to the following purport.

"About three o'clock on the day of their departure, they got round a point about six leagues to the eastward of the rock, which, as they approached, had the appearance of a double point. This gave them some encouragement to hope that they should find a harbour between the two points; but they were disappointed, as a high surf ran all along the coast. About five o'clock they ventured to pull into the shore, but the moment they got into the surf the boat was upset, by which Bothwell was unfortunately drowned. They reached the shore in a very exhausted condition, being destitute of everything but a small keg of brandy. On recovering a little, they crawled along the shore in search of the boat, as they had no other shelter from wild beasts, which might be expected to come abroad in the night, and after some search found her; but they were too weak to get her up, and were obliged to lie down on the sand with no other covering than the branches of a tree. In the morning they again searched for the boat, which the surf had driven from the place where they left her, and in walking along the coast saw a man who, on their approach, ran away into the woods. Soon afterwards they discovered their unfortunate companion, Bothwell, who had been dragged some distance up the sand and mangled by some wild beast; which so terrified them, that rather than undergo the dread of passing another night on shore, they resolved to return immediately.

"They were, however, prevented, by a fresh gale from the west, that, before they could put back, overset the boat and drove them along the shore; but once more, after much struggling and swimming, they got safe on land, exhausted by their exertions, and faint with hunger. Soon afterwards they met with a fruit resembling an apple, which they eagerly devoured without knowing either its name or quality; but, fortunately, it did them no harm: and, somewhat refreshed by their repast, they managed to get the boat on shore, where, turning it keel upwards, they crept under it to sleep.

"Wearied by their late fatigues, they slept till the dawn of day next morning, when peeping out from under the edge of the boat, they saw the feet of several animals, which, by their claws, they supposed to be tigers, and which induced them to remain until the day had well broke, whence, once more looking out, they saw the feet of a man. On this discovery, they crept from below, to the great amazement of a poor savage, and two other men and a boy, who were at some distance. When they had all collected, and were a little recovered from their surprise, the savages made signs to the sailors to go away, which they endeavoured to do, though they began to move very slowly; but they had not got far from the boat when a considerable number of the natives ran down upon them with their lances. Rosenbury, as he went along, had picked up the mast of the boat, and a pistol which had been washed ashore, and thus armed, he imprudently turned round upon the natives, and, exerting all his strength, advanced towards them in a threatening attitude, supposing they would have been frightened, and retreat into the woods. It happened, however, that he was mistaken, for, instead of running away, they began to whet their lances. Taylor thought it was now time to try what could be done by supplication, and, throwing himself upon his knees, piteously cried for mercy, while Rosenbury took refuge in the water. The savages commenced stripping Taylor, who quietly permitted them to take his shoes and his shirt; but when they attempted to take his trousers, he entreated them, by gestures, not to leave him quite naked, on which they thought fit to desist. They then made signs to Rosenbury, who was all this time swimming about in the sea, to come to them, and on his refusal, from the fear of their killing him, they pointed to Taylor, to intimate that he had not been killed. On his coming up, they offered him no violence, but only held the boat's mast and the pistol to him, as deriding his attempt to frighten them. The clothes they seemed very much pleased with, and divided them amongst themselves as far as they would go; then beginning to rifle the boat, they took away all the rope they could find, the hook by which the rudder hung to the stern-post, and then began to knock the stern to pieces for the iron which they saw about it. With the exception of

absolute destruction to these hapless mariners, this was the greatest calamity they could sustain; and, rough as they were they burst into tears, and entreated the savages with such agony of distress to spare their only chance of regaining their friends, that they suffered the boat to remain without further injury.

Encouraged by such an appearance of kindness, and impelled by hunger, they solicited for something to eat, with which request the natives complied; and having brought them some roots, again made signs for their departure. With the assistance of the savages, they once more launched the boat and got into it; but the wind blowing strong from the west, they could not put off. The natives therefore consented to their remaining another night under the boat; and the following morning proving fine, with an easterly wind, they launched the boat for the third time, and returned to their companions on the rock."

The carpenter and the smith continued with praiseworthy assiduity at work upon the vessel till Sunday, the 29th of September, the people, in the meantime, being busy in securing such stores as were from time to time thrown up from the wreck. They also recovered some casks of fresh water which they were solicitous to keep for sea store, as their escape depended as much upon fresh water, as upon the vessel which was to carry them.

After prayers, which was a duty regularly and publicly performed every Sunday, the officers discovered that the chest of treasure had been broken open, and the greater part of it carried away. This may appear strange, that those whom their danger had made religious, should at the same time be guilty of theft, and that, too, in a situation in which the possession of gold could not contribute in the slightest degree to their subsistence or their means of escape; but it should be remembered that on a ship being lost, all the sailors lose their wages, and whatever is cast ashore is considered by the sailors as common property. The men, therefore, who ventured secretly to take what they deemed their share of this treasure, were not conscious of acting dishonestly, but only designed to secure what they feared their officers would monopolise, and thus prevent disputes, which, in their circumstances, might terminate fatally. The officers finding that none would own knowing anything about it, proposed to write the form of an oath to be administered separately to each individual, themselves taking it first. But to this the majority immediately objected; for though they might not suppose themselves guilty of a crime by taking the treasure, they were aware that it would not only be immoral but impious to swear that they had not taken it; and as the minority were not in a condition to enforce their proposal, the matter was suffered to rest without further inquiry.

On the 6th of October they found a fowling-piece, which was a valuable acquisition, although the barrel was much bent; but this was soon made serviceable by the carpenter, and used with great success for shooting the birds, which before they could only take by knocking them down by a stick.

On the 11th of October, the gannets, which had for some time forsaken the rock, were observed hovering around in great numbers, which made them hope that they would settle there and lay their eggs, in which they were not disappointed. For nearly three months they had a constant and plentiful supply, and then the laying season terminated.

On the 20th of October, Mr. Collet, Mr. Webb, and two others, once more ventured out on the raft; but the wind springing up fresh, the raft broke loose, and they were driven to the other side of the rock, where they were obliged to remain all night among the seals, without any shelter or refreshment. The next day at noon the wind abated when the boat ventured out, and brought them off, leaving, the boat behind.

Amidst all their privations, from the scanty supply of provisions and water, their health remained in a great measure entire; and on the 15th of February, 1756, they launched their little vessel, which they named the "Happy Deliverance." Next day their little pittance of stores was put on board; and on the 18th they left the rock, where they had lived just seven months, and which, at parting, they called Bird Island.

Their provisions consisted of six casks of water, two live hogs, a firkin of butter, about four pounds of biscuit for each man, and ten days' subsistence of salt provisions in bad condition, at the rate of two ounces a-day per man.

They weighed anchor at one in the afternoon, and set sail with a light breeze from the west, for the river St. Lucia, on the coast of Natal; but misfortune still seemed to attend them. For five days they met with nothing but adversity, and during twenty-five in succession, their provisions were almost exhausted, and rapid currents carrying them so far out of their course, that a favourable wind was but little service to them. Despairing at last of being able to make the river St. Lucia, they resolved to change their course for the Cape of Good Hope, and, accordingly, on the 2nd of March, they bore away for the west.

The three following days the wind increased to such prodigious violence that it blew a furious storm, and their frail bark shipped such heavy seas, that they expected each wave, as it rolled over, to dash her to pieces. On the morning of the fifth, however, fine weather ensued, and on the seventh it was a perfect calm, when they cast anchor about three-quarters of a mile from a shore where they observed several natives coming down from the mountains towards them.

Encouraged by this sight they attempted to land, and Arnold, the black servant, was sent on shore, accompanied by two seamen, with a string of amber beads, as a present to the Indians. After a mutual interchange of civilities he obtained some Indian corn, fruit, and water, in a calabash, with a promise of sheep, oxen, and other necessities; but the wind continuing westerly, the boat returned with a supply only sufficient for four days.

The vessel coasted along until the 10th of March, when the wind changed to the east, and they cast anchor in twelve fathoms, about half a mile from the shore. Several Indians came down and invited them to land, but they considered it impracticable; and though they were tempted by the appearance of goats and bullocks, which were daily driven before their eyes to meet them on shore, they were obliged to endure the tantalizing spectacle till the 14th when two men were sent off in the boat, and succeeded with great difficulty in reaching the shore. The wind fell the same evening, and seemed tending towards the west, which made them apprehensive that they should not be able to ride at anchor all night. Signals were therefore made, by showing lights, to induce their two comrades on shore to come down to the beach, and get off before the surf rose too high. No intelligence of them was obtained until six in the morning, when it was too late to get them on board; trusting, therefore to find some more favourable place, they made signals for the men to proceed along the shore, while the vessel followed in the same direction. They had not advanced more than two leagues, when the vessel, working close to the shore, anchored in five fathoms water.

A boat was sent out with four men, two of whom were employed in recovering those ashore, and the other two in sounding the mouth of a river, where they were in great hopes of finding sufficient water for the vessel to pass over the bar. About three hours afterwards, the two men on shore were seen with the four belonging to the boat, but they were afraid to embark on account of the height of the surf.

All night on board was spent in a state of the greatest uneasiness. At break of day they weighed anchor and stood still nearer the shore; but observing their companions were yet afraid to venture, they gave them to understand that if they did not immediately return, or show the possibility of entering the river, they should be obliged to abandon them for want of provisions. These menaces produced the desired effect, and two of them braved the violence of the surf, and gained the bark in safety.

They weighed anchor at eleven o'clock the following forenoon, and at two o'clock in the afternoon, crossed the bar, and cast anchor in two-and-a-half fathoms.

Their first consideration was, how to traffic for provisions and other necessities; but this consultation did not last long, as the whole stock they had to offer in exchange consisted of brass buttons, nails, iron bolts, and copper hoops, of which the

natives seemed extremely fond. These they carried on shore, and showing them to the natives, imitated the bleating of sheep and lowing of cattle, which the Indians quickly comprehended, and brought two small oxen, which were purchased for a piece of copper and three or four brass buttons. They also sold at the same time a quantity of grain, resembling Guinea corn, which they hoped to preserve; but to their great disappointment, it became mouldy in the course of three days.

They remained in this place for about fifteen days, during which they frequently penetrated for ten or twelve miles up the country. The inhabitants always testified great friendship for the English, often ate with them, and seemed to enjoy the European method of preparing food. Hunting was their principal occupation, their only weapons being lances, and two short clubs with a large knob at the end. They wore few clothes during the daytime, but at night covered themselves with a well dried bullock's hide, which they had the art of rendering very pliant; they also wore pieces of skin round the ankles, knees, and arms.

The activity and address of these men in throwing the spear, was so great, that at the distance of thirty or forty yards, they could strike at an ear of corn set up as a mark. They also practised another exercise, which consisted in dancing and leaping in a circle, uttering the most discordant noises, and all the while actively wielding their lances.

The crew were extremely surprised to find among these savages, who were quite black and had woolly hair, a youth about twelve or fourteen years of age, perfectly white, with European features, fine light hair, and altogether different from the natives of the country. He was treated as a servant, and the savages sent him upon their errands, but at the same time they appeared to live in great friendship with each other.

The sailors having thus, by the intervention of Divine Providence, collected a considerable quantity of provisions, they weighed anchor at five in the morning of the 29th, and stood over the bar. Here there was a dangerous surf running, which almost stove the vessel, and their being becalmed, put them in great hazard, of being shipwrecked on the rocks. At last they succeeded in getting over the bar, and sailed for the river St. Lucia, where they arrived on the sixth of April, without any remarkable occurrence.

Having landed, they signified to the natives their wish to trade with them, but the Indians intimated that they wanted nothing but small beads; however, on being shown some copper buttons, they brought bullocks, fowls, potatoes, gourds, and other provisions. No bullocks could be purchased, for the natives wanted copper rings, large enough for collars, in exchange. Of the fowls, they gave five or six for a small piece of linen, and the other things in proportion.

The English remained here three weeks, being engaged in traversing the country, and endeavouring to obtain such articles as they wanted. The Indians set a great value on copper, and on being shown the handle of an old box, offered two bullocks for it, which were immediately accepted, and driven on board the vessel. In manners the natives appeared proud and haughty, possessing none of those endearing qualities which had characterised those whom the English had lately left. They differed also in the manner of preparing their food, which here was done with greater neatness; they were also more cleanly in their persons, and bathed every morning, apparently as an act of devotion which was never observed among the others. They wore no kind of ornament, but their chief pride seemed to be in keeping their hair in great order. Of their women they appeared to be jealous, and kept a strict watch over them.

On the 18th of May, a favourable breeze springing up from the west, attended with good weather, they weighed anchor at seven in the morning, and set sail. About a quarter of an hour before high water, when almost on a bar which crossed the river, some of them were imprudent enough to lower the sail and cast anchor on a sand bank. Nine men then got into the boat, and rowed towards the shore, declaring they would rather run any risk among the savages, than be drowned to a certainty in endeavouring to cross the bar. Those on board hesitated whether to attempt the passage or return; but the

wind and tide driving the vessel out of the river, made them apprehensive that if the tide fell, she would strike the bar, and be dashed to pieces. At length they weighed the anchor trusting that they should be able to save the vessel and preserve their lives, but were very soon carried among the breakers, when they were in the most alarming situation, there being only eight feet of water, while the vessel drew five. After being in this situation for more than half an hour, in momentary expectation of instant destruction, the surface of the sea suddenly became as smooth as glass, and they left the river St. Lucia in safety. Those who had gone ashore in the boat, and most of whom had nothing on but a shirt and a pair of trousers, followed along the coast on foot.

On the 20th of May, the Happy Deliverance safely arrived in Lagoa Bay, where they cast anchor in nine fathoms water. There they found the Rose, a snow, commanded by Captain Chandler, in which some of them requested a passage to Bombay. Having remained in this place about three weeks, they were joined by three of their comrades who had gone ashore at St. Lucia, and who arrived in a canoe, stating that their six companions were on the other side of Lagoa Bay waiting for an opportunity to come over.

The officers judging themselves now in the most convenient situation for securing the treasure, packets, and other effects of the Doddington, sent four or five men on shore, and two on board the snow. Mr. Jones then came to the vessel in Captain Chandler's pinnace, well manned and armed, and carried off to the snow all the money, plate, and letters he could find in her, in order that they might be given up on her arrival at Madras. Those who remained in the vessel being apprehensive of a second visit, which might have proved very disagreeable, took an opportunity of escaping during the night with the vessel.

On the 25th of May, the Rose sailed for Madagascar, for the purpose of completing her cargo, as, in consequence of some misunderstanding with the natives, they had driven away above a hundred head of cattle after having sold them. In the afternoon a vessel came in sight, which, on approaching, proved to be the bark. The carpenter and one of the seamen coming on board the snow, persuaded Captain Chandler to purchase their little vessel for five hundred rupees, and he gave his note for that sum. They told him that they had recovered the six men who had gone ashore at St. Lucia; but three of them were already dead, and two extremely ill from the great fatigues they had suffered in travelling. These also died a few days afterwards.

Captain Chandler continued his course to Madagascar, in company with the little bark, and after a voyage of twenty-two days arrived there on the sixteenth of June, and anchored off Morondova. They were followed by the Carnarvon, commanded by Captain Norton Hutchinson, which likewise arrived there on her voyage from Europe to China. The packets and treasure being destined for Madras were put on board this vessel, which left Morondova on the 1st of July and having arrived at Madras about a month afterwards, the whole were delivered according to their original destination.

BOAT ACTION IN THE BAY OF CADIZ.

In the battle off Cape St. Vincent, Nelson's conduct had been particularly distinguished for skill and gallantry, and conducted in no small degree to the victory which was on that occasion gained over the Spanish fleet. In consequence of this, in the month of April, 1797, he was promoted to the rank of rear-admiral, still continuing with the squadron under Earl St. Vincent. This squadron being engaged in blockading Cadiz, it was resolved to bombard that place: for that purpose, Earl St. Vincent fixed upon Admiral Nelson, persuaded that whatever could be effected by a consummate union of presence of mind and bravery he would undoubtedly accomplish. Accordingly, the command of the advance squadron was given to him; and during the night of the 3rd of July, he proceeded on his hazardous enterprise with the Thunder-bomb, covered and protected by the launches and barges of the fleet. The Thunder advanced

to within 2,500 yards of the garrison of Cadiz, and everything was prepared to commence a bombardment, which promised the most successful results, when it was discovered that the principal mortar had been so much used, as to be unfit for safe and effectual service. Under these circumstances, Admiral Nelson was obliged to direct the Thunder to retire: as soon as the Spaniards perceived this, they sent out an immense number of mortar gun boats, and armed launches, with the intention and expectation of cutting her off. This Admiral Nelson most effectually prevented: he had gone in his own barge, having on board only its usual complement, the coxswain and ten men; and with this small force, and in this comparatively defenceless boat, he advanced to the support and protection of the Thunder. The Spaniards who had come out to cut her off, were not deficient in intrepidity; nor did they hesitate to try their strength with Admiral Nelson. Don Miguel Tyrason commanded the Spanish flotilla; and in his boat he advanced against the barge of the British admiral. The disproportion in the comparative strength of the two boats, rendered this a contest in which Nelson delighted, and which was worthy of him; and it was still more worthy of him, and pleasing to his noble soul, in that his opponents evinced the most determined and persevering resolution and intrepidity. The conflict was long and doubtful; they fought hand to hand with their swords: his faithful coxswain, John Sykes, was wounded in defending the admiral, and twice saved his life by parrying several blows that were aimed at him, and mortally wounding his adversaries. The Spanish commandant fought till, out of twenty-seven men that were on board of his barge, eighteen had been killed, and himself and all the remainder wounded; then, but not till then, he acknowledged the superiority of Admiral Nelson, by surrendering himself prisoner. Notwithstanding the fate of Don Miguel Tyrason, the other part of the Spanish flotilla continued to fight with great obstinacy; but not being able, with all their efforts, to succeed in the object for which they had come out, they returned, or rather were driven back, into the harbour of Cadiz.

HAIL TO THE FLAG.

"Hail to the flag—the gallant flag! Britannia's proudest boast;
Her herald o'er the distant sea, the guardian of her coast;
Where'er tis spread, on field or flood, the blazonry of fame!
And Briton's hail its mastery, with shouts of loud acclaim.

Hail to the flag—the gallant flag, in battle or in blast;
Whether 'tis hoisted at the peak, or nail'd to splinter'd mast;
Though rent by service or by shot, all tatter'd it may be,
Old England's tars shall still maintain its dread supremacy.

Hail to the flag—the gallant flag, that Nelson proudly bore,
When hostile banners waved aloft, amid the cannon's roar!
When France and Spain in unison the deadly battle close,
And deeper than its own red hue the vital current flows.

Hail to the flag—the gallant flag! for it is Victory's own,
Though Trafalgar re-choes still the hero's dying groan;
The Spaniards down'd their jaundiced rag on that eventful day,
And Gallic eagles humbly crouch'd acknowledging our sway.

Hail to the flag—the gallant flag! come hoist it once again;
And show the haughty nations round, our throne is on the main:
Our ships are crowns and sceptres, whose titles have no flaw,
And our guns are legislators, dispensing cannon law.

Once more then hail the gallant flag! the seaman's honest pride,
Who loves to see it flaunt the breeze, and o'er the ocean ride;
Like the genius of his country, 'tis ever bold and free;
And he will prove, wh'er flies, we're sovereigns of the sea.

CAPTURE OF THE GENERAL WASHINGTON.

THE General Washington, an American vessel, commanded by Captain Alexander Boyle, and destined for the Archipelago, sailed from New Orleans at the mouth of the great river Mississippi, and embracing the advantage of a favourable breeze, soon gained an offing. They stretched across the gulf of Mexico, and having made Cape Florida, they shaped their course through the Bahama Islands, and entered the Atlantic Ocean.

The wind continuing fresh for several days, they crossed the Tropic of Cancer in an oblique direction, and steered direct for the island of Madeira, where they touched and watered, and got under weigh again as soon as possible. For several days the wind continued baffling; but again becoming steady, they were enabled by going two points free, to run at the rate of nine knots an hour.

They now began to enter the Straits, but not without signs of falling in with their sworn enemies, the Barbary corsairs. They consequently prepared to meet them in the best manner they could; but chiefly depended on the quality of their vessel, she being a remarkable fast sailer. On approaching the Straits, the wind headed them, and blew in squalls: but soon after the wind shifted, and at length settled in a favourable point, upon which they crowded as much sail as the ship could bear, carefully avoiding the African coast as much as possible, as they observed several galleys lurking along shore.

After a speedy passage, they weathered Cape Bona-Silicia, lying several leagues on the larboard, and then directed their course to Malta. The wind soon afterwards died away, and they made but little progress, except by the current which always runs upward. In this state they drifted on with their sails flapping, when suddenly at night-time, the man on the look-out, vehemently sung "a sail!" and on the approach of day-light, two large galleys full of men were seen rowing towards them.

Having not an instant to lose, they prepared for close quarters each man resolved to fight to the last; but the ship not having steege way, they could not bring their guns to bear, except the bow-chasers, which were two six-pounders; they, however, saluted them with grape and canister, which made great havoc among the infidels. The leading galley then ran right on board, and carried away their spritsail-yard; part of the crew then boarded the Washington, but were as quickly repulsed, many of them who escaped the sword finding a watery grave.

The galley now becoming entangled with the bows of the Washington, and swinging broadside to, the former had an opportunity of pouring in a greater number of men, and the second galley having by this time approached, ran the Washington on the quarter, by which her force was divided; the crew, notwithstanding, made a gallant resistance, and a desperate struggle ensued. The infidels at last made a desperate rush on board, headed by their chief, who, stepping on the cat-head, fired his pistol at the mate, but fortunately it missed fire; he then made a blow at him with his sabre, which the mate parried, and plunging at the corsair with a short boarding-pike, he thrust it through his body, and the infidel fell back into his own galley a corpse.

The rest of the crew who were defending the quarter, having lost so many of their brave companions who had been killed or desperately wounded, began now to give way; and the pirates being enraged at the fall of their chief, attacked them with such fury and in such numbers, that the few remaining brave fellows were obliged to retreat to the hatchway, and seek shelter below from the cruelty of their vile assassins. Resistance was now of no avail; they asked for quarter, which was granted; but not from any feelings of humanity, to which their savage breasts were strangers, but from a hope of plunder—from a desire to increase the misery of the few surviving wretches, and dispose of them for slaves.

They were now ordered to come on deck, one by one, when their hands were tied behind their backs; and this was no sooner done and they had retired below, than they heard a

great confusion among the pirates, which was occasioned by the galley plunging against them with great violence. It appeared that when she first boarded the General Washington, she had started a plank forward, and otherwise materially injured her bows; they, however, managed to stop the leaks, and having set-to at the pumps, they soon freed her.

These savages having now secured all their prisoners and divided them, it was the lot of the mate to be put on board the galley which had received the injury, where he was immediately recognised as the person who had killed their captain, and was consequently treated with a greater degree of barbarity. He was inhumanly driven to the chains which were intended to fetter him, and when lashed like a dog, he was spurned and spit upon by the piratical crew; but this cruel treatment he

bore with silent resignation, though not without the most painful and indignant sensations.

The weather still continuing calm, the two galleys shot a-head and took the prize in tow, which being heavily-laden, they were obliged to treble man their oars, and the current running contrary to their destination, made the labour so excessive, that the rowers, exhausted from fatigue, soon began to drop. In this dilemma, the chains of the captives were knocked off, and they were placed as substitutes for the rowers. For several hours these poor wretches toiled with all their strength; their back stripped even of their shirts, and severely galled by the lash which compelled them to the labour; their bodies weakened for want of nourishment, and exhausted with the excessive severity of their barbarous task-masters. But provi-

CAPTURE OF THE GENERAL WASHINGTON, CAPTAIN ALEXANDER BOYLE, BY TWO BARBARY CORSAIRS.

dentially, a breeze sprung up, which rendered it neither necessary nor safe to row any longer, so they cast off, and as it was still favourable, they were ordered to lie on their oars, which was a great relief to these unfortunate sufferers.

As the evening approached, the sky became overcast, and a violent gale arose, which, with the roughness of the sea, prevented their using their oars any longer, there being every appearance of a heavy storm. The night becoming exceedingly dark, they lost sight of the other galley, and the Washington, which she had in tow; and as the sea increased, the leaks, which had not been sufficiently fortified, gained upon them to such an alarming extent, that all their efforts to preserve the galley were ineffectual; she was rapidly going down.

They now began to clear their boat and hoist her out, when

she had no sooner touched the water, than as many as she could hold, which was about half the crew, got in, leaving the remainder and the prisoners, to take their chance in the sinking galley.

Those who were in the galley saw no more of the boat, and in a few minutes, the sea made a complete breach over the leaky vessel; but each one was so occupied with the thoughts of his own preservation, that no attention was paid to the transactions of their fellow-sufferers. Fortunately for the mate, he could swim remarkably well, having had great practice in the early part of his life; but after long struggling, he began to consider all his efforts fruitless. The sea at this time was running terrifically high, when something struck against him, which proved to be one of the oars that a few hours

before had been the occasion of so much misery. He immediately grasped and clung to it, and this support, with his own skill in swimming, enabled him to encounter the waves for some time; but being completely at their mercy, he was at length rendered nearly insensible, till a sudden and severe shock roused him from his lethargy, he scrambled at something before him in the convulsive pangs of his death-like agony. This was a quantity of sea-weed, which he continued to hold fast till repeated surges drove both him and the weeds over some small rocks which severely bruised him in several parts; but the rocks served as a barrier against the fury of the sea, and breaking the force of the waves, enabled him to crawl to the craggy shore, which, after many painful efforts, he effected.

Here he remained above the reach of the sea; but worn out and exhausted from fatigue, hunger, thirst, cold, and bruises, that at last his senses were benumbed like his body, and he fell into a heavy death-like sleep.

He did not rouse from this torpid state until the following noon, and would probably have never awakened, but that the sun, by his happy influence, darted his genial rays upon him, and gradually re-kindled that vital animation which seemed almost fled, when he awoke, he stared with horror and surprise at the surrounding prospect; the clouds, indeed, were dissipated; but still the gradually-subsiding surge lashed the shore, exhibiting the bodies of many of his poor mangled shipmates, stretched breathless on the beach. In the first agony of his feelings he burst into tears, which gave some relief to his sinking spirits; and then summoning all his strength and fortitude, he removed the bodies, one by one, above the reach of the sea, and then covered them with sea-weed.

Having paid this last tribute of respect to his deceased companions, he began to feel the want of nourishment, having fasted for nearly two days and a half; but he fell in with some shell-fish which had been thrown up by the late gale, and on which he made a sumptuous repast. He was also well supplied with water, as the rain which had accompanied the storm, had filled the cavities of the rock.

He passed the evening, and greater part of the next night, in painful reflections on his late disaster and present gloomy situation; but towards the break of day he became more composed, and indeed somewhat reconciled to the little spot upon which Providence, in its mercy, had rescued him from destruction; and indulged a hope of its further goodness in delivering him, or at least suffering him to breathe his last in quietness on the rock, death even being preferable to slavery among such barbarous infidels.

He remained here three days, solacing himself with having escaped the barbarians; but this consolation he lost all of a sudden by the unwelcome sight of a sail approaching the rock, and which he soon discovered to be the second galley which had come in quest of her consort. On nearing the rock, and perceiving several pieces of the wreck, the pirates hoisted out their boat, and getting under the lee of the rock, landed in smooth water.

The mate as soon as he perceived the galley, endeavoured to find a hiding-place; but his search proved in vain, as the rock afforded none. It was about 600 yards in circumference, and almost covered with coarse sand and shells, except the summit where he found the rain water. As a last resort under these untoward circumstances, he crawled to the water's edge, and stretching himself at full length upon his face, assumed the appearance of being drowned. The pirates soon began to explore the beach, and observing several heaps of weeds turned up, particularly examined them, and of course were not a little surprised at discovering the graves of the unfortunate Americans; but as their interment had evidently been the work of human hands they renewed their search till they at last perceived the mate stretched on the beach.

Having turned him with his face upwards, they found that he was not only warm, but that he breathed; upon which, severely shaking him, and bestowing sundry hard blows and kicks, they obliged him to lay aside the counterfeit of death, when he was immediately conveyed on board, and interrogated about the wreck. This examination took place by means of a

Portuguese renegado, who had long been in the service of pirates, and who could speak English pretty well.

As soon as the pirates had been apprised, by means of the interpreter, of all the particulars relative to the lost vessel, they steered for Tripoli. The mate, in the meantime, learned from the renegado, that it had been agreed between the two galleys, that in case a separation should take place either during the night or in a storm, that they should make for a small island in the gulf of Mahomet. Here they had touched, but not finding the other galley, had gone in search of her, till deeming her irrecoverably lost, they had discontinued their search.

It is impossible to describe the feelings of satisfaction of both the mate and his companions, whom he found on board the galley, in thus again seeing and conversing with one another, of their painful feelings of distress, on being informed of the melancholy fate of the crew.

The situation of the harbour where they lay was on the sea coast, the entrance to it being very narrow, and forming a basin capable of accommodating several vessels. The town is surrounded with high walls, and strengthened in many parts with bulwarks and other fortifications. There are but two entrances to the town, one on the north by the haven, and the other on the south by the main land, each of them secured by forts.

Four days after their arrival, accounts reached Tripoli of the loss of the prize, and all hands on board, except three. It seems that the pirates not being sufficiently skilled in naval tactics and the English mode of rigging, were unable to manage the ship, which was thus left to the mercy of the storm, and was very soon dashed to pieces on a rocky lee shore.

The disappointment and rage of the infidels at this loss was very great. So valuable a prize thus suddenly snatched from their grasp, was a calamity which sorely galled these barbarians, and which they knew not how to brook. The galley soon became in an uproar; nothing being heard but the most vile jargon and execrations, and not even Mahomet escaped the lash of these infidels.

The unfortunate captives were soon after conveyed on shore, and sold without distinction. The mate was purchased by a Jew merchant, who let his slaves to hire by the day to drag stones for repairing the town walls which had been damaged by the late storm, particularly that part which lay next the sea, and which was almost swept away. This employment lasted a considerable time, and proved excessively irksome, as the immense weight of the pieces of rock which he had to drag, encumbered by his chains, were more than his reduced strength could bear; and whenever he attempted to alleviate his sufferings by temporary rest, he was instantly goaded by the galling lash, to resume his heart-breaking toil.

The repairs of the wall being at length completed, and the Jew merchant having no further employment for him, he was again sold to a native merchant, who was immensely rich. Here he was obliged to carry water, to remove the dust of the place, convey the merchandize to warehouses, and perform all manner of drudgery. At other times, he attended the merchant and his daughter on their frequent excursions into the country, where his occupation was to drive the mule on which the lady rode, seated within a frame-work, drawn round with curtains, and covered with a kind of canopy, and sometimes he attended his young mistress to the mosques, where a service called *sala* is performed five times a-day; but as none are compelled to attend, there are few, but the most zealous, who resort to it at all times.

The men wear next their skin, a large linen frock and drawers, over which is fastened with great gold or silver buttons, a loose coat of cloth or silk, which hangs almost down to the knees. Their sleeves cover only their elbows, so that turning up their shirt sleeves upon them, their arms are almost naked. They shave all their hair off, with the exception of a lock which they suffer to grow on the crown of their heads, under the belief that by that Mahomet will pull them into Paradise. Some cut off the whole beard, reserving only two large mustachios: those, however, who are stricken in years, wear their beards long and cut round. They use turbans made of red wool, and wound up in a piece of cotton five or six yards in length. At their girdles they wear three knives, two large and one small, which are

fitted in a silver scabbard about a foot long, adorned with torques and other stones, often of very great value.

The women are habited almost like the men, only that they have a fine linen cloth on their heads, instead of a turban. The rich often wear five or six pendants in each ear, and bracelets of jewels on their arms. Before they go into the streets to walk, they throw over them a cotton cloak, which completely covers them, and hangs down to their feet; they also tie a string of pearls upon their foreheads, and a fine kerchief before their eyes, so that they should not be known as they pass in the streets. They are very particular in beautifying themselves, and not only paint their eyebrows and eyelids black, but also their hair, with burnt antimony.

As the mate had many opportunities of being abroad, he several times met with some of his shipmates, particularly those who had been sold to the planters or farmers who resided a short distance from the town; and one or more of these he was nearly certain of meeting with on the market-day, as part of their employment was to convey the produce of the country to market. On occasions of this kind, it must naturally be supposed that they lightened their hearts by sympathising one with the other.

The mate, by his steady behaviour and attention to business, soon gained the confidence of his master, who frequently required his attendance on him abroad. It happened, on one of these occasions, that the merchants were summoned to a sale of slaves that had formed the crew of a Portuguese polacre just brought into the harbour. It appeared that the crew of the polacre had made a desperate resistance, which occasioned the death of their captain and half the crew; the remainder of them seemed to be young and healthy men and therefore brought a good price in the market. The mate's master and two other merchants, having bought six of the youngest, he was ordered to convey them to the prison, where it was found necessary to lodge them until they had further decided on their purchase, followed on the road by his master and the merchants.

Early on the following morning, he was ordered to convey the six men to his master's house, and for that purpose waited on the head gaoler, who accompanied him into the prison. On approaching, they found the outer gate wide open; and proceeding farther towards the second gate, the first object which presented itself was the body of the under-gaoler, lying dead, and weltering in his blood. Alarmed at the sight, they hastily withdrew to the outer gate, and called loudly for assistance; and having obtained the aid of several officers, they re-entered the prison, when they soon discovered that the six men they were in search of had made their escape. By this time, the news had reached the merchant, who hastened to the prison on foot to make a strict search, but it proved unsuccessful. As, however, none of the vessels or boats were missed from the harbour, it was evident that the runaways were lurking somewhere on shore, and this was soon proved to be the case. On a strict search being made along the coast, they were found on the evening of the third day, hidden among the rocks, close to the sea, waiting for an opportunity to seize on the first boat they could find.

The prisoners having been brought back, they were immediately brought before the cadi, and after a very short examination, the ringleader of them was condemned to be executed on the following day. On occasions of this sort, it is usual for all the slaves to be sent to witness the exhibition, in order to deter them from making similar attempts; and on this opportunity the mate did not find his master backward in sending him, particularly as he was so deeply interested.

At the appointed time there was a great concourse of people assembled, and the mate found himself much gratified in thus having an opportunity of meeting with several of his shipmates and countrymen, though they could not but sincerely deplore the melancholy cause which had occasioned this vast assemblage, particularly as they saw the consequences which must inevitably ensue from any unsuccessful attempt on their part to recover their own liberty, should they ever endeavour to put it into practice.

The workmen having finished the platform where the un-

happy culprit was to suffer the extreme penalty of the law, two large posts or supporters of wood, and a heavy cross beam were exhibited, bearing some resemblance to a gallows. As soon as the wretched criminal had ascended the platform, he was ordered to climb the ladder placed against one of the posts, with the executioner, who, on his gaining the top, thrust a large iron hook, suspended by a strong chain, into the palm of one of his hands, and by that means hung him to the cross beam. The ladder was then placed on the other side, where the miserable culprit being dragged towards it, had a similar iron hook, fastened to a chain, driven through the sole of one of his feet; and in this inhuman and barbarous manner the poor man was suspended, and consequently lingered long in the most insufferable torments, till a merciful death released him from the barbarity of the infidels.

This exhibition had a deep effect on the minds of the mate of the Washington and his shipmates, and making up their minds as to the consequences, they resolved to seek the first opportunity of leaving this abominable country. They had received orders to attend the following day at the place of execution, when another wretch was doomed to undergo the same horrible ceremony. To behold such another revolting exhibition, would have been heart-breaking to them all; but they could not overlook the opportunity which it afforded them of undertaking their own scheme. They accordingly assembled at an earlier hour on the following morning, when, on further consultation, one of them proposed that they should attempt their escape as soon as possible; he informed them that, adjacent to his master's country-house, which was situate five miles from Tripoli, and one from the sea coast, he was constantly employed in gardening, except when sent to Tripoli with the produce of his labour, and that he was well acquainted with a small creek near his master's house, at the top of which were two or three small huts occupied by fishermen, who always moored their boats at night close to their huts, and kept a large dog chained on board in order to guard them, as they slept on shore. He therefore proposed to poison the dog that evening, in order to prevent his giving an alarm. This, at the first view, seemed a very flattering and promising proposal, and all at once agreed to adopt it; but, on further reflection, seven men rushing into an open boat without food, water, or necessities of any kind, having a vast sea before them, which they must, in all probability, encounter for many days, threw a momentary damp upon their spirits at the impracticability of adopting it.

The mate at last suggested, that as that day was the last of August, and the approaching 5th of September being the festival of the prophet Mahomet, for the celebration of which they were then making great preparations, each man should save a certain portion from his allowance of food every day, and deposit it in a secret place. As this feast of the prophet would be a general holiday, there was no doubt but that all classes of people would be absorbed in their religious duties; and it was equally certain, that the fishermen before mentioned, would, on that day come to Tripoli. To this proposition they readily agreed, and consented to be guided by the mate.

They then appointed a place at some distance from the town, and a certain hour for meeting, in order to put their stratagem into execution; and each of them promised, in the interim, to save all the provisions and necessities which he could, in order to make a general stock. This consultation being over, the execution of the unfortunate Portuguese seaman commenced. He seemed to bear his fate with less resignation than the other, and the executioner was obliged to have recourse to compulsion before he submitted to his fate. It was supposed that these two who suffered, were those who actually committed the murder of the under-gaoler; but as there was no fair trial, this was only a matter of conjecture. The judges of this arbitrary government sentence whom they please; some are punished, whether guilty or not, as examples to the rest; and when they think it expedient that an example should be made; they select for that purpose those who are the least serviceable to their masters, or with whom their masters are most willing to part.

As soon as the miserable victim had ceased struggling, and

was released by death from the barbarity of his tormentors, which was not till nearly sunset, the people began to disperse; but the mangled corpse was left to hang until a certain hour the next day, it being the rule that the bodies of those who suffer in this way should be exposed for so many hours, in order to render the punishment the more impressive.

The American seamen having shaken hands with great cordiality, now parted full of the pleasing hope of soon quitting this barbarous place, and once more beholding their native land the land of liberty and civilization; though every hour seemed a month until the happy arrival of the appointed time.

On the evening of the 5th of September, they punctually met at the place appointed, and proceeded with all speed to the place which had previously been mentioned by one of them. Having boldly entered the huts, they found only two old women and a child, the rest having gone to the *Sala* at Tripoli, as they expected. The women were alarmed at their intrusion and seemingly conscious of their design, fell on their faces to the earth, and prayed for mercy; but the child, who seemed the most courageous, was dexterously making towards the door, till they put a stop to the little one's egress, who would, in all probability, have given an alarm, and thereby defeated their project. The mate held the little girl in his arms, while his companions began to soothe the old women by repeated assurances that no harm should come to them, if they would but keep quiet. Prudence, however, obliged them to secure the old ladies with the aid of cords, at the same time kindly assuring them of their harmless intentions. Having thus prevented any alarm, they began to supply themselves with whatever necessaries lay in their way, and fortunately found some black bread and dried fish, which having seized, they hastened to the boat.

It now occurred to the mate, that the dog which was left to guard the boat, might prove a very disagreeable antagonist; but as it was probable he was acquainted with the child, he thought it advisable to take her with him in his arms, in order to obtain the creature's favour. The child, however, was very unwilling to go with him, till by repeated assurances of his care, which were confirmed by several kisses, she remained quiet. Thus prepared, he entered the boat first, and made the child speak to the dog, which rendered him quiet immediately; he was fastened to a long chain, which the mate loosened, and seizing an opportunity, threw him overboard. His companions now joined him, when he desired the child to return to her friends, and release them from their bondage; and having set her on shore for this purpose, they shoved the boat off. The dog swam to shore and joined the child, who remained for some time where they had left her, watching their motions. Indeed this little girl expressed much satisfaction at being able to assist them, and by her smiles and manners, seemed to congratulate them on their escape.

They, fortunately, found a nine-gallon cask of water in the boat, which proved of considerable service to them. They had to row a considerable distance before a breeze sprung up; but at length meeting with a propitious gale, they spread their sail and shaped their course for Malta, where, with some difficulty, they arrived twelve days after, exceedingly fatigued and exhausted.

Here they providentially found a ship bound for England, on board of which they took their passage, the captain readily accepting of their services for the same. Nothing remarkable occurred during the voyage, and in a short time they reached their native country in safety; with the blessings of which they were the more deeply impressed from the severity of the sufferings which they had so recently endured in another.

A TROUBLESOME RETINUE.

A CERTAIN captain, who had made a greater figure than his fortune could well bear, and the regiment not being paid as was expected, was forced to put off a great part of his equipage; a few days after, as he was walking by the road-side, he saw one of his soldiers sitting cleaning himself under a hedge: "What are you doing there, Tom?" said the officer. "Why faith, sir," answered the soldier, "I am following your example, getting rid of part of my retinue."

MURDER AT SEA, AND A HURRICANE.

ONE fine evening, the sun had set bright and clear, after a most beautiful day, and we were bowling along right before it, rolling like the very devil; but there was no moon, and although the stars sparkled brilliantly, yet it was dark, and as we were the sternmost of the men-of-war, we had the task of whipping in the sluggards. It was my watch on deck, and presently was heard a gun from the commodore, who showed a number of lights.

"What is that, Mr. Kennedy?" said the captain to the old gunner.

"The commodore has made the night-signal for the sternmost ships to make more sail and close, sir." We repeated the signal, and stood on, hating the dullest of the merchantmen in our neighbourhood to make more sail, and firing a musket shot, now and then, over the more distant of them. By and bye we saw a large West Indianman suddenly haul her wind, and stand across our bows.

"Forward, there," sung out Mr. Splinter, "stand by to fire a shot at that fellow from the gun-boat, if he does not bear up. What can he be after?"

"Get a musket and fire over him," said Sergeant Armstrong, to a marine who was standing close by him in the waist.

It was done, and the ship immediately hove up on her course again. We now ranged alongside of him on his larboard quarter. "Ho! the ship ahoy!" "Hillo!" was the reply.

"Make more sail, sir; and run into the body of the fleet, or I shall fire into you; why don't you, sir, keep in the wake of the commodore?" No answer. "What meant you by hauling your wind just now, sir?"

"Yesh!" responded a voice from the merchantman.

"Something wrong here," said Mr. Splinter. "Back your main-topsail, sir, and hoist a light at the peak. I shall send a boat on board of you. Boatswain's mate, pipe away the crew of the jolly-boat." We also hove-to, and were in the act of lowering down the boat, when the officer rattled out, "Keep all fast with the boat; I can't comprehend that chap's manoeuvres for the soul of me. He has not hove to." Once more we were within pistol-shot of him. "Why don't you hove-to, sir?" All silent.

Presently, we could perceive a confusion and noise of struggling on board, and angry voices, as if people were trying to force their way up the hatchway from below; and a heavy thumping on the deck, and a creaking of the blocks, and rattling of the cordage, while the main-yard was first braced one way and then the other, as if two parties were striving for the mastery. At length a voice hailed distinctly, "We are captured by a—!" A sudden sharp cry, and a splash overboard, told of some fearful deed. "We are taken by a privateer or pirate," sung another voice. This was followed by a heavy crunching blow, as when the spike of a butcher's axe is driven through a bullock's forehead deep into the brain.

By this time all hands had been called, and the word had been passed to clear away two of the foremost carronades on the starboard-side, and to lead them with grape. "On board there—get below all you of the English crew; as I shall fire with grape," sung out the captain.

The hint was now taken. The ship at length came to the wind—we rounded to under her lee—and an armed boat, with Mr. Treenail and myself, and sixteen men with cutlasses, were sent on board.

We jumped on deck, and at the gangway Mr. Treenail stumbled and fell over the dead body of a man; no doubt the one who had hailed last, with his skull cloven to the eyes, and a broken cutlass blade sticking in the gash. We were immediately accosted by the mate, who was lashed down to a ring-bolt close by the bits, with his hands tied at the wrists by sharp cords, so tightly that the blood was spouting beneath his nails.

"We have been surprised by a private schooner, sir; the lieutenant of her and twelve men are now in the cabin."

"Where are the rest of the crew?"

"All secured in the fore-castle, except the second mate and boatswain, the men who hailed you just now; the last was knocked down on the head, and the former was stabbed and thrown overboard."

We immediately released the men, eighteen in number, and armed them with boarding pikes.

"What vessel is that astern of us?" said Treenail to the mate. Before he could answer, a shot from the brig fired at the privateer showed she was broad awake. Next moment Captain Deadeye hailed "Have you mastered the prize crew, Mr. Treenail?"

"Ay, ay, sir."

"Then keep your course, and keep two lights hoisted at your mizen-peak during the night, and blue-peter at the main-topsail yard-arm when the day breaks. I shall haul my wind after the suspicious sail in your wake."

Another shot, and another, from the brig; the time between each flash and the report increasing with the distance. By this time the lieutenant had descended to the cabin, followed by his people, while the merchant crew once more took charge of the ship, crowding sail into the body of the fleet.

I followed him close, pistol and cutlass in hand, and I shall never forget the scene that presented itself when I entered. The cabin was that of a vessel of 500 tons, elegantly fitted up; the panels filled with crimson cloth, edged with gold mouldings, with superb damask hangings before the stern windows and the side berths, and brilliantly lighted up by two large swinging lamps hung from the deck above, which were reflected from, and multiplied in, several plate-glass mirrors in the panels. On the recess, which in cold weather had been occupied by the stove, now stood a splendid grand piano, the silk in the open work above the keys corresponding with the crimson cloth of the panels; it was open, and a Leghorn bonnet with a green veil, a parasol, and two long white gloves, as if recently pulled off, lay on it, with the very mould of the hands in them.

The rudder-case was particularly beautiful; it was a richly-carved and gilded palm-tree, the stern painted white, and interlaced with golden fretwork, like the lozenges of a pineapple, while the leaves spread up and abroad on the roof.

The table was laid for supper, with cold meat and wine, and a profusion of silver things, and all sparkling brightly; but it was in great disorder—wine spilt, and glasses broken, and dishes of meat upset, and knives, and forks, and spoons, scattered all about. She was evidently one of those London West Indianmen, on board of which I knew there was much splendour and great comfort. But, alas! the hand of lawless violence had been there. The captain lay across the table, with his head hanging over the side of it next to us, unable to help himself, with his hands tied behind his back, and a gag in his mouth; his face purple from the blood running to his head, and the white of his eyes turned up, while his loud stentorian breathing but too clearly indicated the rupture of a blood-vessel on the brain.

He was a stout portly man, and, although we released him on the instant, and had him bled and threw water on his face, and did all we could for him, he never spoke afterwards, and died in half an hour.

Four gentlemanly-looking men were sitting at table lashed to their chairs, pale and trembling, while six of the most ruffian-looking scoundrels I ever beheld, stood on the opposite side of the table in a row fronting us, with the light from the lamps shining full on them. Three of them were small but very square mulattoes; one was a South American Indian, with the square high-boned visage, and long, lank, black glassy hair of his caste. These four had no clothing besides their trousers, and stood with their arms folded, in all the calmness of desperate men caught in the very act of some horrible atrocity, which they knew shut out all hope of mercy. The two others were white, Frenchmen, tall, bushy-whiskered, sallow, desperadoes; but still, wonderful to relate, with, if I may so speak, the manners of gentlemen. One of them squinted and had a hare lip, which gave him a horrible expression. They were dressed in white trousers and shirts, silk sashes round their waists, and a sort of blue uniform

jackets, blue Gascon caps, with the peaks, from each of which depended a large bullion tassel, hanging down on one side of their heads. The whole party had apparently made up their minds that resistance was vain, for their pistols and cutlasses, some of them bloody, had all been laid on the table, with the butts and handles towards us, contrasting horribly with the glittering equipage of steel, and crystal, and silver things, on the snow white damask table cloth.

They were immediately seized and ironed, to which they submitted in silence. We next released the passengers, and were overpowered with thanks, one dancing, one laughing, one crying, and another praying. But, merciful heaven! what an object met our eye! Drawing aside the curtain that concealed a sofa, fitted into a recess, there lay, more dead than alive, a tall and most beautiful girl, her head resting on her left arm, her clothes disordered and torn, blood on her bosom, with her long black hair loose and dishevelled, and covering the upper part of her deadly pale face, through which her wild sparkling black eyes, protruding from their sockets, glanced and glared with the fire of a maniac's, while her blue lips kept gibbering an incoherent prayer one moment, and the next imploring mercy, as if she had still been in the hands of those who knew not the name of mercy; and anon, a low hysterical laugh made our very blood freeze in our bosoms, which soon ended in a long dismal yell, as she rolled off the couch upon the hard deck, and lay in a death-faint. Alas, the day!—a maniac she was from that hour. She was the only daughter of the murdered master of the ship, and never awoke, in her unclouded reason, to the fearful consciousness of her own dishonour and her parent's death.

The Torch captured the schooner, and we left the privateer's men at Barbadoes to meet their reward; and several of the merchant sailors were turned over to the guard-ship, to prove the facts in the first instance, and to serve his majesty as impressed men in the second—but scant measure of justice to the poor ship's crew.

After this we experienced, with little intermission, most dreadful weather for two weeks, until at length we were nearly torn in pieces, and the captain was about abandoning his ground and returning to Port Royal, when it came on to blow with redoubled violence. We struggled against it for twelve hours, but were finally obliged to heave-to, the sea all the while running tremendously high.

About noon on the day I speak of the weather had begun to look a little better, but the sea had if anything increased. I had just come on deck, when Mr. Splinter sung out—"Look out for that sea, quarter-master! Mind your starboard helm! Ease her, man—ease her!"

On it came, rolling as high as the fore-yard, and tumbled in over the bows, green, clear, and unbroken. It filled the deep waist of the Torch in an instant, and as I rose, half smothered in the midst of a jumble of men, pigs, hen-coops, and spare spars, I had nearly lost an eye by a floating boarding-pike that was launched at me by the jangle of the water. As for the boats on the booms, they had all gone to sea separately, and were bobbing at us in a squadron to leeward, the launch acting as commodore, with a crew of a dozen sheep, whose bleating, as she rose upon the crest of a wave, came back upon us, faintly blending with the hoarse roaring of the storm, and seeming to cry, "No more mutton for you, my boys!"

At length, the lee-ports were forced out—the pumps promptly rigged and manned—buckets slung, and at work down the hatchways; and although we had narrowly escaped being swamped, and it continued to blow hard with a heavy sea, the men, confident in the qualities of the ship, worked with glee, shaking their feathers, and quizzing each other.

But anon, a sudden and appalling change came over the sea and the sky, that made the stoutest among us quail and draw his breath thick. The firmament darkened—the horizon seemed to contract—and the sea became black as ink. The wind fell to a dead calm: the teeming clouds descended, and filling the murky arch of heaven with their whirling masses, until they appeared to touch our mast-heads; but there was

neither lightning nor rain, not one glancing flash, not one refreshing drop; the windows of the sky had been sealed up by Him who said to the storm, "Peace, be still."

During this death-like pause, infinitely more awful than the heaviest gale, every sound on board, the voices of the men, even to the creaking of the bulk-heads, was heard with startling distinctness; and the water-logged brig having no wind to steady her, laboured so heavily in the trough of the sea, that we expected her masts to go overboard every moment.

"Do you see and hear that, sir?" said Lieutenant Treenail to the captain.

We all looked eagerly forth in the direction indicated. There was a white line in fearful contrast with the clouds and the rest of the ocean, gleaming on the extreme verge of the horizon. It grew broader; a low increasing growl was heard! a thick blinding mist came driving up a-stern of us, whose small drops pierced into the skin like sharp hail.

"Is it rain?"—"No, no, salt, salt."

And now the fierce spirit of the hurricane himself, the sea Azrael, in storm and in darkness, came thundering on with stunning violence, tearing off the snowy scalps of the tortured billows, and with tremendous and sheer-force, crushing down beneath his chariot wheels, their mountainous and howling ridges into one level plain of foaming water. Our chain-plates, strong fastenings, and clenched bolts, drew like pliant wires; shrouds and stays were torn away like the summer gossamer, and our masts and spars cracking before his fury like dry seeds in autumn, were blown clearly out of the ship, over her bows into the sea.

Had we shown a shred of the strongest sail in the vessel, it would have been blown out of the bolt-rope in an instant; we had, therefore, to get her before the wind by crossing a spar on the stump of the foremast, with four men at the wheel, one watch at the pumps, and the other clearing the wreck. But our spirits were soon dashed, when the old carpenter, one of the coolest and bravest men in the ship, rose through the forehatch, pale as a ghost, with his white hair streaming straight out in the wind. He did not speak to any of us, but clamped off towards the capstan, to which the captain had lashed himself.

"The water is rushing in like a millstream, sir; we have either started a *but*, or the wreck of the foremast has gone through her bows, for she is fast settling down by the head."

"Get the boatswain to *father* a sail, then, man, and try it over the leak, but don't alarm the people, Mr. Kelson." "Stand by, to heave the guns overboard." "Too late, too late—oh God, that cry!" I was stunned and drowning; a chaos of wreck was beneath me, and around me, and above me; the blue agonised gasping faces, and struggling arms and colourless clutching hands, and despairing yells for help, where help was impossible, when I felt a sharp bite on the neck, and breathed again. My Newfoundland dog, Sneezer, had snatched at me and dragged me out of the eddy of the sinking vessel.

For life, for dear life, nearly suffocated amidst the hissing spray, we reached the cutter—the dog and his helpless master. For three miserable days I had been exposed, half-naked and bareheaded, in an open boat, without water, or food, or shade. The third fierce cloudless West Indian moon was long passed, and once more the dry burning sun sank in the west, like a red-hot shield of iron.

In my horrible extremity, I imprecated the wrath of heaven on my defenceless head, and shaking my clenched hands against the brazen sky, I called aloud on the Almighty, "Oh, never let me see him rise again!" I glared on the noble dog, as he lay dying at the bottom of the boat—madness seized me—I tore his throat with my teeth, not for food, but that I might drink his hot blood; it flowed, and, vampire-like, I would have gorged myself: but as he turned his dull, grey, glazing eye on me, the pulse of my heart stopped, and I fell senseless. When my recollection returned, I was stretched on some pliant leaves, in a low smoky hut, with my faithful dog lying beside me, whining and licking my hands and face. On the wide joists that bound the rafters of the roof together, rested a light canoe with its paddles, and over against me, on the wall, hung some Indian fishing imple-

ments, and a long-barrelled Spanish gun. Underneath lay a corpse, wrapped in a boat-sail, on which was clumsily written with charcoal, "The body of John Deadeye, Esq., late commander of his Britannic Majesty's sloop *Torch*."

There was a fire on the floor, at which Lieutenant Splinter, in his shirt and trousers, drenched, unshorn, and death-like, was roasting a joint of meat, while a dwarfish Indian, stark naked, sat opposite to him, squatting on his hams, more like a large bull-frog than a man, and fanning the flame with a palm-leaf. In the dark corner of the hut, half a dozen miserable sheep shrunk, huddled together. Through the open door, I saw the stars in the deep blue heaven, and the cold beams of the newly-risen moon were dancing in a long flickering wake of silver light on the ever-heaving bosom of the ocean, whilst the melancholy murmur of the surf breaking on the shore, came booming on the gentle night-wind. I was instantly persuaded that I had been nourished during my delirium; for the fierceness of my sufferings were assuaged, and I was comparatively strong. I anxiously inquired of the lieutenant the fate of our shipmates.

"All gone down in the old *Torch*; and had it not been for the launch and our four-footed friend there, I should not have been here to have told it; but raw mutton with the wool on, is not a mess to thrive on, Tom. All that the sharks have left of the captain, and five seamen, came on shore last night. I have buried the poor fellows on the beach, where they lay, as well as I could, with an oar-blade for a shovel, and the bronze ornament there (pointing to the Indian) for an assistant." Here he looked towards the body, and the honest fellow's voice shook as he continued. "But seeing you were alive, I thought if you did recover, it would be gratifying to both of us, after having weathered it so long with him through gales and sunshine, to lay the kind-hearted old man's head on its everlasting pillow, as decently as our forlorn condition permitted."

As the lieutenant spoke, Sneezer seemed to think his watch was up, and drew off towards the fire. Weak and famished, the poor brute could no longer resist the temptation; but, making a desperate snatch at the joint, bolted through the door with it, hotly pursued by the bull-frog. "Drop the leg of mutton, Sneezer," roared the lieutenant, "drop the mutton—drop it, sir, drop it, drop it." And away raced his majesty's officer in pursuit of the canine pirate.

After a little, he and the Indian returned, the former with the joint in his hand; and presently the dog stole into the hut after them, and patiently lay down in a corner, until the lieutenant, good-humouredly threw the bone to him after our comfortless meal had been finished. I was so weak that my shipmate considerably refrained from pressing his society on me; and we therefore all betook ourselves to rest for the night.

A STORM.

WE sailed with a convoy for Bombay and China, but destined to cruise ourselves in the neighbourhood of the Cape of Good Hope. We had not quitted port more than a week when we encountered a very severe gale. It was the first time I had beheld the sea in such commotion, and the spectacle was awfully grand. The noble ship was borne like a weed upon the ocean, at the mercy of the tempest, which howled through the rigging, so as to deaden the shouts of the seamen, while furling the heavy sails upon the yards. Billow after billow beat over us; and as the rolling waves dashed up their frothy crests to heaven, roaring in the wildness of their fury, I could not help thinking how different the noise was from the comparison of my poor mother, when she heard the rain patter into the water-butt. The convoy, too, very heavily laden Indianmen, and transports with troops, were scattered in every direction; but now and then we could distinguish one or two, as they appeared for a moment on the summit of the foaming surge, like dim specks on the verge of the horizon.

Night came, and brought its frowning horrors—a pitchy darkness, which seemed almost palpable to the touch, hung with

a funereal gloom above, whilst the wild waves lashed by the raging tempest into sparkling foam, served but to render the blackness of the heavens more dense and horrible. At the commencement of the gale the wind was dead against us, and the ship was hove-to under a close-reefed main-topsail; but towards night the wind veered in our favour, and we flew through the liquid element with astonishing rapidity. The shifting of the gale had produced a still wilder commotion in the waves, which seemed to be struggling for the mastery. Wave after wave came raging after us, and threatening to engulf the frigate; but like a bird upon the wing, the gallant vessel lifted to the swell, and rushed down the steep abyss, tracking her path with brilliancy and light.

Morning at length appeared; the wind had again changed and the ship was once more hove-to. But if the gale of the preceeding night had been furious, it now came with redoubled violence, and the stately vessel which had so lately steered her course in majesty and pride, lay writhing and groaning between the billows, like the soul of the mighty struggling with the last pangs of mortality.

Orders were given to furl the foresail, and about sixty of the best seamen sprang aloft to execute the command. Already had they extended themselves upon the yards, and were gathering up the folds of the heavy canvass, when a tremendous sea came, like an Alpine mountain, rushing towards us. As the poor wretch, when the fierce eye of some famished beast of prey is glaring on him, stands fixed and immoveable, so did the poor seamen suspend their labours, when they saw the waters of destruction approaching. No human voice could warn them of their danger, no hand could be outstretched to save. There seemed to be a momentary stillness in the storm, and a shuddering instinct crept through every spirit—a horrible dread of they knew not what.

Still onward rolled the wave; it struck the vessel on the bows, and threw its portentous burden on the deck. A crash, mingled with a wild, tumultuous yell, ensued; and when the spray had cleared, it was found that the foremast had been swept away, and upwards of fifty brave fellows were buried in the waves. Some still remained entangled in the rigging, but man after man was washed away, till only one was left. We could see him, we could speak to him; but only that Power who holds the tempest in his hand, could rescue him from death. There he struggled; blank despair in every feature, as his strong limbs writhed round the shattered mast, and with convulsive agony, he buffeted the waves. Oh, what avail was human strength in such an hour of peril? His hold relaxed—it became weaker—and slowly he settled in his watery grave.

I need not describe the effects which such a scene produced upon the mind of a boy not thirteen years of age; and even at this moment, so strong are first impressions, the crash, the yell, and the agonised contortions of that drowning man, are present to my mind in all their horrors.

The storm abated, the wreck was cleared, a jurymast was erected, and once more the stately frigate held her way upon the glassy surface of the wave. The first duty was to collect the convoy, and heavy forebodings of their fate were whispered among the crew. One by one, however, they gathered round us, showing manifest indications of the recent storm.

There is something peculiarly interesting to a seaman in the assembling of ships after a gale of wind. It occasions a sensation that a landsman cannot feel, unless it is that sort of melancholy satisfaction when friends meet who have surmounted adversity together, but with the apprehension of similar calamity still before them. Several of the convoy were yet undiscovered, and as the evening was closing in, the heavy report of a distant gun came booming along the waters. Another and another followed in rapid succession, and the frigate's course was directed towards the spot, whence the sounds proceeded.

The sun went down in glory; its radiance tinged the bosom of the liquid element; but it never rose again on those whose signals of distress we heard. They must have seen his last beams arching the heavens with their golden brightness, and light and hope must have expired to them for ever.

The wind opposed our progress, and the swell still rolled against us, though it was now only the heaving of the sea, without its breaking violence. Still we approached nearer to the object of our search, as the noise of the guns was more distinct, and the flashes were plainly visible. At length, about midnight, by the help of glasses, a dismayed vessel was distinguished rolling like a log upon the waters. Every nerve was strained, every effort was made to intimate that assistance was at hand, and the boats were prepared to give succour, or to snatch from destruction. The sight was eagerly bent towards the spot where the clear horizon was broken by the dark object of our good intentions. Suddenly the curve appeared connected; in vain the eye sought the vessel in distress, for nothing obstructed the union of sky and ocean, and "She's gone! She's gone!" was simultaneously exclaimed by officers and men.

Yes, she was gone; and the gallant ship that had endured the fury of the tempest, sunk when its wrath was spent: but that tempest had doubtless shaken her stout frame, and rent her joints asunder. Yet it was hard to perish almost within the grasp of safety.

Hopes were still entertained that some, if not all, had escaped in the boats. Our own were hoisted out, and having neared the supposed spot, were immediately despatched. The morning dawned in magnificence and splendour; the sun rose in glorious majesty; but his earliest beams glanced on a scattered wreck, that told a tale of death. The boats were actively employed in passing to and fro, but no appearance of a human being could be discerned. The launch was discovered bottom upwards, and another boat broken nearly in two. The truth was soon disclosed, for the name *Atlas*, on the stern of the launch informed us, that nearly 200 victims had perished in the deep. How the catastrophe had happened, could only be matter of conjecture.

One of our boats fell in with some spars, which were lashed together so as to form a kind of floating raft, and, on turning them over, a scene presented itself that filled every soul with anguish. A young female, apparently about twenty-two, with an infant fastened to her body, had been secured to the timber; perhaps the last sad office of a tender husband, who, in the affectionate solicitude of his heart, had vainly hoped to rescue them from death. They were taken on board the frigate, sewed up in a hammock, and again consigned to that element at once their destruction and their grave.

INDIAN GRATITUDE.

A MERRY shout rung upon the wandering breeze, as a group of glad children emerged from the confinement of a school-room into the gay sunlight and balmy atmosphere of summer. There was a music in that shout, breathing the very spirit of freedom, happiness, and hope; a music which echoed all the rapturous feelings of childhood, and which burst from the heart and lip only in that sunny period of existence.

It was a beautiful sight to see these fairy creatures, tossing the curls from their beaming eyes, and dancing away over the pleasant landscape that surrounded them. Their career afforded an apt illustration of the manner in which we perform the sweetest portion of the journey of life. Now they would speed onward, with the fleetness of the wind, after a butterfly that flitted before them, and anon they would linger by the way-side and gather wild flowers to garland their joy-illuminated brows. Thus they went on, meeting pleasure at every step, and finding, in each successive object that presented itself to their eyes, a new source of enjoyment.

After varied roaming here and there, the light-hearted wanderers found themselves upon the banks of the river that skirted their homes. It was a beautiful stream, and it presented a fine picture as it went sparkling away in the mellow sunlight, through the green and pleasant hills that enclosed it. But the children had no eye for its beauties; their attention being suddenly and entirely absorbed by a novel, and to them, startling object. Drawn upon the shore among some over-

hanging bushes which had prevented their seeing it until they were quite near, they beheld a frail bark canoe. It contained a young Indian woman, who held an infant, and a dark-browed man who bent his piercing eyes frowningly upon the little group of tremblers before him. Many of these children had never seen an Indian, for the tribes once inhabiting that portion of the country had long since departed to more western climes; but they had all heard vivid and terrible descriptions of the red-men; and all listened to tales of savage barbarity until their cheeks paled and their frames shuddered with apprehension. The sudden hush of their merry voices, and the quick shadows that settled upon their bright faces, told the alarm with which they regarded the strangers. For one moment they stood spell-bound by fear; and the next they turned and fled from the spot. But, one of them, a pretty and resolute-looking little girl, still remained. She stood gazing at the boat and its occupants, with a timid curiosity that expressed itself most eloquently in every lineament of her innocent face. She appeared desirous to obtain the goodwill of the strangers, but she knew not how to make the first advances towards acquaintance. At length she remembered having heard that the Indian race were peculiarly susceptible to kindness, that they never forgot a favour. Yielding to the impulse awakened by this reflection, she turned and darted away. It was nearly half a mile distant, but her rapid footsteps soon traversed the intervening space. There she gathered a basket full of gifts—fairy playthings, toys, trinkets, cakes and fruits, were all mingled together in hurried and strange confusion. With a load which was almost too much for her strength, she hastened back to the boat and laid her offering at the feet of the strangers. They received it with many simple expressions of gratitude, and the little girl, finding her benevolent desires still unsatisfied, took from her neck a costly and beautiful string of coral, and clasped it around that of the infant. The smile of delight that beamed upon the face of the mother at this act of kindness to her child, and the grateful expressions that crossed the dark features of the father, were more eloquent than words, and the giver felt herself amply rewarded. At that moment, another Indian, who had been to the neighbouring village, and for whom the strangers had been waiting, returned, and they prepared for departure. As they sailed away, the little girl stood looking after them with that deep feeling of satisfaction which warms the heart after the performance of a generous deed. She then left the spot to rejoin her companions, and soon forgot, in wild sports and joyous pastimes, the simple act of kindness she had performed.

Years after this little incident, and far away from the spot where it transpired, a proud steamer was ploughing its pathway through the tranquil waters of a noble river. The season was spring, in its first brightness and beauty; the time morning, in its first flush of rosy loveliness, and the scene one of Nature's fairest, in its wildest state of magnificence.

The boat was ascending the Mississippi river, and as it careered along through that picturesque region, many an admiring eye was bent upon the fine and ever-varying landscape. Among those who seemed most gratified by the exceeding loveliness of the scene, were two persons who were themselves the objects of much admiring attention. They were both young, both beautiful, and both happy—happy to a degree beyond all measure, if the radiance of the face revealed aright the sunshine of the soul. The gentleman possessed a handsome and dignified face, with a form such as our dreams bestow upon a hero of ancient days. He seemed a fit protector for the lovely and delicate being at his side, who looked up to him with an expression of firm and trusting confidence which was itself a perfect type of the holy faith of woman. It was easy to discover that this young couple had chosen to tread the path of life together, and that, as yet, their way was strewn with the most beautiful flowers of hope.

From their youth, beauty, and superior refinement of manners, the newly married pair, for such in truth they were, seemed the "observed of all observers." But none gazed upon them with more apparent interest than a group of Indians, who composed a portion of the boat's passengers. These Indians were the last remnant of a once powerful

and warlike tribe, who were now leaving their homes and heritage to seek a resting-place in the wild regions of the far west. One of the dark-browed men, in particular, manifested a peculiar admiration for the young bride. He gazed earnestly and unceasingly upon her face; he lingered near to catch the sound of her voice, and wherever she moved, his eyes followed her, as if they were fascinated by some magic spell.

The boat was passing through a portion of the stream wider and more picturesque than any it had yet traversed. The river had become narrower, the current much more rapid, and dark rocks and high hills frowned in savage grandeur on either side. As the crowd of passengers were gazing in voiceless admiration upon the wild magnificence of nature, the silence was suddenly broken by a fearful noise. There was a mighty shock—and then arose the mingled sound of many voices, crying out in tones of agony and terror—"We are lost!" The steamboat had struck some hidden and fatal obstruction in the river, and her strong timbers were crashing and severing like a frail sapling in the stroke of the thunderbolt. There was no time for deliberation—no chance for selecting a mode of preservation—the boat was rapidly going down, and the many terrified beings, thus suddenly menaced with destruction, sought each the readiest means of avoiding death. Some leaped boldly into the rapid current and swam stoutly towards the shore; others, who could not swim, clung eagerly to some frail object which was to be their support in the deep waters to which they were about to commit themselves, and many ran wildly about upon the decks, frantically calling upon some loved name or seeking some dear friend who had, perhaps, already met a dreadful doom.

Among those who acted, in that trying moment, with firmness and composure, the young pair above alluded to were conspicuous. As soon as the husband became assured that the destruction of the boat was inevitable, he calmly divested himself of some portion of his attire, whispered a few words of encouragement to his companion, and then twining his left arm around her slender waist, he leaped into the water. He was an expert swimmer, and imagined that he could easily bear his light and lovely burthen in safety to the shore. But this hope was destroyed by an unlooked for accident. In springing from the boat he struck his left arm violently against a floating plank, and when he endeavoured to raise it, he found it rendered powerless by the shock. This was truly alarming, but with great presence of mind he entreated his wife to cling firmly to the support thus thrown in their way. All that he could now do, was to lay hold of the plank himself, and look around for assistance. There was none near—nothing that met his eye could afford the faintest hope of rescue! As he felt the powerful current rapidly bearing them down the stream, he strove to raise his disabled arm to guide their frail support towards the shore. But his efforts were vain, and the remorseless waters seemed eagerly hurrying him on to destruction. He could have resigned himself calmly to the fate which now seemed inevitable, but for the fearful thought that his beloved wife must share it. This agonising reflection, added to the pain of his wounded arm, rapidly diminished his strength. Despair began to paralyse his energies, and he struggled in vain against the faintness that was fast overpowering him. He imagined himself dying, and called out to his companion—

"Cling firmly to the plank, dearest, and God will send thee aid. I die—farewell!"

"No, no!" she screamed, in the shrill accents of indescribable anguish, while she loosed her hold of the plank and clung frantically to his sinking form. "No, no, if thou perish I will not be saved. Better far to die with thee than live to lament thy loss." At the same moment she relinquished all efforts to keep herself from sinking, and resigned herself to a power which she believed to be death. But it was only insensibility stealing over her, and after a time she awoke as from a strange and troubled dream. The noise of rushing waters seemed still sounding in her ears, and her form yet seemed tossed about at the mercy of the restless waves. For some moments she vainly endeavoured to recall the remembrance

of what had occurred. She was lying upon a little island in the middle of the stream. Some person was carefully supporting her head; and looking up to ascertain who was near her, what was her astonishment to behold the dark featured Indian who had so strangely and earnestly regarded her during the voyage. This brought the remembrance of the recent catastrophe vividly to her mind, and uttering a faint low cry of anguish, she darted a glance of fearful inquiry around. That look was answered by beholding its object lying near, weak and almost exhausted like herself, but safe from the terrible fate which had threatened him. Then joy, unutterable joy, took possession of her heart. She asked not how they had been saved, she cared not to know—it was enough to see the beloved one whom she had last beheld sinking beneath the wave, now safe and unharmed before her; and a sense of holy gratitude and tranquil happiness, excluded all other thoughts.

The greeting of the young pair was such as might be imagined between persons, like them, rescued from the very grasp of death. When the first deep gush of fervent happiness passed away and allowed other thoughts to arise, they turned to their kind preserver to offer the warmest acknowledgements for the service he had rendered them. He received their thanks with a smile, but when they spoke of reward for his noble deed his features expressed dissatisfaction. His reply to their offers of reward was characteristic of the Indian race, for it expressed all that was necessary in few but fitting words. It also explained that which before appeared mysterious in his conduct.

"Maneko," he said, "wants no recompense; he would scorn to receive pay for what was only an act of duty. The beautiful white girl has forgotten the poor Indian whom she long ago befriended, but he can never forget her. The gift she took from her own fair neck still rests upon the bosom of his child, and the remembrance of her kindness is still warm in the heart of his wife. Many times have the forest leaves withered in the breath of Autumn since the little white girl smiled kindly on the strangers. She was then like a spring flower just opening its beauties to the light, and she is now like a tall tree standing in the pride and glory of its summer loveliness; yet, Maneko remembered her again, despite the change, and his heart warmed with the desire of returning her kindness. It has pleased the Great Spirit to grant him an opportunity, and now his soul is satisfied."

And thus it was! The grateful Indian had recognised the fair young bride as the child who had, a number of years before, conferred upon him a slight, but never forgotten favour. In the fearful moment of the boat's destruction, he had resolved to save her, or perish in the attempt. For some time his kindly intentions were frustrated by the confusion of the scene, and by the disappearance of the lady and her husband. When, at length, he did discover them, they were floating far away down the river, and it required his utmost exertions to reach them. Even then he would not have been able to save them, if they had not been near a little island, which afforded a safe and secure resting-place to the insensible couple and the almost exhausted preserver.

Thus were two young beings rescued from a fearful death, and restored to hope and happiness, life and love, by the influence of one little act of kindness. Surely deeds of benevolence are like

"Flower-seeds by the far winds strewn;"

they take root in almost every soil—they spring up in the most rugged and lonely places; and they shed light and grace and beauty around the most desolate scenes!

A SLIGHT MISTAKE.

A LARGE American brig, bound from Havannah to Boston, had been captured in this very channel by one of our men-of-war schooners, and carried into Nassau; out of which port, for their own security, the authorities had fitted a small schooner, carrying six guns and twenty-four men. She was commanded by a very gallant fellow—there is no disputing that; and he must needs emulate the conduct of the officer who had made the capture: for in a fine clear night, when all the officers were

below rummaging in their kits for the killing things they should array themselves in on the morrow, so as to smite the fair of New Providence to the heart at a blow—whiss—a shot flew over our mast head.

"A small schooner lying-to right a-head, sir," sung out the boatswain from the forecabin.

Before we could beat to quarters, another sung between our masts. We kept steadily on our course, and as we approached our pigmy antagonists, he bore up. Presently we were alongside of him. "Heave-to," hailed the strange sail, "heave-to, or I'll sink you."

"The devil you will, you midge," thought I.

The captain took the trumpet—"Schooner, a hoy!"

No answer. "D—n your blood, sir, if you don't let every thing go by the run this instant, I'll fire a broadside. Strike to his Britannic Majesty's sloop, Torch."

The poor fellow commanding the schooner had by this time found out his mistake, and immediately came on board; where, instead of being lauded for his gallantry, I am sorry to say he was roundly rated for mistaking his majesty's cruiser for a Yankee merchantman. Next forenoon we arrived at Nassau.

THE SEAMAN'S TALE.

SWIFT to the embracing deep,
Of British architects the theme and boast,
Rushed our devoted bark;
With loud acclaims the echoing welkin rung,
As first around the circling waves she flung
That Hamoaze's bosom sweep.
Pride of Britannia's sea-girt coast,
Her name became each seaman's toast,
And long her waving flag was blest
With constant victory.

Our crew a dauntless band,
The cheering song—the battle—or the dance,
With equal ardour shared;
Hearts volatile as air; yet bold as light,
In every clime they eager sought the fight,
And shock each hostile strand.
Descried on ocean's wave, what chance
Waits on thy hapless cruiser's, France!
What hope! when Britain's tars advance?
Favourites of victory!

In danger's utmost hour,
When sleep's embraces drowsy landmen fold,
Determined to the last,
Our heroes braved the storm—the lightning's flash,
Howls the wild wave—the pealing thunder's crash,
But vain their power
To sink with fear our seamen bold;
Calmly the tempest they behold,
Firm, though the death-winged demon rolled
His dread artillery.

In Biscay's stormy Bay
Stealing along, a galley fleet espy,
Our death-devoted bark!
Ah, what could valour, what could skill avail,
Opposed to three, one solitary sail,
In such unequal fray?
(A lion in the toils). To fly
We scorned—no aid, no succour nigh—
'Twas ours indignantly to die
Or gain the victory.

Peace to the immortal brave
Who fell that fatal day—a gallant few—
Now ocean deep at rest:
Ye sank! supporting nobly Britain's fame,
Unstruck her flag, unstained the glorious name
That rules the subject waves.
Your country's tears are yours—the due
Well earned, of such a matchless crew;
And England, as she cries adieu,
Embalms your memory!

LOSS OF H.M.S. HINDOSTAN.

Hrs Majesty's ship Hindostan, of fifty-four guns, was converted into a store-ship, carrying thirty guns, and commanded by Captain J. Le Gros. At the time of the unfortunate accident she was on her way to Malta, having on board eleven medicine-chests, and sundry naval stores for the use of the hospital. On the evening of the 29th of March, 1804, being in company with the Phœbe, and a transport, then off Cape St. Sebastian, a violent storm from the N.W. came on so suddenly, that before they could take in the sails, they were all split, with the exception of the foresail, and the greater part of the canvass was blown overboard, and during the gale they parted company with his majesty's ship Phœbe. As the ship laboured violently, the mortar-raft on the main-

deck fetched away, as well as the boats on the quarters, which all hands were instantly employed in securing. The gale abated the following evening, and the crew were engaged in repairing the damage which the ship had sustained in her sails and rigging.

On April 2, about seven o'clock in the morning, a thick smoke was observed to ascend from below; and all hands were immediately called up, the engine was set to work without loss of time, and the buckets kept employed in supplying it with water. The courses were hauled up, and the hammocks got up and stowed away; the galley fire was put out, and several of the ports were opened to give light below. From the course of the smoke, and the report made, the fire was supposed to be on the orlop-deck, abreast of the larboard chess-tree; the engine was therefore played there, and a vast

LOSS OF H.M.S. HINDOSTAN CAPTAIN J. LE GROS APRIL 2, 1804.

quantity of water thrown down. Though no fire was visible, yet the smoke increased so fast in the orlop, that it was impossible for the people to remain there; upon which scuttles were cut at several places forward in the lower deck. Still, with the exception of the smoke, there was no appearance of fire; but they continued incessantly pouring water down the scuttles and hatchways. The fore-hatchway was then partly cleared down to the orlop-hatches, when, from the heat of the tarpaulin over them, it became evident that the fire was among the stores in the fore-hold. It was before impossible to form a conjecture concerning the cause of this alarming accident; but it was now supposed that in the gale of the 30th of March, some of the medicine-chests in the hold had been broken by the working of the ship, and that a spontaneous combustion had been produced by some of the

inflammable materials which they might have contained; and the frequency of occurrences of a similar nature appear in a great measure to confirm this conjecture.

The smoke had by this time become so overpowering, that the people were unable to work on the orlop deck; the lower deck hatches were therefore ordered to be laid on, the ports lowered down, the scuttles, which had been opened, to be choked up, and every means taken that were possible, to endeavour to smother the fire. This having been done, the ship was hove-to about half-past eight; the boats were then hoisted out, and the marines ordered to be under arms to prevent any but the boat-keepers from getting into the boats. Soon after there was a cry of a strange sail being in sight, and, in consequence, a signal of distress was hoisted; but the report proved to be false.

At a quarter-past nine, they wore ship to the N.W. and made every exertion to sail for the land, occasionally firing guns. The people were employed in supplying water, launching the spars overboard for a raft, and getting the gunpowder out of the magazine, and throwing it overboard; but the smoke soon increased to such a degree, that it was impossible for the people to remain at work below. An attempt was therefore made to drown the powder in the magazine by throwing water down, as there was no cock for that purpose; but about eleven o'clock, every one was obliged to discontinue his exertions, as several had been suffocated and brought up for dead. They all, however, afterwards recovered, excepting Francis Burke, who was steward to the purser of the Victory.

As the magazine was still the principal cause of alarm,

those carpenters and shipwrights who were on board as passengers, readily volunteered their services, and succeeded in cutting scuttles into it, through one of the ward-room and one of the gun-room cabins. While they were thus occupied, the smoke increased aft so rapidly, that it became absolutely necessary to close up the after-hatchway on the main-deck; the fore and main-hatchways having already been secured. The chinks of the doors, seams, &c. of the ward-room, were filled up to keep out the smoke. The scuttle in the captain's after-cabin was then opened, and people set to work to haul up the powder and heave it overboard; but so severe was this duty, that many of the men employed were brought up apparently lifeless.

At noon they had an indistinct view of the land, bearing N. W. by W., distant about three or four leagues, latitude by ob-

servation, $41^{\circ} 59' N.$ The people were still busily engaged in clearing the magazine and supplying water, when about half-past twelve they were thrown into the utmost consternation by a violent out-burst of smoke, followed by flames, which rose to half the height of the mainmast, threw off the upper deck gratings, and rushed up the larboard gunwales, abreast of the chess-tree, threatening immediate destruction. In the general confusion which this circumstance naturally created, two men, James Jeffery and James Kelly, in attempting to get into the boats, were drowned. The main-topsail was backed so as to be in readiness to take to the boats; but when the first burst of the fire had passed off, the flame so far subsided, that they were enabled to get the tarpaulins, &c. again over the hatchways, and in some measure to fasten them down. The ship was now fast drawing in with the land and as they then sup-

posed themselves to be to the leeward of Cape Crux, they threw overboard the signal-books and private signals, together with all public and private despatches, to prevent any chance of their falling into the hands of the enemy; and having previously fastened weights to them, saw them all sink. They then hauled down the numeral signal for being in distress, and left flying the reel-ensign at the fore-topmast-head, and blue ensign at the ensign staff, both reversed; and then threw overboard all the other flags and the hammocks which were upon deck.

In the meantime, the people who had been employed in clearing the magazine had run up from below, bringing with them several of their number who were so suffocated as to be apparently dead: this accident had been very frequent during this day, but none of them had suffered so severely as Mr. Banks,

the acting lieutenant, and Mr. Pearce, the gunner; the former having been brought up five times during the morning, in a state of suffocation, and the latter four times. The smoke, however, soon cleared away again in the ward-room and magazine, and a third attempt was made to get up the remaining powder, and also to save the ship's books; but they found it quite impracticable to accomplish either of these objects.

At half-past one the breeze freshened, and at length blew so strong, that they were obliged to take in top-gallant sails. All further communication with the fore part of the ship was now cut off, and the men who were at work were obliged to leave that duty, and use every possible exertion to keep the hatchways covered, while others were employed in incessantly pouring water down by the main and mizen masts, the capstan, wheel-ropes, and every place whence the smoke issued the most, in order, if possible, to prevent the fire from gaining ground abaft; but in spite of all their exertions, and the means which were taken to suppress the fire, it still gained upon them, and the case of the mizenmast in the captain's cabin having already caught, and the flames frequently bursting through the lee-ports, particularly those forward, there was no other alternative than clearing away the mortar-raft which was stowed over the quarter-deck, and to get in readiness to save the crew, about which the shipwrights and others were immediately employed.

At about a quarter-past three, they got a hawser made fast to the raft, and launched her overboard; and a few minutes after four, the Hindostan ran aground in the Bay of Roses, at about half a mile distant from the shore, and three miles to the N.E. of the town of Ampurius la Escala. They immediately clewed up all abaft, leaving the fore-topsail and jib set, in order to prevent the ship from swinging with her head to the wind.

By this time eleven Spanish boats had put off from Escala, and were pulling towards them. The crew of the Hindostan immediately manned their boats, and began to land the passengers and people, while the carpenter, with his crew, assisted by those passengers who were shipwrights, were ordered upon the raft, to endeavour, if possible, to scuttle the ship on the lee-quarter; but as they had not been able to save but very few of their tools, they could not accomplish this effectually, and the wind soon after shifting, blew so much of the smoke aft, that they were obliged to desist from this attempt; and the raft, with as many men as could be placed upon her, was then ordered to be put off from the ship and endeavour to reach the land. The Spanish boats which had come off to their assistance, could not be prevailed upon, on any account, to come close to the ship, but some of them took in the men from the boats and carried them safe ashore.

At about five o'clock the devouring element had made such fearful progress, that it was found impossible for any one to remain on board longer with any chance of safety. All had now left the ship, excepting Captain Le Gros, the first lieutenant, and the master, who descended by the stern-ladders into one of the yawls and pulled to windward of the ship, and Mr. Banks, the second lieutenant, who did the same in the other yawl; but as they judged it dangerous to remain near her, they made for the town of La Escala, where, from its blowing fresh, they did not arrive till nearly seven o'clock in the evening. The launch, which was the first boat ordered on shore, having landed the consul of Tripoli and his family, and all the women and children, had, by the time the captain had left the ship, gone with the jolly-boat to the assistance of the raft, which had drifted considerably to leeward, and towed it to shore; but the men were so entirely exhausted by the excessive fatigues which they had undergone, that they were only able to haul up the jolly-boat, and were therefore obliged to leave the raft and launch lashed together, and secured to the beach by tow-ropes. This party, in marching past where the ship lay at about half-past six, saw the fire bursting frequently from her ports and hatchways. At half-past eight, when they arrived at La Escala, she appeared to be one entire sheet of flame, and at half-past nine she blew up, having drifted as she became lighter, to some distance from the shore.

Immediately upon landing, Captain Le Gros waited on the principal officers of the town; and through their assistance pro-

vided a house for the ship's company, where the exertions of the previous day were forgotten in the soundness of their slumbers. The next morning, not a vestige of their ill-fated vessel was to be seen; and upon mustering the crew, the only persons who were missing were the two who were lost as before stated, when the flames first burst forth, and Francis Burke, who was suffocated, as already described, in endeavouring to clear the magazine. The total number of persons, men, women, and children, who were landed from the Hindostan, amounted to two hundred and fifty-nine.

The next morning they were visited by Mr. Edward Gayner, an English merchant of the town of Roses, who very kindly offered his services, and procured them a supply of provisions, and other necessaries for the ship's company; the men were then removed to a large detached house, to the eastward of the town, and put under quarantine. On being mustered the following day, April 4, it was found that John Colquhoun and William Montgomery, two supernumerary boys, were missing.

On the 5th the articles of war were read, and Joseph Birch, a supernumerary marine, received twenty-one lashes for drunkenness and disobedience of orders.

The two yawls, with a lieutenant in each, were sent to look out in the bay for the remains of the ship, to see if anything could be saved from the wreck, and also to bring the launch and jolly-boat to La Escala. They returned at two o'clock in the afternoon, bringing the jolly-boat with them, but the launch having been staved, they were obliged to leave it behind. They had not been able to discover the wreck, or any remains of the ship, but they found that that part of the mortar-raft on which some of the crew had landed, and which they had left secured to the beach, had been moved about half a mile to the northward of where the launch lay, that it had been cut to pieces, evidently by axes, and a great deal of it was carried away.

On the 7th, the wind blew so fresh, and the weather looked so threatening, that it was deemed inadvisable to send the boats out again. Near La Escala, they found the upper part of the mortar-raft, drifted ashore, and burned to pieces.

On Sunday, the 8th of April, they sent off despatches to Lord Nelson, the commander-in-chief, giving him the particulars of the dreadful accident by which they had just lost their vessel, and also to the secretary of the Admiralty, in a vessel which was hired by Mr. Gayner for that purpose, at the especial request of Captain Le Gros. After the accustomed ceremony of mustering the ship's company, they performed divine service, offering up their heartfelt thanksgivings to Divine Providence for his late signal mercy in delivering them from such imminent perils. At eleven o'clock they again sent the two yawls, with the first lieutenant and master, to endeavour, if possible, to discover the wreck; they were attended by a fishing-boat, the master of which had promised to point out the spot where the wreck lay, but after a fruitless search till six o'clock in the evening, they returned without having found anything.

On the 9th, at daybreak, the first lieutenant and master were again sent out with the two yawls in quest of the wreck, with instructions to the lieutenant to go alongside of an English frigate which had come to an anchor in the bay the previous evening, and to inform her of their distressing situation. This proved to be his majesty's ship Juno. At nine o'clock the yawls succeeded in discovering the wreck, at nine fathoms and a half below the surface of the water, when they immediately put a buoy on her. At eleven o'clock the boats returned with the intelligence of their success in discovering the remains of their once gallant vessel, and half an hour afterwards, they were relieved from the disagreeable and irksome confinement of quarantine, by the arrival of the pratique master from Roses, who immediately released the officers, passengers, and crew. At noon, Captain Richardson of the Juno, came on shore at La Escala, to arrange with Captain Le Gros for the disposal of the numerous body who had been thus suddenly thrown upon a foreign shore, only escaping with their lives, when it was agreed that the Juno should take the whole of them, officers, crew, and passengers, which was accordingly carried into effect the following morning at day-

break, by means of the two yawls and jolly-boats, assisted by the boats belonging to the Juno. At noon, Captain Le Gros, accompanied by Captain Richardson, went on board the Juno, leaving Lieutenant Tailour on shore at La Escala, to look after some of the men that were missing.

On the 11th, at eight o'clock in the morning, the second lieutenant was despatched with the two yawls belonging to the Hindostan, to endeavour to bring off the launch from the beach; but they found the surf so high, that it was impossible for the boats to land. Captain Le Gros afterwards accompanied the masters of both vessels to the wreck of the Hindostan, and soon afterwards Lieutenant Tailour returned on board with some of the men who were missing, and reported that others had been taken up by the Spanish government at Gerona. However, with the exception of James Key, an able seaman, who had been missing since the 10th, and the two boys, Colquhoun and Montgomery, the whole of the absentees returned by the thirteenth.

In pursuance of an order from Vice-admiral the Right Honourable Lord Viscount Nelson, K. B., and commander-in-chief of his majesty's ships and vessels on the Mediterranean station, dated the 18th April, a court-martial was held on board his majesty's ship, the Royal Sovereign, at sea, on Thursday the 19th, under the presidency of Sir Richard Bickerton, Bart., Rear-admiral; when, after thoroughly investigating all the circumstances attending the loss of the Hindostan, they were of opinion, that the fire originated among the stores in the fore-hold, from some unknown cause, near the place where some medicine chests were stowed, and which increased to such a degree as to baffle all efforts to extinguish it; and most fully acquitted Captain Le Gros, the officers, and ship's company, from any blame on account of the transaction.

RETRIBUTION; AN INCIDENT AT SEA.

It is now some five-and-twenty years ago that I was junior lieutenant of as sweet a frigate as ever spread canvass to the breeze, and as it was my first appointment, I was not a little proud of my white lapelles, for I could with truth declare that, as I had the pleasure of wearing them, so also I had honestly won them. We were stationed in that part of the world so terrific to the imagination of Europeans—the West Indies; but I must acknowledge that, though it was precious hot, yet I found it rather pleasant than otherwise.

We were cruising in the Gulf of Florida—the merry old craft playing all sorts of antics in the numerous currents—poking her nose to whatever point of the compass pleased her for the time, in spite of helm or braces—and not unfrequently threatening to resemble the black fellow's schooner, that “run in de bush for ‘n yam apple.”

One night, to the northward of Anguilla, just clear of the Salt Keys Bank, we had a smart gale from N. E. and we reached away upon the starboard tack under close-reefed top-sails, fore-topmast, staysail and trysail, top-gallant yards on deck, and top-gallant masts struck. Towards morning the breeze lulled, so that we were enabled to shake out a couple of reefs; and the bubble of a sea that had been kicked up by the wind was soon smoothed down by the run of the stream.

At daylight, we saw a large ship right a-head of us, with her topmasts gone, the wreck still hanging over the side; whilst to leeward, running away large, under a heavy press of canvass, was a low black schooner, which, as she was nearly end on, looked something like a negro's head with a large ostrich plume floating on the waters. What she was became instantly known, and no small degree of excitement prevailed amongst the watch as soon as the name was uttered—“the Black Bloodhound”—which was alike applied to the pirate vessel and the marauding chief, and of whose peculiarities the most wonderful accounts had obtained currency and credence.

There was nothing the schooner could not be made to do, except speak, and the captain had the same peculiarity, for all (and I am thinking they were but very few) who escaped from

his clutches declared that he carried on the several duties of commander, judge, jury, and chief executioner, by dumb show. The fellow was described as hideous in appearance, ferocious by nature, and cruel from an instinctive love of human flesh. The Black Bloodhound, small as she appeared upon the ocean, was nearly two hundred tons admeasurement, and carried twelve eighteen pounder carronades, one long two-and-thirty in amidships, upon traversing slides, with an heterogeneous crew of seventy men from all nations.

“Keep her clean rap full, Quarter-master,” said I, as descending the companion ladder, I hastened to perform my duty, as officer of the watch, by giving information to the captain. “Two sail in sight, sir,” exclaimed I, on opening the cabin-door; “a ship about half a league distant ahead, with her topmasts gone”

“Well, sir, you had no occasion to disturb me for that,” replied he. “Stand on and hail her, and let me know what she is. I have not had five minutes sleep throughout the night, and had just got into a snooze, and here you come to rouse me out, merely to tell me”

“The Black Bloodhound is on our lee-beam, sir, about five miles off,” rejoined I, interrupting him rather unceremoniously.

“You don't say so, Mr. —?” uttered he, making but one spring out of his cot; and drawing on a pair of loose flannel trousers; and throwing his cloak around him, he neither waited for shoes nor hat, but was instantly on deck, with his glass, reconnoitring the strangers. One look at the stranger was sufficient to betray her character, whilst the ship in distress was evidently a capture, and that she had been plundering her.

“Turn the hands up; make sail, Mr. —,” said the skipper, as cool as a melon.

“The watch square the main-yard—lower the quarter-boat down—put twelve men into her, armed—and be ready, Mr. — to shove off and take charge of the ship. Do the best you can to repair the damage, and keep the frigate in sight as long as possible. Up helm, sir, directly you get on board, and stand after me. Should you part company run for Jamaica. Bear a hand, sir: you have not a moment to spare for chest or bedding.”

The orders were promptly obeyed; the word flew swiftly along the decks that the Black Bloodhound was under our lee, and produced greater alacrity amongst the people than the shrill call of the boatswain's mate. The boat was lowered, and as the frigate launched gallantly ahead, in less than ten minutes from my quitting the captain's cabin I was alongside the strange ship; while the frigate, under a cloud of sail, pursued the flying pirate.

During the bustle I had picked out twelve of the best seamen from the many who volunteered; for so strong is the love of novelty or change in the mind of a tar, that he will undergo any hazard or privation to indulge it. Had the first lieutenant not been so fully engaged, I much question whether he would have allowed me to carry away such excellent hands; as it was he had no time to muster or inspect them, and thus I got clear off with my crew, fourteen in all, including myself and a master's mate.

On ascending to the deck a scene of devastation and blood presented itself, such as could only be witnessed under similar circumstances. Bales and cases broken open lay about in every direction. Elegantly-bound books, silks, muslins, lace, music—in short, something of everything, mutilated, torn, and defaced—were scattered in every part fore and aft, and much of it saturated with human gore. The topmast and topgallant gear hanging down increased the confusion, whilst here and there a dead body, horribly mangled, completed the dreadful spectacle.

My faculties were for a few minutes utterly benumbed. I had seen many a bloody corpse upon the deck of a battle-ship without shrinking; but these—these fell by the remorseless hand of the murderer, and not in fair with a gallant foe. The men had followed me very closely, and were waiting for orders, when one of the men caught me up in his arms (I am a little fellow) and ran aft to the taffrail. At first I was much incensed and almost suspected a mutiny, particularly as I saw the rest very busy about the mainmast, from which several of them hurried down the main-hatchway, whilst others descended by

the companion hatch. It was the work of a moment. "What the devil do you mean by this Jackson?" said I, addressing the man who still held me, apparently ready to jump overboard.

"She's on fire, for'ard, sir," answered he respectfully; "and there was a train, with a lighted match close to it, leading to a barrel o' powder that stood alongside o' you, sir; and as I've heard you say you can't swim, sir, why I hopes no offence in the regard o'trying to save you, sir."

Instinct alone could have prompted this simultaneous movement, and I felt humbled and abashed that I should so far have suffered the shock my nature received to unman me as to give my men the advantage of the discovery. I could not, however, but be much gratified at this token of esteem manifested towards me. "This will never do, Jackson," said I gratefully: "we must stand our chance, my boy, sink or swim. Come, let us see if we can't lend them a hand."

He immediately complied; but the danger had in a great measure ceased through the activity of the men, who had destroyed the communications which had been laid to the powder, ready to blow the ship up. A slight explosion took place down forward, but a plentiful supply of water soon extinguished the fire, and we commenced clearing the wreck; so that in a short time we were running after the frigate, under the fore-sail, mizen staysail, and driver. But in a couple of hours we lost sight of her altogether, and the chase we had not seen for some time.

"There's a—of a sight in the cabin, sir," said Jackson, as soon as the hurry of duty had somewhat subsided; "I've been down overhauling the lockers for a palm and needle and some twine, in the regard that the first lieutenant didn't give us a sufficient allowance of time to get my ditty-bag a long with me, sir. There's four on 'em with their throats cut from clew to earing, and there's a sort of a soughing or groaning abaft by the rudder-case; so that thinks I to myself, I'll just tell the officer, and mayhap—"

"You're right, Jackson; it may be some poor wretch still in existence," said I; and for the first time from my coming on board I went below. The cabin-deck was strewn with a variety of articles, and nearly in parallel lines to each other, with their arms tightly pinioned, lay four bodies, each with the head nearly severed from the neck. The cabin was large and handsome, and the dress of the sufferers indicated that they had been passengers.

In a state room on the starboard fore part of the cabin lay a male and female in a most disgusting position, as if the fiends delighted in every species of evil that could possibly outrage human nature. They were both dead; and beneath the bed-place they occupied was a smaller one, in which was a female child about three years old, cruelly murdered by cutting the throat.

"It's aft here, sir, as the noise is," said Jackson (who had followed me below) going to the rudder-case. I went to the spot and listened, and certainly there were sounds of a peculiar kind, but I thought they were merely caused by the weight of the rudder on the gudgeons, till, on opening a small door of what appeared to be a cupboard, the upper part of a human being

became visible, and we soon had the melancholy gratification of rescuing a fellow creature from a premature death. I say melancholy gratification, for he had been so inhumanly maltreated, that it was really shocking to look upon him. He continued for a long time in a state of insensibility, but by the application of some cordial which we found, and restoring him to the air, he recovered animation, though his mental faculties seemed at first to be much impaired. He raved of bloodshed and murder, called upon the names of Emma and Eliza, shrieked for his children; and bodily pain, which must have been excruciating, was absorbed in the more agonised anguish of the heart. He was apparently about five and forty years of age, but his face had been so scored with knives, that it was impossible to make out a feature of his woeful countenance.

Through dint of strenuous perseverance, by four o'clock in the afternoon, we had jury, fore, and main top-masts up, and the top-gallant sails set for top-sails, and as we had lost sight of the frigate, I hauled up with a fine breeze, intending to go round Cape St. Antonio, the western extremity of the island of Cuba; and as we had made all tolerably snug, we sought for some refreshment, having brought with us only a bag of bread and a few pieces of salt junk. Our search however, was unavailing, for though we found a case of claret and

a quarter cask of Madeira, yet we discovered nothing—not even a biscuit—in the way of food.

Compelled to make ourselves content upon the fare we had, preparations were made for cooking, and whilst some were attaching weights to the murdered dead for the purpose of sinking them, others were employed washing away the crimson pools that stained the polluted deck.

I used my best endeavours to soothe and tranquillize the mind of the wretched sufferer, who still existed, and gradually became more and more conscious, till at length his rationality returned, and he proved to be the mate of the ship,

and brother to the captain, who had been murdered by the pirates. Everything that could be done to alleviate the poor fellow's torture was tried, but he was so dreadfully burnt (the wretches having scored him like pork, rubbed gunpowder into the interstices, and then fired it off,) with other grievous injuries. —And perhaps I may as well relate here the narrative which I obtained at intervals, and by disjointed parts.

"We sailed," said the mate, "from New York, and as my brother the captain had purchased some property in Jamaica, we were bound to Montego Bay, where, with his family, consisting of a wife and two daughters, one sixteen, and the other thirteen, he purposed landing."

"But there was one younger than you mention," said I without making other reference, to what I had before witnessed.

"Oh yes, sir," replied he, "there were two—two dear innocents—they were mine, sir—they were mine—the children of one who died a short time before we left New York; and they were going to remain with their uncle whilst I was at sea. I need not ask you how you came to know the fact of their being aboard, for the dreadful massacre is yet before my eyes. Oh God! that I could wipe away the remembrance of it for

ever. Yet no! Almighty Father, grant that the hour of retribution may come and I am content to suffer till that time.

"We made a very fair passage, sir, till yesterday afternoon, when the piratical schooner hove in sight, and not liking her appearance, we carried on through thick and thin, under the vain hope of falling in with some of the British cruisers. Oh, sir, had it pleased Providence to have sent you to our succour yesterday—but I will not arraign the decrees of unerring wisdom. Yet when I think of my murdered little ones, and all dear relations—all—all gone—oh, sir, it is more than my spirit can endure.

"The schooner overhauled us very fast, yet still we cherished the prospect of escape or succour, till in a sudden squall, in which we did not shorten sail, our three topmasts came down, and then we sank into despair. The females had been secreted in the hold under a heap of lumber; and whilst I was looking at the wreck, my brother came to me.

"Amos," said he, "let me commune with you apart," and I walked aft with him in silence. "Amos," continued he; and there was a fierce, fiery restlessness in his eyes as he looked in mine; "Amos," repeated he, "our children, could you bear to see them," and he paused and grasped my arm in a convulsive clutch. "Amos, answer me: would it not be better that they should die, than fall in the power of yon hellish gang?"

I caught his meaning, but I could not speak. "Did not the chosen people of the Most High," he continued, "save their wives and daughters from pollution by—" he ceased, and a sickly tremor came over him as he felt terrified at his own thoughts.

"God had departed from them, Daniel," said I, soothingly; "but we do not know that he will visit us in judgement! Pray to him in this hour of peril, that his wrath be not stirred up against us! We must use the means, Daniel; it is for Him to bless our efforts." "Thou counselest well, Amos," returned he; "we will use the means, and," he added, raising his hands to heaven, "Lord deliver us for thy name's sake!"

"We worked hard to clear the wreck, but the schooner was alongside of us before we had well commenced; and in a few minutes her boat full of men, shoved off to board us. 'Amos,' said Daniel, 'be near me, my brother; and be firm. Yet, yet,' added he, whilst his eyes again flashed fiercely, 'I would not torture them; and if the lambs are to be slain—'

"Peace, Daniel," returned I; "God sees not as man sees."

"Well, sir, the pirates boarded us, and then commenced a series of the most diabolical outrages that infernal ingenuity could invent and perpetrate. No resistance was offered; for it would have been useless. The passengers were taken into the cabin, and tortured to make confession where the money was concealed. It was in vain they endeavoured to appease the wretches, by resigning every thing. Some articles of female apparel were discovered, and the pirate chief, his face concealed beneath a black mask, made signs to one of his followers, who demanded where the owners were?"

"To the honour of the seamen, they resisted every attempt to wring the secret from them; but one of the passengers, a poor weak, terrified lad, under the expectation of saving himself, betrayed their hiding-place, and the next minute his throat was cut, and he lay a corpse upon the deck. Never shall I forget the look of Daniel when his wife and daughters were brought up, and tried to run to him for protection. Emma was just at the age of ripening beauty; and Eliza was nearly as tall as her sister, though not so well favoured in feature. A motion from the chief, and they were seized by some of his fiends in human form; and when Daniel would have rushed forward to attempt their rescue, a blow from the chief's sabre cut him down. Then ascended up to heaven wild shrieks of horror and supplications for deliverance.

"There, too, stood my innocents—the wretches, could not they spare infancy? Oh no! their feet were swift to shed blood—although it were the blood of babes! but I cannot speak of them, sir—they are safe in another and a better world—whilst I!—ay, the hour of retribution will come. When Daniel recovered sensibility, it was to see his daughters forced over the side into the pirates' boat; and as they clung to their mother,

who held them with an inseparable grasp, the tendons of her arms were divided by a sharp weapon; and as they still embraced, a ruffian drew his knife across my sister's throat, and she was a quivering corpse. Daniel was lashed down to the ring-bolts—powder was placed round him, and exploded, to make him confess that money was somewhere in his keeping. For myself I was suspended by the wrists in the main rigging, and there, oh God! will the scene never pass away from my eyes?—there, sir, I saw my children practised on by every hellish device; and there, too, in my sight—the sight of a father—the remorseless villains butchered them."

Here he ceased for a while, entirely overcome with the horror of recollection, and his convulsive sobbings seemed as if they would rend his breast. In a short time he grew more calm, and proceeded:—

"It would be a sickening task, sir, to detail all the atrocities practised by these devils. Murder after murder followed in rapid succession, and then they commenced plundering. My poor brother looked at me, and then was, or at least I thought there was an expression of reproach upon his countenance as he mournfully shook his head; but he could not speak as the inhuman wretches had cut out his tongue.

"Throughout the night did this scene continue; and it grew more and more dreadful when heightened by intoxication. The pirate chief never removed his hideous mask—he had returned once to the schooner, but remained only a short time; and when he came back poor Daniel was cast loose, a rope was rove through a block upon the main-stay, a noose was put round his neck, and he was run up till his convulsive throes ceased, and he was lowered down to recover. Three times was this repeated; but the third time had effectually terminated his sufferings, and he was thrown down the skylight into the cabin.

"How I contrived to escape I can hardly tell. I remember being cut down and falling to the deck, where some one dragged me to the companion hatch; and as they raised me up for a launch down the ladder, a voice whispered in my ear, 'There's a sail in sight—hide yourself if you can.' The next moment I was precipitated below, and in a few minutes, finding no one in the cabin, I crawled to the place where you found me, and sunk into insensibility. You see the manner in which I have been treated; but God will grant me strength for the hour of retribution. I have prayed for it, sir—the groanings of my spirit have ascended up to the throne of omnipotence; I have implored with the pleadings of faith—and I feel assured, that ere long, my petitions will be answered."

There could be no doubt, that the schooner had made the frigate out before we had caught sight of her, and thus was enabled to gain a considerable advantage. "What sort of a man is he you call the pirate chief?" inquired I.

"Of his features I can say nothing; for they were concealed, and consequently it was impossible to ascertain his age," replied the mate; "but he was of middle stature, well-built, and active. Every signal or sign he made showed the heart of a devil."

That night it was calm, and for three days we drifted at the mercy of the currents. Sometimes a light air of wind would tantalize us, but it soon subsided again; and as our stock of provisions began seriously to decrease I put the men upon short allowance. But this was not the worst—our water was nearly gone, and under a vertical sun this was no joke.

On the fourth day, however, we got a fine breeze, and as the frigate did not appear I determined to run into the Havana to obtain victuals, and water, and the next morning we were safe at anchor within the Moro Castle, and all hands busily at work. Unfortunately I had no papers to show my authority in taking charge of the ship; but, by one of those occurrences which are especially ordained, I happened to have my pocket-book, containing my commission, and a deposition was taken before the authorities of the actual state of the case.

The Spaniards used many pretexts for doubting and discrediting the evidence of myself and my men, for the purpose of seizing the vessel, but the English and American official residents promptly came to my aid, and we were allowed to remain unmolested. Medical assistance was obtained for the mate but no persuasions could induce him to go on shore.

I had landed early one morning to expedite the labours of the men, and feeling fatigued, entered a coffee-house to obtain refreshment. Whilst sitting at the table a young man in a Spanish undress naval uniform approached, and, stiffly saluting me, took his seat on the opposite side. His age appeared to be about five-and-twenty; his face was remarkably handsome, and there was a sort of careless recklessness in his look which characterised a tar of the old English school—in fact there was nothing of the Spaniard about him but his dress, and I very soon became convinced by his manners that he was a countryman. His beverage was wine; and as he raised the tumbler to his lips, he uttered in good English, though with somewhat of an Irish accent, “Signor teniente, your health.”

I bowed in token of acknowledgment; and a conversation ensued, in which he announced himself an Irishman by birth, but nearly the whole of his existence had been passed in the United States and Spanish America, and he was then in the personal suite of the governor, with a rank of a first lieutenant in the navy. His manners were extremely engaging; but there was a sort of hardened bravado at times about him which strikingly contrasted with his usual gentlemanly deportment.

We talked of our several national services, and his observations manifested acuteness and intelligence. The capture of the Yankee by the pirate naturally engaged some portion of our attention, and he listened to the details with much earnestness.

At length he proposed a walk through the city; but this I politely declined, urging the necessity for my speedy departure for Jamaica, as an efficient excuse. The fact, however, was, that I did not like to commit myself with a man of whom I knew nothing, and I was not pleased at seeing a seaman in any other uniform than that of his natural country. He accompanied me, however, to the boat, and looking upon the six men that were at work, paid a high compliment to their admirable appearance.

“How many such have you in the frigate?” inquired he.

I replied, “Three hundred and twenty.”

“But you have more than these in the Yankee,” said he; “strong as they are, they are barely sufficient to handle her.”

“They do very well,” answered I, somewhat evasively. “I have no wish for more; especially as the frigate will, no doubt be somewhere in the neighbourhood looking for us.”

“I should like very much to run to Jamaica with you,” said he; “the governor, I think, would grant me permission, if you would give me a passage. When do you sail?”

I told him, on the following day if possible; and he was perfectly welcome to a passage.

“Well, then,” added he, “I will obtain leave of absence, and be on board in the morning;” and so we parted.

I completed all my arrangements, and by night was ready for sea, intending to take advantage of the land-breeze in the early part of the dawn to make an offing. Accordingly, soon after sunrise we had sail upon the ship; the anchor was purchased, and we stood out. A canoe came alongside, and a note was handed up by a negro, who instantly shoved off again. It was from my acquaintance of the coffee-house, stating the failure of his application for leave of absence, and wishing me a pleasant passage.

The mate had been very carefully attended to; and as most of his injuries were of an external nature, he found great relief from the applications prescribed by the doctor; nor was his bodily strength much diminished. He was a tall, robust, and muscular man, apparently of great physical power; but he belonged to that enduring sect founded by William Penn, whose object is peace and good-will to all.

We rounded Cape St. Antonio in capital style, and then hauled up for Jamaica; but we had light baffling winds and calms till nearly abreast of the Isle of Pines, and then we had it more steady.

It was early one morning—the master’s mate (he was an Irish youth of the name of O’Brien) had the watch—and I was soundly sleeping on a mattress upon the deck, dreaming of home, when I felt myself roughly shaken, and O’Brien, with staring eyes an eager look, exclaimed,—“By the powers but she’s there again, sir.”

“Who’s there?” inquired I, jumping up in a hurry, and observing the men using my glass to examine something to windward. “What is it, O’Brien?”

“Why, then, it’s the devil herself, Mr. ———” replied he; “she’s got away from the old hooker, and will be down upon us before we can say pase.”

I went to the gangway—took the glass, and directed it towards a sail in-shore of us. There was no mistaking the rig, or the cut of her sails: a curious sensation crept over me—it was the Black Bloodhound, and she was standing out towards us. The atmosphere was rather hazy; but I sent a man aloft to see if he could discover any other strange sail, and he reported several small craft in with the land, and a vessel of some kind or other on the lee-bow, but he could not make out what.

I communicated the circumstance to the American mate, who, so far from feeling alarmed, expressed considerable satisfaction. “I shall die, sir,” said he, “but the hour of retribution is at hand.” I called the men aft, and described the inevitable consequence of falling into such murderous hands, and demanded whether they would stand by me in resisting to the last.

“If you’ll ownly give orders, sir,” said Jackson, advancing a little before the rest, “we’ll hold on by you for a highland moon; and I’m bless’d if we don’t larn the scoundrels a trick or two afore we’ve done. Won’t us, boys?”

A brief assent announced their willingness; and we instantly commenced preparations for defence. I had found a couple of eighteen pounder carronades in the hold whilst at Havana, and got them mounted. There was plenty of powder on board, but no shot; and all hands set immediately to work to collect langridge of all kinds to atone for the deficiency: iron hoops were broken in small pieces—glass bottles were in readiness—spike-nails—in short, everything of an offensive nature that we could gather was tied up in canvass of a dimension to enter the muzzles of the guns; and each man amongst us had his musket, a brace of pistols, a bayonet, and cutlass. I gave the American my musket and bayonet, reserving my other arms to myself: and thus we presented a formidable little band of fifteen, expecting an attack of probably more than seventy. But when I considered that

“Thrice is he armed who hath his quarrel just,”

I felt but little apprehensions as to the result. The awning was spread over the quarter-deck, and I directed the stops to be cleverly stranded so that a strong jerk would bring the whole of it down together. Our carronades were loaded, and secured in midships, just before the after-hatchway, so that we might, on seeing which side the pirate would take, bring them both to bear together. A shot from his long gun, that passed over us, was a warning to heave-to; but we still carried on, to gain as much time as possible, and induce him to believe that we were under great alarm.

“May I request a favour, sir?” said Amos, in a tone of great solemnity.

“If it does not interfere with my arrangements, you may ask, and have all that I can do for you,” replied I.

“It’s only to let one of the men reeve a line through that block upon the mainstay, sir,” said he, pointing aloft to the block at which his unfortunate brother had been suspended, and which still remained in its original position, though I had ordered its removal. “You may deem my request a strange one,” added he: “but grant it me, sir; Jackson, here, will lend me a hand, and you shall see that retribution will have its day.”

I certainly did not much heed what his intentions were, for my thoughts were otherwise too busily engaged; but I told Jackson to get the rope rove, as much as anything to satisfy him; as there seemed to be a sort of mysterious communing between them. Another shot from the schooner passed through both topsails; but as the weather began to thicken, I still carried on, though without the smallest hope or expectation of getting away. In another quarter of an hour she ranged under our lee-quarter, and poured in a broadside, which, however, injured no one. My brave fellows had anticipated her movement, and the two carronades were promptly at the midship-ports, covered over with the boat’s sails.

"Ho—the ship, ahoy!" exclaimed a voice from the schooner; "heave-to, and send your boat aboard directly."
 "Ay, ay, sir," answered I, aloud; but, whisperingly added—"Stand by, my men—square the mainyard lubberly fashion;" and then aloud—"Back the main-top-sail."

My orders were well obeyed—only a few of my men appearing; and the pirates, fancying we had but little strength, and knowing that there were no guns when they were last on board, crowded the nettings and rigging to have a look at us; they were so close that we could hear even the tread of the men upon her deck; when suddenly luffing up (as the schooner had forged a-head so as to be abreast the fore-channels), I gave the word "fire!" The carronades were admirably pointed and the execution they did exceeded my most sanguine expectation. The schooner filled her topsail, and stood on till she brought us in line with her stern, and then her long gun was pointed abaft, and cut us up most miserably—the shots ploughing the deck, and tearing and rending everything before them—but still without wounding a single individual; for, except myself and the man at the helm, every soul else was in the hold.

I concluded that she meant to sink us; and as some of the shots struck the ship below the breast-hooks, she made a good deal of water: but the men were prompt with such materials as they could find for plugs, and there was no immediate danger. Finding, however, that we made no further resistance, he got out two large boats, and going about, kept them out of sight to windward, and stood towards us till he got within half a cable's length of our weather-bow, when he again tacked, and the boats, filled with men, shoved off to board us. Hastily scanning the armament with my glass, I distinctly saw the pirate chief in a black mask, and should have taken him for a negro, had not Amos exclaimed, in a suppressed voice,—"It is he—he comes—and the hour of retribution has arrived."

My carronades had been reloaded, and my gallant fellows, with incredible speed, dragged them forward to the middle port, which was closed. It was a moment of fearful excitement—the boats were close to us, nearly under the bows—when open flew the port, and they got the full benefit of the discharge—killing, and crashing, and wounding, but we could only fire one gun before the wretches were scrambling up the head, and on to the fore-castle.

I had retreated with my men to the larboard waist, so as to place the long boat between us and the assailants, and directed them to be sure of their aim, and fire—they did so, and ten of the pirates fell to rise no more, "Now lads," shouted I, "your pistols and cutlasses, and the day's our own."

We made a desperate rush a sharp hand-to-hand struggle ensued, and we were the victors, having the Black Bloodhound himself among the prisoners. In an instant the American darted at him, tore the mask from his face, and I beheld the handsome features of my coffee-house acquaintance at Havanna. I had not a moment, however, to bestow upon the recognition so as to renew our intimacy, for about a dozen men had crowded back into one of the boats, and were making off on their return to the schooner.—The second carronade, however, speedily supplied the place of that which had been discharged, and pointing it myself I awaited the dispersion of smoke to ascertain the issue. On its clearing away, I saw the boat filled with water, and the men who yet lived were swimming around her.

A loud shout abaft now attracted my attention, but the smoke from the gun still clung to the rigging aloft, yet I could indistinctly see the American and Jackson, and several of the men, clustered together at the gangway, and following the direction of their looks up to the mainstay, there was the body of the Black Bloodhound writhing in the convulsive agonies of death—Amos was right—his hour of retribution had come.

I hastily ran aft to stay this illegal execution, but was too late—the carcase, which but a few minutes before had been full of life and animation, now hung suspended without motion—the vital principle had fled.

Amos knelt upon the deck, the blood flowing freely from fresh wounds he had received in his breast and on his head,

and presenting a most ghastly spectacle. "Lord, now let thy thy servant depart in peace," uttered he, in a low but fervent tone; "Thou heardest my petition, and hast granted the prayer thereof, blessed be thy holy name." I shuddered to hear the name of the Deity addressed in terms of gratitude for the indulgence of revenge, and should have expressed my disgust, but a shot from the pirate came crashing through the bows—and Amos lay at my feet a headless corpse.

"The schooner means boarding, sir," shouted O'Brien "Uphelm," cried I, running aft—"tend the braces men, and trim the sails, as she gathers good way." The ship payed off, and the schooner, observing our manœuvre, gave us a broadside that scratched two of my men out of the book of life, and wounded three others. I must own that a sickness of heart came over me when I witnessed this destruction of so many of my gallant band; but Jackson suddenly aroused me by a shout—"the ship, sir,—the frigate—hurrah I knew old Ironsides (the name by which the captain went among these men) wouldn't leave us—hurrah boys!—every b——y rogue on 'em will be strung up just like ingons."

I looked, and there, sure enough, was the dashing craft emerging from the fog, under a heavy press, and coming down to our rescue. One of the pirate's boats was yet lying under our bows—the frigate was too close for the schooner to get away; so manning the boat with six men, I prepared to board.

In another quarter of an hour I stood upon the pirate's deck—no creature was to be seen, but mangled dead and wounded lay in all directions. I brought the vessel to the wind, lashed her helm a-lee, and then went into the cabin urged by an irresistible impulse, to ascertain the fate of the young females.

They were there—the eldest was sitting crouched in a corner her long hair hanging over her neck and bosom, and her eyes wildly glaring with unnatural ferocity. The youngest was extended at full length, with her head resting in her sister's lap, and her face turned up with a fixed expression on the countenance of the elder. I spoke soothingly, but the only answer returned was an hysterical laugh—alas! one was a maniac, and the other a corpse!

The boats from the frigate boarded us soon after, and my command was transferred from the Yankee to the schooner—the body of the chief still hung at the mainstay, nor would Captain ——— suffer it to be lowered down—and a fair breeze springing up, we steered for Jamaica; and entered Montego Bay with the human sacrifice still exposed. Upwards of forty of the pirates had been killed or wounded the rest expiated their crimes on the gallows. The young surviving female of the American family never properly recovered her reason, but she inherited the property of her father, and lived on it many years, refusing every offer of marriage that was made her.

The uncle and niece were buried in the same grave. The planters very handsomely presented me with a valuable gold-mounted sword, and the men with ten doubloons each: the beautiful craft was purchased into the service, raised upon, and spoiled; and the body of the pirate chief, enclosed in an iron frame, was suspended from a gibbet just above high water mark—a signal instance of just RETRIBUTION.

SWIMMING.

THE French minister of marines has made it imperative, that all men, of whatever rank, employed in the naval service, should be able to swim.

BRED TO THE SEA.

THE late Captain O'Byrne, of gambling memory, having made a bet on the subject of Admiral Payne, wrote the following note:—

"Dear Payne,—Pray were you bred to the sea?" To which the following answer was returned: "Dear O'Byrne,—No; but the sea was bred to me."

LOSS OF THE BETSEY

THE sloop *Betsey*, commanded by Philip Aubin, and bound for Surinam, sailed from Carlisle Bay, in the Island of Barbadoes, on the 1st of August, 1756. The vessel was about eighty tons burthen, built entirely of cedar, and freighted by Messrs. Roscoe and Nyles, merchants, of Bridgetown, with a cargo consisting of all kinds of provisions and horses. The latter part of the cargo was in consequence of a law which the Dutch passed, that no English vessel should be permitted to trade with the colony, unless horses constituted a part of her cargo, as they were then greatly in want of a supply of these animals; and this condition was so rigidly enforced by the Dutch, that if the horses chanced to die on the passage, the master of the

vessel was obliged to preserve the ears and hoofs of the animals, and to make oath, upon entering the port of Surinam, that they were alive when he embarked and destined for that colony.

The coast of Surinam, Berbice, Demerara, Orinooka, and all the adjacent ports are low lands, and inundated by large rivers which discharge themselves into the sea. All along this coast the bottom is composed of a kind of mud or clay, in which the anchors sink to the depth of three or four fathoms, and upon which the keel sometimes strikes without stopping the vessel. The sloop being at anchor three leagues and a half from the shore, in five fathoms water, the mouth of the river Demerara bearing S. by S.W., and it being the rainy season, the crew drew up water from the sea for their use, which was as sweet and good as river water. The current occasioned by the trade winds, and the numerous rivers which fall into the sea, carried

LOSS OF THE BETSEY, CAPTAIN AUBIN, AUGUST 5, 1756

them at the rate of four miles an hour towards the West and North-west.

In the evening of the 4th of August, they were tacking about between the latitudes of ten and twelve degrees north, with a fresh breeze, which obliged them to reef the sails. At midnight the captain found that the wind increased in proportion as the moon, which was then on the wane, rose above the horizon, and that the sloop, which was deeply laden, laboured excessively; he therefore would not retire to rest until the weather became more moderate, but told his mate, whose name was Williams, to bring him a bottle of beer, and both of them sat down. While thus occupied, the vessel suddenly turned with her broadside to windward. The captain called to one of the seamen to put the helm a-weather, but he replied it had been so for some time; he then directed the mate to see if the cord was not entangled, but

he answered that it was not. At this instant the vessel swung round with her head to the sea and plunged, and immediately her head filled in such a manner that she could not rise above the surf, which broke over them to the height of the anchor-stocks; and they were very soon up to their necks in water, and everything in the cabin was washed away, while some of the crew, which consisted of nine men, were drowned in their hammocks without uttering a cry or groan. When the wave had passed, the captain took the hatchet that was hanging up near the fire-place, to cut away the shrouds, so as to prevent the ship from upsetting, but his efforts were in vain. The vessel upset and turned over again, with her masts and sails in the water; the horses rolled one over the other and were drowned, forming altogether a spectacle the most melancholy that can be conceived.

They had but one small boat, about twelve or thirteen feet in length, and she was fixed, with a cable coiled inside of her, between the pump and the side of the ship. Providentially for their preservation, there was no occasion to lash her fast, but at this time they entertained no hope of seeing her again, as the large cable within her, together with the weight of the horses and their stalls, entangled one among another, prevented her from rising to the surface of the water.

In this dreadful situation, holding on by the shrouds, and slipping off his clothes, the captain looked around him for some plank or empty box, by which he might preserve his life as long as it should please the Almighty, when he perceived his mate and two seamen hanging by a rope, and imploring God to receive their souls. He then advised them to undress, as he had done, and to endeavour to seize the first object that could assist them in preserving their lives. Williams, the mate, followed his advice, stripped himself quite naked, and instantly betook himself to swimming, at the same time looking out for anything he could find. He had not been in the water many minutes, before he cried out "Here is the boat, keel uppermost!" upon which the captain immediately swam to him, and found him holding on to the boat by the keel. They then set to work to turn her, but their exertions were unavailing, till at length Williams, who was the strongest and heaviest man of the two, contrived to set his feet against the gunwale of the boat, while he laid hold of the keel with his hands, and with a violent effort nearly succeeded in turning her. The captain being to windward, pushed and lifted her up with his shoulders on the opposite side, till at length, with the assistance of the surf, they turned her over; but she was full of water. The captain then got into her, and endeavoured, by means of a rope belonging to the rigging, to draw her to the mast of the vessel, as, in the intervals between the waves, the mast always rose to the height of fifteen or twenty feet above the water. He passed the end of the rope fastened to the boat once round the head of the mast, keeping hold of the end; and each time that the mast rose out of the water, it lifted up both him and the boat: he then let go the rope, and by this expedient the boat was about three-fourths emptied; but having nothing to enable him to disengage her from the mast and shrouds, they fell down upon him, driving him and the boat again under water.

After repeated attempts to empty her, in which he was cruelly wounded and bruised, he began to haul the boat, thus filled with water, towards the vessel by the shrouds; but, by this time, the sloop had sunk to such a depth, that only a small part of her stern was visible, upon which the mate and two other seamen were holding fast by a rope. He then threw himself into the water, with the rope that was attached to the boat in his mouth, and swam towards them, to give them the end of the rope to lay hold of, in the hope that by their united strength they would be able to haul the boat over the stern of the vessel, to accomplish which they exerted their utmost efforts; and at this instant the captain nearly had his thigh broken by a shock of the boat, as he was between her and the ship. At length they succeeded in hauling her over the stern, but in this manœuvre they had the misfortune to break a hole in her bottom. The captain, as soon as his thigh was a little recovered from the blow, jumped into her with one of the men, and stopped the leak with a piece of his coarse shirt. This man not being enabled to swim, had not stripped like the others; and had thus preserved his coarse shirt, a knife that was in his pocket, and an enormous hat in the Dutch fashion. The boat being fastened to the rigging, was no sooner cleared of the greatest part of the water, than the captain's dog came to them, running along the gunwale; they took him in, and returned thanks to Providence for thus sending provision for a time of necessity. A moment after the dog had entered, the rope broke with a jerk of the vessel, and the boat drifted away, leaving the mate and the other seamen hanging to the wreck. The mate had fortunately found a small spare topmast, which afterwards served them for a rudder, and with this they swam to the boat, where they were assisted in by the others, and soon afterwards they lost sight of their ill-fated bark.

It was then about four o'clock in the morning, as they judged by the dawn of day, which was then beginning to appear, so that about two hours had elapsed since the calamity that had compelled them to abandon their vessel. That which prevented her foundering sooner, was their having on board about a hundred and fifty barrels of biscuit, as many or more sacks of flour, and three hundred firkins of butter, all of which floated upon the water, and were soaked through but slowly. As soon as they were clear of the wreck, they kept the boat before the wind as well as they could; and when it grew light, they perceived several articles that had floated from the vessel. Soon after the captain saw his box of clothes and linen, which had been carried out of the cabin by the violence of the waves. This unexpected circumstance gave great joy, as the box contained some bottles of orange and lime juice, a few pounds of chocolate, sugar, &c. Reaching over the gunwale of the boat they laid hold of the box, and made use of every effort to open it on the water, for they could not think of getting into the boat a box of size and weight sufficient to sink her; but in spite of all their endeavours, they were, to their unutterable disappointment, obliged to leave it behind, with all the good things it contained; and to add to their distress, the efforts they had made to accomplish what they desired, had almost filled their boat with water, and had more than once nearly sunk her.

They however had the good fortune to pick up thirteen onions, but were unable to reach any more, although they saw many. These thirteen onions and the dog, without a single drop of fresh water, or any liquor whatever, were all that they had to subsist upon; and they were at that time, according to the computation of the captain, about fifty leagues from land, having neither masts, sails, nor oars to direct them, nor any description of article, except the knife of a sailor who could not swim, his shirt, a piece of which they had already used to stop the leak in their boat, and his wide trousers. This day they cut the remainder of his shirt into strips, which they twisted for rigging, and then went to work, alternately, to loosen the planks with which the boat was lined, by dint of time and patience, cutting round the heads of the nails that fastened them. Of these planks they made a kind of mast, which they fixed, by tying it to the foremost bench; a piece of board was substituted for a yard, to which they fastened the two parts of the trousers which served for sails, and assisted in keeping the boat before the wind, while they steered with the small topmast, which the mate had brought on board.

As the pieces of plank which they had detached from the inside of the boat were too short, and were not sufficient to go quite round the edge, they were obliged, when the sea ran very high, to lie down several times along the gunwale on each side, with their backs to the water, in order to prevent the waves from entering the boat; and thus with their bodies to repel the surf, whilst the other, with the Dutch hat, was constantly employed in baling out the water; besides which the boat continued to make water at the leak, which they were unable to stop entirely.

It was in this melancholy situation, and all of them quite naked, that they kept the boat before the wind as well as they could. The night of the first day after their shipwreck arrived before they had well completed their sail; but although it became quite dark, they contrived to keep the boat running before the wind at the rate of about a league an hour. The second day was more calm; they each ate an onion, at different times, and soon began to feel the effect of thirst. Towards night the wind became violent and variable, sometimes blowing from the north, which caused them great uneasiness, as they were then obliged to steer south, in order to keep the boat before the wind, and their only hope of being saved was on their proceeding from east to west.

On the third day their sufferings were excessive, as they had not only to endure hunger and thirst, in themselves sufficiently painful, but also the heat of the sun, which scorched them in such a manner, that from the neck to the feet, their skin was as red and as full of blisters as if they had been burned by a fire. Smarting under this accumulation of bodily pain, the captain seized the dog, and plunged the knife into his throat. They caught his blood in the hat, receiving in their hands and

drinking what ran over, and then drinking in turn out of the hat, with which they felt themselves very much refreshed.

The fourth day the wind was extremely violent, and the sea very high, so that they were more than once on the point of perishing; it was on this day, in particular, that they were obliged to make a rampart of their bodies to repel the waves. About noon a ray of hope dawned upon them, but only to experience bitter disappointment. They perceived a sloop, commanded by Captain Southey, a particular friend of Captain Aubin, which, like the Betsey, belonged to the island of Barbadoes, and was bound for Demerara; and this vessel came so near that they could see the crew walking upon the deck, and shouted to them; but unfortunately they were neither seen nor heard. Being obliged by the violence of the gale to keep the boat before the wind, for fear of foundering, they had passed her a great distance before she crossed them, the sloop steering direct south, and they bearing away to the west. This disappointment so discouraged the two seamen, that they refused to make any more exertions to save their lives; in spite of all that could be said, one of them would do nothing, not even bale out the water which was every minute gaining upon them. In vain did the captain have recourse to entreaties, and, falling on his knees, implored the assistance of the obdurate seaman; he remained unmoved; till at length the captain and mate prevailed, by threatening to kill them instantly with the topmast, which they used to steer by, and to kill themselves afterwards, in order to put a period to their misery. This menace seemed to make some impression on them, and they resumed their occupation of baling as before.

The captain this day set the others the example of eating a piece of the dog with some onions: it was with great difficulty that he swallowed a few mouthfuls, but in the course of an hour afterwards he felt that this small morsel of food had given them new vigour. The mate, who was of a much stronger constitution, ate more. One of the men also tasted it; but the other, whose name was Comings, absolutely refused to swallow a morsel, protesting that he could not.

The fifth day was more calm, and the sea much smoother. At day-break they perceived an enormous shark, full as large as the boat, which followed them for several hours as a prey that was evidently destined for him: they also found in the boat a flying fish, which had dropped there during the night; this they divided into four parts, which they chewed to moisten their mouths, and it proved a very seasonable relief, though so little inadequate to their necessities, that on this day, when pressed with hunger and despair, the mate, Williams, had the generosity to exhort his companions to cut off a piece of his thigh, in order to refresh themselves with the blood and support life. The wind freshened during the night, and they had several heavy showers, when they tried to get some rain-water by wringing the trousers which served them for a sail, but when they caught it in their mouths it proved to be as salt as that of the sea, the men's clothes having been so often soaked with sea-water, that they, as well as the hat, were impregnated with salt. They had, therefore no other resource, but to open their mouths, and catch the drops of rain as they fell upon their tongues to cool them; after the shower was over they again fastened the trousers to the mast.

On the sixth day the seamen, notwithstanding all the remonstrances of the captain and mate, persisted in drinking sea-water, which purged them so excessively that they fell into a kind of delirium, and were no longer of the slightest service in managing their frail bark. As for the others, they each kept a nail in their mouths, and, from time to time, sprinkled their heads with water to cool them; from these ablutions they found their heads were more easy, and themselves generally better. They also tried several times to eat of the dog's flesh with a morsel of onion, and thought themselves fortunate if they could get down three or four mouthfuls.

On the seventh day the weather was fine, with a moderate breeze, and the sea perfectly calm. The two men who had drunk sea-water grew so weak about noon that they began to talk wildly, like those who are light-headed, not knowing any longer whether they were at sea or on shore. The captain and mate were also so weak that they could hardly stand on

their legs, or steer the boat in their turns, much less bale the water from the boat, which now made considerably at the leak.

On the morning of the eighth day, John Comings died, and about three hours afterwards the other seaman, George Simpson, also expired. That same evening, just before the sun had withdrawn his light, they had the inexpressible satisfaction of discovering the high lands on the west point of the island of Tobago. Hope inspired them with courage and infused new strength into their limbs. They kept the head of the boat towards the land all night, with a light breeze and a strong current, which was in their favour. The captain and mate were that night in an extraordinary situation; their two comrades lying dead before them, with the land in sight, having very little wind to approach it, and being assisted only by the current which drove strongly to westward. In the morning, according to their own computation, they were not more than five or six leagues from the land, and that happy day was the last of their sufferings at sea. They kept steering the boat the whole day towards the shore, though they were no longer able to stand. Towards evening the wind lulled, and at night it was a perfect calm; but about two o'clock in the morning the current cast them on the beach of the island of Tobago, at the foot of a high shore between Little Tobago and Man-of-War Bay, which is the easternmost part of the island. The boat soon bulged with the shock; and her two fortunate occupants crawled to the shore, leaving the bodies of their two deceased comrades in the boat, and the remainder of the dog, which, by this time, had become quite putrid.

They clambered as well as they could, on all-fours along the high coast, which rose almost perpendicularly to the height of three or four hundred feet. A great number of leaves had fallen on the place where they were, from the numerous trees which grew over their heads, and these they collected to lay down upon while they waited for the coming daylight. As the dawn appeared they began to search for water, and found some in the holes of the rocks, but it was brackish, and not fit to drink. They also found on the rocks several kinds of shell-fish, some of which they broke open with a stone, and chewed them to moisten their mouths.

Between eight and nine o'clock in the morning they were perceived by a young Carib, who was alternately swimming and walking towards the boat. As soon as he had reached it, he called his companions with loud shouts, at the same time making signs of the greatest compassion. His comrades instantly followed him, and swam towards the captain and mate, whom they had perceived almost at the same time. The eldest of the party, a man apparently about sixty years of age, approached them with the two youngest, whom they afterwards learned were his son and son-in-law. At the sight of the poor sufferers, these compassionate men burst into tears, while the captain endeavoured, by words and signs, to make them comprehend that he and his mate had been at sea for nine days, in want of everything. The Caribs understood a few French words, and signified that they would fetch a boat to convey them to their dwelling. The old man then took a handkerchief from his head, and tied round the captain's head, and one of the young Caribs gave Williams his straw hat; the other swam round a projecting rock and brought them a calabash of fresh water, some cakes of cassava, and a piece of boiled fish; but they had been so long without food that they were unable to eat any. The two others took the corpses out of the boat and laid them upon the rock, after which all three of them hauled the boat out of the water. They then departed to fetch their canoe, leaving the poor shipwrecked mariners with every mark of the utmost compassion.

About noon they returned in their canoe, to the number of six, and brought with them, in an earthen pot, something resembling soup, which they thought to be delicious. Of this they partook, but the captain's stomach was so weak that he immediately cast it up again. In less than two hours they arrived at Man-of-War Bay, where the huts of the Caribs were situated. They had only one hammock, in which the hospitable natives laid the captain, while the women, who were in the hut, made them a very agreeable mess of herbs and

broth of quatracas and pigeons. They also bathed his feet with a decoction of tobacco and other plants, and every morning the man lifted him out of the hammock and carried him in his arms beneath a lemon tree, where he covered him with plaitain leaves to screen him from the sun. There they anointed the bodies of the poor sufferers with a kind of oil, to cure the blisters raised by the sun. Their compassionate entertainers had even the generosity to give each of them a shirt and a pair of trousers, which they procured from the ships that came from time to time to trade with them for turtles and tortoiseshell.

The method pursued by the natives in healing the numerous wounds which had broken out on the bodies of these unfortunate mariners, was this: after they had completely cleansed the wounds, they kept the patient with his legs suspended in the air, and anointed them morning and evening, with an oil extracted from the tail of a small crab, something resembling what the English called the soldier-crab, because its shell is red, and which is obtained by bruising a quantity of the ends of their tails, and putting them to digest upon the fire in a large shell. After thus anointing them they were covered with plaitain leaves till the wounds were healed.

Thanks to the nourishing food procured them by the Caribs, and the humane attention which was bestowed upon them, the captain was able, in about three weeks time, to support himself upon crutches, like a person recovering from a very severe illness; but anxious to return to his own friends, as early as possible, he cut his name with a knife upon several boards, and gave them to different Caribs to show them to any ships which might chance to approach the coast. Still they almost despaired of seeing any arrive, when a sloop from Oronooko, laden with mules, and bound for St. Pierre, in the island of Martinique, touched at the sandy point on the west side of Tobago. The Indians showed the crew a plank, upon which was carved the name of Captain Aubin, and acquainted them with the dreadful situation of him and his companion, which those on board the vessel related, when they arrived at St. Pierre. Several merchants with whom Captain Aubin was acquainted, and who traded under Dutch colours, happened to be there at the time, and they transmitted the information to the owners of the Betsey, Messrs. Roscoe and Nyles, who instantly despatched a small vessel in quest of the survivors, who, after living about nine weeks with this benevolent and hospitable tribe of savages, embarked and left them; their regret at doing so being only equal to the joy and surprise which they had experienced at meeting with them.

As the vessel was ready to depart, the natives furnished them with an abundant supply of bananas, figs, yams, fowls, fish, and fruits, particularly oranges and lemons. The captain had nothing to give them in return, as an acknowledgment for their generous treatment, but the boat, which they had repaired and used occasionally for visiting their nests of turtles, which being larger than their canoes, was more adapted to the purpose. Of this he made them a present, and his friend, Captain Young, who commanded the small vessel, assisted him to remunerate his benefactors, by giving them all the rum he had with him, which was about seven or eight bottles. He also gave them several shirts and trousers, some knives, fish-hooks, and sail-cloth for the boat, with needles and hooks.

At length, after two days spent in preparations for their departure, they were obliged to separate. The Caribs came down to the beach to the number of about thirty men, women, and children, and all appeared to feel the deepest sorrow, particularly the old man, who had acted as a father to them. When the vessel left the bay, the tears flowed from their eyes which still continued fixed upon their departing friends, and they remained upon the beach, in a line, until they lost sight of the vessel.

It was about nine o'clock in the morning when the vessel sailed, steering north-east, and in three days after they arrived at Barbadoes, where they received, from the whole island, marks of the most tender interest and the most generous compassion; indeed, the benevolence of the inhabitants was unbounded. The celebrated Dr. Hilery, the author of a treatise on the diseases peculiar to the island, came to see them accom-

panied by Dr. Silihorn, and both prescribed various remedies, but without effect. Both of them were unable to speak but with the greatest difficulty. Williams remained at Barbadoes, but the captain, being more affected and less robust, was advised, by the physicians, to return to Europe. In compliance with their advice he went to London, where he was attended by some of the most celebrated physicians; and, after a judicious treatment of about five months, he was so far restored to a state of convalescence, as to be enabled to resume his ordinary avocation.

DESTRUCTION OF THE BEAUTY.

It was at the close of a sultry day in July, that the large contraband cutter, the *Beauty*, with a rich cargo on board, set all her sails, and rapidly neared the coast of Kent. It was nearly dark, the tide was at low water, and everything seemed favourable for the disembarkation of their cargo: while a single light, displayed from a jutting crag, showed Frank Hardy, her commander, that his accomplices on shore were all ready, and only waited his arrival to commence operations.

Frank was the only son of a half-pay officer, who had resided many years on the coast of Kent, near the Cove. He was brought up as a gentleman, but on his father's death found himself a beggar. Being a high spirited youth, he soon resorted to that unfortunate trade which caused his death. He had been several voyages to sea, and having succeeded in laying by sufficient, this was to be his last voyage; and the day after his return had been fixed upon as the day on which his union was to take place with Jane d'Arcy, the daughter of one, who, though much reduced, was still the first man in the place. It was, then, with a heart throbbing with joy and expectation, that Frank observed the rapid approach of his vessel to the shore, and indulged in pleasing anticipations of the morrow.

The wind blowing from the land, was on the larboard quarter, in which a high rocky point, running far out into the sea, protected the vessel from the observation of the craft in the distant bay. Everything was as favourable as could have been wished, and it was now getting quite dark enough for the enterprise; although it blew what the sailors call a snoring breeze, and the tide already beginning to flow, rose on meeting the opposite wind, in a rough, coarse jabble.

"Luff, my lad, luff," cried Hardy, as the vessel plunged into the vast shadow of the cliffs; "keep her away; give her plenty of it—don't you see our lights along shore?—to starboard!"

"Ay, ay, sir," answered the man at the helm; "but I've just been thinking—look up at that there moonraker of a peak—if that is not something more than the beam of a tree running upon the summit, standing against the sky. By George! it is down—there are land-sharks after us!"

"True, true!" said Hardy, musing; "but never mind, there is only one; and even if he happen to be an enemy, we shall have our business over; if we manage cleverly, he can hardly get round to us. Bear right down upon the light!"

The impetus of the vessel was hardly diminished by the precautions of the helmsman and the lowering of the sails, when her keel, towards the bows, grated upon the sand, and stuck hard and fast. The hatches were then thrown open, and the goods handed, piece by piece, to the accomplices, who had by this time gathered round the bowsprit, to the number of ten or twelve. This employment had continued for about twenty minutes; during which time the cargo, as soon as it quitted the ship, disappeared in the ledges of the rock, being instantly snatched away by the smugglers to a place of safety, by paths only known to themselves. It now became almost dark, and this, added to the roughness of the sea, which howled along the shore, and dashed on the vessel in angry torrents, rendered the operations of the sailors both difficult and dangerous. Hardy, with his accustomed prudence—and to which, in fact, was owing the success of his usual boldness—had caused the shore-lights to be extinguished the moment his ship touched the beach; but, now, when the happy termination of the adventure appeared so near, and was only rendered doubtful by the increasing darkness of the night, he promptly gave

the word for re-lighting them, with several others from the vessel.

The exertions of the sailors were now renewed with double eagerness, and the scene became singularly animated. The lights rushing and flaring along the land, and dancing among the rocks, as if borne by the night-fiends themselves—the strange wild faces of the men, as they were now illumined for a moment by the red flame, and now disappeared in the gloom—the blackness of the overhanging cliffs, their fantastic summits only faintly observable far overhead, against the dull sky—the rocking and plunging of the vessel, that swung by her bows as if fixed on a pivot—the hoarse roaring of the troubled sea, and the portentous flashing of the spray, as the waves rushed against the ship, mounted, split, and, parting into innumerable fragments, swept over her decks from stem to stern—all conferred a character of strange interest upon the picture, heightened to intensity by the ideas of terror, mystery, and ferocity, inspired by its details.

In the midst of the hurry and confusion, the voice of their young commander again broke upon the ear of that half-savage group.

"Avast!" he cried, in a tone, stern, sudden, and yet subdued. "Out with the lights! Steady!" The lights hissed in the water and disappeared; and for a moment almost the only noise heard was the swinging of the rising storm. At length the sound of voices and hurrying footsteps rose distinctly in the distance. The mate, who had thrown himself down, and put his ear to the sand, jumped furiously up, and exclaimed with an oath, "There are not a dozen of them! There is no need to fly—out with your cutlasses, my lads! Steady—stand fast!"

The preventive-service men rushed on—the smugglers made a desperate resistance, beat them back, and gained their vessel again; when just as Hardy (who had remained till the last) was mounting the side, the preventive officers rallied—he was pulled backwards, and a violent blow on the head from the butt-end of a musket, put an end to his existence. The cutter immediately swung off and got out to sea, when an alarm of fire was raised—a cloud of smoke and flame rose up from the fore-hatchway, which, licking the masts and spars, ran up and caught the rigging and gear aloft, while below it burned with intense fury. The hull was soon burned to the water's edge. The water rushed in like a mill-stream. She gave a sudden heel and down she went, head foremost, while her unhappy crew split the heavens with their piercing cries. Meantime the inhabitants of d'Arcy's house had been alarmed by the tumultuous noise of numerous persons carrying some weighty object; and soon afterwards a servant entered the room, and exclaimed, "The preventive-service men have brought the body of a captain of a smuggler, which has been found at the Cove!" Jane, followed by her friends, instantly started up and ran to the room in which they had laid him—it was her Frank: she gave one wild convulsive shriek, fell into the arms of the man who had been left to watch the body, and was soon laid gently down by the lifeless body of her lover—the dead by the dead. A few days after they were interred in one grave.

THE WRECKERS OF ST. AGNES.

THERE are few parts of England more wild and desolate than the mining districts of Cornwall. Nature, as a counterpoise to the treasures which she has lavished on this region of her bounty, has imparted to its features a most forbidding aspect. Bleak and barren plains, unenlivened by vegetation, with neither tree nor shrub to protect the traveller from the wind that sweeps across their surface, and danger in every step from the innumerable shafts by which they are intersected.

It is truly an inhospitable country; and the nature of the inhabitants seems quite in accordance with its unfriendly characteristics—repulsive and ungainly in appearance, disgusting and ferocious in manner, cruel by nature, and treacherously cunning. Not a step have they gained from the barbarous state of their savage ancestors. I allude more particularly to the town and district of St. Agnes, near Truro, and its people. St.

Agnes is a small place, situated on the coast of Cornwall, about ten miles from Truro, across one of those sterile plains, almost covered with the refuse of mines, and perforated in every direction, like a gigantic rabbit-warren. The road, so called, through this waste, is little better than a track, which it would be difficult and dangerous to traverse, without a guide. Many a wanderer has found a nameless grave by venturing across those dreary moors.

It was late in autumn when I visited St. Agnes, and it was towards the close of a gloomy day that I found myself at the residence of Capt. Thomas, so I shall call him, whose acquaintance I had made in London, and who had succeeded in persuading me that the only sure way to make a fortune was by investing a trifle of ready money in a copper-mine. He held the rank of captain by the custom of the country, as a mine is conducted like a ship, by a captain and officers. The captain was rather a decent specimen of his caste; for, where all are combinations of the miner, smuggler, wrecker, and, consequently, ruffian, a man of even decent manners is something. He had one fault, however, which I afterwards discovered,—he would have considered it a most meritorious employment to have robbed even his own father, rather than not to have robbed at all.

Our repast being over, and I, like a witless booby, having invested my bank-notes in his pouch, in exchange for certain bits of paper he was pleased to call shares, and having received from him, in addition to such valuable considerations, the most flattering congratulations on the prospect of immediate wealth, he proposed an adjournment to the "Red Dragon," or red something,—I almost forget, it is so long since,—where he assured me I should meet a most respectable society, and where I might pick up much valuable information. They were all particular friends of his—captains and pursers of mines.

It was a dismal night. When we sailed out, a thick mist was gathering around: the sea was breaking against the huge rocky cliffs of the adjacent coast, with a deafening roar; and at intervals was heard the distant thunder. It was with no uncomfortable feeling that I felt myself safely housed at the rendezvous of the choice spirits of the mines.

The party to which I was introduced was seated at a long deal table, in a spacious apartment, half-kitchen, half tap-room, at the upper end of which appeared a blazing fire, beneath a chimney-porch of a most ancient and approved formation. On one side of the room, a door opened into a small parlour, and in the corner was a little bar, for the host to dispense to his customers their various potations from his smuggled treasures. For, although it was not a trifle of Schidam or Cognac that would satisfy these congregated worthies, I question whether the king could afford to pay the salaries of the commissioners of excise, if the greater portion of his lieges were not more considerate customers than our friends of the "Red Dragon."

The arrival of Captain Thomas was hailed with marked satisfaction. We were soon seated, and in a twinkling a large tumbler of hot brandy-and-water was placed before me, and a pipe thrust into my hand. The conversation, which was rather loud when we entered, was now suddenly hushed, and intelligent glances were quickly interchanged, which I saw related to myself. Thomas understood it, and said, "You need not be afraid; that gentleman is a particular friend of mine, and a great patron of the mining arts."

I then begged to assure the company of my veneration for miners and mines, and all connected with them. There was a visible brightening up at this declaration, and doubtless at that moment various were the plans of swindling and rascality which shot through the stolid brains of that pleasant coterie to put my devotedness to the proof.

"A likely night this, Captain Thomas," said a beetle-browed, shock-headed, short, muscular man, whose small dark eyes peered from beneath a brow of peculiar ferocity.

"Uncommonly likely!" returned the other, "and if we should have a bit of luck to-night, it would not be a bad beginning this winter."

"Ah!" said the former, who answered to the name of Knox, "my wife says she thinks Providence has deserted our coast; we haven't had a godsend worth telling about these two years.

I've seen the time when we've had a matter of a dozen wracks in a season." "Well, never mind, Master Knox," said a pert-looking, snub-nosed fellow, named Roberts, whom I, at first glance, took for an attorney, but afterwards found he was a mining agent. From his more constant intercourse with Truro, he was rather better dressed than some of his companions; but his town breeding gave him no other advantage than a conceited, saucy air.

"Never mind, Master Knox," said he, jingling a bunch of seals which peeped from beneath a waistcoat of that worthy, "you have made the most of your luck, and if you don't get any more you won't harm." "Why, yes," said the fellow, drawing out a handsome gold watch, which accorded curiously with his coarse attire. "I don't complain of the past; and yet I had a narrow escape with this; if it hadn't been for my boy Jem, I should have lost it."

"He's a cute child, that boy of yours," remarked one. "There never was a better. I'll tell you, sir," said he, addressing me. "It's two years ago come December, on a Sunday, when we were all in church, that we had news of a wrack. Well, off we all started; you may be sure, and the parson not the last, to see what it had pleased God to send us. We found on coming up, that it was a French Indiaman. She had gone to pieces off the rocks, and the goods were floating about like dirt. I wasn't long in making the most of it; and Jem was just going off for the cart, when I spied, half covered with weed, and hidden by a piece of rock, the body of a Frenchman. I soon saw I had got a prize, for he was loaded with money and trinkets. These I quickly eased him of, seeing as he'd never want 'em; but to make sure, I hit 'un a good slap over the head just to see whether the life was in 'un or no." (Here one or two of the auditors grinned.) "Well, I was just going away, when I see'd a diamond ring on his finger, and the finger being swelled with the water, I cuts it off" (displaying at the same time a knife of rather formidable proportions) "and walks off with my goods. I hadn't been gone far, when little Jem runs after, crying, 'Dad, dad! hit 'un again, dad! he grin'th, he grin'th!'

I looked back, and sure enough that rascally French thief—whether it was drawing the blood or not, I don't know—but he was moving his arm about, and opening his eyes, as though he were bent on taking the bread out of my mouth. This put me in a precious rage—these Frenchmen are always a spiteful set, and hate Englishmen as they hate the devil. So I makes no more ado but I hits 'un a lick with the tail of a rudder lying close by, and I'll warrant me he never come to ask for my goods."

The miscreant chuckled over this horrid recital with all the self-satisfaction that another might feel at the recollection of a virtuous action; whilst his companions, to whom no doubt the story was familiar, felt no other sensations of uneasiness at its recapitulation than from the recollection that they had not been able to do the same thing. Knox was evidently the ruffian *par excellence*. I beheld others around me, the expression of whose countenances would have hung them at any bar in England without any other evidence; yet none ventured to boast of crime; Knox was the only open professor of villany, and seemed to claim his right of pre-eminence. I have been in many parts of the world, and have encountered ruffians of every country and grade; but never before did I have the fortune to hear depravity, and of such a revolting character, so freely confessed, so unblushingly avowed.

"Well, Knox," said Thomas, after a short pause, "so you have seen Hibbert Shear. How's poor Bill Treuddick?"

Knox placed his finger significantly on his cheek.

"How," said the other, "dead?"

"Dead as mackerel," returned Knox, "you know I was in it, and a sharp brush we had. Poor Bill had three balls in him; he died the same night." A universal expression of sympathy followed this announcement, and various were the questions put by different individuals as to the details of his death. It appeared that he was killed in an engagement with a revenue cruiser.

"He was as likely a lad as ever ran a cargo," said Thomas; "where did you bury him?"

"Alongside of the guager, I s'pose," said Roberts, who ventured a sidelong glance of malicious meaning, though ap-

parently half-doubtful of the consequences. I never saw so speedy a change in human being as that remark produced in Knox. In an instant, his brow became as black as the storm which now raged with appalling violence without.

"What has thee to do with that, thou pert, meddling coxcomb?" said he, as he fixed his black eyes, almost concealed by their overhanging brows, on the object of his wrath. "Now mark me, Master Roberts; play off no more of thy jokes on me. This is not the first time I have warned thee; but it shall be the last."

I learned afterwards that the gauger alluded to was Knox's half-brother, who was supposed to have met with his death by the hands of his relation, and his body flung down a shaft near the sea, now known by the name of the Guager's Shaft. What confirmed the suspicion was, that he was known to have frightful dreams about his murdered brother, and some said that he was known to tremble like a child if left alone at night. Be that as it might, however, a ferocious altercation was now proceeding between Knox and a friend of Roberts, who had replied to the other's threats, which appeared likely to proceed to serious consequences, had not the attention of all parties been diverted by a loud and continued knocking at the outer door. This seemed so unusual an occurrence that the host hesitated to unbar, for never was a stranger known to arrive at St. Agnes at such an hour, and on such a night too; for we heard the rain descend in torrents, and the thunder growling at intervals.

The knocking continued vehemently, and although we were too many to fear anything like personal danger, yet I could see an evident though undefinable fear spreading throughout the party, sufficiently expressed by their anxious glances. In no one was such an expression more visible than in Knox. It was the result of some superstitious feeling, which the conversation of the night, and the awful storm now raging about them, had called into play.

The knocking was now fiercer than ever, and the host was at last, constrained to unbolt and unbar; the guest, whoever he was, would take no denial. As the door opened, in stalked a tall, weather-beaten-looking man, enveloped in a huge shaggy great-coat, and a broad oil-skin hat on his head.

"What the devil dost thee mean by this?" he said, dashing his hat upon the floor, and shaking the rain from his coat like a huge water dog—"keeping a traveller outside your gates on such a night!" At this moment, during a lull in the storm, was heard a heaving booming sound from the sea.

"A wrack! a wrack!" shouted Knox; and instantly a dozen fellows were on their legs ready to rush forth like thirsty blood-hounds on their prey. "Keep your places, you fools!" cried the stranger; "if she goes ashore, it will be many miles from here, with the wind in this quarter." They all seemed to acknowledge the justice of the remark by sulkily resuming their places. "I've heard the guns some time," continued the stranger; "but she has good offing yet, and she may mahage to keep off. I'd lay my life she is a foreign craft, they're always in such a plaguy hurry to sing out." The company had leisure by this time to seat themselves and resume their pipes. They likewise, seeing he was no ghost, took the liberty of scanning their guest. He was not very remarkable, further than being a tall, muscular man, with short curling black hair, immense bushy whiskers, meeting under his chin, and large black eyes. Altogether it was not an unpleasant countenance. He did not apologise for his intrusion, but called at once for his pipe and glass.

"Did you come from Truro side?" asked Knox. The stranger took a huge whiff, and nodded assent.

"Who might have brought you across the moors?" "Dost thou think no one can tread the moors but thyself, and the louts of St. Agnes?"

"None that I ever heard of, except Beelzebub," said Knox, peering from beneath his brows suspiciously on the new comer.

The stranger laughed.

"The path is dangerous by night," said Thomas; "few strangers find the way alone."

"Then I am one of the few, for here I am," said he.

"I've lived here man and boy, these forty years," said

Knox, "I never knew a stranger to do that before! And thou must be a stranger, for I've never seen thee." "Art sure of that?" Knox again scanned him attentively.

"I never saw thee before."

"You see, then, a stranger can find his way in these parts. I came by the Guager's Shaft. Thou know'st the Guager's Shaft?" said he, significantly.

"Hell!" said the other, furiously, "dost thou come here to mock me? If thou dost, thou'dst better return, afore harm comes of thee."

"Thou'rt a strong man," said his opponent; "but I am so much a stronger, that I would hold thee with one arm on yonder fire till thou wert as black as thy own black heart. Come, thou need'st not frown on me, man; if thou hast a spark of courage, I'll put it now to the test."

"Courage! I fear neither thee nor Beelzebub!"

"I'll wager thee this heavy purse of French *louis d'ors* against that watch and ring that befits thy finger so oddly, that thou durst not go into yonder room alone, and look on the face that shall meet thee there."

"Thou'rt a juggler and a cheat—I'll have nothing further to say to thee."

"There's my gold," said he, throwing a heavy purse on the table; "look at it—count it; a hundred as bright *louis* as ever were coined in France, against thy watch and ring, not worth the half!" The eyes of the wrecker glistened at the bright heap of gold.

"What is the wager?" he demanded.

"If thou durst go into yonder room, that I will raise the form of one whom thou would'st most dread to see."

"I fear nothing, and believe thee to be a cheat."

"There's my gold."

"Take the wager!" cried several of Knox's friends; "we'll see thou hast the gold."

"Done!" cried Knox, with a sort of desperate resolve, which the cheers of his friends and the sight of the gold helped him to assume; and he placed the ring and watch on the heap of *louis*.

"I must have arms and lights."

"Take them," said the stranger; "but before you go, I will show you a portion of your property you have never discovered." He took up the ring, and touching the inside with the point of a pin, a small aperture flew open, and disclosed a small space filled with hair. It was not till that moment it was discovered that the stranger had lost the little finger of the left hand! For a moment all was still as the grave. A frightful feeling seemed to pervade the breast of every one around. It was as though the murdered stood before them to claim his own! The stranger broke into a loud laugh. "What the devil ails you all? Are you afraid of a man without a finger?" and his laugh was louder than before.

"I'll not go into the room," said Knox, in a low, broken voice.

"Then the watch and ring are mine," said the stranger.

"You have forfeited the wager;" and he began to fill the bag with the coin.

"It's a base juggle to rob me of my property," cried Knox, whose courage returned as he witnessed the unghostlike manner in which the stranger fingered the money.

"Keep to your wager, man," cried Thomas, "we'll see you rightly dealt with. He can no more do what he says, than raise the Prince of Darkness himself."

"Will you stand to your bargain?" asked the stranger.

"I will; and defy the devil and all his works." He took a candle and a loaded pistol, and went towards the room. If ever the agony of a life were condensed into the short space of a few minutes, that was the time. Ruffian as he was, he was a pitiable object. Pale and trembling, without making an effort to conceal his distress, he paused and turned, irresolute, even at the threshold of the door. Shame and avarice urged him on. He entered the room and closed the door.

If I say that I looked on as a calm spectator of these proceedings, I should say falsely. I began to grow nervous, and was infected with the superstitious feeling which had evidently taken possession of my companions. The only unconverted person was the stranger; at least, he was apparently so.

He very coolly tied up the money, watch, and ring in the bag, and placed them on the table. He then took two pieces of paper, and wrote some characters on both: one he handed to Thomas; it was marked with the name of Gauger; the other he kept himself. He advanced to the fire, which was blazing brightly, and, muttering a few words, threw into it a small leaden packet, and retired at the same moment to the end of the room. The flames had hardly time to melt the thin sheet-lead, ere our ears were greeted with the most terrific and appalling explosion that I have ever in my life heard, and as though the elements were in unison, a deafening thunder-crash shook the house to its very foundation. Every man was thrown violently to the ground; the chairs and tables tumbled about, as though imbued with life; every door was burst open by the shock, and hardly a pane of glass remained entire. This, with the screams of the women, and the groans of the men, if any one could withstand, without actual terror taking possession of his heart, he must be a bolder man than I was. For several minutes (for so it appeared to me) did we lie on the floor in this state, expecting, momentarily, the house to fall over us in ruins. All was, however, silent as death, except the pealing of the thunder, and the roaring of the storm; so that when the sense of suffocation was somewhat removed by the fresh air forcing through the open doors and windows we ventured to hail each other.

It was some time, however, before we could get a light; and that accomplished, our first care was to look to our friend in the back parlour. We found him lying on his face, quite insensible, and bleeding from a wound in the head, which he must have received in falling. We brought him into the large room; and after a time, when people could be brought to their senses, we procured restoratives. I never shall forget the wild and ghastly look with which he first gazed round him. He looked around, as though seeking some horrid object. "It's gone," he cried; "thank God!—what a horrid sight!—who saw it?" "Saw what? who?" asked Thomas. "Just as bloody and ghastly as when I pitched him down the shaft," cried he, incoherently.

"Hush! hush!" said Thomas; "collect yourself—you don't know what you're talking of."—"Who says I murdered him?" cried the miserable being before us. "Who says I got his money? He's a liar, I say—a liar! His money is sunk with him. Let 'em hang me—I am innocent—they cannot prove it!" It became too distressing. Fortunately for the feelings of all, the unhappy man, or rather maniac, relapsed into insensibility, and in that state was conveyed home.

It was not till then that we thought of the stranger. No trace of him could be found. The money, ring, and watch had disappeared.

Strange were the rumours abroad the next day at St. Agnes. Some men going very early to work, averred they saw a horseman flying over the moors, crossing shafts and pits, without once staying to pick his way. It could have been no human horseman, nor steed, that could have sped on such a wild career. There was another report, which accounted for the appearance and disappearance of the stranger in another way. Some smugglers reported, that on that night they saw a beautiful French smuggling lugger sheltering from the gale in a little unfrequented bay along the coast. It might have been one of the crew, who had made himself acquainted with the circumstances he mentioned, and which was no secret, and made this bold dash for a prize; but this version of the story was scouted, as quite unworthy of the slightest credit. The former was the popular belief.

ACCIDENT TO H.M.S. LEANDER, DECEMBER 6, 1802.

FROM CAPTAIN BASIL HALL'S VOYAGES.

On the 6th of December we sailed from Halifax, with a fresh north-westerly wind, in a day so bitterly cold, that the harbour was covered over with a vapour called "the Barber," a sort of low fog, which clings to the surface of the water, and sweeps along with these fierce winter blasts in such a manner as to cut one to the very bone. The "Barber" is evidently caused by a condensation of the moisture close to the water in this severe temperature. As the thermometer, when we sailed

stood at eleven degrees below Zero, nothing but the violence of the wind which broke the surface into a sheet of foam, prevented our being frozen up in the harbour, like Parry and his north-western voyagers at Melville Island.

On our dashing by one of the lower wharfs of the town of Halifax, just before coming to the narrow passage between George's Island and the main-land, on the south-side of this magnificent inlet, a boat put off to us, having a gentleman on board, who, by some accident, had missed his passage. He succeeded in getting alongside the ship; but, in seizing hold of a rope which was thrown to him from the main-chains, one of the boatmen, in his hurry, caught a turn with the line round the after-thwart, instead of making it fast forward. The inevitable and immediate consequence of this proceeding was to raise the stern of the boat quite out of the water, and, of course, to plunge her nose under the surface. I suppose even a landsman will comprehend how this happened, when it is mentioned that the ship was running past at the rate of ten knots.

In the twinkling of an eye, the whole party, officer boatmen, and all were seen floating about, grasping at the oars or striking out for the land, distant, fortunately, only a few yards from them; for the water thereabouts is so deep, that a ship in sailing out or in may safely graze the shore. Considering the intensity of the cold, we were quite astonished to see people swimming away so easily; but we afterwards learned from some of the party, that, owing to the water being between forty and fifty degrees warmer than the air, they felt, when plunged into it, as if they had been soured into a hot bath. The instant, however, they reached the pier, and were lugged out, like half-drowned rats, they became literally enclosed in firm cases of ice from head to foot! This very awkward coat of mail could not be removed without considerable difficulty; and one of them told me, that he could not move at all till he had been laid for some hours in a well-warmed bed, between two other persons, and for several months afterwards he remained too unwell to leave his room.

For us to stop, at such a place and time, was impossible; so away we shot like an arrow, past Chebuctohead, Cape Sambro, and sundry other fierce-looking, black promontories of naked rocks, smoothed off, apparently, by the attrition of some huge and transient deluge, which, in ancient days, must have submerged all that part of America lying between the shores of Lake Erie on the west, and Boston and New York on the south and east.

But we had no time, on the day I speak of, for any such geological speculations. The breeze, which rose rapidly to a hard gale, soon split our main-topsail to threads, and sent the fragments crackling off to leeward in the storm, in such grand style, that, to this hour, I can almost fancy I distinguish the noise in my ears. I know, indeed, few things more impressive than the deep-toned, thunder-like sounds caused by the flapping of a wet topsail in such a fierce squall as this, when both the sheets are carried away, and the unconfined sail is tugging and tearing to get clear of the yard, which bends so fearfully that even the lower mast sometimes wags about like a reed. I certainly have heard crashes amongst the clouds far louder than the sounds alluded to, but have seldom known thunder-peals more effective and startling than those of a sail going to pieces in such a tempest of wind and rain.

I was standing, where I had no business to be, on the weather-side of the quarter-deck, holding on stoutly by one of the belaying-pins, and wondering in what catastrophe this novel scene was to end. I had an obscure idea that the ship was going to the bottom; but the admiral looked up to the splitting sail as composedly as possible, and only desired that the main-top-men, whose exertions were quite useless, should be called down, out of the way of the ropes, which were smacking about their heads. Yet I could see, every now and then, the weather-wise glance of the veteran's eye directed to windward, in anxious hope that matters would mend; but they only became worse. At last, when the foremast seemed to be really in danger, for it bent over like a cane, though the foresail had been reefed, he waited not to run through the usual round of etiquettes by which, on board ship an admiral's commands are

generally transmitted, by regular steps, down to the executive; but exclaimed, with a voice so loud, that it made me start right over to the lee-side of the deck:—

"Man the fore-clue-garnets!"

In the next minute the sail rose gradually to the yard, and the groaning ship, by this time sorely strained to her innermost timber, seemed to be at once relieved from the pressure of the canvass which had borne her headlong, right into the seas, making the old barks tremble from stem to stern, as if she were going to pieces.

The next thing to be done was to get in the jib-boom, in order to ease the bowsprit. In effecting this operation, rather troublesome at all times, one of the primest of our seamen fell overboard. He was the second captain of the fore-castle, and the steadiness of his admirable skill as a steersman had, one day, elicited the complimentary remark from the captain, that he must surely have nailed the compass-card to the binnacle. On this and other accounts he had long been so much esteemed in the ship, that more than the usual degree of regret was felt for his melancholy fate. I saw the poor fellow pitch headlong into the water, and I watched him as he floated past, buoyant as a cork, and breasting the waves most gallantly, with an imploring look towards us, which I shall never forget, but in less than a minute he was out of sight. A boat could hardly have lived in such weather, and no further attempt was made, or perhaps could have been made, to save him, than to throw over ropes, which fell short of their mark. Although we soon lost all traces of the drowning seaman, it is probable he may have kept sight of us, as we drifted quickly to leeward under our bare poles, long after we had ceased to distinguish his figure in the yeast of waves. This gale, the first I ever saw, was also one of the fiercest. It lasted for three days, totally dispersed our little squadron, well nigh foundered one of them, the Cambrian, and sent her hobbling into Bermuda some days after us, with the loss of her mainmast and all her three topmasts.

THE SAILOR'S GRAVE.

Oh! far from his native land he died,

In youth's sweet opening day—

E'en as the flower, in summer pride,

Is torn from earth away.

Far from his home's bright sunny bowers,

On the dark stormy main,

He languished through long weary hours

For that dear home again.

For lonely the dying sailor lay,

Uncheered by one kind tone:

The joyous light of hope's cheering ray

With health's bright hours had flown.

No mother was near to soothe his head,

And catch his parting sighs;

Strangers stood by the loved one's bed,

And closed his dying eyes.

They gave him unto the stormy deep—

The young, the loved, the brave!

And the dark billows, with sudden sweep,

Closed o'er the Sailor's Grave!

His father rests 'neath yon marble tomb,

Where the sad willow weeps;

And where the red roses brightly bloom

His fair young sister sleeps.

The flowers around their graves now cling,

Planted by love's fond care;

Holy and sweet are the thoughts they bring

Of the loved sleepers there.

But, alas! o'er him no friend may weep,

Nor flower brightly wave;

Alas, for him! for the stormy deep

Is the young Sailor's Grave!

ADVENTURES OF CAPTAIN RICHARD FALCONER.

I was born at Bruton, a market-town in Somersetshire, of parents tolerably well to pass in the world. My mother died when I was very young. My father had been a great traveller in his youth, and, frequently repeating his adventures abroad, I had a great desire to follow his steps. I often begged he would let me go to sea with some captain of his acquaintance; but he would reply, "Stay where you are; you know not the hazards and dangers that attend a sea life: think no more of going to sea, for I know it is only the desire of youth, prone to change; and if I should give you leave, one week's voyage would make you wish to be at home again." I used all the arguments I could think of to move

my father from his opposition, but without effect. My father was not to be moved; and thus I lived two years longer with him in expectation of a change in his mind. At last an event happened that furthered my desires, and although it was the ruin of our family, I confess I did not feel it in its full force.

My father was a supervisor of a tax upon the burning of pipes, and having collected a sum amounting to £3,800 to pay to government, he was robbed of the whole by an exciseman, who made his escape. My father employed all possible means to apprehend him, but all his endeavours were fruitless; and finding his affairs in a desperate condition, he resolved to retire to some part of the world where he might be secure from the law. One morning, just before his voluntary exile, he called me to him. "Richard," said he, "you have often been desirous of going to sea, and I have always endeavoured

ADVENTURES OF CAPTAIN RICHARD FALCONER. WRITTEN BY HIMSELF.

to dissuade you from it; but as what has happened has made it impossible for me to continue upon the place of my birth, the patrimony of my ancestors, I must recommend to you that way of life which I should never have chosen, but that the exigency of my affairs will not allow me to provide in any other way for you. Here," continued he, "take this hundred pounds, which I can ill spare out of my little fortune; but since it is all that I can do for you, take it, and may Heaven prosper your undertakings! May the blessing of a father always live with you, whose prayers shall ever be sent to the Almighty Creator for your welfare. Here is also a recommendation for you to Captain Pultney, of Bristol, whose friendship I am sure will be of service to you." Then, with tears in his eyes, he embraced me, gave me his blessing, and took his leave for ever, for I have not beheld him since.

No. 30.

I had now nothing more to do than provide a little luggage, in order to go to Bristol. I packed up my things in a portmanteau, and gave them to an old servant of my father's who would see me as far as Bristol for his sake. We set out in the morning, and reached it by noon. I inquired for Captain Pultney, and soon found him out; I informed him who I was, and gave him my father's letter.

Captain Pultney received me with great cordiality, and promised to procure me a good berth; and when by his advice, I had studied the mathematics, and he thought me capable of performing the duties of mate, he sent me on board the Albion frigate, commanded by Captain Wise; and on the 2nd of May, 1699, we set sail, bound for Jamaica, with a fair wind. As soon as we lost sight of land, I began to be extremely sea-sick, and bore the rough jokes of the sailors

very indifferently. One cried out, "There's an excellent master's-mate; he'll hit Jamaica to a hair, if the island was no bigger than a bunghole." However, in a day or two, I was perfectly recovered, and was never troubled with any sickness afterwards.

Nothing material happened to us till we entered the Bay of Biscay, when we encountered a dreadful storm; the billows ran mountains high, and our vessel seemed to be the sport of the waves. A ship that overtook us the day before, and accompanied us, was sometimes lost through the height of the waves, though they were not half a furlong distance; and this continued for three days, when the storm abated something of its fierceness, though it still blew very hard. The other vessel, by firing a gun and showing a signal, made it appear she was in distress; but the sea ran so high, that it

was impossible to give them any assistance, yet we bore down, being to windward, to be as near as possible without danger to ourselves. We found that she had sprung a leak, and though they had had all hands by turns to pump, yet the water gained on them. They begged us to hoist out our boat as their own was stove, and we accordingly put out our long-boat with two men in her; but the rope that held her to the ship unfortunately broke, and she drove away with the two men in her, and we never afterwards heard of them. They were undoubtedly lost, or perished of hunger, as we were more than twenty leagues from any shore. The ship sunk in less than ten minutes afterwards, with fifty seven men on board, of whom four only were saved by clinging to the ropes we had thrown out.

And here we ought to admire the interference of Provi

SKETCHES OF CAPTAIN JONES'S VOYAGE TO JAMAICA

dence; for this vessel was a pirate-ship, commanded by Captain Jones, who left Dover in a large open boat, and when near Ostend, stole, during the night, on a French ship, murdered the captain and some others, and set all the sailors on shore who would not unite in their designs. They had also resolved to attack us when the storm was over. The four we saved consisted of three Englishmen and one Frenchman, who said they were forced, with several others, by Captain Jones, to enter on that course of life; but whether true or false, they behaved with great propriety during our voyage.

On the 28th of May we made the Canaries, and saw the peak of Teneriffe, that island, or rather rock, of stupendous height. On the 4th of July, we anchored in Carlisle Bay, Barbadoes, after a desperate action with a pirate who boarded us, and was beat off. On the 20th of July we sailed for Ja-

maica, on the 1st of August anchored at Nevis, and on the 7th of September, arrived in Port Royal harbour.

Now, finding our affairs would detain us half a year longer, I obtained leave of the captain to go in a sloop, with some of my acquaintances, to get logwood on the South American coast, at the Bay of Campeachy; and on the 25th of September we set sail on this expedition. The manner of getting this wood is as follows:—A company of desperate fellows go together in a sloop, well armed, and land by stealth (to avoid an encounter with the Spaniards, to whom the country at that time belonged); but in case of any resistance, the whole crew attend on the cutters ready armed, to defend them. We sailed merrily on our course for six days together, with a fair wind towards the bay; but on the seventh, the clouds darkened, and the welkin seemed all on fire with lightning,

and the thunder roared louder than ever I heard it in my life. In short, a dreadful hurricane approached. The sailors had furl'd their sails and lowered their topmasts, waiting for it under a double-reefed foresail. At length it came with extreme violence, which lasted three hours, until it insensibly abated, and brought on a stark calm. We then loosened our sails in expectation of the wind, which stole out again in about half an hour. About six in the evening, we saw a water-spout, an aerial cloud that draws up the salt water of the sea, and distills it into fresh showers of rain. This cloud comes down in the form of a pipe, of a vast thickness, and, by the force of the sun, sucks up a great quantity of water. After it had continued about half an hour on the water, it drew up insensibly, by degrees, till it was lost in the clouds; but in closing, it shut out some of the water, which fell into the sea again, with a noise like that of thunder, and occasioned a smoke in the water that continued for a considerable time.

October the 6th, we anchored at Trist Island; in the Bay of Campeachy, and sent our men ashore at Logwood Creek, to seek for the logwood cutters, who immediately came on board. The bargain was soon struck; and, in exchange for our rum and sugar, and a little money, we got in our lading in eight days, and set sail for Jamaica on the 15th day of October. Now, getting up to Jamaica again generally takes up two months, because we are obliged to ply it all the way to windward. I one day went down into the hold to bottle off a small parcel of wine I had there: coming upon deck again, I wanted to wash myself, but did not care to go into the water, so went into the boat astern that we had hoisted out in the morning to look after a wreck. Having washed and dressed myself, I took a book out of my pocket, and sat reading in the boat; when, before I was aware, a storm began to rise, so that I could not get up at the ship's side as usual, but called for the ladder of ropes that hangs over the ship's quarter, in order to get up that way. Whether it broke through rottenness, as being seldom used, I cannot tell, but down I fell into the sea; and though the ship tacked about to take me up, yet I lost sight of them through the duskiness of the evening, and the storm. I had the most dismal fears that could ever possess any one in my condition. I was forced to drive with the wind, which, by good fortune, set in with the current; and having kept myself above water, as near as I could guess in this fright, four hours, I felt my feet every now and then touch the ground; and at last, by a great wave, I was thrown and left upon the sand: yet, it being dark, I knew not what to do; but I got up and walked as well as my tired limbs would let me, and every now and then was overtaken by the waves, which were not high enough to wash me away. When I had got far enough, as I thought, to be out of danger, I could not discover any thing of land, and I immediately conjectured that it was but some bank of sand, that the sea would overflow at high tide. Whereupon I sat down to rest my weary limbs, and fit myself for death; for that was all I could expect, in my own opinion: then all my sins came flying in my face. I offered up my fervent prayers, not for my safety, because I did not expect any such thing, but for all my past offences; and I may really say I anticipated my dissolution with a calmness that led me to hope I had made my peace with heaven. At last I fell asleep, though I tried all I could against it, by getting up and walking, till I was obliged, through weariness, to lie down again.

When I awoke in the morning, I was amazed to find myself among four or five very low sandy islands, separated half a mile or more, as I guessed, by the sea. With that I began to be a little cheerful, and walked about to see if I could find any thing that was eatable; but to my great grief I found nothing but a few eggs, which I was obliged to eat raw. The fear of starving seemed to me to be worse than that of drowning; and often did I wish that the sea had swallowed me, rather than have thrown me on this desolate island; for I could perceive, by the evenness of them, that they were not inhabited either by man or beast, or anything else but rats, and several sorts of fowl. Upon this island there were some bushes of a wood they call burton wood, which used to be my shelter at night; but to complete my misery, there was not to be found one drop of

fresh water anywhere, so that I was forced to drink sea water for two or three days, which made my skin come off like the peel of a broiled codlin. At last my misery so increased, that I often was in the mind of terminating my life, but desisted from the expectation I had that some alligator, or other voracious creature, would come and do it for me.

I had lived a week upon eggs only, when, by good fortune, I discovered a bird called a booby sitting upon a bush, I ran immediately, as fast as I could, and knocked it down with a stick. I never considered whether it was proper food, but sucked the blood and ate the flesh with such a pleasure as none can express but those who have felt the pain of hunger to the same degree as myself. After I had devoured this banquet, I walked about and discovered many more of these birds, which I killed. My stomach being now pretty well appeased, I began to consider whether I could not with two sticks make a fire, as I had seen the blacks do in Jamaica, and at last happily accomplished it. I picked several of my boobies, and broiled them as well as I could; and now I resolved to come to an allowance.

At night, I and my fellow inhabitants endured a great storm of rain and thunder, with the reddest lightning I had ever seen, and well drenched we all were. As for myself, my clothes, which were only a pair of thin shoes and thread stockings, and a canvass waistcoat and breeches, were soundly wet; but I had the happiness to find in the morning several cavities of rain water, which put in my head a thought of making a deep well, or hollow place, that I might have water continually by me, which I brought to perfection in this manner: I took a piece of wood, and pitched upon a place under a burton tree, where, with my hands and the stick together, I dug a hole, or well, big enough to contain a hog'shead of water; then I put in stones and paved it, and got in and stamped them down hard all round, and, with my stick, beat the sides close, so that I made it capable of holding water. But the difficulty was how to get the water there, which I at length effected by means of a sort of bucket made from part of my clothing. I now felt greatly cheered with my prospects, and thought I should not be very badly off for a while; for besides the water for my drink, I had already broiled forty boobies, designing to allow myself half a one a-day. I had a small Ovid, printed by Elzevir, which was in my trousers pocket when I was going up the ladder of ropes; and, by being pressed close, was not quite spoiled, but only the cover off, and a little stained with the wet. This was a great mitigation of my misfortune; for I could entertain myself with this book under a burton bush, till I fell asleep. I remained always in good health, only a little troubled with the headache, for want of a hat, which I lost in the water, in falling down from the vessel's side. But I remedied this as well as I could, by gathering a parcel of chicken-weed, which grows there in plenty, and strewing it over the burton bushes under which I sat. Nay, at last, finding my time might be longer than I expected, I tore off one of the sleeves of my shirt, and lined a cap that I had made of green sprigs, twisted with the green bark that I peeled off.

I had been here a month by my reckoning, and in that time my skin looked as if it had been rubbed over with walnut-shells. I several times thought to have swam to one of the other islands; but as they looked only like heaps of sand, I believed I had got the best berth, so contented myself with my present station. Of boobies I could get enough, who built on the ground, and another bird that lays eggs, which I used to eat, but I never ventured to taste the eggs. I was so well satisfied with my boobies, that I did not care to try experiments. The island which I was upon, seemed to me to be about two miles in circumference, and was almost round. On the west side there is a good anchoring-place, for the water is very deep within two fathoms of the shore. God forgive me! but I often wished to have had companions in my misfortune, and hoped every day either to have seen some vessel come that way, or a wreck where, perhaps, I might have found some necessities which I wanted. I used to fancy, that if I should be forced to stay there long, I should forget my speech; so I used to talk aloud, ask myself questions, and answer them. But if any body had been by to have heard me, they would

certainly have thought me bewitched, I often asked myself such odd questions. All this while I could not inform myself where I was, nor how near any inhabited place.

One morning, which I took to be the 8th of November, a violent storm arose, which continued till noon. In the meantime I discerned a bark labouring with the waves for several hours; and at last, with the violence of the tempest, perfectly thrown out of the water upon the shore, within a quarter of a mile from the place where I observed them. I ran to see if there were any body I could assist, when I found four men (being all there were in the vessel) busy about saving what they could. When I came up with them, and hailed them in English, they seemed mightily surprised; and asked me how I came there, and how long I had been there. When I told them my story, they were concerned for themselves as well as for me, for they found there was no possibility of getting their bark off the sands, the wind having forced her so far: with that we began to bemoan one another's misfortunes; but I must confess to you, without lying, I was never more rejoiced in my whole life, for they had on board plenty of everything for a twelvemonth, and not any article spoiled. Their lading (which was logwood) they had thrown overboard to lighten the ship, which was the occasion of the wind forcing her so far. Had they kept in their lading they would have bulged in the sands, half a quarter of a mile from the place they did, and the sea flying over them, would not only have spoiled their provisions, but perhaps would have been the death of them all. By these men I understood to what place I had got, namely, one of the islands of Alcranes, which are five islands, or rather large banks of sand, for there is not a tree or bush upon any but that where we were. They lie in the lat. of 22° north, twenty-five leagues from Yucatan, and about sixty from Campeachy town. We worked as fast as we could, and got at everything that would be useful to us before night. We had six barrels of salt beef, three of pork, two of biscuit, a small copper and iron-pot, some wearing apparel, and a spare hat, which I wanted mightily. We had, besides, several kegs of rum, one of brandy, a chest of sugar, some gunpowder, and one fowling-piece, with many other very useful things. We took off the sails from the yards, and, with some pieces of timber, raised a hut big enough to hold twenty men, under which we put the beds that we got from the bark. It is true we had no shelter from the wind, for the trees were so low they were of no use. I now thought myself in a palace, and was as merry as if I had been at Jamaica, or even at home in my own country. In short, when we had been there some time, we began to be very easy, and to wait contentedly till Providence should fetch us out of this island. The bark lay upon the sands, fifty yards from the water, when at the highest, so that I used to lie in her cabin, by reason there was no more beds ashore than were for my four companions, to wit, Thomas Randal of Cork, in Ireland, whose bed was largest, which he did me the favour to spare a part of, now and then, when the wind was high, and I did not care to lie on board; Richard White and William Musgrave, of Kingston, in Jamaica; and Ralph Middleton, of Cowes, in the Isle of Wight. These men, with eight others, set out of Port Royal about a month after us, bound for the same place; but the latter, lying ashore, and wandering too far up the country, were met, as it is supposed, by some Spaniards and Indians, who set upon them in great numbers. Yet, nevertheless, by all appearance, they fought desperately; for when Mr. Randal and Mr. Middleton went to seek for them, they found all the eight dead, with fifteen Indians, and two Spaniards. All the Englishmen had several cuts in their heads, arms, breasts, &c., that made it very plainly appear they had sold their lives dearly. They were too far up in the country to bring down their dead, so they were obliged to dig a hole in the earth, and put them in as they lay, in their clothes. As for the Indians and Spaniards, they stripped them, and left them above ground as they found them, and made all the haste they could to embark, for fear of any other unlucky accident that might happen. They set sail as soon as ever they came on board, and made the best of their way for Jamaica, till they were overtaken by the storm that shipwrecked them on Make Shift Island, as I had named it.

Now, we had all manner of fishing-tackle with us, but we

wanted a boat to go a little way from shore to catch fish; therefore we set our wits to work, in order to make some manner of float, and at last we pitched upon this odd project: we took six casks, and tarred them all over, then stopped up the bungholes with corks, and nailed them close down with a piece of tarred canvass. These six casks we tied together with some of the cordage of the vessel, and upon them we placed the skuttles of the deck, and fixed them, and made it so strong, that two men might sit upon them; but for fear a storm should happen, we tied to one end of them a coil or two of small rope, of 500 fathoms long, which we fixed to a small stake on the shore. Two of our party went out (as for my part I was no fisherman) in order to see what success they should have; but returned with only one nurse, a fish so called, about two feet long, something like a shark, only its skin is very rough, and, when dry, will do the same office as a seal-skin. The same, boiled in lemon-juice, is considered an excellent remedy for the scurvy, by applying pieces of the skin to the calves of the legs, and rubbing the body with some of the liquor once or twice. We sent out our fishermen the next day again, and they returned with two old wives, and a young shark, about two feet long, which were dressed for dinner, and they proved excellent eating. In the morning following we killed a young seal with our fowling-piece. This we salted, and it ate very well, after lying two or three days in the brine.

We passed our time on this Make Shift Island as well as we could, and invented several games to divert ourselves. One day, when we had been merry, sorrow, as after gaiety often happens, stole insensibly on us all. I, as being the youngest, began to reflect on my sad condition, spending my youth on a barren island, without hopes of being ever redeemed. Whereupon Mr. Randal, who was a man of great experience, and had gone through many sufferings, gave me considerable comfort in my affliction, both by a narrative of his own mishaps, and by a plan he laid before us of a means of getting off the island. "Mr. Falconer, and my fellow sufferers," said he, "but it is to you," pointing at me, "that I chiefly address myself, as you seem to despair of a safe removal from this place more than any other. Is not your condition much better now than you could have expected it to have been a month ago? There is a virtue in manly suffering; as to repine seems to doubt of the all-seeing Power which regulates our actions. Our bark is strong and firm; and by degrees, I do not doubt, but with time and much labour, to get her into the water again. I have been aboard her this morning, when you were all asleep, and examined her carefully, inside and out, and fancy our liberty may soon be effected. I only wonder we have never thought before of clearing the sand from our vessel, which, once done, I believe we may launch her into deep water."

Having spent the night in reflection on what had passed, the next morning we went to work to clear the sand from our vessel, which by continually working on for sixteen days together, resting only on Sunday, at last we effected. The next thing we had to do was to get poles to put under our vessel to launch her out; which we got from the burton wood, but with much difficulty, as we were forced to cut a great many, before we could get such that were fit for our purpose. After we had done this, we returned God thanks for our success hitherto; and, on the day following, resolved to thrust off our vessel into the water, but we were prevented by Mr. Randal being taken ill of a fever, occasioned, as we supposed, by his great fatigue in working to free our ship from the sand, wherein he spared no pains to encourage us, as much by his actions as his words, even beyond his strength. The concern we were all in upon this, occasioned our delay in not getting our vessel out. Besides, one hand out of five very much weakened our strength. Mr. Randal never thought of his instruments till now, when he wanted to let himself blood; but, not feeling them about his clothes, we supposed they might have been overlooked in the vessel: so I ran immediately to see if I could find them; and, getting up the side, my very weight pulled her down to the sand, which would have crushed me to death if I had not sunk into the hollow that we had made by throwing the sand from the ship. I crept out in a great fright, and ran to my companions, who, with much ado, got her upright; and afterwards we fixed

some spare oars on each side to keep her up from falling again, for the pieces of wood that was placed under her were greased, to facilitate her slipping into the water, and we had dug the sand so entirely from her, that she rested only by them, which occasioned her leaning to one side with my weight only. When we entered into the vessel, and our endeavours to find the box of instruments were fruitless, we were all mightily concerned, for we verily believed that bleeding would have cured him; nay, even he himself said, that if he could be let blood, he was certain his fever would abate, and he should be easier; yet to see with what a perfect resignation he submitted to the will of heaven, would have inspired one with a true knowledge of the state good men enjoy after a dissolution from this painful life. He grew still worse and worse, but yet so patient in his sufferings, that it perfectly amazed us all. He continued in this manner a whole week, at the end of which time he expired. After our sorrow for his death was somewhat abated, we consulted how to bury him, and at last agreed on committing his body to the hole in the sand which I had dug for my well. After fulfilling this melancholy duty, the whole of our thoughts were bent on our vessel, and the means of escape from the island.

On Monday, the 31st of December, we launched our vessel out into the sea, and designed to set sail the next day from the island upon which we had been so long confined. After we had fixed her fast with two anchors and a hawser on shore, we went on board to dine and make ourselves merry, which we did very heartily; and, to add to our mirth, we made a large can of punch, which we never attempted to do before, as we had but one bottle of lime-juice in all, which was what indeed we designed for this occasion. In short, the punch ran down so merrily, that we were all in a drunken condition. When it was gone, we resolved to go to rest; but all I could do, could not persuade them to lie on board that night in their cabins, without a bed: they would venture, though they were obliged to swim a hundred yards before they could wade to shore; but however, they got safe, which I knew by their hallooing and rejoicing.

Having brought my bed on board, I went to rest very contentedly, which I did till next morning: but oh! horror! when I had dressed myself, and gone on deck to call my companions to come on board to breakfast, which was intended overnight, and afterwards to go on shore, and bring our sails and yards on board, and make to sea as fast as we could, I could not see any land! which so overcame me on the sudden, that I sunk down on the deck, without sense or motion. How long I continued so I cannot tell, but I awoke full of the sense of my melancholy condition; and ten thousand times, in spite of my resolution to forbear, cursed my unhappy fate that brought me to that deplorable state. Instead of coming on board to be frolicsome and merry, we should have given thanks to Him who gave us the means which rendered us no longer subject to such hardships that we might probably have undergone, if we had been detained longer on that island. I had no compass, neither was I, of myself, capable of ruling the vessel in a calm, much less if there should a storm happen, which is too frequent in this climate.

After I had vented my grief in a torrent of words and tears, I began to think how the vessel could have got to sea without my knowledge. By remembrance of the affairs of the night before, I found, by our eagerness and fatal carelessness, we had forgotten to fasten our cables to the geers; and, pulling up the hawser which we had fastened to one of the burton trees on shore, I perceived that the force of the vessel had pulled the tree out the earth. Then I too late found that a hurricane had risen when I was sound asleep and stupified with too much liquor. When I began to be something better contented in my mind, and thought of sustaining nature, almost spent with fatigue and grieving, one great comfort I had on my side, which my poor wretched companions wanted, was provision in plenty, and fresh water; so that when I began to consider coolly, I found I had not that cause to complain of which they had, who were left on a barren island, without any other provision than that very same diet

which I was forced to take up with when first thrown on shore.

I remained tossed upon the sea for a fortnight, without discovering land; for the weather continued very calm, but yet so hazy, that I could not perceive the sun for several days. One day, searching for some linen that I had dropped under the sacking of my bed, for I did not lie in a hammock, I found a glove with seventy-five pieces of eight in it, which I took, and sewed in the waistband of my trousers, for fear I should want it some time or other. I made no scruple in taking it, for I was well assured it had belonged to poor Mr. Randal. Besides, I had heard the other people say that they were sure that he had money somewhere; and, after his death, we searched for it, but could not find any.

January the 20th, 1700, I discovered a sail near me; but she bore away so fast, that there was not any hope of succour from her, and I had not anything to distinguish me. I supposed, though I could see them, yet they could not see me, by reason of my want of sail, which would have made me the more conspicuous. The next day I discovered land, about six leagues to the south-west of me, which, I observed, my vessel did not come nigh, but coasted along shore. I was well assured it was the province of Yucatan, belonging to the Spaniards, and was the place we came from. Now, all my fear was that I should fall into their hands, who would make me do the work of a slave; but even that I thought was better than to live in continual fear of storms, and tempests, or shipwreck.

I coasted along in this manner for two or three days, and at last discovered land right a-head, which I was very glad of, but yet mixed with fear, in not knowing what treatment I should have. On January the 30th, I made the bay and town of Francisco di Campeachy, as it proved afterwards, and was almost upon it before I was met by anything of a ship or a boat; but at last two canoes came on board, with one Spaniard and six Indians, who were much surprised when they understood my condition, by speaking broken French, which the Spaniards understood. They immediately carried me on shore, and thence to the governor, who was at dinner. They would have had me stay till he had dined; but at his hearing of me, commanded me to come in where he was at dinner with several gentlemen and two ladies; and though it is very rare any one sees the women, yet they did not offer to veil themselves. I was ordered to sit down by myself at a little table placed for that purpose, where I had sent me of what composed their dinner, which was some fish, fowls, and excellent wine of several sorts.

After they had feasted me for two or three days, they sent me about, with several officers appointed by the governor, to make a gathering, which we did with success, for in three days we had got seven hundred and odd pieces of eight; and two merchants there were at the charge of fitting up my bark, in order to send it for my poor companions, and to hearten us up, some bottles of fine wines, two bottles of citron water for a cordial, chocolate, and several other useful things: but the difficulty was to get seamen to go with me. At last they remembered they had five Englishmen, that were prisoners there, and taken in the Bay of Campeachy, upon suspicion of piracy; but nothing could be proved against them, and they were freed without any ransom. I indeed received as much humanity among them as could be expected from any of the most civilised nations.

All things being prepared, on the 15th of February, 1700, we set sail from Campeachy Bay, after paying my acknowledgments to the generous governor; but having nothing to present him worth acceptance but my Ovid, I gave him that, which he took very kindly, and said he would prize it mightily, not only in the esteem he had for that author, but in remembrance of me and my misfortunes. We plied it to the windward very briskly, and in fifteen days discovered the isles of the Alcranes; but we durst not go in within the shoals, because we were all ignorant of the channel. So we cast anchor, and hoisted out our boat, with two men and myself, and made to shore, where we found my three companions, but in a miserable condition, and Mr.

Musgrave so faint and weak, that they expected he could not live long.

They mentioned to me that when they awoke, after I had drove off in the vessel in the dark from the island, they were all in despair to find the ship gone, which they perceived was occasioned by a hurricane, that they were assured was violent, because it had blown down their tent, though without awaking them. But when they began to consider they had no food, and but very little fresh water, which was left in a barrel without a head in the tent, their despair increased. But as no passion can last long that is violent, it wore off with their care for sustenance, which they diligently searched for; and not finding any quantity of eggs or boobies, the dreadful fear of starving came into their minds, with all its horrid attendants. They had been five days without eating or drinking, for the boobies had retired, out of fear or custom, to some other place; neither could they find one egg more; and weakness came so fast upon them, with hunger and drought, that they were hardly able to crawl, so they thought of nothing but dying. When at last, they remembered the body of good Mr. Randal, that had been buried a week, which they dug up without being putrified; and that poor wretch, who helped to support our misfortunes when alive, with his sage advice, now was a means of preserving their life, though dead. We arrived in time to save them from continuing this horrid cannibalism, and having seen the remains of my old friend once more consigned to the tomb, we all got on board our vessel, in order to sail as soon as the wind would rise, it being stark calm, and continued so two days. At last it blew a little, and we weighed anchor, and stood out to sea, yet made but little way. I now was master or captain of a ship, and began to take upon me accordingly. We were nine men, all English; that is, myself, Richard White, W. Musgrave, and Ralph Middleton, my old companions; John Stone, W. Keater, Francis Hood, W. Warren, and Joseph Meadows, the five men given me by Don Antonio, who, as I said before, were taken on suspicion of piracy.

A thought came into my head that had escaped me before. I considered if these were really pirates, being five to four, they might be too powerful for us, and perhaps murder us. One day we all dined together upon deck, under our awning, it being very calm weather. I then asked the five men, what was the reason that they were taken by the Spaniards for pirates? Upon this they seemed nonplussed; but Warren soon recovered himself, as well as the rest, and spoke for the others in this manner:—"We embarked on board the ship Bonaventure, in the Thames, bound for Jamaica, whither we made a prosperous voyage; but after taking in our lading, on our way home, we were overtaken by a storm, in which our ship was lost, and all the men perished, except myself and four companions, who were saved in the long-boat. But the reason we were taken for pirates was, that making to shore to save ourselves, we saw a bark riding at anchor without the port of Campeachy, which we made to, in order to inquire whereabouts we were, and to beg some provisions, our own being gone. On entering the vessel, we found but two people in it; the third, jumping into the water, swam on shore, and brought three boats filled with Spanish soldiers, which came on board before we could make off." "Make off!" said I. "What, did you design to run away with the vessel?" "No," answered Warren, with some confusion; "but we did design to weigh anchor, and go farther in shore, that we might land in the morning, it being late at night."

I must confess I did not like the fellow being nonplussed now and then, in not knowing what to say, but, upon consideration, thought it might be for want of words to express himself better; so for that time I took no more notice, not weighing it in my mind: but in the evening Mr. Middleton came to me, with a face of concern, and told me he did not like these fellows' tale. "Why so?" said I. "Because I observe they herd together," answered he, "and are always whispering and speaking low to one another. If a foreboding heart may speak, I am sure we shall suffer something from these fellows, that will be of danger to us."

Upon this I began to stagger in my opinion of their honesty, and therefore we resolved to stand upon our guard. We took

no notice of our conference then to our two other companions but resolved to stay till night, having a better opportunity then, as we lay together in the cabin aft. When we were to go to supper, we called one another to come; but the five sailors excused themselves by saying they had dined so lately that they had no stomach as yet: whereupon we had an opportunity to converse together sooner than we designed, for being at supper, we opened the matter to our other two companions, and they agreed immediately that we were in some danger; so we resolved in the middle watch of the night to seize them in their sleep. We were to have the first watch, which we set at eight o'clock; then they were to watch till twelve; and then, in their third watch, between one and two, we had concluded to seize upon them as they slept; that is, four of them, for one of them watched with us, which was Frank Hood, the cook, whom we agreed to seize and bind fast, towards the latter end of the watch, and to threaten him with death if he offered to make the least noise.

As soon as ever our first watch was set, we sent Mr. Musgrave to prepare our arms. In about half an hour, or thereabouts, Warren called to Hood upon deck (they lying below), to get him a little water, "for he was very dry," he said: whereupon the other went down immediately with some water in a can to him. As soon as he was gone down, I had the curiosity to draw as near the scuttle as I could, to hear the discourse. Now, you must know, Hood, our cook, had been employed that day about searching our provisions, our beef casks and pork to see what quantity we had, that we might know how long it would last; so that the others had not an opportunity to disclose their design to him. As soon as he was gone down, I could hear Will Warren say to him, "Hark ye, Frank, we had like to have been smoked to-day; and though we had contrived the story that I told you, yet I was a little surprised at their asking me, because then I did not expect it; but we design to be even with them in a very little time; for hark ye—" said he, and spoke so low that I could not hear him: upon which, the other said, "There is no difficulty in the matter; but we need not be in such haste, for you know, as we ply it to windward, a day or two can break no squares, and we can soon (after effecting our design) bear down to leeward to our comrades, that we left on shore; for I fancy," added he, "that they have some small suspicion of you now, which in time will sleep, and may be on their guard: therefore it is better to wait a day or two."

"No; we'll do it to-night when they are asleep," replied Warren; whereupon there were many arguments, *pro* and *con*, as I fancied. A little while afterwards Hood came up again; and after walking up and down, fixing his eyes often upon me—who, in the mean time, was provided with a couple of pistols under my waistcoat, and which, indeed, were their own, that we had hung up ready charged, in our cabin (which was one reason of their design to attack us in our sleep)—Hood, as I said before, seemed to fix his eyes frequently on me, for, till now, I never watched in the night.

Hood's conduct became more mysterious; at last, said he, very softly, "If you please Mr. Falconer, I have a word or two to say to you, that much concerns you all." "What is it?" said I. "Why," answered he, "I would have the rest of your companions ear-witnesses too;" with that I called them together; "but," said he, "let us retire as far from the scuttle as we can, that we may not be heard by any below deck." So we went into the cabin, and opened the scuttle above, that Mr. Musgrave, who steered, might hear what was said. When we had sat down upon the floor, Hood began as follows:—"My four companions below have a wicked design upon you: that is to seize you, and put you into the boat, and run away with the vessel; but I think it is an inhuman action, not only to any one, but to you in particular, that have been the means of their freedom." Upon this (finding his sincerity), I told him that we were provided against it already; and, with the consent of my companions, I told him of our design of seizing them in the third watch. "But," said he, "they intend to put their project in practice their next watch; therefore I think 'twill be more proper for us to counterplot them, and seize them this. As they have no arms," said I, "and we have, we need not fear them."

We had several debates about this, which took up too much time, to our sorrow; for Warren, mistrusting Hood, it seems got up, and listened; and when he found that we retired all of us to the cabin, he got upon deck, and, stealing softly, came so close that he overheard everything we said, which, as soon as he understood, he went immediately to his companions, who waited impatiently, as they told us afterwards, and let them know all our discourse; whereupon, without pausing, they resolved to attack us immediately, in the midst of our consultation; which was no sooner resolved upon than done. For we were immediately surprised by their seizing us, which they did with that quickness, and so unperceivable, that we were all confounded and amazed: they had got two pistols in our consternation, which they clapped to our breasts. In this confusion I had forgotten mine, that were at my girdle (or else we might have been hard enough for them); neither did I remember them till they found them about me. They shut the cabin-door on the inside till they had bound us, and never minded Mr. Musgrave's knocking and making a noise, till they had secured us; which done, they opened the door and seized him, who came to know what the matter was, for we had no candle in the cabin; and he, hearing a noise amongst us, thought we were seizing Hood, and called to us to forbear (as he said afterwards), and make haste, for he was going to tack about, though we did not hear him; on which, he clapped the helm a-lee, and came down to fetch us out to haul off the sheets, &c., and was seized; and the sails fluttered in the wind, by reason she was veering round when the helm was a-lee.

After they had fixed the vessel, and it was broad day, they came and unbound our legs, and gave us leave to walk upon deck; whereupon I began to expostulate with them, particularly Warren, as he seemed to have a sort of command over the others. "And what," said I to him, "do you design to do with us, now you have your desire?" "Do with you? why, by and bye, we design to put you into the boat, and turn you adrift; but, for that Hood, we'll murder him without mercy! A dog, to betray us! but as you have not so much injured us, we'll put you immediately into the boat, with a week's provisions, and a small sail, and you shall seek your fortune, as I suppose you would have done by us." "No," answered I; "we only designed to confine you till we came to Jamaica, and there to have given you your liberty to go where you had thought fit. Put us ashore at any land that belongs to the English, and we will think you have not done us an injury." "No," said he; "we must go to meet our captain and fifty men, upon the mainland of Yucatan, where our vessel was stranded, not to be gotten off. Our first design, when we were taken in our boat, was to get us a vessel to go buccaneering, which we had done at Campeachy, if it had not been for the Indian that swam on shore, unknown to us, and brought succours too soon."

When they had got every thing ready, that is to say, a barrel of biscuit, and another of water, about half a dozen pieces of beef, and as much pork, a small kettle, and a tinder-box, we were better provided than we expected, by much: besides, they granted us four cutlasses, and a fowling-piece, with about four pounds of powder, and a sufficient quantity of shot; together with all poor Mr. Randal's journals, after their perusing them, and finding them of no use. When this was done, Warren ordered them to tie Hood to the mast of the vessel, and was charging a pistol to shoot him through the head, not considering it was charged before; for it was one of those I had at my girdle, and which they took from me; but in his eagerness and heat of passion he did not mind it. We all intreated for the poor fellow, and he himself fell upon his knees, and begged, with all the eloquence he had, to spare him and let him go with us; but Warren swore bitterly nothing should save him; with that he cocked his pistol and levelled it at Hood, but firing, it split into several pieces, and one struck Warren into the skull so deep, that he was breathing his last upon deck. One of the bullets grazed upon the side of my temple, and did but just break the skin: as for Hood, he was not hurt; but with the fright and noise of the pistol (as we supposed), laboured with such an agony of spirit, that he broke the cords that tied him by the arms, though as thick as a middle finger, and fell down, but rose immediately; and not finding himself

hurt ran to us and unbound our arms unperceived by the other two, who were busy about the unfortunate Warren; and though they were called to by those that steered (who ran immediately to prevent it, yet they did not mind it, they were so concerned about Warren. Before he that steered came, Hood had unbound me, and stopped the fellow (Meadows) by giving him a blow with his fist that knocked him down. In the meantime, I had unbound White, Musgrave, and Middleton, and we went and seized upon the other two pirates, as now we called them nothing else.

After we had bound them in our turn, we went to see what assistance could be given to Warren, when we found that a piece of the barrel of the pistol had sunk into his skull, and that he was just expiring; but yet he sat up with great resolution. "You have overpowered us," said he, "and I likewise see the hand of heaven is in it: I was born of good honest parents, whose steps, if I had followed, would have made my conscience easy to me at this time; but I forsook all religion, and now, too late, I find that to dally with heaven is fooling one's self: but yet, in this one moment of my life that is left, I heartily repent of all my past crimes, and rely upon the Saviour of the world that died for our sins to pardon mine." With that he crossed himself and expired. I must confess I was very sorry for the unhappy accident of his death, but yet glad that we were at liberty, and felt something easy that the poor soul repented before he expired.

After we had secured our Tartars, we threw Warren overboard, and bore to the wind; for after our first tacking about in the morning, when the bustle happened, they bore away with tack at cat-head, as being for their purpose. The three men that were left, desired us to let them have the boat, and go to seek their companions, which we refused, not having hands enough to carry our vessel to Jamaica. But we promised them, if they would freely work in the voyage, they should have their entire liberty to go where they thought fit, without any complaints against them. Upon this, we began to be a little sociable as before; and they all declared that what they did was at the instigation of Warren.

The next day we discovered a ship to the windward of us, that bore down upon us with crowded sails. We filled all the sails we had, and endeavoured to get away from her as fast as we could, but all to no purpose. We saw they gained upon us every moment; and therefore seeing it was not possible for us to escape, we backed our sails and laid by for them that they might be more civil if they were enemies. As soon as ever they came up with us they hailed us, and ordered us to come on board, which we durst not deny, when Mr. Musgrave and I, with Hood and White, for rowers, went on board them. We found by Hood's knowing them that they were his captain and comrades. Now, as Hood said, we did not know how we should behave ourselves, or what we should say about Warren; but we only told the captain how we met with his men, and that they were redeemed upon my account. He never asked particularly for Warren, but how they all did; and when they sent on board to search our vessel they soon came to the truth, for the other three told them the story, though not with aggravated circumstances; upon which poor Hood was tied to the mainmast, lashed with a cat-o-nine-tails most abominably, and after that pickled in brine, which was more painful than the whipping; but it kept his back from festering, which it might otherwise have done, because they flay the skin at every stroke; and then wash it with brine, which is called whipping and tickling. After this, they would not keep him among them, but sent for the other three men from our vessel, and ordered us all on board, with another of their men who was ill of a dangerous fever, which they feared might prove infectious. They did not take any thing from us, as we expected at first; only gave us this sick man to look after, which we were very contented with; so we parted with them very well satisfied, but much more so when we were out of sight, fearing they had forgotten themselves, and would send for us back, and take our provisions from us, or some mischief or another; for pirates do not often happen to be so courteous.

Two nights after we had parted from the pirate, we encountered a dreadful storm, that lasted two days without

abating; and our poor bark, which was none of the best, was tumbled and tossed about like a tennis-ball, yet we received no damage, but that she would not answer the helm; so we were obliged to let her go before the tempest, and trust to the mercy of heaven for relief. We, in the middle of the storm, discovered land right a-head, which put us all into our panics. We endeavoured to bring our vessel to bear up to the wind, but all to no purpose, for she still drove nearer the shore, where we discovered several tokens of a shipwreck, as pieces of broken masts, and barrels swimming on the water, and a little farther, men's hats. Then we began to think that we certainly should run the same fate—when, as soon as thought, our bark was driven on shore in a smooth sandy bay, where we had opportunity to quit her, which was happy for us; for the sea washed over her with such violence, that we had not any hopes of her escaping the storm, and thought, of course, we should be torn to pieces.

When we were ashore, we all concluded it could be no other land but the south of Cuba island, belonging to the Spaniards. We were then in a terrible fright lest we were near any place that belonged to the Indians; for Musgrave assured me that there were some parts of the south-side of Cuba that Indians dwelt in, in spite of the Spaniards, and massacred them, wherever they met with them, or any other whites. We remained all night in great fear; and though we found the storm abated, or rather a calm succeeded, yet we durst not stir till the moon rose, and then we walked towards our vessel, which we found all on one side; but, by good fortune, most of our provisions were dry, which mightily rejoiced us. But all the vessel's rigging and masts were shattered and torn to pieces, and some part of her quarter wrung off, so that she could not be of any use to us if we could have got her upright. We took out all our provision, and our arms, with two barrels of gunpowder, that were dry, the rest being damaged with water and sand that had got in. We had arms enough, as having those that belonged to the three sailors that were taken in the pirate, which we supposed they had forgotten; so we were six men well armed, with each a musket, a case of pistols, and a bayonet, besides two cutlasses, if we should need them. By the time we had taken every thing out, day approached, and then we designed, altogether, well armed, to go and view the country. John Rouse was very well recovered of his fever, but a little weak; yet his heart was as good as the best of us; so we resolved, if we were set upon by the Indians, to defend ourselves to the last drop of blood, choosing rather to die by their hands in fight, than to be tortured after their usual manner.

When we had placed our provision and other necessities, safe behind a tuft of trees that grew close by the water-side, we fixed our arms, and ventured to walk up into the country, which we did in all directions that day, four or five miles, but could not discover any living creature, nor any sign of inhabitants; only in one place the grass seemed to be lately trodden, but whether by man or beast, we could not discover; so being tired, we went back again to our station, where we ate heartily, and at night we laid ourselves upon the grass, and fell asleep, for we durst not lie upon the sails we had got for that purpose, as they were not dry, though spread all day long.

I was awakened the next morning by a company of lizards creeping over me, which is an animal frightful enough to look at, but very harmless, and great lovers of mankind. They say that these creatures, if any person lie asleep, and any voracious beast, or the alligator, which comes on shore often, is approaching the place where you lie, will crawl to you as fast as they can, and, with their forked tongues, tickle you till you awake, that you may avoid, by their timely notice, the coming danger. I got up, being roused by these animals, and looked about me, but saw nothing except an odd kind of a snake, about two feet long, having a head something like a weasel, and fiery eyes, like a cat; as soon as it spied me, it ran away, and my dog after it, but he did not kill it.

We now resolved on another walk to discover what inhabitants were our neighbours, whether Indians or Spaniards; if Indians, we designed to patch up our boat, which had several holes in it, and make off as fast as we could, and row northward, till we came to some place inhabited by Spaniards: but

if we found the latter, to beg protection, and some means to get to Jamaica, whereupon we ventured out with these resolutions.

We had not gone far before my dog began to bark, when, turning my head on one side, I beheld a black approaching us; and, being startled at the sight, I cocked my piece, and resolved to fire at him; but he called to me in English, and told me he did not come to do me any harm, but was a poor distressed Englishman that wanted food, and was almost starved, having eaten nothing but wild fruit for four days: upon that I let him come near, when he was soon known by Rouse to be William Plymouth, the black trumpeter to the captain that commanded the pirate ship. Upon this, knowing him, we sat down and gave him some provision, which we had brought with us, because we designed to be out all day.

After he had refreshed himself a little, we asked him how he came into this island? To which he answered, "We were cruising about Cuba, in hopes of some Spanish prize, when a storm arose and drove us upon a rock, where our ship was beaten to pieces, and not above eighteen men saved beside the captain." "And did that wicked wretch escape the shipwreck?" said I. "Yes," answered Plymouth, "but to undergo a more violent death; for as soon as ever we landed, we wandered up in the country to seek for some food, without any weapons but a few cutlasses, having lost our fire-arms; but, however, we all got something or other to defend ourselves on shore, such as long clubs, which we took from the trees we found in our walks. Our captain resolved, if he met with any Indian or Spanish huts, he would murder all that he found in them, for fear they should make their escape, and bring more upon us. Thus he encouraged his men to follow him with their clubs: 'We will walk,' said he, 'till we find some beaten path, and there lie hid till night, when we may go on to some house, and come upon them undiscovered, by which means we may get provision and other arms: for the Indians of Cuba use fire-arms as well as the Spaniards, and are full as dexterous in using them as any Europeans. After travelling about ten miles to the north-west, we discovered a path, upon which a halt was commanded; and we retired into the woods again till night, and dined upon what fruits we could get upon the trees."

"About two hours before night, a dog smelt us out, and, running away from us, barked most furiously; upon that we were afraid of being discovered, which fear proved true; for in half an hour, or thereabouts, after the dog left us, we were saluted with several arrows and musket shot, that killed three men, and wounded me in the foot; but it proved the means of saving my life; for as soon as our men perceived what had happened, they ran as hard as they could to meet the danger; knowing they could do no good till they came to handy-blows. I, in endeavouring to follow them, found my hurt, which prevented me keeping up with the rest; but I could hear and see them at it. About 200 Indians set upon our men, and in half an hour killed them every one. I saw the captain lay about him desperately, but at last he fell, being run through the throat with a wooden stake. As soon as ever the Indians had conquered, or rather murdered them, they fell to stripping them as fast as they could, and carried them off, together with their own dead, which were many, for the English sold their lives very dearly.

"After they were gone, I ventured to steal out from behind a row of bushes, where I had placed myself to see what had happened. I went to the place of battle, where I found two of our men that they had left, with all their arms; so I took up one of their best muskets and a cutlass, and made farther into the wood, for fear of being caught, which I should have been, if I had stayed a quarter of an hour longer; for I soon heard them coming, screaming, and hallooing, back to fetch the other two bodies and their arms, as I conjectured.

"I walked as far as my injured foot would let me that night, and out of the danger of the Indians, as I thought, and then laid me down to sleep as well as I could, being very hungry and sadly tired, and slept very well till morning, when I proceeded forward in my painful journey, and directed my coast north-east, thinking that was the best way to avoid the Indians, and probably to meet with some Spaniards, whom I knew inhabited

towards the north; the Havannah, the capital city of the whole island, being seated there. I wandered for four days, eating nothing but fruit in the woods; but laying myself down about an hour ago, to rest myself a little, I thought I heard the tongues of Englishmen, which, to my great joy, proved true. I left my musket behind the bushes, for fear of alarming you; but now, after returning God and you thanks for this timely nourishment, I'll go and fetch it; which he did. It was easily known to be an Indian piece, for they rudely carved it all over with several figures of birds and beasts."

"Now," said I, to my companions, "you see the reward of wickedness. The pirate was not suffered to go on long in his crimes; for though justice has leaden feet, yet they always find she has iron hands."

After poor Plymouth had refreshed himself, we set forward

and walked along till we came to a road that seemed to be the main road of the island. Here we consulted what we should do; whether we should go on, or return for more provision. We resolved to go a little distance from the road, for fear we should meet with more of the Indians, and run the same fate with the other Englishmen. But Plymouth told us we were a great way from the place where his countrymen were killed (for Plymouth, though born in Guinea, would always call himself an Englishman, being brought over very young); so we resolved, one and all, to venture.

We sent up prayers to the Almighty for our safety, and went on with an idea that we should come off with success; but we had not gone far, when we heard the reports of several muskets, and shouting in a barbarous manner behind us. Looking that way, we saw a mulatto riding, as fast as ever his mule could

carry him: when he came up to us, he stopped, and cried in Spanish, "Make haste! run!—the Indians are coming upon you. They have killed several Spaniards already, and are fighting with them!" Mr. Musgrave, who understood Spanish very well, interpreted what he said to us, and asked how far they were off. He answered, "Just by;" and hearing another shout, put spurs to his mule, and left us in an instant. We found, by the shouting and the firing, that they would be immediately upon us; so we retired out of the road to let them pass, and laid down upon our bellies that they might not discover us. Immediately came by about twenty Spaniards, on horseback, pursued by nearly a hundred Indians. Just as they came by us, one Spaniard dropped, and crept into a bush on the other side of the road; and presently the Indians followed, shouting in a horrid manner, who, being very swift on foot, outran an ordinary horse, and overtook the Spaniards again; and they had thrown away their fire-arms, to make them the lighter to run as we supposed. The Spaniards knew they would soon overtake them, so only ran to charge their pistols, and stayed till they came up; then discharged them to put them in confusion, and then ran again to prolong the time, in hopes of some aid. All this we understood by the Spaniard who crept into the bush undiscovered by the Indians, he being the foremost in flight. He told us, moreover, that about three leagues further, there was a fort belonging to the Spaniards, to stop the Indians, they using to make inroads before that fort was built, even to the gates of the city of Havannah. Upon this we consulted, and resolved to follow on the edge of the road, to see if we could be useful. We soon came even with them, for they were in a narrow place, and the Spaniards kept

them at bay pretty well. By good fortune there was a high hedge, made by trees, and all along as we went, which hindered us from being discovered. Here we resolved to fire upon them, altogether, and then run farther up, and, if possible, get out into the road and face them.

Accordingly, we agreed to fire, four and three, and the first four to charge again immediately. Mr. Musgrave, Mr. Middleton, Mr. White, and myself, agreed to fire first; then Hood, Rouse, and Plymouth: which, as soon as we had taken good aim, we did; and firing at their backs, killed four downright, and wounded several; for I had ordered them to put two bullets into each piece. As soon as ever we had fired our muskets, we let fly one pistol each, and then the other three fired their guns. After a good deal of fighting and skirmishing, we put the savages completely to the rout. However, we took four of them prisoners, and tying their hands behind them, fastened them to two of our foremost horses, the rest following after, that they might not get loose.

We were met on the road by twenty Spanish horse, with each a foot soldier behind them, who were upon the full gallop to our assistance, having been alarmed by the mulatto that rode by; but I believe some were glad they came too late. The officers and the rest saluted us very courteously, when they heard how luckily we came to their assistance; but they fell a-whipping the poor naked Indians so barbarously, that, though they deserved, I could not bear to see it done; and though the blood followed every lash, yet they never cried out.

We were well entertained at a gentleman's house at dinner, with provision dressed after the English way, and all manner of sweet-meats, and cool wines. As soon as we had dined, we were obliged to get on horseback, and away for the Havannah, which we reached about six o'clock in the evening. We had rooms allotted us; and several Englishmen and Irishmen came to see us, who lived there.

I met there with a priest, whom I am sure harboured nothing of cruelty in his breast, for he came to see us every day, and in such a friendly manner, that charmed us all. He was always sending us one good thing or other, and would take us to divert us abroad. He understood Latin very well and some English. On the Sunday he preached an excellent sermon in Spanish, in order to excite charity in the auditors, and let us have what was necessary for carrying us to Jamaica. The next day he brought us to the value of £50 in Spanish dollars, which were collected at the church-doors for us. There was a small vessel upon the stocks, that was bought of the owners for us, and a collection made in the town for money to pay for it. This was very agreeable news, and we were told our vessel was ready, and therefore we might go when we pleased. It was as neat a one as ever was built by the Spaniards, and carried between thirteen and fourteen tons. We had all sorts of provision sent on board for half a year, or more: so that we only stayed for the wind to rise, it being quite a calm. While we remained there, the four unfortunate Indians were executed in the midst of the parade.

When all was over, Father Antonio took us home to his lodgings, to give us a small collation for the last time, as the next day we all designed to lie on board, in expectation of the wind rising. In the morning we paid our hearty acknowledgments to all our benefactors, and went on board; where we had not been a quarter of an hour before an extraordinary message came from the governor for Plymouth, our black, who went without any hesitation, and returned with a present from the governor of several bottles of rack, Spanish wines, fowls, rice, and brandy, with twenty pieces of Spanish gold, as the messenger told us, in recompense for the loss of our companion; for the governor had sent for Plymouth to know if he would serve him in the quality of his trumpeter, and a pension should be settled on him for life. Plymouth thought fit to accept of it, as having no master, nor knowing when he should have one; but he got leave to come on board to bid us farewell, which he did in a very affectionate manner; so we parted with Plymouth, and with hearty thanks recommended him to father Antonio for all his favours. Plymouth had a trumpet given him by the governor as soon as he came on shore, which he brought with him, and so sounded all the way in the boat, as

he went back again, to oblige us, for really he sounded extraordinarily well, and had learned to play on several other instruments, having a tolerable understanding in music. The wind rising, we weighed anchor, and left port with three huzzas, and a volley of small arms (having no cannon), and in two days lost sight of the island of Cuba.

The weather continued favourable, so that we arrived at Jamaica without meeting anything remarkable in our passage. As soon as we had cast anchor, I ordered the boat to be made ready to carry me on board my own ship, which I saw riding there. But when I got up the ship's side, I found my clothes selling at the mast, at "Who bids more?" which is the method as soon as the person is dead or killed; the first harbour they anchor in, the clothes of the deceased are brought upon the deck and sold by auction; the money to be paid when they come to England, for it generally happens that sailors have not any till they come home again.

They were at the last article when I came up to the ship's side, which was a pair of black worsted stockings, that cost, I believe, about 4s., which went off at 12s. 6d., though they had been worn. As soon as I was seen by them, some cried out, "A ghost! a ghost!" and others ran away to secure the clothes they had bought, suspecting that now I would have them again. When they were satisfied of my being alive, and were told my story, they were all rejoiced at my good fortune, but none could be prevailed upon to let me have my clothes again; so I took up the slop-book, and cast up what they were sold for, and found what cost me about £20, were sold for four times the money. When I was satisfied in that, I called every person, one by one, that had bought any of my clothes, and struck a bargain with them for ready money, and bought them for about £10, as the ready money pleased them mightily.

Captain Wise being sick ashore, I went to pay him a visit where he was mighty glad to see me, believing that I had perished. He told me that the vessel hung lights out for several hours, that I might know where to swim, and laid by as long as the wind would permit; as the crew acquainted him when they came into harbour. The captain told me that he did not think he should live long, therefore was extremely glad I was come to take charge of the ship, which would have sailed before if she had been in a condition to bear the sea. From thence I went on board my new bark, and settled my affairs with my new companions, who were very sorry to think of parting from me. Hood and Rouse desired they might be received on board as sailors, and go to England with us; for Hood was an Englishman, and Rouse had friends there. Besides, it was as easy to go from England to Bermudas, as from Jamaica. So I spoke to the captain, who was very well pleased to receive them, as he had lost five men by the distemper of the country. Captain Wise died in a week after my coming, and left me executor for his wife, who lived at Bristol.

As soon as we had buried him, I went on board with my two men, designing to sail in three days at furthest, which I would have done before, but that I was hindered by wanting a chapman for our bark, as we had shares to dispose of. When I came on board, the master told me he had no occasion for the two men to add to their charge. "That is as I shall think fit," said I; "for the power is in my hands no." "And who put that power into your hand?" said the master. "He that had power to do so," said I; "the captain;" whereupon I showed him in writing. He told me "it did not signify anything, and that I should find no one of the sailors would obey a boy incapable to steer a vessel. It would be a fine thing," added he, "for my mate to become my captain; and as I was designed by the captain to have the command of the vessel before you came, so I intend to keep it." "But," said I, "this paper, signed by his own hand, is but of two days date, and you cannot show any thing for the command, as you pretend to; therefore I'll make my complaint to the governor, and he shall right me." "Ay, ay, do so," said he; "I'll stand to anything he shall command."

Whereupon Rouse, Hood, and myself, went into the boat again, and rowed on shore; but the governor was six miles

up in the country; and as it was pretty late, we designed to wait for his coming home, which, we were told, would be in the morning early; so I went on board the bark and lay there all night, the ship lying beyond the quays, two leagues from the harbour, in order to sail. The next morning, getting up with an intent to wait upon the governor, and looking towards the place where the ship lay over night, I found she was gone; and casting my eyes towards the sea, saw a ship four or five leagues distant from us, which we supposed to be ours. I immediately went on shore, and found the governor had just come to town, and made my complaint. He told me there was no remedy, but to send immediately to Blewfield's Bay, where he supposed they would stop to get wood, which was usual with our ships that were bound for England; whereupon there was a messenger ordered for Blewfield's Bay, whom I accompanied, to give instructions to the officer that commanded at the fort to seize the master of the ship, and order him before the governor at Port Royal; so we got on horseback and reached it in three days, it being almost a hundred miles. When we came there, we found several ships in the harbour, but none that we wanted; so we waited a week, all to no purpose; for she passed the bay as mistrusting our design. Upon this we were obliged to return with heavy hearts, and tell the governor of our ill success, who pitied me, and told me he would see me shipped in the first vessel bound for England: so I went on board my own bark, where they were all glad to see me, though sorry I was so disappointed. Now I was very glad that I had not disposed of my bark, for I thought it might be of use to me. We consulted together to know what was best to do; at last I made a bargain with them, if they would venture with me in our bark to England. Upon this we agreed; and with what money I had, I began to lade my vessel with things to traffic with. I bought a good quantity of indigo, some cotton, sugar, and rum. In short, I laid out the best part of my money; and on the 1st of June, 1700, set sail with a fair wind, and steered our course to England.

We put in at Blewfield's Bay for the convenience of getting wood and water, and when we were provided, steered our course onward as fast as possible; but as soon as we came within ten leagues of the Havannah, a Spanish man-of-war of forty guns came up with us, and commanded us to strike our sails, which we did immediately; and coming on board us, were surprised to find us all Englishmen, not expecting other than Spaniards, from the build of our vessel: whereupon they made us all prisoners, and sent fifteen men on board us to carry the vessel into the Havannah. Telling them how we came by the vessel did not signify any thing, for they said we were pirates, and had seized it; and our pass, which we had from the governor of Havannah, not being to be found, made things appear so different to what they really were, that it had on the face of it a very suspicious appearance. We were very much afraid we should find a great number of difficulties in obtaining our liberty, especially if they proceeded to their station, which was St. Jago. But it happened much better than we had any reason to expect; for she proceeded directly to the Havannah, where we knew every thing would be placed in a true light again. When we were anchored, and the people came on board us, we were soon known, and the captain, going to the governor, was informed of the matter; so we were released immediately, and had a visit made us from father Antonio and honest Plymouth, who were mightily rejoiced to see us. We were detained two days before we could get away; and then we set sail with a brisk gale, first saluting the town.

In two days after our sailing, we made Cape Florida, and entered the gulf which bears the same name, and passed it without danger. But here a sudden calm overtook us, as frequently happens, when you are past the gulf; and the current set strong to westward, occasioned, as we supposed, by the opening of the land upon that coast. The calm lasted for four days, we were insensibly carried within half a league of the shore; but a little breeze rising from land, helped us farther out again. Still our danger increased; for we soon perceived three large canoes, making towards us, full of armed Indians.

We had not much time to consult what to do, for they gained upon us every moment. Now death, or something worse than

death, stared us in the face; and most of us thought this the last day we had to live. "Come, friends," said I, "if we must die, let us die bravely, like Englishmen." We charged our four guns with double and round, and our pateraroes with musket balls: the rest of our arms we got in readiness, and resolved to die fighting, and not suffer ourselves to be taken, to be miserably butchered, as all the Indians of Florida do when they get any whites in their power. We resolved to fire our six muskets upon them, as soon as they came within reach; so we took our aim, two at each canoe, and fired upon them, which did them some damage, for they stopped upon it. Whereupon we made the best of our way, but they soon pursued us with loud and rude shouts.

By this time we had charged our pieces the third time, which we fired as before, but did more execution, as they were nearer to us; and now we charged them the fourth time, and laid them along upon the deck for a further occasion.

Looking towards the shore, we saw eight more of their canoes standing towards us. This put us upon making all the sail we could; and the sea breeze being now pretty strong, we had good way. Being anxious to avoid killing the poor and ignorant creatures, we made all the sail we could, and as they could not keep up with us, we soon left them far behind. We now sailed on with a prosperous gale, and met with no incident worth recording, till Thursday, the 15th of July, when we discovered land, which amazed us all, for we did not think of falling in with any land till we saw England. We went to consult our charts, and saw we were near Newfoundland: and finding that, we steered directly into St. John's harbour, which is the most commodious in the island, and capital of that part of Newfoundland which belongs to the English, and we were well pleased.

After being there two days, we set sail, and made our course to England, July 25th, 1700. We met with no extraordinary accident in our passage, till we discovered the Land's End, on the 21st of August. How rejoiced I was to see my native country, let them judge that have been placed in the same condition that I have. I may with truth say, that the transports I felt, on first seeing the white cliffs of the island that gave me birth, exceeded the joy I received when I was delivered from the most imminent danger.

LOSS OF H.M.S. LA TRIBUNE,

CAPTAIN BARKER, NOVEMBER, 1797.

LA TRIBUNE was one of the finest frigates in his Majesty's navy, mounted 44 guns, and had recently been taken from the French by Captain Williams, in the Unicorn frigate. She was commanded by Captain S. Barker, and on September the 22nd, 1797, sailed from Torbay, as convoy to the Quebec and Newfoundland fleets. In latitude 49 deg. 14 min., lon. 17 deg. 22 min., she fell in, and spoke with his majesty's ship Experiment, from Halifax; and lost sight of all her convoy on the 10th of October, in lat. 46 deg. 19 min., lon. 32 deg. 11 min.

About eight o'clock in the morning of the following Thursday, they came in sight of the harbour of Halifax, and approached it very fast, with an E.S.E. wind, when Captain Barker proposed to the master to lay the ship to till they could procure a pilot. The master replied that he had beat a 44-gun ship into the harbour, that he had frequently been there, and, as the wind was favourable, there was not the slightest occasion for a pilot. Captain Barker, confiding in these assurances, went into his cabin, where he was employed in arranging some papers which he intended to take on shore with him. In the meantime, the master, who placed great dependence on the judgment of a negro, named John Cosey, who had formerly belonged to Halifax, took upon himself the pilotage of the ship. By twelve o'clock the ship had approached so near the Thrum Cap shoals, that the master became alarmed, and sent for Mr. Galvin, the master's mate, who was sick below. On his coming upon deck, he heard the man in the chains sing out "By the mark five!" the black man forward at the same time crying out, "Steady!" Galvin got on one of the carronades to observe

the situation of the ship, while the master ran, in great agitation, to the wheel, and took it from the man who was steering, with the intention of wearing the ship; but before this could be effected, or Galvin was able to give an opinion, the ship struck, Captain Barker immediately went on deck, and reproached the master with having lost the ship. Seeing Galvin likewise on deck, he addressed him, saying, that knowing he had formerly sailed out of the harbour, he was surprised that he could stand by and see the master run the ship on shore; to which Galvin replied, that he had not been long enough on deck to be able to give an opinion.

They instantly made signals of distress, which were answered by the military posts and ships in the harbour; and from these, as well as from the dock-yard, boats were immediately sent to the relief of the Tribune. The military boats, and one of those from the dock-yard, with Mr. Rackum, the boatswain in ordinary, reached the ship, but the wind was so much against them, that in spite of all their exertions, the others were unable to get on board. The ship was immediately lightened by throwing overboard all her guns, except one, which was retained for signals, and every other heavy article, so that about half-past eight o'clock in the evening the ship began to heave, and at nine o'clock they got her off the shoals. About three hours before she had lost her rudder, and they now found, upon examination, that she had seven feet water in her hold. The chain-pumps were instantly manned, and their exertions so well sustained, that they soon began to gain upon the leaks. By the advice of Mr. Rackum, the captain ordered the best bower-anchor to be let go, but this did not succeed in bringing her up. He then ordered the cable to be cut; and the jib and fore-topmast-staysail were hoisted to steer by. During this interval a violent gale, which had come on at S.E. kept increasing, and the ship was fast driven on to the western shore. The small bower-anchor was soon afterwards let go; at which time they found themselves in thirteen fathoms water, and the mizenmast was then cut away.

It was now ten o'clock, and as the water was gaining rapidly upon them, the crew had but little hopes remaining of being able to save either the ship or their lives. At this critical period Lieutenant Campbell quitted the ship, and Lieutenant North was taken into the boat out of one of the ports. From the moment at which the former left the ship, all hopes of safety had vanished; the ship was rapidly sinking, the storm was increasing with redoubled violence, and the rocky shore which they were fast approaching, resounding with the deafening roar of the rolling billows, presented nothing to those who might survive the loss of the ship, but the expectation of a more painful death, by being impetuously dashed against precipices, which, even in the calmest day, it is impossible to ascend. Dunlass, who was one of the survivors, declared that about half-past ten, as near as he could conjecture, one of the men who had been below came to him upon the fore-castle, and told him it was all over. A few minutes afterwards the ship took a lurch, like a boat nearly filled with water and going down; on which Dunlass immediately began to ascend the fore-shrouds, and, at the same moment, casting his eyes towards the quarter-deck, he saw Captain Barker standing by the gangway looking into the water, and, directly afterwards, he heard him call for the jolly-boat. He then saw the lieutenant of marines coming towards the taffrail to look, as he supposed, for the jolly-boat, which had been previously let down with men in her: but the ship, at that instant, made a second lurch, and directly went to the bottom: after which, neither the captain nor any of the other officers were again seen.

The scene, which before had been peculiarly distressing, now became truly awful: more than two hundred and forty men, besides several women and children, were floating on the waves, each vainly endeavouring to save himself, and making the last struggle to preserve life. Dunlass, who has been already mentioned, gained the fore-top, while Mr. Galvin, the master's mate, with great difficulty got into the main-top. When the ship sunk, he was below directing the men at the chain-pump, and the manner of his preservation was rather singular: as the ship sunk, he was washed up the

hatchway, thrown into the waist, and from thence into the water, and, as he plunged, his feet struck against the rock. On ascending to the surface, he swam to gain the main-shrouds, when three men suddenly laid hold of him: he had almost given himself up for lost, when, to disengage himself, he suddenly dived under the water, which made them let go their grasp. On again rising, he swam to the shrouds, and having reached the main-top, he seated himself on an arm chest that was lashed to the mast.

From the observations of Galvin in the main-top, and Dunlass in the fore-top, it appeared that more than one hundred persons were hanging to the shrouds, the tops, and other parts of the wreck, for a considerable time; but from the length of the night and the severity of the storm, nature became exhausted, and, during the whole of the night, they continued dropping off and disappearing. The cries and groans of the unhappy sufferers, from the bruises which many of them had received, and as their hopes of deliverance began to fail, were truly appalling, and continued throughout the night, but became very feeble towards the morning, on account of the few who survived.

About twelve o'clock the mainmast gave way with a loud crash, having at that time about forty persons in the main-top and shrouds, the whole of whom were again precipitated into the water, where the greater number of these unhappy wretches perished, ten of them only being able to regain the top, which rested on the main yard, and the whole remained fast to the ship by some of the rigging. When morning broke, four only were alive of the ten who had reached the top, and ten only were alive on the fore-top, of whom three were so exhausted and so helpless, that before any relief arrived, they were washed away; soon after three others also perished, and thus four only were at last left alive on the fore-top.

The place where the ship went down was barely three times her length to the southward of the entrance into Herring Cove. During the night the inhabitants came down to the point opposite to where the ship had sunk, and kept up large fires, and were so near, that they could converse with the people upon the wreck.

The first exertion that was made for their relief was by a boy of only thirteen years of age, belonging to Herring Cove, who, though men hesitated to attempt it, dared to venture off by himself in a small skiff, about eleven o'clock the next day. This intrepid youth, with great labour and extreme risk to himself, boldly approached the wreck, and backed in his little boat so near as to take off two of the men from the fore-top, which were all his boat would safely hold. And here was exhibited a trait of generous magnanimity which ought not to pass unnoticed. Dunlass and a man named Monro, had, throughout this disastrous night, preserved their strength and spirits in a greater degree than their companions in misfortune, whom they endeavoured to cheer and encourage when they found their spirits sinking. These two, upon the arrival of the boat, might easily have stepped into it, and thus have terminated their own sufferings, at the expense of the lives of their two companions, who were unable to stir, but lay exhausted on the top, wishing not to be disturbed, and seemed desirous of perishing in that situation; but these generous fellows did not hesitate a moment as to which of them should be rescued, but remaining themselves upon the wreck, they saved their unfortunate companions even against their will. Lifting them up, they, with the greatest exertion, placed them in the little skiff, when the noble boy rowed them triumphantly to the Cove, and had them immediately conveyed to a comfortable habitation. After shaming, by this example of his humanity and intrepidity, many older persons who had larger boats, he again put off with his little skiff; but, with all his efforts, he could not succeed in again approaching the wreck. His noble example, however, was not entirely thrown away, for he was soon followed by four of the crew who had escaped in the Tribune's jolly-boat, and by some of the boats belonging to the Cove. By their joint exertions, the eight men who were then remaining on the tops were saved; and these, with the four who had saved themselves in the jolly-boat, were the whole of the survivors of this fine ship's company.

BRUTAL MASSACRE OF A BRITISH OFFICER AND BOAT'S CREW.

THE following unprovoked and atrocious massacre took place in the year 1820. In consequence of a letter from a British merchant, complaining of the piratical seizure of his vessel in the Rio Pongas, on the coast of Africa, by a notorious slave-dealer of the name of Curtis, (a descendant of one of the old English slave-dealers, by an African woman), Lieutenant Hagan, of the *Thistle*, then on that station, thought it right to send in Mr. Inman, a midshipman, to demand her release. Curtis, and (as it afterwards appeared), one Vignes, the master of a Dutch brig, of one hundred and eighty tons, engaged in the slave-trade, fell upon the boat's crew, and murdered Mr. Inman and six of his people, with every circumstance of the most revolting barbarity. Two of the men, who were saved, and subsequently made their escape, deposed, that, with seven others, including the officer, they were dragged on shore, stripped, and exposed to a vertical sun for a considerable time; that after a consultation with Curtis, Vignes, and two others, mates of slave-vessels, it was agreed that the Europeans should be put to death, but that these two, being men of colour, should be sold for slaves; that the officer, seamen, and marines were shot by order of Curtis, in the presence of them (the deponents), amidst the exulting shouts of many hundred persons; that the bodies of the sufferers were disinterred, by order of Mungo Brama, king of the country, and carried away by wolves, having previously been mutilated by this inhuman tyrant. Such atrocities could not be suffered to pass unpunished, and, accordingly, a signal vengeance was inflicted on the savage perpetrators. The *Myrmidon*, Morgiana, Snapper, and *Thistle*, under the command of Captain Leeke, with a detachment of the second West India regiment, under Major Chisholm, were despatched to the river Pongas. After some resistance, they succeeded in setting fire to eight towns belonging to the miscreants, Curtis and Mungo Brama, which, with all the property they contained—ivory, rice, rope, cotton, and other goods, were wholly consumed. The loss on our side consisted of three men wounded, and one who died of fatigue. Four of the *Thistle's* boat's crew, who had been seized and detained as prisoners, were released, and from them the fate of their unfortunate companions was further ascertained.

EXTRAORDINARY DELIVERANCE.

On the morning of the 28th of December, 1802, there was a heavy gale of wind from the N.E., which blew with such violence, that vessels, unable to enter the port of Trieste, were obliged, after loss of anchors, to run for shelter to the coast of Istria. An Ionian ship, the *Eliza*, Captain G. Margari, let go two anchors in the roads, but dragging there, she was driven five miles out to sea, when a third anchor brought her up. On the following morning she was seen totally dismasted, and in the greatest distress; they were perceived from the shore near the old Lazaretto, with outstretched arms, supplicating for relief. This the fury of the storm prevented being given. The owner of the *Eliza*, who was on shore at the time, used every effort to induce, by offers of high rewards, some of the sea-faring people of the port to undertake to carry out assistance to the ship, or, at any rate, to save the crew and passengers; but no one dared to attempt it, and it was momentarily expected she would go down. During two whole days and nights she remained in this agonizing state; it was lamentable to behold the ship exposed to the pitiless storm, the crew in vain making signals for aid, the waves breaking over them incessantly, and the cold intense. On the morning of the 30th, application was made to Mr. W. Morgan, jun., the proprietor of the steam-vessel *Empress Caroline*, which runs between Trieste and Venice, as the last hope, who instantly acceded to the request; but it being then dark, and the violence of the wind continuing, nothing could be attempted before daylight. Every preparation having been made, four English seamen volunteered to assist the small crew of the steam-vessel; when, on the 31st, in the morning,

she left the harbour. Mr. Morgan having generously determined to share with his people the dangers they had consented to encounter, the quays and vessels, crowded with spectators, cheered them as they passed, the wind blowing still a furious gale. The *Empress Caroline* was soon alongside the *Eliza*, whose desolate situation was almost indescribable—a total wreck, and enveloped in ice, as the seas that had been constantly breaking over her for three days, freezing as they fell, had formed her broken masts, yards, &c.; into one solid body; the crew, who had not tasted food since the storm came on, with the exception of two, benumbed and half dead. With the greatest difficulty the end of a hawser was got on board, which the two poor seamen, with still greater difficulty, succeeded in making fast. Signs were then made to them, as the violence of the wind rendered all attempts to hail them inaudible, to cut their cables, which finally they effected. The steam-vessel then made sail, and conducted the *Eliza* to a sheltered place in safety. On the following morning, the storm still continuing, Mr. Morgan returned to accomplish what he had so successfully begun, and brought the vessel into port, amidst the acclamations of an immense concourse of people, who crowded the shores to witness their return. Nothing can exceed the gratitude of the fifteen persons who were thus snatched from destruction, and who all declared they could not have survived another night. The whole population of Trieste joined in commendation of the humanity and intrepidity of the owner, engineer and crew of the *Empress Caroline* steam-vessel, who, when all others had refused to make the attempt, voluntarily risked their lives, and, setting danger at defiance, succeeded in preserving the lives of fifteen of their fellow-creatures.

THE IMPRESS.

HARK! how the church bells with a sudden peal
Stun the glad ear. Tidings of joy have come,
To crown each anxious hope. Two gallant ships
Met on their element; they met, they fought,
And England triumph'd—

Yet there was one who died
'Mid that day's glory, whose obscurer name
No great historian's page will chronicle;
'Twas in the catalogue of slain.—Thank God!
The sound is not familiar to my ear.
But it told me after, that this man
Was by compulsion's violence roughly forc'd
From his own home, and wife, and little, ones,
Who by his labour liv'd;—that he was one,
Whose uncorrupted heart could keenly feel
A husband's love, a father's anxiousness;—
That from the wages of his toil he fed
The distant dear ones, and would talk of them
At midnight when he trod the silent deck
With him he valued—talk of them, of joys
That he had known—Oh God! and of the hour
When they should meet again, till his full heart,
His manly heart, at last would overflow,
Even like a child's with very tenderness.
Peace to his honest spirit! Listlessly
It came, and merciful, the ball of death;
For it came suddenly and shatter'd him,
And left no moment's agonizing thought
On those he loved so well.—

—He, ocean deep,
Now lies at rest. Be thou her comforter.
Who art the widow's friend! Man does not know
What a cold sickness made her blood run back,
When first she heard the tidings of the fight;
Man does not know with what a dreadful hope
She listened to the names of those that died;
Man does not know, or knowing will not heed,
With what an agony of tenderness
She gaz'd upon her children and beheld
His image who was gone. O God! be thou
Her comforter, who art the widow's friend.

LOSS OF THE REPULSE.

THE Repulse was one of the ships belonging to the Channel fleet, under the command of Sir Allen Gardner, but had been detached for the purpose of intercepting provision vessels going into Brest. On the night of the 10th of March, 1800, she struck upon a sunken rock, supposed to be the Mace, about twenty-five leagues south-east of Ushant. The crew made good a landing on one of the Glenen islands, about two miles from the continent. Here the captain, and most of the officers, were made prisoners, and sent to Quimper; but Mr. Rothery, the first lieutenant, Mr. Gordon, the fifth, Mr. Finn, the master, two midshipmen, and eight seamen, got into the larger cutter; and, on the fourth day after leaving the ship, during which interval they experienced bad weather, and were, at times, near perishing, arrived safe at Guernsey.

The following letter from one of the officers who escaped, to his father, gives a full account of the loss of the Repulse, and likewise of the adventures of the boat's crew, from the time of their quitting the ship till their arrival at Guernsey:—

Guernsey, March 13, 1800.

"My dear Father,—I embrace the opportunity of a packet sailing for England, to acquaint you with the unfortunate fate of the Repulse. Coming off the Penmarks, in company with the Agamemnon, on Saturday, the 9th of March, it then blowing a very heavy gale of wind, Captain Alms was thrown down the companion-ladder, by the rolling of the ship; by which accident some of his ribs were broken, and he was much bruised. The same day, we parted company with the Agamemnon, in chase of a strange sail to leeward; and, about six in the evening, we came up with and re-captured the Princess Royal packet, from the West Indies. Next morning, Captain Alms, finding himself much worse, resolved to put into Torbay. We accordingly bore up and shaped a course, which, if our reckoning had been correct, would have carried us far enough to the westward of Ushant. But, unfortunately, owing to the thickness of the weather (not having had an observation for some days), and to the different set of the tides, which are very strong on this coast, the ship had got nearly three degrees to the east of her reckoning; and at twelve o'clock the same night, going under an easy sail, that the prize might be able to keep up, breakers were discovered ahead. It was extremely foggy, and the ship was going at the rate of about seven knots, with the wind almost right aft, so that our endeavours to clear the danger were ineffectual. In a moment, the ship struck with great violence, and was instantly so completely surrounded with rocks, that we could not even see the opening which we had entered. In this dreadful situation we continued nearly three quarters of an hour, the ship, from the great surf that ran among the rocks, striking so violently, that we every moment expected she would go to pieces.

"I shall not attempt to describe the appearance of so many men, with certain and almost instant death staring them in the face; but I cannot forbear observing, that those whom I ever considered the greatest reprobates now became the greatest cowards, and were so overcome by their awful situation, that they were totally unable to exert themselves for their own preservation. We had no hopes of deliverance. The prize was, indeed, in company, and we kept firing guns, to inform her of our danger. It was, however, absolutely impossible for us to receive any assistance from that quarter; and if our firing enabled her to escape herself, it was as much as we could expect. That nothing on our part might be left untried, the sails were hove aback, and, with the divine assistance, the ship backed astern, clear of the danger.

"Our joy on this occasion was, however, of short duration, for the ship made so much water that in half an hour it reached as high as the orlop deck; and the rudder having lost all command, there appeared to be no other chance of saving our lives than by running for the coast of France. Accordingly, having got her head round to the eastward, we made all the sail we could. We had now sufficient employment for all hands; some were busy at the pumps, others were engaged in throwing the

guns overboard, and otherwise lightening the ship; while others, again, were employed in lining a sail with beds, blankets, &c., which being got over the bows, and bowed taut up to the ship's bottom, was of very great service. The water being considerably above the orlop deck, we were enabled to bail at the hatchway; by which, and the wonderful exertions of men actuated by the fear of death, we were enabled to keep her afloat till five o'clock, when, to our inexpressible joy, the echo of the report of one of our guns announced our being near the land, the fog being so thick that we could not see the length of the ship. But judge what must have been our sensations when we found ourselves within half a ship's length of a lee shore, bounded by a precipice as high as our mast-head, against which the sea broke with excessive violence, and on which we were running with great rapidity. The only chance of preservation we now had was by letting go an anchor, which, however, did not bring us up. At the moment when we expected to be dashed to pieces, our jib-boom almost touching the precipice, Providence again interposed in our behalf, and the eddy wind, reverberating from the rock, took the sail aback, and most miraculously saved us from destruction.

"We now cut the cable, and the ship drifted along the shore, till we cleared a rugged point a quarter of a mile to the leeward of us, when she filled and ran up under a weather shore, which, being very high, sheltered us a good deal. Here we grounded, but, from the heavy surf, the ship continued striking with such violence, that we were afraid she would go to pieces before we could leave her. We therefore made what haste we could in getting the boat out, and then cut away the masts, when she lay tolerably easy.

"As I had early in the morning resolved within myself to attempt escaping in one of the boats, rather than be made prisoner, I mentioned my design to Mr. Gordon, the fifth lieutenant who readily agreed to accompany me. The eight-oared cutter being hoisted, I got into her, as she was the best boat for the purpose, under pretence of seeking a landing-place; and having taken on board as many men as she could conveniently carry, I landed them to the leeward of the point, about a mile from the ship, and then returned for another cargo. Having disclosed my plan to the boat's crew, I sent one of them on board the ship for a compass, boat's mast, sails, &c. but, to my infinite mortification, he could only get a compass, the boat's sail being down in the store-room. The pilot now came into my boat to go on shore. I thought if I could secure him it would be a great point, and I was glad to obtain his concurrence.

"I had made four or five more trips between the ship and the shore, when Mr. Rothery, the first lieutenant, called to me to take him on board, which I did, and was agreeably surprised to find that Mr. Gordon had acquainted him with our secret, that he was resolved to go with us, and had made some provision for the voyage. It consisted of some pieces of hung beef, which, though raw, was better than nothing, a small quantity of bread, and half-a-dozen of brandy, as he imagined, but which afterwards proved to be wine. When I mentioned our want of sails, he replied, that we must make shift to supply that deficiency with some table-cloths and sheets which he had brought with him.

"We still continued going and returning, till almost all the people were landed, and on our way had fortunately picked up the jolly-boat's mast and sail, and the masts and yards belonging to several other boats, so that the only article we now wanted was water. I recollected the fire-cask in the mizen chains, which we desired a man to push overboard. Having picked it up and taken it in, with Mr. Gordon, we again committed ourselves to the mercy of the waves, and the care of Providence.

"But before I leave the ship, it will be proper to mention the number of lives that were lost. When we first struck upon the rock, five of the crew, whose apprehensions were too powerful for any other consideration, got into a boat that was hung over the quarter, and, in their hurry to escape, cut one of the tackles by which the boat was suspended, while they kept the other fast. The boat, consequently, hung by one end, and they were all thrown out and drowned.

"I forgot to mention, that, while the boats were employed in landing the people, those on board had thrown the ends of

several hawsers on shore, which the peasantry made fast to the rock, and which being hauled taut on board, they could go on shore upon them with great ease. Two men, however, being intoxicated, fell off the hawsers into the water, and perished. These, together with four marines, who lay upon deck dead drunk at the time we came away, and who, I believe, were not afterwards carried on shore, are, as far as I know, all that suffered on this occasion.

"Having a fair wind, we set the jolly-boat's sail for a fore-sail; then made a sparing breakfast, and thought to recruit our spirits with a dram, when, to our great disappointment, we found we had nothing but wine. This was not the greatest of our misfortunes, for, upon broaching our water, we found it so strongly impregnated with the varnish with which the cask had been so frequently laid over, that it was scarcely drinkable, and even made some of us sick.

"One of the men having, fortunately, some sail-needles in his pocket, all hands turned to sail-making, some sewing, and others unlaying rope, and making it into twine. A table-cloth and a sheet, sewed together, made an excellent main-sail; and out of a piece of canvass we happened to have in the boat we contrived to make a mizen-mast, so that in a couple of hours we had a complete suit.

"About twelve o'clock, we were much alarmed by being becalmed among the Penmark rocks, and they were obliged to pull hard to avoid being dashed to pieces against them. We soon afterwards had a fine breeze, and about five, found ourselves close in with the land, a few miles to the southward of Cape Raz. The wind was so scant that we could barely lie along shore, and were obliged to pass several signal-posts, at each of which the enemy had a gun, so that we every moment expected to be fired at. I believe, by our being so badly rigged, and white sail, they took us for Frenchmen.

"About dusk, we had another narrow escape among a reef of rocks, which lay off Cape Raz, and upon which we were set by a very heavy swell, and a strong tide. It was now nearly dark, and, as it had every appearance of blowing hard, we ran down into a deep bay, a little to the southward of Brest harbour, purposing to come to an anchor till the morning; but, in luffing up round a point, under which we intended to take shelter, we were much surprised by the appearance of something like a fort, and soon found our fears realized, when the sentinel hailed us in French, which he did twice. We now bore up, and made sail from it as fast as we could, and I fancy were out of reach before they could get a gun ready, as we saw several lights moving about.

"Some of the boat's crew now thought our undertaking so desperate, that they proposed to surrender, rather than run any further risk. It was, however, agreed to wait till daylight and we accordingly came to an anchor in the middle of the bay, not daring to trust ourselves any more in shore. About eleven, the wind having moderated, and the moon shining bright, we got under weigh, and ran between the Saints and the main, which is a very dangerous passage. By two o'clock next morning we were clear of Ushant, having also passed between that and the main. We were now in high spirits to think we had got clear of the coast of France, and regaled ourselves with an additional glass of wine; having also a fair wind for England, which continued all that day till four in the afternoon, when to our great distress, it fell calm, at a time when, by the distance we had run, we computed ourselves at not more than eight leagues from Plymouth. At seven, a breeze sprung up from the northward, and at eight it blew extremely violent, with a heavy sea. The gale continued to increase till eleven, when our situation became very alarming; exposed to a heavy gale of wind in the middle of the English Channel, in an open boat, with the sea breaking over us in such a manner that we expected each succeeding wave would overwhelm the boat, and terminate our existence.

"The pilot, after some consideration, proposed to us, as the only chance we had remaining, to bear up for the islands of Guernsey or Jersey. To this proposal we all would readily have acceded, but were of opinion, that if he once put the boat before the sea, she would immediately fill. During our consultation, a singular circumstance occurred, which deter-

mined us to follow the pilot's advice. Three distinct flashes of lightning were perceived, at regular intervals, in the south-east, which was exactly the direction the islands bore from us. This the superstition of the boat's crew immediately interpreted as a signal from heaven; we therefore bore up, and stood in the same direction in which we had observed the lightning.

"Next morning the gale rather abated; and about two o'clock in the afternoon, to our inexpressible joy, we discovered the island of Guernsey; but the wind falling, we did not make the land till late the following morning."

A SAILOR'S REFLECTION ON DEATH.

DEATH is at all times solemn, but never so much so as at sea. A man dies on shore,—his body remains with his friends, and the mourners go about the streets; but when a man falls overboard at sea, and is lost, there is a suddenness in the event, and a difficulty in realizing it, which gives to it an air of awful mystery. A man dies on shore,—you follow his body to the grave, and a stone marks the spot. You are often prepared for the event. There is always something that helps you to realize it when it happens, and to recall it when it has passed. A man is shot down by your side in battle, and the mangled body remains an object and a real evidence: but, at sea, the man is near you—at your side; you hear his voice—and, in an instant, he is gone, and nothing but a vacancy shows his loss. Then, too, at sea, to use a homely but expressive phrase, you miss a man so much. A dozen men are shut up together in a little bark upon the wide, wide sea, and, for months and months, see no forms and hear no voice but their own, and one is taken suddenly from among them, and they miss him at every turn. It is like losing a limb. There are no new faces or new scenes to fill up the gap. There is always an empty berth in the fore-castle, and one man wanting when the small night-watch is mustered. There is one less to take the wheel, and one less to lay out with you upon the yard. You miss his form and the sound of his voice, for habit had made them almost necessary to you; and each of your senses feels the loss. All these things make such a death peculiarly solemn; and the effect of it remains upon the crew for some time. There is more kindness shown by the officers to the crew, and by the crew to one another. There is more quietness and seriousness. The oath and the loud laugh are gone. The officers are more watchful, and the crew go more carefully aloft.

THE OLD SMUGGLER.

IMMEDIATELY after the 42nd regiment disembarked in Egypt, in 1801, under the command of the brave Abercrombie, orders were given not to fix their bayonets nor to load their muskets till they were all ashore, although the enemy's shot was falling in and round the boats like hail. After the regiment had formed into line on the beach, which was done in the coolest manner, under a destructive fire from a French battery, and a battalion of infantry on the heights in front, Major Stirling gave the word, "Fix bayonets!" In a moment the order was executed. The officer then followed with "Prime and load!" but the words had hardly escaped his lips when an individual in the ranks vociferated, "No prime and load, but charge bayonets and by Got immediately."

The entire corps, as one man, instantly obeyed this energetic command, ascended the heights at a charge, and carried the enemy's position with cold steel in the most gallant style. But the question immediately arose, who was the person that gave the counter order; and on inquiry it was found that the individual who assumed the command was no other than "Donald Black," a private soldier, and an old smuggler from the Isle of Skye.

ON ACCIDENTS TO STEAM VESSELS.

BY CAPTAIN BASIL HALL.

IN the United States of America, every steam-boat has the steersman placed so far forward in the vessel that he can readily distinguish, even at night, any vessel which is meeting him, or any boat or any obstacle which lies in his course. The utility of this method of steering any vessel moving so fast as a steam-boat in a crowded river, even in day-time, need scarcely be insisted upon. But when the darkness of night is superadded, its advantages become still more obvious, and the plan ought certainly to be adopted in every boat navigating the river. In practice, nothing can be more simple than the American mode of steering. The tiller is generally shipped abaft the rudder, in order to leave the quarter-deck quite free for the passengers. The tiller ropes are then led, through blocks, on the quarter, and along small trunks, to the foremost part of the vessel, where they are again rove through blocks, and made to pass round the barrel of an ordinary steering-wheel, which being raised on a platform to the height of ten or twelve feet above the deck, and not far from the bows of the ship, the helmsman can distinctly see objects before him, and by the proper movements of the wheel, readily avoid them.

It has been objected to this adaptation of the steering process, that the weight and friction of the ropes would be so great that the proper degree of celerity of movement could not be commanded. But I have myself, often, and with the greatest ease, steered boats as large as any of ours on the Mississippi and elsewhere, and I know that in other respects there exist no technical difficulties in the way of its universal adoption. It is well known to professional men that only one person can steer a ship properly in an intricate navigation; and even those who are not bred to the sea, well understand that when a vessel, going at the rate of many miles an hour, is threading her way amongst shoals and boats, and numberless vessels, some meeting her, some crossing her, and some going in the same direction, there ought to be the most immediate communication between the sense of sight which is to distinguish these objects, the practised intellect which is to decide what is proper to be done, and the hand by which the regulating impulse is to be given to the guiding power. In other and plainer words, the helmsman ought to see what he is about, and not to act by the command of another.

In America, the pilot himself is always at the wheel, and being raised up in the manner I have described, in the bows of the vessel, he can distinguish every obstacle, and know at once how best to steer clear of it. With us, the matter is very different. The helmsman is fixed in the worst position possible, at the very sternmost part of the vessel, where he can see nothing:—firstly, owing to the want of elevation; secondly, to the intervention of the masts and the chimney; thirdly, to that of the crowds of passengers and their carriages and luggage; and fourthly, to his being at the whole length of the ship further from the object to be avoided. To remedy this inconvenience what is done by us? The pilot stations himself on the top of one paddle-box, the captain on the other—both bad positions for seeing directly ahead. Only one of them ought to call out to the steersman what to do; but, as the responsibility is shared by both, each of them does in practice interfere, as I have often, indeed, heard contradictory orders given by them respectively, while the bewildered helmsman knew not which way to turn the wheel. All this is bad enough in day-time, but I need not say how the confusion is worse confounded when it is dark, and when it is blowing and raining, and when several men have to be stationed along the deck to pass the word, as it is called, from the pilot to the helmsman, especially when the noise and bustle of the passengers hunting for their carpet bags, increase the difficulty.

My wonder, accordingly, has much more often been excited how these vessels get on at all, than that occasional accidents should occur. I must add, that when the remedy is so simple, so cheap, and has been so effective, it is altogether inexcusable in those who have the power to regulate such things, that this plan has not been universally adopted in our

river boats. The only objection I have ever heard urged against this plan of steering, is, that when the vessel left the river, and entered a rough sea, the steersman would be needlessly exposed in the bow, and that, in point of practice, he would be better if placed abaft, in the usual situation, than so far forward.

In answer to this, it need only be said that nothing could be easier than to have another wheel and tiller-ropes, fitted in the ordinary way, but the tiller not shipped till required, at which time the tiller used for the wheel in the bows might be unshipped, or the ends of the tiller-ropes cast off. In short, I think you will take my word for it, that technically considered, nothing can be more simple than this device, which, by placing the whole power of guiding the steam-vessel in the hands of the pilot (or of a man who stands by his side), will not only essentially add to her safety, and that of all the other boats on the river, but enable her speed, to be greatly accelerated, without incurring nearly so much risk as at present.

THE SEA-BOY'S DEATH.

FIVE long and dreary years have passed,
The sea-boy comes not home!
His aged mother's form at last,
Is hastening to the tomb.

Her raven-hair has turned quite grey,
Her once bright brow is sad—
She sits all lone the summer's day,
And mourns her sailor-lad,

The wintry storm is hush'd! the shore
Is darken'd by the wing
Of blackest night!—she hears the roar
Of wild winds slumbering.

Nor, that alone is heard—a moan
Sweeps by the widow's cot—
"Hark! was not that a piteous groan!"
The mother slumbers not.

She rushes to the wreck-strewn sand,
Who can the mother paint?
When lifeless on the wave-worn strand,
(Her sinking heart so faint).

She sees a sea-boy! all so pale;—
Then dropping by his side,
The mother's sight begins to fail—
She heeds not coming tide.

Clasp'd in her arms—the next day's sun
Rose on the sleeping boy;
Whose early race on earth was run—
The widow's only joy!

Through his torn vest, close to his heart,
A silken bag she found;
Her portrait that!—"No more to part"—
The motto written round.

They never parted more! That sea,
The sailor's place of rest,
Engulf'd them both. The sea-boy! he
Slept on his mother's breast!

SINGULAR CAPTURE.

ENGLISH history does not record a more daring action than that of Edward Stanley, an English officer, at the attack of one of the forts of Zutphen, in the Low Countries, in the year 1586. Three hundred Spaniards defended the fort, and when Stanley approached it, one of them thrust a pike at him to kill him; he seized hold of it with both his hands, and held it with such force, that the Spaniards, unable to wrest it from him, drew him up into the fort. He instantly drew his sword, and dispersed all that were present: this so astonished the garrison, that it gave Stanley's followers time to storm the fort, and establish themselves in their conquest.

LOSS OF THE KILLARNEY STEAMER.

THE Killarney, a fine steamer, nearly new, belonging to the Bristol company, and capable of carrying a cargo of two hundred tons, exclusive of coals, left the quay at Cork about half-past nine o'clock on the morning of Friday, January 19, 1838, on her voyage to Bristol, the wind blowing hard from the south-east. She had on board eight cabin passengers, viz., Richard Callaghan, Esq., brother of the member for Cork; Lieutenant Nicolay, of the 99th regiment; Dr. Spolasco and his son; Robert Lawe, Esq., and Mrs. Lawe; Mr. John Collis, of Castlecooke, and Mr. Thomas Foster, of Ballymaloo, both of whom were apprentices to Mr. Robert Beamish, the engineer; there were also thirteen deck passengers, and the crew, consisting of George Bailley the captain, George Rowles the mate,

six seamen, two engineers, four firemen, two coal-trimmers, a steward and stewardess, and three assistants, and the cabin-boy; being a total of forty-three persons on board: she had also about ninety tons dead weight of cargo, and six hundred and fifty pigs, two hundred and fifty of which were in the forehold, and the remainder on deck.

After she passed the light-house, it was blowing what the sailors term "half a gale;" the vessel, from the number of pigs on board, dipped rather much, and having shipped some seas, the passengers became alarmed, and, with the crew, requested the captain to put back. With this the captain complied, and when they had nearly reached Poor Head, he put about and returned to Cove. It was then about three o'clock, and Lieutenant Nicolay, and Richard Callaghan, Esq., went on shore, whence the former proceeded to Spike, and after dining with

LOSS OF THE KILLARNEY STEAMER, JANUARY 20TH 1831.

some of his brother officers, again went on board the Killarney, but the latter returned home and gave up the voyage. The wind had by this time somewhat moderated; but still the evening was so threatening, and the passengers, who were below after dinner, unwilling to risk their lives, having heard that the captain was about to put out again, sent up for him to protest against it. The captain, we understand, did not go down, and in a few minutes they heard the engine at work, and the vessel was under weigh. They started up in terror; a melancholy foreboding of the catastrophe seemed to have seized them, and poor Nicolay exclaimed, "I trust in God we may see our friends again." Poor fellow! to him, and to three-fourths of those embarked with him, that hope was not to be realized.

It was just eight o'clock when the vessel was quitting the No. 31.

harbour. She stood for Ballycotton, the wind increasing every moment until it blew a full gale, and the vessel going very slowly. This continued until midnight, the vessel rolling dreadfully, the pigs bearing her down to leeward, and every wave that struck her causing her to dip so deeply that she shipped several seas. A great quantity of water poured down into the forehold, the hatches having been left open, as there were about two hundred and fifty pigs in it. There were about four hundred pigs on deck, and in order to lighten the vessel the captain directed all hands to exert themselves to throw them overboard. Exert themselves they did, till four o'clock in the morning; but overboard it was impossible to get the pigs: in the language of one on board, "they clung to the vessel as if they were destined to be her destruction," and she leaned so much, that the sailors were unable to attack them

with effect. One man, however, contrived to seize two of them in his arms, and throw them over the side. Up to four o'clock on Saturday morning, they managed, by means of the air or engine pumps, to work the hold tolerably clear of the water that was shipped, but at that hour some small coal got into the pumps and choked them. The water then rose rapidly, until reaching the level of the fire, it rushed in and extinguished it. The engines no longer moved, and all was given up for lost. Even the stout hearts of some of the sailors failed them—they seemed completely paralysed. Many of them, however, held out, and all that man could do the captain did to encourage and help them.

The scene in the cabin was not without its interest. With one exception, all was silence—we might say, despair. But one voice was to be heard—and that the voice of a woman!

The passengers had quitted their beds. They were congregated in the ladies' cabin, and there amid the terrors of the storm and the roarings of an ocean that threatened every instant to engulf them, a lady's voice ascended to heaven for mercy! That lady was Mrs. Lawe. Nothing could exceed the magnanimity of this lamented woman. She endeavoured to cheer her companions in misfortune, and some of the sailors who went down to the cabin she exhorted not to be daunted, but to put their trust to God, who could protect them on the sea as well as on the shore. During the whole time that she was engaged in prayer (the passengers, deck and cabin, assembled around her), she held one of her husband's hands clasped in hers, and this she continued until the vessel having neared the fatal rock, the steward ran down, and called to them to go on deck—that they were all lost!

While matters proceeded thus in the cabin, the sailors and some of the deck passengers were engaged in endeavouring with buckets to lighten the vessel of some of the water in the hold; and after several hours' hard work, they so far succeeded as to be able, about twelve o'clock on Saturday, to get the steam partly up again. They were at this time utterly ignorant of where they were, or whither they were going, for the fog was so dense that no object was visible; they endeavoured to keep the vessel's head to the wind, but after some time they found that they were going to leeward. The jibsail was then set, in order to keep her steady, but no sooner was it run out than it was blown into ribands. About three o'clock the fog cleared away, and they saw land behind them, but what land it was they could not tell; one took it for Poor Head, another for Roche's Tower, and the captain, we believe, for Kinsale Head.

It was then blowing a complete hurricane; the coast was covered with rocks, and they saw that if they drifted towards it, destruction was inevitable. By the captain's orders the mainsail was set, and the engine-men were directed to do their utmost to get up the steam, in order to keep her off. The steam, unfortunately, was so weak as to be of no assistance—it scarcely moved the crank; and the sail had to be hauled down, lest it should throw her on her beam-ends. The staysail was then tried, in the hope that it would enable them to round the point, but they could not haul it out. Mr. Foster then pointed out a bay, which he said was Robert's Cove, and recommended the captain to run the vessel in there, as there was a boat harbour in it, and beach her. The captain said he did not think there was a harbour there, but at all events it would be impossible to make it. The vessel was all this time drifting nearer

the rock on which she ultimately struck; and in about an hour after Mr. Foster had given the recommendation alluded to, the captain got the vessel round, and endeavouring to make for Robert's Cove. Just as he had got her before the wind, she was, however, pooped by a tremendous sea, which carried away her taffrail, taffrail rail, the wheel, and the two men who worked it (John Price and James Atfell), the companion, the binnacle, and the breakwater. Price and Atfell fortunately caught part of the rigging, and were saved; but the sea which did the damage carried away the bulwarks, with some of the steerage passengers who were standing near the funnel, and cleared the deck of all the pigs that were on it.

It was when the vessel was nearing the rock, and before she put about, that the steward went down to call the cabin passengers on deck, and they were on their way up when the sea passed over the vessel. A second sea succeeded almost immediately, and scarcely had Mr. Lawe and Mr. Nicolay stepped on the quarter-deck, when they were hurried overboard. Mr. Lawe was taken in the "break" of the sea, and dashed, his head downward, against the paddle-box, by which, it is supposed, his brains must have been beaten out; Mr. Nicolay was taken up, whirled round several times as if in a whirlpool, and swept away. These two seas had the effect of bringing her head somewhat to windward again, when a third sea rapidly succeeded, and drove her on the rock. It was then between four and five o'clock. The first stroke she gave, the carpenter (James Mason) jumped on it, as did also a deck passenger, but the landing-place was so narrow that there was not room for both, and the latter fell into the water and was drowned. After striking, the vessel receded; she soon struck again, and continued receding and striking for some time, during which some of the sailors, the first-mate, and the captain landed. When the latter got on the rock, a rope was thrown to him and to the mate, that they might endeavour to keep the vessel to the rock. Most—we believe all—of the sailors and some of the passengers were saved in this way, only one landing at a time. The steward, Michael Sheehan (a native of Cork), scrambled along the vessel to look for Mrs. Lawe. He found her on the deck near the funnel, calm and collected. He brought her to the quarter-gallery (part of the vessel at that moment striking) and loosing the rope, he handed it to her and directed her to it; and, when the vessel next struck, to leap into the sea, and they would drag her to the rock. She did so, and was drawn up part of the rock, but having let go the rope, and the wave returning immediately, she was carried away when it receded, and never seen again. Sheehan leaped almost at the same moment with Mrs. Lawe, and was saved. The last persons that left the vessel were a sailor and a woman—the latter supposed to be the stewardess. She appeared to be senseless; and the sailor, who seemed to have brought her from the cabin, had her in his arms. He leaped from the vessel, and reached the rock, the woman under one arm; but the footing was narrow, and the rock was shelving. He had room for little more than his toes, and was obliged to endeavour to hold on with the fingers of one hand, but the weight of the woman inclining him backwards, they were carried off in the same manner as Mrs. Lawe. Had not the sailor endeavoured to save the stewardess, the poor fellow might unquestionably have saved himself.

The manner in which some of the lives were lost was peculiarly affecting. Dr. Spolasco had his little son in his arms, soothing and supporting him, and when the vessel struck he flung him with all his strength towards the rock, the child reached the rock, though the violence of the effort nearly sent the father overboard. When the latter gained the rock he again took him in his arms, and, by clasping him closely, endeavoured to keep him warm. "Kiss me, papa," said the little fellow, "we shall soon meet no more." The child was right. In a few minutes he got on his feet ventured a short distance from his father's side, and, benumbed we suppose by the cold, dropped from the rock and was drowned.

As soon as Sheehan loosed the rope to give it to Mrs. Lawe, the vessel, having nothing to confine her, swung round, and the next sea that struck her drove her against the rock; her deck opened, she divided into two, fore and aft, and all that had been unable to quit her in order to reach the rock, perished. In an

hour after, with the exception of the engine and the paddle-wheel, not a vestige of the vessel or of her machinery was visible.

There were about twenty-five persons on the rock. The sailors had contrived to clamber to the sheltered side, but the situation of the passengers was pitiable in the extreme. Mr. Foster, who had on but a shirt and waistcoat, was seated astride on a projection of the rock, his face towards the sea. Under him was Mr. Collis, his back to the sea, his toes resting on a narrow ledge, and his fingers clinging in a crevice. Alongside the latter was the engineer, M^rArthur, next to whom, side by side, were Dr. Spolasco, Mary Leary, and Sheehan, the latter lying on his face and hands, and every sea washing over him. Over them were the steward's brother (Ward), the captain, the mate, a boy in the care of pigs for the Messrs. Adams, and the cabin-boy. The person on the side next the land observing some country people—about eighteen or twenty—on the rock, they shouted to them, hoping to attract their attention, but there was no answer. The probability is that the shout never reached the land, but they saw the people subsequently descend and carry off some of the pigs that had been washed ashore. Night then came on. About 11 o'clock the wind rose and blew terrifically, but amid the raging of the storm a startling shriek was heard. Poor young Foster had lost his hold, and tumbling head-long immediately past his friend, Mr. Collis, his neck was heard to crack on the hard rock, and he fell into the sea!

He was not the first, however, that fell. The engineer, M^rArthur, some time previous, had called to his companions that he was unable to hold any longer. He put his hands into his pockets in order to warm them, but just as he did so, a sea washed him from his slender footing. As he passed, he made a grasp at Dr. Spolasco. Had he caught him, both must have perished, but he only touched him. He contrived to catch part of the rock, however, about twenty feet lower down, by which he held on for some time, every sea washing over him, and eventually succeeded in regaining the position he had lost. Soon after Mr. Foster fell, Ward, who had been dropping asleep, was heard to fall—then followed the Messrs. Adams' boy—and then, towards morning, the cabin-boy.

When morning broke, they, with some difficulty, clambered upon the rock, and got to the sheltered side. The great difficulty now was to get a rope to reach them. On Sunday, ducks with ropes fastened to them were sent out—only one reached, and that they were not able to catch. Wire was attached to bullets, and rope to the wire, and sundry shots were fired, but without the rope reaching the unfortunate people. The gentry around were all present, giving their assistance:—Captain Knolles, of Oatlands, and his son, Richard Knolles, Esq., George Daunt, Esq., and Arthur Daunt, Esq., of Newborough, Dr. M^dDermott, Charles Newenham, Esq., Mr. Hull, of the coast-guard, at Roberts' Cove, and his brother—and, "though last, not least," Lady Roberts, of Britfieldstown. Nothing could exceed her ladyship's attention to the sufferers when rescued. Sir Thomas was not at home.

On Sunday, when all efforts to reach them with a rope by the above-mentioned means were found vain, Mr. Hull, brother to the officer of the coast-guard, suggested the fastening a long rope to one part of the promontory, and carrying it along the beach to the other side, until a rope, dependent from the middle of it, was brought within reach of those on the rock. This was effected, but the dependent rope was so weak, and it was so late—then after four o'clock, and just dark—that it was necessary to give over further exertions for that evening, and, direful as was the alternative, leave the sufferers exposed to the fury of another night. In the course of the day, worn out by hunger and fatigue, M^rArthur the engineer, and Jephson the black cook, died. Here the survivors had to remain until Monday. Their sufferings it would be impossible to describe, and their agony, when they saw the attempt to rescue them on Sunday abandoned—when darkness settled down upon the deep, and they could no longer distinguish the figures of the persons on the cliff above them, it would not be easy to imagine. Their sole sustenance during the two tedious days and nights they were doomed to this dismal destiny, was a little salt water and the few scraps of sea-weed that they could

gather from one of the bleakest and most barren rocks on the coast. The night, however, was not so tempestuous as the preceding, and at daylight many were on the spot to give their assistance, Lady Roberts among the first.

On Monday morning, Captain Manby's life-preserving apparatus was brought from Kinsale, but the same difficulty was experienced in reaching the rock with the rope. Shots were again fired from guns and small cannon brought for the purpose, but without success, and Mr. Hull's plan was again resorted to. This succeeded; Captain Manby's apparatus was affixed to the centre rope, and about eleven o'clock, two loaves of bread, and a little wine and spirits, were lowered to them—the first they had partaken of since Friday. After refreshing themselves, they were hauled up in the cradle, one by one, the woman first.

The following were drawn up—Mr. Collis, Doctor Spolasco, a woman, passengers; the captain; George Rowles, mate; William Hancock, John Price, John Champion, Charles Goodlin, J. Atfell, and William Peterson, seamen; G. Porter, coal-trimmer, and J. Mason, carpenter, who died soon after.

When landed, they seemed all in a state of collapse. The respiration was perfect; but all their feet were swollen, and the circulation was scarcely perceptible.

They were all put into neighbouring cottages, and attended to under the immediate superintendence of Lady Roberts, who provided them with covering, gruel, and other nourishing drink. Dr. McDermott, and indeed all in the vicinity, were most attentive. Mr. Collis, who appeared to have suffered less than would have been supposed, was taken to Britfieldstown, Sir Thomas Roberts's, and the captain to the water-guard station; the rest were comfortably provided for, and seldom were individuals more in want of it, they having been the whole of Saturday night (and a most dreadful night it was), all Sunday and Sunday night, exposed to both winds and waves—besides which they were wet before they left the vessel. The woman who lay on the rock, and was rescued, had on nothing but her night-dress and a small handkerchief. The stewardess was washed ashore with only buskins on her. Mrs. Morris, whose husband, a tanner, is among the dead, had two stays on, and one hundred and eighty sovereigns stitched between the linings. These were rifled when she floated ashore, as well as some rings that were on her fingers!

Among those who distinguished themselves on this trying occasion, were Lieutenant Irwin, R.N., inspecting commander of the coast-guard at Kinsale, and Lieutenant Charlesson, chief officer, of Oyster Haven.

It was considered, after a lengthened investigation, that the captain did his utmost to save the vessel and passengers; but that the great number of pigs on board, accelerated her destruction.

LOSS OF THE MIDAS,

CAPTAIN RICHARD CLARK, JANUARY 1, 1838.

THE brigantine Midas, of 168 tons, commanded by Captain Richard Clarke, sailed from Odessa at ten a.m., on Wednesday, December 27, 1817, bound to Falmouth; for orders, in company with the brigantine Hope, Captain Gottridge, of Liverpool, bound to Glasgow, and the brig Defiance, of Clay. When they weighed from Odessa, the wind was blowing so strong from the northward, that several foreign vessels which were ready for sea remained at anchor. The three English ships, however, double reefed their fore-topsails and made sail. They ran in company during the whole of the night of the 27th, and the next afternoon, at four o'clock, they made the land about thirty miles to the northward of Cape Kalacri. The breeze still continued to blow strong from the same quarter; but the weather being clear, the captains of the three ships, after having closed and spoken before dark, agreed to run during the night under easy sail, as they were of opinion that by these means they would make the Bosphorus the following morning. At nine p.m. the wind increased to a gale, and the weather also becoming very thick, the Midas was hove-to under a close-reefed mainsail; and she continued drifting throughout the night S. by E., their reckoning being corrected about two knots an hour.

The next morning, Friday, December 29, they again saw their late companion, the Hope, also hove-to; but neither the Defiance nor any other vessel was then in sight. No further communication took place between the Midas and the Hope; and notwithstanding the thick weather, they remained in sight of each other all day, but after dark they parted company and met no more. The Midas continued hove-to until Sunday, the 31st; the gale still unabated, and the sun was so clouded, that the slight observations obtained by the quadrant on this day could not be relied on. Shortly after noon, land was again made, which they thought to be the entrance of the Bosphorus, bearing about S.W. Accordingly all the reefs were let out, and the Midas now ran for the supposed entrance; the captain or the mate keeping a continual look-out on the fore-topsail yard. After running for about an hour and a half, the captain began to suspect that he had been deceived by the fog and snow on the land, and as the weather was gradually becoming more thick, the captain thought it would be more prudent, as it was a case of doubt, to haul off the shore, than continue running. The Midas was, therefore, brought-to, the wind on the larboard tack, and the first reef taken in in the fore-topsail and mainsail. At five, p.m., after a short lull, the gale again increased, the weather became thicker than ever, and they lost sight of the land. Orders were immediately given to close-reef the fore-topsail, reef the foresail, and double reef the mainsail; which was done.

At six, p.m., the gale still continued to increase, with a heavy sea running, when the fore-topsail was handed. The Midas was still on the larboard tack, lying about E., the wind being N.N.E. and the captain now feared that no exertions which they could make, would long keep her off a lee-shore; but little more could be done, and to add to the horrors of the scene, darkness closed around them.

At seven, p.m., all hands were called aft, and informed of the position of the ship, and also that no hope could be entertained of being able to prevent her going on shore before day-light. About half an hour after midnight, high land was seen close under the lee-beam, and in five minutes more the ship began to strike hard, and a heavy sea broke over her, which soon carried the body of the mainsail out of the bolt-ropes, and split the foresail. The rocks and shore being close to leeward, all prepared to attempt a landing. The captain and one man made for the main-rigging, as the main-mast careened over the land; the former dropped too soon, and was unfortunately drowned; but the latter happily succeeded in his attempt, and was followed by all the crew, with the exception of one boy and the mate, who were in the fore-rigging. At this moment, the fore-mast fell, and the head of it luckily lodged on the rocks to leeward, by which the mate and the boy left the ship, which was then beginning to break up.

The wreck of the Midas took place the first hour of the new-year. The only life that was lost was that of the captain; but one seaman was missing, George Houston, of Bristol, who fell from aloft the night before, and was somewhat injured. He was left with a boy, named Richard Hare, in a mill, while the rest of the crew went out in search of a village; but he crawled away from the boy, who was frost-bitten, and has not since been heard of. At day-light, the exploring party retraced their footsteps in the snow, which was knee-deep, and came back for Hare. All now proceeded to the wreck, when they found that only part of the poop of the Midas remained, the rest of the ship being broken up, and strewn along the shore, intermixed with the casks of tallow which had formed the cargo. Again leaving the spot, and walking about ten miles, they came to a small village, where the people crowded round them, and gave them food and lodging, and forwarded the mate to Nicomedia, a five days' journey, on horseback, across the mountains. From thence he went to Constantinople, in a Turkish schooner-yacht belonging to the Capitain Pacha, which lost her masts during this short voyage, and soon after returned to the wreck to execute the orders he had received at Constantinople. The Hope, which accompanied the Midas at the commencement of the voyage, arrived safely at Constantinople and proceeded to her destination.

INDIAN REVENGE AND TREACHERY.

The wars with the Indians in North Western America, on the shores of the Pacific Ocean, are but little celebrated in history, and probably but little would be known of the numerous tribes in that quarter, were it not that the spirit of trade penetrates to every part of the globe, where a commodity of exchange is to be found: the spoils, however, of these wars, are before our eyes—they are suspended in Regent-street and Oxford-street—they adorn the winter robes of our ladies of fashion. The Indian furrier chief is far removed from civilization, and holds his hunting grounds partly by force and partly by barter; he selects his spot, fortifies himself, and surrounds himself with tame Indians and a half race of Canadian trappers; these fight with the Indians who quarrel with him, and trade with those who covet rum and tobacco.

But the trader in furs has still more formidable enemies than the ferocious savages: a few leagues distant from him is the agent of a rival company, who holds a kind of court, as he himself does, enticing the Indian to his market, offering higher prices; and not unfrequently, when art and stratagem fail to obtain him a preference, he sallies forth with his forces to exterminate his opponent. Such are the wars of the Hudson

Bay Company, and that called the North West, between whom a bloody rivalry exists, which in bitterness, activity, and perhaps in acts of courage, vie with any which have been carried on in Europe. The fur trader of the North American deserts and wilds, has to contend with climate, want of food, and other privations in solitude, together with an armed rival near him, and the treacherous Indians around him. The agents of these companies remain for years in pathless and solitary places, far from the habitation of any society, but that of

savages: these are their only neighbours, excepting their rivals in trade. The Indian character, in one respect, resembles that of the Spaniard; he never forgets an insult or a blow;—if he receives the latter, the rankling of his soul allows him no peace until it is revenged. All the qualities of cunning, art, and perseverance, are brought into play for the attainment of that one object. The following account of the loss of a ship, and the murder of the crew, is highly illustrative of this spirit of revenge.

In the year 1811, a vessel sailed from Columbia, for the purpose of obtaining furs from the Indians, carrying out such articles of commerce as the Indians desire in the exchange for their commodity of various skins, collected in their hunting wilds and pathless woods. This vessel belonged to a company, having on board, besides the captain, an agent to manage the trade, and an interpreter to assist him in his conferences with the natives; the vessel, however, after she left Columbia, was never afterwards heard of, until within a few years since, when another voyager and trader was sent out by an opposition company. The interpreter on board the vessel lost, was an Indian, a native of Gray's Harbour, and it was from him the history of what befel the vessel and crew was collected.

A few days after she had sailed from Columbia, the vessel anchored near a considerable village called New Whitby, which is in the vicinity of Nootka. With the inhabitants of this place, a smart trade was immediately opened;—the agent and his men were so well received, that they were induced to sleep two nights on shore: however, during the agent's absence from the ship, several of the natives went on board and carried furs for the captain to purchase. Unfortunately the captain lacked all those qualities which so pre-eminently distinguished the celebrated circumnavigator, Cook; his manners were unbending, and rough in the extreme, and consequently but ill-fitted to come into immediate contact with savages, whose character, upon every occasion should have entered into his consideration. One day having caught a principal chief in a petty theft while on board the vessel, the captain struck him a blow; it appears that the chief immediately went on shore, and got up a conspiracy with his fellow countrymen to cut off the vessel. This, however came to the ears of the trusty interpreter, who forthwith made it known to the agent on shore, in consequence of which they immediately hastened on board, and conferred with the captain, warning him to be prepared against any attack. The latter roughly replied, he never could believe that a parcel of lazy, thieving Indians could have the courage to attack such a

THE SAVAGES ATTACKING THE CREW OF THE TRADER.

vessel as his. In the intermediate time, the disappearance of the agent, and the men who were with him on shore, made the natives apprehensive that their scheme was discovered; they, therefore, in order to lull all suspicion, visited the ship in small parties, totally unarmed, thinking, without doubt, to throw their intended victims off their guard. The chief who had been struck, and who was at the head of the conspiracy, to obtain his revenge, played the part of a dissembler, and visited the ship in an apparently friendly manner, affecting to have

forgotten the obnoxious and offensive blow. At length it was made known that the ship intended to leave Whitby. Very early on the morning previous to the day named for her departure, two large canoes, containing each about twenty men, came alongside, bringing with them bundles of fur, apparently for exchange and trading; the sailor, therefore, unhesitatingly allowed them to come on deck. In a short time, two other parties, equally strong in numbers, arrived in canoes carrying beaver, otter, and other valuable skins. To none of these was any opposition made to their coming on board, although the captain had been previously put on his guard; the officer of the watch, however, seeing a great number of other canoes pushing off from the beach, became suspicious, and forthwith apprised the captain of what he thought were the intentions of the Indians.

The agent, the captain, and the interpreter, being all now upon deck, the latter remarked that they all wore short cloaks or mantles of skins, which was by no means a general usage among them; and, addressing the captain, he intreated that he would lose no time in clearing the ship of the intruders. This additional caution was however lost upon this confident and

fearless man; he treated the idea of the Indians taking the ship with contempt, remarking, that with the arms they had on board, they were a match for three times their number.

By this time the sailors were all on deck, indiscriminately interspersed in disorder with the natives, and that in such a manner, that the gangways were all so blocked up, that it was impossible for the men to perform their duty about the ship.

The captain at length seeing the inconvenience, thought proper to request they would retire; to which they paid no manner of attention. He then told them he was going to sea, and had given orders for the men to weigh the anchor, and that he hoped they would depart quietly; but if they refused, he would use force. He had scarcely uttered this threat, when, at a signal given by the before-named chief, a loud horrible yell was set up by all the assembled savages, who, without parley, simultaneously commenced an attack upon the officers and the crew, drawing their weapons, consisting of knives, bludgeons, and short sabres, from under their cloaks, where, until this moment, they had remained undiscovered.

The captain, although upon this occasion imprudent and incautious, was still a bold and resolute man, and probably, had he and the crew been properly armed, they would have beaten the natives hand to hand, notwithstanding their superiority of numbers. The moment the attack was commenced, he took out his jack-knife, and defended himself with almost unparalleled resolution, quickly ripping up the bowels of four of the assailants, and wounding many others; the savages which were nearest him, retired in dismay, leaving, for a moment, a space around him clear. He had made a desperate and destructive defence, when being himself wounded, and exhausted from loss of blood, he for a second leaned to rest himself against the tiller-wheel, grasping his knife, and casting his eyes alternately at his enemies, and the way to the cabin, towards which he had made many ineffectual attempts to approach through the throng of savages that were opposed to his passage. His mind was perhaps, engaged at this instant in resolving upon another effort to reach a spot where he could furnish himself with arms, and where it is probable he thought alone he should be a match for the whole body of natives then besetting him with deadly and murderous views of revenge. At this juncture he received a blow from behind, on the back part of the head; it was given with a weapon called a *pantumangan*, a kind of bludgeon having flat sides with blunt edges; it was a dreadful stroke, and the captain was felled to the deck. The death-dealing knife fell from his grasp, his muscles were unstrung, and the savage butchers rushed upon his powerless body to use their knives in extinguishing any remains of life there might be left, and then throwing the mangled corpse overboard.

The agent was one of the first attacked. An Indian gave him a severe blow with his flat bludgeon, which, however, only partially stunned him, whereupon he was seized by five or six others, who threw him overboard into a canoe alongside, but whether he was intended for the canoe or the water is uncertain; he however quickly recovered himself, and was permitted to remain there uninjured for some time, only to suffer a second death. The last time this ill-fated gentleman was seen, his head was hanging over the side of a canoe, and three savages, armed with bludgeons, were battering out his brains.

When the captain fell, the interpreter was close to him, on which he jumped overboard, expecting to share the same fate; but being uninjured, from the water, he was taken by some women into a canoe, and there covered up under some mats.

While these events were occurring, the crew were vigorously maintaining a brave, but unequal conflict with the savages, for life. At length, the boatswain and two others, having dealt death around them with handspikes, which they had seized at the moment of attack, and having no other means of defence, fought their way to the cabin, which they knew was well furnished with arms. After well securing the door, it is probable they found time to recruit their spirits with a dram, and prepare for the further work of death. The Indians having seen and felt the courage and prowess of these men when armed only with handspikes, and being perfectly aware that they were now in a depot of fire-arms, became more cautious in their movements; they dreaded the effects of more

deadly weapons in the hands of men who so well knew how to use them.

The three men in the cabin were allowed a moment's reflection; they at once saw that as all the crew besides themselves, were either dead or dying around them, that whatever numbers they might yet have strength to bring down, they must in the end, with six or seven hundred savages on the deck, and as many more around the ship, be overpowered. The boatswain said, looking out of the cabin window, and seeing the number of natives in their canoes upon the water, "There is no hope of escape! opposition is useless, but we will have our revenge, and it shall be a terrible one." Immediately two of them set about laying a train of powder from the magazine into the cabin. While this dreadful preparation was in hand, the third man addressed the savages in the canoes from the cabin window. He told them they intended to sell their lives as dearly as possible, and stated how many they thought, with the arms in their possession, they should be enabled to kill, offering, however, the alternative of their being allowed to depart unmolested; adding they would give up the ship, without firing a shot, if the ship's boat was brought to the window, and all the canoes withdrew from her while they made their escape in the boat. After some little negotiation, the pinnace was brought astern, when the three remaining heroes of this devoted crew, after effecting their dreadful arrangements in the cabin, lowered themselves into the boat from the cabin window. Seeing, in accordance with the stipulated terms, that no obstacle was interposed to their departure from the vessel, they fired the fatal train, and as speedily as possible pushed off towards the mouth of the harbour.

Hundreds who were watching their movements, now rushed on deck, or towards the vessel, eager to share the spoils of the prize, yelling shouts of victory: but short was the duration of their triumph. Just as they had burst open the cabin door, the explosion of the magazine took place, and in an instant upwards of three hundred savages were hurled into eternity, while as many more were dreadfully mutilated. The interpreter, who had, at this crisis, reached the shore, stated that he saw fragments of the ship, and parts of human bodies, such as heads, arms legs, &c., which were thrown on shore, besides other signs of this dreadful catastrophe, which floated in from the harbour for several days.

The original intention of the conspirators was, to have taken the agent sent out, as prisoner, to have secured him and the vessel, and to have exacted a ransom for them, but subsequently the love of gain gave way to the desire for revenge.

The first impression of the surviving savages was, that the great *Master of Life* had sent forth the *Evil Spirit* from the waters, to punish them for their ill-treatment of the whites. These superstitious fears, however, subsided towards night, and they then saw that the event was brought about by the three fugitives. A pursuit was determined on in the same spirit of revenge as that which had moved them, in the first instance, to murder the captain and his crew. The three unfortunate men, after reaching, with great difficulty, a bay, where they hoped to escape observation, landed and laid themselves down to sleep, that they might, the next day, feel refreshed, the better to encounter new troubles. The Indians, however, ever expert at a trail, discovered their retreat, and while they lay exhausted, and insensible to fear, these relentless savages beat their brains out; thus mingling their spirits with those of their companions, who had but a few hours earlier shared a similar fate.

THE DEVIL'S OWN.

THE Temple corps, which many years ago was distinguished by its plain elegant dress and steady order, was inspected by the Earl of Harrington. As he rode along the line, before the review, his Lordship stopped to salute its commander, and said, "This is the Law Association, sir?" "Yes, my lord," to which the Earl rejoined, "I do not find any one that speaks a word; I never saw lawyers so silent." "We have no pay, my lord," replied Colonel Erskine.

LOSS OF THE SHIP NABBY.

On the 19th of December, 1804, the ship *Nabby*, Philip Chandell, master, sailed from Liverpool for Boston, with a cargo of salt, crates, dry goods, &c. with the wind at E.S.E. On the 21st, the ship sprung a leak, which continued to gain upon them, notwithstanding both their pumps were kept constantly going. Finding the leak still increasing, they hauled their wind in order to gain a port. Standing along by the wind, they made Mizzen-head, on the western coast of Ireland. Not being able to gain to windward of it, and then having six feet water in the hold, and the men much fatigued with three days and nights incessant pumping, they tried for Beervhaven, in Bantry Bay.

By this time the ship became water-logged, and the wind still a-head, they determined upon gaining the shore, and saving, if possible, a part of the cargo. Accordingly, on the 25th, in the morning, they ran into a small cove on the south side of the bay, and let go their anchor in eight fathoms water, about twenty-five yards from the shore. They then loaded their boat with provisions and part of their effects, and then sent on shore, where they were left in the care of the mate and one man.

While they were loading the second boat, the country people began to collect on the shore, to the amount of about two hundred men and women. Immediately on the arrival of the boat again on shore, which contained all the effects of the officers and crew, together with all the ship's papers, the inhabitants attacked the defenceless crew, and inhumanly robbed them of all their clothes, papers and money, and from some of the crew their hats from their heads, and shoes from their feet. Not content with this, they proceeded on board the ship, where all they could lay their hands upon fell a prey to their rapacity, threatening with instant death such as opposed them. About dark the robbers left the ship, and carried their spoil into the mountains, when the crew left her also, and proceeded to a miserable hut in the mountains, where they passed a most melancholy night. Early on the morning of the 26th, Richard Donovan, Esq., a gentleman living eight miles from where the ship was lost, came to their assistance, and conducted the whole ship's company to his house. To the benevolence and humanity of this worthy gentleman, and his humane family, they were indebted for the preservation of their lives, without whose friendly assistance they must inevitably have perished. Early on the morning of the 28th, David Mellefont, Esq., of Bantry, together with Captain Scott and Lieutenant Griffin, with a party of forty soldiers, went from Bantry in order to search for the stolen property; upon the approach of whom the robbers immediately left their huts and fled to the mountains. To this gentleman, and to Jonas Baldwin, Esq., they were also much indebted for their active benevolent exertions.

THE MUTINY.

—“I, in mine own woe charm'd,
Could not find death where I did hear him groan;
Nor feel him when he struck.”

In the summer of the year 18—, I was the only passenger on board the *Alceste* merchantman, which was bound to the Brazils. One fine moonlight night I stood on the deck and gazed on the quiet ocean, on which the moonbeams danced. The wind was so still, that it scarcely agitated the sails, which were spread out to invite it. I looked round; it was the same on every side—a world of waters: not a single object diversified the view, or intercepted the long and steady glance which I threw over the ocean. I have heard many complain of the sameness and unvarying uniformity of the objects which oppose themselves to the eye of the voyager. I feel differently; I can gaze for hours, without weariness, on the deep, occupied

with the thought it produces; I can listen to the rush of the element as the vessel cleaves it; and these things have charms for me which others cannot perceive.

I heard, on a sudden, a noise, which seemed to proceed from the captain's cabin, and I thought I could distinguish the voices of several men speaking earnestly, though in a suppressed tone. I cautiously drew near the spot from whence the noise arose, but the alarm was given, and I could see no one. I retired to rest, or rather to lie down, for I felt that heavy and foreboding sense of evil overpower me, which comes we know not how or wherefore; and I could not sleep, knowing that there had been disputes between the captain and his men, respecting some point of discipline, and I feared to think what might be the consequences. I lay a long time disturbed with these unpleasant reflections; at last, wearied with my thoughts, my eyes closed, and I dropped to sleep: but it was not to that refreshing sleep which recruits the exhausted spirits, and by a while “steeping the senses in forgetfulness,” renders them fitter for exertion on awakening. My sleep was haunted with confused and hideous dreams, and murder and blood seemed to surround me. I was awakened by convulsive starts, and in vain sought again for quiet slumber; the same images filled my mind, diversified in a thousand horrid forms. Early in the morning I arose, and went above, and the mild sea breeze dispelled my uneasy sensations.

During the whole of the day nothing seemed to justify the fears that had tormented me, and everything went on in its regular course. The men pursued their occupations quietly and in silence, and I thought the temporary fit of disaffection was passed over. Alas! I remembered not that the passions of men, like deep waters, are most to be suspected when they seem to glide along most smoothly. Night came on, and I retired to rest more composed than on the preceding evening. I endeavoured to convince myself that the noises I had heard were but the fancies of a disturbed imagination, and I slept soundly. Ill-timed security! About midnight, I was awakened by a scuffling in the vessel; I hastened to the spot; the captain and one of his officers were fighting against a multitude of the ship's crew. In a moment afterwards I saw the officer fall. Two fellows advanced to me, and, clapping pistols to my breast, threatened instant death if I stirred or spoke. I gazed on the bloody spectacle; the bodies which lay around, swimming in gore, testified that the mutineers could not have accomplished their aim with impunity. I was horror-struck; a swimming sensation came over my eyes, my limbs failed me, and I fell senseless.

When I recovered, I found myself lying on a bed. Everything was still. I listened in vain for a sound, and lay a considerable time; at last I arose and walked about the ship, but could see no one. I searched every part of the vessel, and visited the place of slaughter, which I had, at first, carefully avoided. I counted nine dead bodies, and the coagulated blood formed a loathsome mass around them. I shuddered to think I was desolate—the companion of death.

“Good God!” said I, “and they have left me here alone!” The word sounded like a knell to me. It now occurred to me, it was necessary the bodies should be thrown overboard. I took up one of them, dragged it to the side, and plunged it into the waves; but the dash of the heavy body into the sea reminded me more forcibly of my loneliness. The sea was so calm, I could scarcely hear it ripple by the vessel's side. One by one, I committed the bodies to their watery grave. At last, my horrible task was finished. My next work was to look for the ship's boats, but they were gone, as I expected. I could not bear to remain in the ship; it seemed a vast tomb for me. I resolved to make some sort of a raft, and depart yn it. This occupied two or three days; at length it was completed, and I succeeded in setting it afloat.

I lowered into it all the provisions I could find in the ship, which was but little, the sailors having, as I imagined, carried off the remainder. All was ready, and I prepared to depart, and trembled at the thought of the danger I was about to encounter. I was going to commit myself to the ocean, separated from it only by a few boards, which a wave might scatter over the surface of the waters. I might never arrive

at land, or meet with any vessel to rescue me from my danger, and I should be exposed without shelter, and almost without food. I half resolved to remain in my present situation; but a moment's reflection dispelled the idea of such a measure. I descended. I stood on my frail raft, and cut the rope by which it was fastened to the ship. I was confused to think of my situation; and could hardly believe that I had dared to enter alone on the waste of waters. I endeavoured to compose myself, but in vain. As far as I could see, nothing presented itself to my view, but the vessel I had left; the sea was perfectly still, for not the least wind was stirring. I endeavoured, with two pieces of board, which supplied the place of oars, to row myself along; but the very little progress I made alarmed me. If the calm should continue, I should perish of hunger. How I longed to see the little sail I had made, agitated by the breeze! I watched it from morning till night—it was my only employment—but in vain. The weather continued the same. Two days passed over. I looked at my store of provisions; it would not, I found, last above three or four days longer, at the farthest. They were quickly passing away. I almost gave myself up for lost. I had scarcely a hope of escaping.

On the fourth day since my departure from the ship I thought I perceived something at a distance; I looked at it intently—it was a sail. Good heavens! what were my emotions at this sight! I fastened my handkerchief on a piece of wood, and waved it, in hopes that it would be observed, and that I should be rescued from my fearful condition. The vessel pressed on its course; I shouted; I knew they could not hear me, but despair impelled me to try so useless an expedient. It passed on—it grew dim—it vanished—it was gone! I will not attempt to describe the torturing feelings which possessed me, at seeing the chance of relief which had offered itself destroyed. I was stupefied with grief and disappointment. My stock of provisions was now entirely exhausted, and I looked forward with horror to an excruciating death.

A little water which had remained, quenched my burning thirst. I wished that the waves would rush over me. My hunger soon became dreadful, but I had no means of relieving it. I endeavoured to sleep, that I might for a time forget my torments; and my wearied frame yielded for awhile to slumber. When I awoke I was not, however, refreshed; I was weak, and felt a burning pain at my stomach. I became hourly more feeble; I lay down, but was unable to rise again. My limbs lost their strength; my lips and tongue were parched; a convulsive shuddering agitated me; my eyes seemed darkened, and I gasped for breath.

The burning at my stomach now departed—I experienced no pain—but a dull torpor came over me; my hands and feet became cold; I believed I was dying, and I rejoiced at the thought. Presently I lost all thought and feeling, and lay without sense, on a few boards, which divided me from the ocean. In this situation, as I was afterwards informed, I was taken up by a small vessel, and carried to a sea-port town. I slowly recovered, and found that I alone, of all who were on board the vessel in which I had embarked, had escaped death. The crew, who had embarked in the boats, after murdering the captain, had met their reward—the boats were shattered against a rock.

LOSS OF THE NEVA CONVICT SHIP.

THE ship *Neva*, of eight hundred and thirty-seven tons, commanded by Captain J. H. Peck, left Cork on the 8th January, 1835, bound to Sidney, having a crew on board of twenty-six men, a surgeon, a superintendent of the convicts, Dr. R. Stevenson, R.N., one hundred and fifty female convicts, fifty-five children, and nine free emigrants. Three of the passengers, it appears, died on their passage, and one child was born, so that at the time the vessel struck, she had on board no less than two hundred and forty souls!

For some weeks the voyage was pursued under the most favourable circumstances; the wind was tolerably fair, and,

though there was some sickness among the passengers and convicts, everything seemed to prognosticate a speedy and propitious voyage. Alas! how soon was that assurance of safety changed to horrors of the most awful description. Danger lurked in their path, and Death, with all his terrors, stood, unseen before them. However, little deeming that their existence was so rapidly drawing to a close, they thought not of the future, till warned by the terrors to which they were subjected.

At about noon on the 13th of May, according to the ship's reckoning, she was ninety miles from King's-Island, at the entrance of Baas Straits, and everything wore a favourable aspect. A good look-out was now kept for land, which was accordingly made on the 14th of May at two o'clock in the morning. In about two hours after breakers were suddenly discovered right ahead, and immediate orders were given to tack by Captain Peck, who was then busily engaged in his various duties on the deck. Without the loss of a single moment, the vessel was then placed in stays; but, to the consternation of all on board, she immediately struck, unshipped her rudder, and became quite unmanageable. At this moment of terror the wind was very strong, and the ship was under double-reefed topsails. Scarcely had the crew and passengers recovered from the alarm into which they had been thrown by this astounding fact, when the vessel again struck most violently on the larboard bow, swung broadside heavily on the reef and directly bilged.

Horror now succeeded to the consternation and alarm into which all the parties on board had been thrown by this unexpected and melancholy event. Self-preservation seemed to be the one prevailing feeling that actuated every breast, and the captain was loudly called upon to render what assistance he could to rescue those who were under his care from the perils and dangers in which they were involved. He endeavoured to soothe and console them under their misfortunes, and earnestly besought them to restrain their terror as much as possible under these trying circumstances; but the imminent danger of their situation rendered them desperate, and their cries of deliverance rose louder and louder, as the danger of the ship became every moment but more apparent.

By whose orders we know not, but the pinnacle was now lowered, and the captain, the surgeon, the superintendent of the convicts, and two of the crew, got into her, and endeavoured to make off from the now evidently sinking vessel. At this period of dismay and confusion, the doors of the prison were burst open by the violence with which the ship had struck, many threw themselves over the side of the vessel, and clinging to the boat, quickly swamped her, when, horrible to relate, all, except the master and the two sailors, perished amidst one wild cry of horror and despair.

With the greatest difficulty the captain contrived to regain the ship, when, without losing a moment of time, he ordered the long-boat to be launched, and that care should be taken to prevent a similar accident to that which had just befallen them, by too many endeavouring to force their way into her. After having taken the utmost caution to secure, as they believed, their own deliverance from a dreadful death, the long-boat was at length pushed off; but scarcely had they got away from the ship, when the boat was upset by the violence of the surf, and the whole of the party precipitated into the sea.

The master and the chief-mate, being good swimmers, once more succeeded in saving themselves from the death which appeared, even to themselves, to be inevitable. With extreme difficulty they managed to reach the ship, but scarcely had they got on board, when a new horror awaited them—the vessel went to pieces, and every hope of preservation vanished like an unsubstantial dream.

The scene at this moment was most awful, and wholly indescribable. The vessel had been divided into four parts, each of which was covered with the terror-stricken females in the light dress in which they had just before simultaneously rushed from their beds, and with the remaining part of the crew, were clinging wildly to all parts of the wreck, and screaming for help in the most piteous manner. This was, indeed, a moment of terror, which would have appalled even the boldest. Situated as they were upon a frail and shaking wreck, not one gleam of

hope broke in upon to cheer or inspire them. Beneath, and all around, were the lashing waves, roaring aloud as if eager to engulf them. Above, the winds howled in hideous triumph over the work of devastation and death which they had caused, and rocking the frail and disjointed wreck, so that each moment seemed to the terrified creatures as if it would be their last in this world. Every plank and joist creaked as the contending elements warred furiously with each other, and insecure as this place of refuge seemed, the hearts of the poor creatures quailed lest it should sink and bury them in the yawning abyss of water. Nor was it long before their worst apprehensions were verified. The vessel, parted as it was, soon afterwards went to pieces, the final work of destruction was completed, and the whole of those on board, were precipitated, shrieking with horror, into the raging ocean!

In this perilous situation, nearly the whole of the unfortunate sufferers were consigned to an untimely death. About two-and-twenty persons, however, consisting of some of the crew, and a few of the convicts, were carried, by clinging to various disjointed portions of the wreck, to King's Island, which was situate at the distance of about nine miles from the spot where this distressing accident had taken place. But their struggles to gain the shore were desperate and severe, and it was not till after they had been in the water for a period exceeding eight hours, that they at last succeeded in attaining the much-desired land. Of these twenty-two suffering creatures, seven shortly afterwards died, from absolute exhaustion and the excessive fatigue to which they had for so long a period been subjected.

After having buried the bodies of their unfortunate com-

LOSS OF THE NEVA CONVICT SHIP, CAPTAIN J. H. PECK, 14th MAY, 1833.

panions in misery, and having, in some degree, recovered from the cold and fatigue they had endured, the remaining fifteen succeeded, after considerable difficulty, in erecting a temporary tent of the few things that were occasionally washed ashore from the wreck of the Neva. In this dreadful situation they were not suffered to perish by the Providence who had hitherto preserved them from the fate that had befallen their late companions in misery—a few provisions were washed ashore from the vessel; and upon the scanty supply thus afforded, they contrived, with economy, to subsist for about fifteen days.

At this period, most singularly, and as events now make it appear, most fortunately for the survivors of the Neva, a small vessel, the Tartar, belonging to Hobart Town, and the property of Mr. C. Friend, was wrecked on another part of the same island. The whole of the crew had been saved, and, like

the others, had erected a tent as a place of shelter, till a vessel should arrive to take them from that cheerless spot. Whilst they were thus waiting for the anticipated succour, their attention was excited by the numerous portions of a wreck which they found on the sea-shore.

Actuated by curiosity, and a desire to ascertain whether any of the crew of the ill-fated vessel had escaped, the men, belonging to the Tartar, commenced a journey round the island, in order to satisfy themselves upon the subject. In this expedition they encountered perils and fatigue of no ordinary kind, and after a search of two or three days, arrived at the tent which had been erected by the survivors of the unfortunate Neva. The meeting between these fellow-victims of adversity, was most affecting. Their hearts at once yearned towards each other as if they had been brothers, and uniting

themselves in one association, they resolved to remain together until they should be relieved from the solitary island upon which they had been thrown.

The crew of the Tartar had been accompanied by a sealer, a passenger in that vessel, who had luckily saved several of his hunting dogs. With the assistance of these sagacious animals they soon afterwards succeeded in taking a walaby, upon which the persons on the island lived until the period of their release from this scene of desolation and despair. Each day men were placed upon the loftiest eminences near the sea-coast, in order to discover whether any vessels passed within view, and in the event of a ship, being seen, to hail her by whatever signals they could make. Whilst some of the party were thus employed others were engaged in fishing and hunting, whilst the remainder busied themselves in increasing the comforts of the tents which they had erected for their shelter, from the inclement season, which had just set in, in those latitudes.

The sufferings, both mental and bodily, to which these poor creatures were subjected, it would be impossible to describe. A thousand thoughts of home and distant friends, were ever flitting through their minds. They remembered with regret the happiness that had once been theirs, and contrasting it with the misery to which they were at present doomed, despair at last yielded to the hopes they had once formed of escaping from the wretched situation in which their lot was cast. Day after day passed wearily by, and still no succour came to these heavily afflicted creatures, till at last they almost began to regret that the raging elements which had destroyed so many of their companions, had not involved them in the same dreadful fate.

At last, on the 15th of June, exactly one month from the time of the wreck taking place, Mr. Friend arrived at the island, in the Sarah Ann, another of his vessels. It happened, by chance, that Mr. Friend was passing King's Island for the whaling station at Portland Bay, and went on shore, the signals made giving him reason to suppose that there were some persons there in distress. Upon landing, he was immediately surrounded by nearly the whole number of the shipwrecked persons, who hailed him joyfully as their deliverer from misery and death. Mr. Friend assured them that he would do all in his power to alleviate their distress, and consoled them with the promise of landing them, at Launceston as speedily as possible. They then collected together all the bodies that they could find of the unfortunate creatures who had been washed ashore from the wreck, and pronouncing over them the solemn rites of Christian burial, consigned to the grave no less than one hundred of their fellow human beings.

This melancholy duty performed, the whole of the shipwrecked persons, with the exception of two seamen, and one female convict, who, at the time, were at the other side of the island, the survivors of this awful calamity were got on board the Sarah Ann, preparatory to their departure from this sterile island. A fair wind befriended them, and on the 27th of June they arrived in safety at Launceston, in New Holland.

As soon as the local government was made acquainted with the disastrous affair, the cutter Shamrock was despatched to King's Island, for the purpose of taking off whatever persons might have been left there, and to pick up any portion of the wreck, or government stores, which might have floated on shore. On arriving at the place of destination, the two sailors and the female convict were found, who, on discovering that their fellow-sufferers had left the island, were reduced to a state of absolute despair. Upon seeing the cutter their confidence once more returned, and they joyfully hastened on board the vessel that was to bear them from that land of inhospitality and horror. The crew of the cutter then collected together what portions of the wreck of the Neva and her stores they could find, and having buried a few more bodies that had been drifted on shore, they quitted the island and landed them in safety at Launceston, where the whole of the survivors received that care and protection they so much needed in their deplorable condition.

Had there have been proper attention paid by those whose duty it was to attend to the shipment and safety of the convicts, in all probability the catastrophe might have been greatly ameliorated, if not avoided.

THE SEA BIRD'S CRUISE.

A strong north-west wind had blown for many days, down the Chesapeake Bay, and detained at anchor a small vessel, which would have willingly made its way against it. The schooner, for such it was, thus wind-bound, lay in the entrance of South river, and under the lee of a narrow and thickly wooded point, which here thrusts its bluff extremity into the Chesapeake.

In modern times, the dark appearance of the schooner, its black hull and yards, unrelieved by the dingy yellow of the naked masts, would have excited disagreeable suspicions in the mind of the passing mariner; and, even at the period of our story, about the year 174—, there was that in the general aspect of the vessel, which, almost indescribably, was calculated to make the fair trader give it a wide berth on meeting; though, perhaps, after all, its distinctive marks were to be found only in the trig and seamanlike style in which the sails were bound to the spars, the tautness of the running rigging, and the fresh paint which gleamed upon the sides.

In the bay phrase, it was a "clever craft," but still had a rakish look about it, not common to an every-day acquaintance, a *noli me tangere* cut, which cried "hands off" to all new comers. The smoke that curled from the caboose or galley, and spread itself among the rigging, was, for some time, the only evidence that the schooner was inhabited.

At last, however, the head of a sailor slowly emerged above the comings of the fore-hatch, and the whole man soon after appeared, in his full proportions, upon the deck. He looked about him, as if to ascertain the state of the wind and weather, walked to the dog-vane on the taffrail, shook the hour-glass, whose sand had nearly run, peered over the bow to see how the tide set against the cable, and finally disappeared down the companion way. In a short time he returned to the deck, accompanied by two persons, whose appearance indicated a higher rank.

The first was evidently the master of the vessel—a short spare man, of the middle age, upon whose face warmer suns than that of America had left their token, in an almost olive complexion. His features were strongly, but not disagreeably marked. On the contrary, there was much good temper in the twinkle of the small grey eye, which glanced rapidly around from beneath the heavy fleshy lid above it; and it was only in the firm compression of the thin, colourless lips, that the spirit to control the crew of his vessel could be recognized. His dress was that of a sailor, in his "go ashore" habit, with the exception of a silver-hilted cutlass, swinging at his side.

His companion was a young man, of perhaps eight-and-twenty, above the middle size, and dressed after the fashion of the time, bold and forward in his carriage, yet not ungraceful—frank, indeed, rather than rude or coarse, and of an open-hearted expression of countenance, and a pleasant smile, which more than atoned for any brusquerie of manner. They both, like the sailor, noted the wind and tide; and the master, having finished his observations, gave a few short, quiet orders to the man who had summoned him on deck.

By this time, the mates, two thorough-going seamen in their appearance, had joined the trio near the main hatch, and the loud, shrill whistle of the sailor first mentioned, brought at least twenty hands from below, to obey the orders of the commander. The effect of these was apparent in a few moments.

The handspikes were thrust into the windlass, and a dozen turns were sufficient to trip the anchor in the shallow water off the point. Another turn, and the schooner was free. The head fell off from the wind, as the jib was run up, and fore and mainsail swelling as they were extended to the generous breeze, the vessel shot from beneath the land, and sped across the bay, towards the opposite and low shores of Kent island. Topsails and gaff topsails were now added; and with all her canvass set, the schooner flew gallantly along. When their immediate services were no longer wanted, the crew, one by one, silently disappeared, leaving those only upon deck who were essential to the attempt now made, to beat the vessel against the north-wester, in her course up the Chesapeake.

During all this time, the master had been busily engaged, and now that the schooner was fairly under weigh, he rejoined the young man, before alluded to. "Off at last," was the first sentence; "and if the wind don't rise, and the tide runs as it does now, an hour will see us at the mouth of the Severn."

"High time we were there," was the reply: "thou didst bargain, captain, to land me at home a week since; but thou hast hugged Thomas's point, as if it were thy mistress; refused to let me land, refused to send thy boat up with me, and kept me for the sake of my society, more a prisoner than a passenger."

"Hoot, man, there it is again. How often have I told thee, that when I left the West Indies, where the bargain thou speakest of was made, I had no idea of finding a king's vessel upon the waters of the Chesapeake. There's no use in mincing matters, master Orrin, and my trade won't bear inquiry."

"Sure enough, Captain Giles Heatherby," answered the other, laughing; "I verily believe thee, man: and I thank thee from my heart, that, when Beckett brought the tidings that a cruiser was in the Severn, thou didst not cut cable, make all sail, and away, before the north-wester, to the ocean."

"Faith, Master Orrin, it was not for the want of inclination, but for want of time. Beckett chose, like a fool, to lose himself in the woods on his way from town, where I sent him when the north-wester first drove me under the point, and the king's ship came down by water, as fast as Beckett brought the tidings by land. I have no objection to a fight when there's a chance for a free trader; but when I saw the sails of the cruiser, from royals to courses, sweeping down the bay, and could now count her teeth grinning on me in the twilight, as I followed her with the glass—I tell thee, Master Orrin, I wished thee at the very devil, or at least safe in the West Indies. Nothing but the twilight saved the Sea Bird from the king's docks, and Giles Heatherby from——" Heatherby here made a significant motion with the fore finger of his right hand, casting, at the same time, a glance to the end of the fore topsail yard of the Sea Bird, which left no doubt of his meaning.

"However, as I said before, that's past, so no more of it. I've waited, until I'm sure the enemy's departed; and now, with the bay to myself—and it's not the first time either—I'll try, when I do leave it, to leave it in ballast only."

"And I suppose Captain Heatherby, that thou hast held me fast, to make all safe."

Giles shrugged up his shoulders at this remark of Orrin, and with his peculiar, but good natured smile, answered, "Why, thou mightst have said, that perchance the Sea Bird's cargo was not invoiced, or cleared; and they set more value upon those invoices here, than among the islands, or on the main. And besides that, I loved thee, man, and wanted thy company. As it is, I'll land thee safe; and should there ever be a quarrel about invoices, I'll expect thee to stand my friend. Thou hast been my passenger from the West Indies, and by this time knowest the Sea Bird and her master; and the master trusts thee."

The last words were uttered in a low and serious tone, and with marked emphasis. The appeal was not to be misunderstood, and Orrin answered, "Yes, Heatherby, had I known thy free trade notions sooner, I scarce had troubled thee with my company. Some of the meetings on the ocean let me into thy secrets; but thou hast acted truly by me, and thou mayest trust me."

"I do," was the reply; and I yet may stead thee still further, than with a passage from the Gulf.

During the latter part of this conversation, the schooner had rapidly neared the shore of Kent island, and the smoother water, immediately ahead, showed, that in another moment the vessel would be upon the flats. "Helm a-lee!" shouted the master, and the instant after, the schooner ran all shaking into the wind.

As the starboard jib-sheet was still held taut, the head fell to leeward, the topsail yards were pointed in another direction, and before the vessel had lost its way, every sail was

filled, and upon the long leg of the tack, the Sea Bird stretched up for the mouth of the Severn. Onward she sped, though now with less velocity than before, for now was her time of struggle with the wind; and with every sail close hauled, and sometimes even shivering, as she luffed more and more up the bay, to clear the flats to leeward, the schooner, to use sailor phrase, crawled steadily along. At last the mouth of the river opened over the larboard bow, and Heatherby gave orders to bear away, for the purpose of entering it.

The sailor on duty had already put his helm up, when Orrin sprang forward, and with a powerful arm again luffed the vessel on the course she was leaving. Heatherby's eyes flashed fire, at this interference of his passenger; and in short fierce tones, he ordered him below, and advanced as if to strike the seaman, who had permitted his command to be disobeyed. With his right hand still on the tiller, and thrusting the helmsman behind him with the other, Orrin stood between Heatherby and the sailor.

"Stand off, Captain Giles Heatherby," he said, "and lay not thy hand on the hilt of the cutlass. Nay, tell me not that thou art master of the schooner, with such round oaths," he continued, as the other, in vehement language, would have interrupted him: "I know it, man, I know it: but I know still better the harbour of Annapolis. Look at that sand bar, the end of which will soon be off the larboard quarter, and tell me how the Sea Bird would have appeared, high and dry upon it, when the tide fell."

Orrin pointed to the bar as he spoke, clearly defined by the comparative smoothness of the water above it. "There, take the helm now," he added to the terrified sailor behind him, "and bear away until you open yon cleared field upon the tall tree on the bank, then luff until you have the Severn straight before you; bear away again, when you range that house with the opening in the woods, and you may anchor any where, near the long low point putting out to right of the town."

He left the helm, as he spoke, and advanced towards Heatherby, who stood, convinced of the necessity of the interference which had so provoked him, conscious of the apology which he owed, and yet reluctant to make it. "Are we to be friends, Captain Giles," said Orrin, holding out his hand, "or must we quarrel in the last half hour of our three week's voyage?"

The firm compression of the other's lips gradually relaxed, the deep furrow disappeared from between his brows, the steady fixedness of his eye yielded to the usual expression of good humour, as he took the proffered hand, and answered, "Nay we, quarrel not now, Master Orrin; thou didst move me much though. It was for common safety, however, and let it pass. Thou knowest," he continued—passing his arm through his companion's, and moving from the immediate neighbourhood of the helmsman—"Thou knowest the tenure of my command here. I am obeyed, because the rascals under me fear me, and have confidence in my skill; and with the like of them, it's better to be high and dry on a sand bar, than, having once given an order, to change it. A few more such interferences, and every scoundrel would presume to cry 'starboard,' when I cried 'port.'"

Further conversation there was between the master and his passenger, until the schooner's course was laid direct to her intended anchorage. The topsails were clewed up, the gaff topsails brought upon the deck, the flying jib and foresail hauled down, and, under jib and mainsail, and with diminished speed, the vessel approached the long, low point indicated by Orrin. Gradually, the remaining canvass was taken in, and, like one wearied with a toilsome journey, the Sea Bird offered but small resistance, when the anchor dropped from the bows, and moving sluggishly on, she was brought up at the extremity of the cable that allowed her.

It was evening, just before the setting of an autumnal sun, that the schooner thus terminated her voyage, and dropped anchor in the port of her immediate destination. She formed another picturesque object in a landscape surpassingly beautiful. She had left the broad waters of the bay, and directly before her, at the bottom of a small, and now unruffled cove, lay

nestled the village or town of Annapolis, then the principal place in the province of Maryland.

To the right, the eye followed the blue waters of the Severn into the dim perspective. To the left, the meanderings of a broad and tranquil creek, dark with the shadows of the trees lining its banks were lost behind the town. Nearer the bay, point and headland projected, on either side, into the Severn; and the low distant shore of Kent island bounded the landscape in that direction. Save where the little town dotted the eminence on which it stood, the land around presented the rich hues of cultivation, or laughed under the yellow sunlight, in all the gay and gorgeous tints of the autumnal forests of America, and the sheets of water were either darkened to a deep blue by the last breathings of the north-wester, or lay the undisturbed mirrors of the beauty of the land. In the centre of all, was the Sea Bird; every sail snug, every rope taut, and, presenting to the seaman's eye a most perfect gem of the ocean.

As soon as the vessel had anchored, Heatherby left her to the command of his mate, and, together with Orrin, whose preparations had been previously made, was pulled in the schooner's boat to the wharf or quay of the town. Few words were exchanged between the master and his passenger, in their short passage to the shore; both were absorbed in their own reflections; and the boat struck the land, before either appeared to recollect, that "Farewell" was yet to be uttered.

A cordial shake of the hand, a "God bless you," on one side, "we'll meet again, may be," on the other, was the brief parting; after which, Orrin, making his way through the crowd of idlers collected at the landing, hastened up into the town.

Orrin Lacy, whom we have heretofore spoken of under the familiar name of Orrin, was the only son of one of the most respectable Catholic families of Maryland. At the usual age, he had been sent to Europe to receive his education, and after an absence of many years had now returned to the place of his nativity. True, Orrin had not been employed all this while in black letter studies, under the good Jesuits of St. Omers.

He had travelled as a man of fortune, had been engaged in extensive speculations as an enterprising merchant, had visited home once during that period, and was on his second return when first introduced to our readers. He had sailed from Europe to the West Indies, in a hope of obtaining a passage from thence to Maryland; and falling in with Heatherby, whose destination suited him, without very particular inquiry, had joined his schooner on her voyage to the province.

Who Giles Heatherby was, was no secret on the Spanish main, or in the West India islands; nor, as it would seem from the kindly greetings which he received from several at landing, was it a secret in Annapolis. Half-smuggler, half-buccaneer, his crew and himself could alone tell where his cargoes came from. People had their suspicions. Some of his men had left the several ports where they were known, sound and smooth, and had returned, maimed and scarred; and there were persons who had noticed recent shot marks, carefully concealed, in the hull of the Sea Bird. But Heatherby was a warm friend, and an inveterate enemy; and it ill became his customers, at least so they thought, to inquire how it was, that even with the duties paid, he could undersell the market.

"First for my father, and then for Alice," thought Orrin, almost audibly after parting with the captain of the schooner. "Two years absence—and she scarce knew how I loved her when we parted. Ah,"—and the sigh might be heard, though the words could not—"those two years may have undone me."

His further reflections of this sort were interrupted by his arrival at his home. He made the house re-echo, as he struck the huge knocker of polished brass, which reflected the neighbourhood, in all the contortions of scroll and moulding. The door was opened by the grey headed negro, who had been grey when Orrin was an infant; and the next instant the traveller was clasped in the arms of his relatives.

"Orrin, my boy; Orrin, my own son; dear, dear Orrin," came at the same moment, from father, mother and sisters, followed by all the rapid gratulations of affection.

It was some time before anything like a connective narrative of what had happened since they parted, could be ob-

tained from either Orrin or his friends. The brief outlines of the traveller's history we have already given: and, in general terms, the elder Lacy alluded to the situation of the province, evidently and purposely turning the conversation to domestic incidents in the family.

Hour after hour went by in this manner, until, at last, pleading an engagement, which all understood, Orrin rose to pay his intended visit to Alice. His father followed him from the room, and both, taking their hats and cloaks, left the house together. Then it was, that the elder Lacy went fully, and in detail, into the situation of the province, and revealed to his son a state of things of which the latter was wholly unconscious.

"Orrin, my boy," continued the father, "the faith of our ancestors is made unto us a mark of infamy, and in the name of Catholic, there is held to centre all that is base and opprobrious. Under pretence of religion our opponents would hunt us as wild beasts, and the night alone saves us from insult, as we now walk the streets of Annapolis. Look," pursued he, raising his cloak at the same time, and displaying the long rapier which, unseen by his son, he had girded to his side, when they left the house; "look, Orrin, at the only safeguard of the persecuted Catholic." The father paused for a moment, and then went on. "In vain have we remonstrated: the Catholic is too vile even to be heard. Our lands are burdened with double taxation; as citizens we are disfranchised; as men we are insulted on our hearth-stones. The council takes from the Catholic his very children, lest in their mother's milk they suck the seeds of infamy and perdition"—the voice of the old man became almost suffocated, as he thus detailed the wrongs of his sect—"and yet, Orrin," he concluded in smothered tones, "we bear it all."

The reply of Orrin was that of excited passion. His blood rushed fiercely through his veins; and when his father told him that the Catholics held a meeting that very night, to consult on the course to be pursued by them, even Alice was forgotten, in his anxiety to be present at the deliberations. Nor was the elder Lacy unwilling that his son should stand forward in a course which he considered to be that of his maker; and without hesitation, he at once led Orrin to the place appointed for the assembly.

History has informed us of the conduct of the Catholics in Maryland, during the persecution which they endured; and the proceedings of the midnight meeting, to which Orrin was introduced, were illustrated, subsequently, in the events of the day. Resistance was in vain. Religious enthusiasm could not supply the defect of numbers, when the same moving spirit was equally powerful on both sides; and a voluntary exile was at last decided upon, as the only means of preserving life, fortune, and honour. "Carroll," said the speaker, who last addressed the assembled Catholics, "is at this moment in France, invested with full power to obtain for us a portion of the southern part of this mighty continent."

"Our brother in the faith, the French king, can scarcely refuse us an asylum, in the boundless wilderness which he possesses; and though we have to raise new temples to our God, kindle new fires upon fresh hearthstones, and beg fellowship with the savage for our daily bread; yet our temples will be undefiled, our hearthstones our own, and our bread eaten in peace and quietness."

Among the audience, there had been some who had urged violent measures, others again who had proposed continued remonstrance; but the conclusion to which all finally came, was, to bear patiently and as best as they might, the insults to which their faith subjected them, until the time arrived, when they could withdraw themselves from their persecutors.

The assembly which had conducted its deliberations with grave and almost portentous silence, now broke up, and ere its members separated for the night, they conversed one with another, though still in whispered tones, more familiarly than the preceding debate had permitted.

Orrin thus became acquainted with much that his father had not been able to communicate; and when he left the room with the rest, he admitted to himself, that the suffer-

ings of kindred and friends created a feeling in his breast, almost as powerful as his love for Alice.

And who was Alice, whom we have thus introduced into our narrative? Alice Redmond was a Catholic orphan, with enough of beauty to make her the reigning toast of the county of Anne Arundel, before Catholic was a name of scorn, and enough of the world's gear to place her beyond the reach of pecuniary misfortune. Alice Redmond was three and twenty, above rather than under the middle size, skilled in the accomplishments of the day, and with all woman's pride and maiden dignity of feeling, and all woman's warm and generous affections clustering round her heart. Naturally gay and cheerful in her temper, was Alice Redmond; but the late religious persecutions had saddened her usual disposition, and, avoiding all society, Alice found herself in a short time almost wholly neglected by those of whom she had once been the centre and the life. She resided with distant connexions, differing from her in faith, looking at her, recently, with distrust, and offering her few inducements to leave the privacy which she had voluntarily chosen.

The future was now so gloomy to the most sanguine Catholic in Maryland, that Alice was excusable if she sought comfort, during her lonely hours, in recollections of the past. Among the numerous passages which she from time to time recalled, there was one on which her memory dwelt frequently, and fondly. It was her acquaintance with Orrin Lacy. True, no words had passed between them, telling of affection; but Alice thought that the eyes of Orrin could not be misunderstood; and her only fear was, that her own had, at times, been tell-tales. She had seen the Sea Bird win its way into the mouth of the river, and with a vague feeling of expectation had watched it from her window.

As the Sea Bird slept upon the water, the twilight concealed it from her view, and when her servant caught the rumour, that Orrin Lacy had returned, and repeated it to Alice, she felt, she knew not why, that the intelligence was anything but unexpected. That night flew with bright dreams to Alice: but when hour after hour passed by on the ensuing day, and Orrin did not appear, to pay the common civilities, even of old acquaintance, she found herself, almost unconsciously, repeating the question, "can he have forgotten me?" and felt her vanity and her pride both touched by his apparent neglect. Evening found Alice in the drawing-room, now an unusual place for her, and a common observer might have noticed the eager attention with which she listened to the slightest sound that reached her ears from without the mansion. At last there was a quick knock at the outer door, a rapid step in the passage, and the next moment Orrin Lacy was in the drawing-room.

How much are we the creatures of circumstance? How little are we under our own control? Had Orrin not appeared, Alice would have been miserable; all her pride notwithstanding: and now that he was before her, fear lest her greeting should betray her feelings, perhaps some pique at the lateness of his visit, gave a cold formality to her manners, that at once checked and mortified the only person whom at that moment she cared to please.

Orrin withdrew his proffered hand, and, with constrained civility, inquired after the health of Mistress Alice Redmond; who, in her turn endeavoured, and with too much success for the feelings of her lover, to manifest the same indifference. In this manner, an half hour went slowly by, wretched to each of them; neither understanding the other; and both, by every word they spoke, widening the breach thus unintentionally made between them.

Orrin had once or twice risen to depart, yet still lingered in the room, hoping he scarce knew what; and he now stood beside the table in the centre of the apartment, idly turning over the various articles upon it. His eye rested at last upon a set of ivory tablets, which he well recollected to have belonged to Alice.

As he opened them, his attention was immediately attracted; his eye changed its expression, and, seeing the tablets, she started, as if to take them from him: her face, at the same time, covered with blushes.

"Nay, Mr. Lacy" she began—"Say me not nay, loveliest

and best beloved Alice," interrupted he, raising the tablets beyond her reach with one hand, and with the other leading her to the sofa, from whence she had risen; "these slips of ivory are of more worth to me, than the revenue of the British empire. Nay, then, that inquiring look forces me to explain. Dost thou not recollect the summer evening when we parted, and when I told thee, that, like a true knight, I would leave my motto as my remembrancer, and wrote upon these very tablets, 'Fidelite et Esperance'; and dost thou not recollect, fair Alice, that, at thy bidding, I erased the 'Esperance,' and left 'Fidelite' remaining, so solitary, on the ivory? Nay, then, turn not away, for my tale is but half-told.

"The knight went to foreign climes, with a heavy heart, and on his return believed, from her manner, that his lady was indifferent; until he finds, written by her own fair hand, 'Esperance' which she bade him erase, and sees, from the date below, that a week has not elapsed, since the lady, in her own heart, promised 'Esperance' to the true knight. Say to me, loveliest Alice, have I told the tale truly?"

Poor Alice, while Orrin spoke, had hid her face on her arm, as she leaned it on the high back of the sofa, and made no answer to his earnest questionings. Misunderstanding, however, was now over; and without detailing the further conversation of the lovers, it is sufficient for our readers to know, that when they separated that evening, their mutual faith was pledged.

True to the policy which they had adopted, at the meeting we have adverted to, the Catholics refrained, as far as possible, from provoking any aggression on the part of their religious opponents, looking forward steadily to the time when they might depart into voluntary exile.

Among others who were thus forbearing, although with the least good will, and perhaps, with the worst grace, was the younger Lacy. Once or twice, indeed, his hand had been upon the hilt of the sword, which he, in common with the other Catholics, was now obliged to wear for his personal protection, and bloodshed was only prevented by the accidental and fortunate presence of a friend. That friend, on these occasions, was no less a personage than Captain Giles Heatherby, who passed himself for a merchant-trader, managed to keep out of sight more than the complement of men proper for the character which he assumed for the Sea Bird, and who trafficked as freely in Annapolis as if he had been a denizen of the place.

He was almost constantly to be found in the streets or about the landing; hushed suspicion by the publicity of his proceedings; and, with all ready for a moment's start, acted as if he, of all men, would be the last under the necessity of flight. There were many who knew him, but he had made secrecy their interest; others again suspected him; and some believed him to be everything that he represented. Heatherby's safety lay in the cheapness of his wares, his accommodating terms, and a lavish distribution of underhand presents to those whose duty it was to protect the revenues of the king and the lord proprietary.

There were many indeed above the means used by Heatherby to affect his ends: but these were most sedulously avoided. The aristocracy of the province, with few exceptions, and the executive government, knew little of Giles Heatherby, save that he was a trader, whose long low schooner occasionally entered the harbour of Annapolis.

A month might have elapsed, since the arrival of the Sea Bird in the waters of the Chesapeake, and she lay before the town, as snugly and quietly as when she first dropped anchor. Hetherby pursued his commercial views with unwonted success; while Orrin, despite the frown of Alice Redmond's relations, passed most of his time in her presence. Although betrothed, no day had been appointed for their marriage; but, by a tacit consent, they seemed disposed to wait, until happier times shone upon the Catholics in Maryland.

In the meanwhile, the elder Lacy and his family treated Alice as though she were already a daughter or a sister, not only for Orrin's sake, but for her own; while she, in her turn, often soothed the excited feelings of the old man, and with her stronger intellect, and more buoyant spirits, cheered and consoled the female members of his household.

Orrin had been absent on a visit to a friend's house, and on

his return, late one afternoon, found that Alice had just left his sisters, with whom she spent part of the day, on her return home. He hastened to overtake her. His nearest and most direct course was over the hill, on which stood the state-house. Another route, and that which he well knew had been taken by Alice, was a circuitous one by the landing place. If I turn to the right, he thought I shall scarcely overtake her; if I go the short cut by the state-house, I shall reach her own door before her.

Orrin did not forget that the Catholics were prohibited from passing in front of the state-house; but he forgot the caution which he had hitherto observed, and walked rapidly up the hill. As he turned the corner of a building, which had concealed from his view the summit of the eminence, he saw collected there, a group of men, who, to judge from the loudness of their tones, were in angry altercation.

For a moment he hesitated whether he should not retire; but discarding the prudential doubt from his mind, he advanced hastily to the spot. Before he could reach it, there was a quick movement in the crowd, and the next instant, he saw a single man keeping at bay a number of assailants.

"Kill the Catholic! down with the worshipper of idols! death to the son of Baal!" were the shouts which came from the latter; while, with surpassing skill, the intended victim parried the blows aimed at his life, and slowly retreated as he did so. With a single bound, Orrin was at the side of Giles Heatherby; for it was the buccaneer, whose religion, for the first time in his life, perhaps, had thus brought him into trouble.

"Faith, master, thou art in time," said the captain of the Sea Bird, retreating for an instant to the rear of Orrin, and leaving him alone to repel the enraged enthusiasts. Heatherby made use of this momentary breathing time, to blow a small whistle, in a shrill and peculiar tone, and ere the last vibration had ceased to sound, he was again by the side of Orrin. A minute might have elapsed, when the two Catholics found themselves most efficiently supported. First one, then another and another of Heatherby's sailor's answered the well known whistle, until ten of them were rallied in defence of their captain.

The Catholics were now the assailants, and in a few seconds were masters of the field. Orrin was slightly wounded and three of the Protestants were groaning upon the ground. There was no time or cause for congratulation.

"Away to the schooner, if ye can; if not to the hut," said Heatherby to his sailors, who waited no second bidding. "And now, Master Orrin, we must fly," continued the captain. "Annapolis and Maryland will both be too hot for us: I shall be the first attacked, and thou wilt be the next; and if either of us be caught, why then farewell to daylight and the Sea Bird. Fool too that I was, to let the jibes and jeers, or even the downright insults of a few hot-headed religionists, make me turn brawler in the streets. If I am a Catholic, I am a free-trader; and the free-trader turns fool, when he talks of his own or any man's creed; and greater fool when cold steel follows his words."

As he spoke, Heatherby hurried Orrin down the hill, and gained the shelter of some buildings, in one of the Jiving streets. The quarrel, the fight, the retreat had begun and concluded so rapidly, that now, for the first time, Orrin was able to collect his thoughts, and consider his situation. Under existing circumstances, he well knew, that the chances of life were but slight in his favour, against the infuriated mob, which a short time would collect; and though Heatherby might be the first object of their vengeance, he with equal certainty would be the second. But Alice, what would become of Alice, if he fled?

"I cannot go with thee," at last he said, "unless another is the companion of my flight, Heatherby. Therefore seek thine own safety, man, and leave me to manage as I may."

"Nay, nay, was the reply; "that will never do; thine arm saved me in this foolish brawl, Master Orrin, and I leave not the water of the bay without thee." "This much I swear. I stay not for parley now, or the Sea Bird may be lost to us both: but meet me an hour hence, under the bank to the left of Carroll's house, at the hut thou wilt find there: or if that may not be,

the schooner shall never leave Thomas's point, until she picks thee up at it. Come single or double, it is all the same. Europe, perhaps, may receive once more the persecuted Catholics."

Heatherby disappeared down a narrow alley, as he uttered the last words, leaving Orrin alone in the street. It was now twilight, and the town, notwithstanding the late rencontre, was still and quiet; and Orrin, availing himself of that, which he knew would not long continue, hastened to the residence of Alice. He found her at her usual seat in the drawing-room, and fortunately alone.

"Alice," he said, as he entered, and seated himself beside her, "misfortune hath at last come, most visibly upon us, and again I must leave my country." Alice looked at him in speechless astonishment; the ashy paleness of her face showing the almost mortal effect of his sudden annunciation. She uttered no sound, but gazed on him so inquiringly, that her very eyes seemed to ask audibly the meaning of his words. Had Orrin wished convincing proof of unalterable love, it would have been found in the appearance of Alice at the moment.

"Forgive me, my own best beloved," he continued, "if, for an instant, I have blanched thy cheek: but the full heart stays not ere it speaks, even when affection would check its utterance. Blood has been spilt this evening: the cause has been still this unhappy difference of creeds; and fight, to preserve life, has become inevitable." Orrin then proceeded to state to Alice the particulars of the rencontre before the state-house, and his fear as to its consequences.

"But why leave the land?" at last answered Alice: "thy interference, Orrin, was to protect one against many; and for thee, personally, there can be no apprehension."

"Fanaticism, not justice, presides, where the Catholic is a party," replied Orrin; "I would not fear the result." As it is, even the courts might not acquit me, if the populace suffered me to live until my trial."

"Alice wrung her hands and wept in utter despair, as her lover went more into detail, in explaining the causes of his apprehension. "And is there no way to avoid the last, bitterest pang?" she said, her full streaming eyes raised devoutly to heaven as she spoke; "can I not be spared it?"

"Yes, Alice, dearest and best," answered Orrin, to her almost unconscious ejaculation; "be mine, now and for ever. In postponing our union hitherto, we have looked forward to brighter days. These are now too far removed—beyond the reach of anticipation. Be mine, then, now, my betrothed wife."

And Orrin urged his claim, with all the fond solicitations of affection. Alice shook her head once or twice, as he proceeded; but her resolution was not proof against his entreaties. He took her passive hand, and when he again repeated his request, her assent was almost inaudible, from the sobs that accompanied it. But she did assent; and Orrin, falling on his knees at her feet, covered with kisses the small and delicate hand clasped in his own, and thanked her with all the devoutness of gratitude. He only ceased his thanks, on hearing a foot fall behind him; and rising from his kneeling attitude, he saw Heatherby standing at his side.

"Captain Heatherby! whence this unauthorised intrusion?" were the first words that fell from Orrin, addressed to the new comer; while Alice, recovering herself, at the excited tone of Orrin, listened long enough to the scene, to understand its import, and then left the apartment.

"Stay, stay, Master Orrin," interrupted Heatherby; "this is no time for quarrel. That lady, doubtless, is the companion you mentioned, and I only pray she is ready for her journey. My communication with the schooner is cut off. The Sea Bird must wing her way without me, for the present. The town is not yet stirred; but soon will be: the soldiers are among the people; they have found out, all of them, for the first time, the knaves, that I am buccaneer and free-trader; and unless we reach the hut in the next half hour, we are undone; not I, Giles Heatherby, only, but you, Orrin Lacy, and your love."

Few were the words, after this, which passed between the two. Heatherby undertook to manage everything, even to having the priest at the hut, provided no delay was made. Alice re-appeared with all her wonted firmness; and in a few

short minutes after the arrival of Heatherby, the three, accompanied by a sailor, bearing Alice's hastily collected apparel, took their way to the hut. They made a wide circuit through the fields, at the back of the town, wound along under the banks of the creek, and at last reached the rendezvous of the buccaneer.

This was the rudely constructed log dwelling of a fisherman, and had been, hitherto, the unsuspected resort of Heatherby and his crew. The site on which it stood was but recently occupied by an oysterman and his wife, almost old enough to have recollected the scenes of the present narrative, and the butts of the school-boy republicans in the now decayed city of Annapolis.

Here Heatherby left Orrin and Alice, with the sailor who had accompanied them in their flight; and after a short absence, returned with the elder Lacy, and a person whom Orrin recognised as the most energetic of the speakers at the meetings of the Catholics, before alluded to. This last, Heatherby, in brief phrase, told Orrin, was the priest. The greeting between the younger Lacy and his father was silent and affecting, but was quickly interrupted by the master of the Sea Bird, who, restless and uneasy, urged the immediate performance of the ceremony.

"My boat will speedily be here, I hope," he said; "and unless we soon reach the schooner, farther flight may be unnecessary and impossible." Thus admonished, hasty preparations were made to comply with the rites of the church. The priest drew from a small bundle his cassock and scapulary, and invested himself with them. The ship's lantern, which hung from the roof tree, was turned, so as to throw its rays full upon the countenance of the holy man. Two brands, lighted at the fire on the hearth, and composed of the resinous knots of the pine, were held by Heatherby and one of his sailors, on either side, and filled the interior of the hut with a bright flickering glare.

Alice stood between her future husband and his father, supported on the arms of both; pale as the shadow of beauty, but calm and self-possessed under the temporary excitement of her feelings. In the back ground, were the hard features of a few of the Sea Bird sailors, parties in the fray of the afternoon, and now hovering about the rendezvous; and farther still, upon the sides of the hut, the eye glanced upon the bright steel of offensive and mortal weapons, these arms hung there for the nonce.

All was now arranged; and after a few preparatory admonitions, the priest commenced the ceremony, in tones low, but full and deeply impressive, and continued uninterrupted, until he had united, by the strongest of all earthly ties, the kneeling couple before him. Orrin had seen the ceremony performed in the cathedral and in the palace, when all that art could do was done, to add to the solemnity of the occasion; but never had the obligation appeared so awfully binding, as when administered in the buccaneer's rendezvous, on the waters of the Chesapeake.

The marriage was now concluded, and the elder Lacy was repeating, in trembling accents, the benediction just pronounced by the priest, when the door of the hut was pushed quickly open, and one of the Sea Bird's sailors entered, alarmed and breathless.

"Well, Beckett, what's in the wind?" asked Heatherby, whose ear and eye were ever on the watch. "Are they coming this way? speak man, and at once. Here are ten of us, and the hut may be defended; though 'twere folly too," he half muttered to himself. "No, you are safe," answered Beckett; "but the schooner, the Sea Bird—"

"Well, what of her, knave?" exclaimed the other anxiously. "They'll board her from the land, in the next ten minutes. No word has reached her; the people and the soldiers have the boats; and the craft's gone, Captain Heatherby, and we are not aboard to lend a hand."

"Is that all?" answered the master: "thinkest thou they will take the Sea Bird unawares?" "I don't know," replied Beckett; "but had I been on board, and known of the storm brewing, the anchor had been up an hour since."

The latter part of the remark was not heard by Heatherby who left the hut, followed by all save the agitated bride, her husband, and his father. Even the priest joined the sailors,

in the anxiety of the moment. Orrin strove in vain to impart some cheerfulness of feeling to his companions; but his own forced attempts yielded to the melancholy circumstances of the hour; and in silence they awaited tidings and directions from the moving spirit on the occasion, the captain of the Sea Bird.

On leaving the hut, Heatherby and his companions moved along the beach of the creek to a bend, from which they could distinctly see the schooner, quietly and unsuspectingly riding at anchor off Windmill point. And scarcely ever did the eye rest upon a lovelier scene, than that which now presented itself. The moon, two days past the full, had just risen over Kent island, and showed a silvery path across the broad Chesapeake, formed by the reflection on the almost unruined water.

Behind the schooner, were the bluff points which jutted into the Severn, now made more prominent by the moonlight. In the fore ground, and to the right was the still creek, with its broad dark shadows. To the left, lay the town, sleeping as it were on the gentle eminences which it covered. And over all—the distant island, the nearer promontories, the vessel of the buccaneer, and the quiet town—was spread that soft and mellow tint, peculiar at certain periods to the autumnal atmosphere of America.

But the attention of Heatherby and his party was not given to the beauties of the moonlight landscape. Every eye was watching the movements of a crowd of men, women, and children, collected at the landing place, where perhaps a dozen boats, including the barge of the Sea Bird, had been brought together, within the last half hour. The populace made no noise, and the cause of the unusual silence was speedily apparent. It was intended to surprise the schooner of the buccaneer; and eight of the twelve boats were soon filled with men, armed for the occasion with such weapons as were nearest.

The glitter of bayonets in each boat showed the regular soldiers were active in the business; and the heart of Heatherby more than once sunk within him, as he looked from the crowded boats, to his only, his narrow home, his sole place of refuge amid the dangers that his reckless life gathered around him, the long low schooner, which he now seemed on the eve of losing for ever.

The assailants, on shoving off, kept close under the shore; and, turning the nearest point, now adorned with the tall steam mill of modern times, were, for a while, hidden behind it. When they next appeared, the barge of the Sea Bird led the line, and was filled with soldiers only; while the glittering bayonets had disappeared from the boats that followed after him.

The townspeople will leave it to the soldiers after all," said Heatherby, as he marked the change of crews which had taken place since starting. "But why a't he cable cut, and her sails all spread? Is no one awake upon her deck, to save the schooner? Dost thou see no stir, Beckett?"

"None, sir," answered the other; "there are but twelve of us ashore, and twenty aboard."

"Twenty devils," replied Heatherby, in tones of increasing excitement; "and why a't they up and at work? Is the Sea Bird so little worth, that they intend surrendering? Do they owe me nothing? Do they owe the craft nothing which has stood the tempest to save them? Traitors! traitors! villains! why don't you save that which has saved you!"

"They are neither traitors nor villains in the schooner, Captain Giles Heatherby," answered Beckett, to the agitated ejaculations of his officer; "wait till the craft's gone, before thou layest so hard on honest men."

"Ha! dog," cried the other, glad of an object on which to vent his feelings; "darest thou speak so to thy master?" and he sprang towards Beckett, with his hanger drawn, as if to cut him down. He stopped suddenly, however, and returning the weapon to its scabbard, said, in tones of deep emotion, "Nay, mind me not, my honest Beckett: but my boat, my child, my friend, my all on earth or on ocean! and I not there to save her!"

Heatherby turned towards the vessel, to hide his feeling as he spoke. The barge was now alongside, and the remaining boats but a few oar-lengths off, and rapidly advancing. He saw the first soldier distinctly, who ascended the side, cleared the waist cloths, and stood upon the deck. Another and another

followed, and still no sign of contest on board the schooner. The townspeople even had begun to mount the side.

"Villains! ye have betrayed me!" shouted the again excited Heatherby, "and may heaven so serve ye, in your hour of greatest need. But, ah!"—the flash of fire arms from the Sea Bird now caught his eye, and the quick reports came over the water, to where he stood. A loud hurra rose from the sailors on the beach, at this visible vindication of their comrades.

"There are boats left still at the landing," said Beckett, approaching Heatherby; "might we not seize them?"

"Why not?" asked the other; "the loss of the schooner be on your head, knave, for not telling this before."

Few and prompt were the commands of Heatherby; and, followed by his men, in a minute he was at the landing. The wild shouts of the buccaneers, their drawn swords and ferocious appearance, as they rushed along the beach, drove back the unarmed crowd, remaining there; and before the townspeople recovered from the panic, Heatherby and his followers were pulling might and main, directly for the schooner.

At this moment, the master recollected Orrin and his wife, and hailing the boat alongside, at the helm of which was Beckett, he ordered it to the hut, to bring them off. The sailors, when they understood that obedience would deprive them of all share in the defence of the Sea Bird, refused, in loud and bitter curses to return to the shore. Finding himself disobeyed, Heatherby ran his boat athwart the bow of the other, and with a pistol drawn and cocked in his right hand, and holding on to the gunwale of Beckett's boat with the left, he threatened death to the first one who dared resistance.

"Beckett," he said, "the man ashore saved my life not later than two hours since; and unless he is saved, I cease to sail as master of the schooner. Ashore then with you, boys," he added, seeing that his words and manner had gained their usual ascendancy over the crew, and adopting the frank tone, which was more natural to him; "ashore, boys, and see who'll first reach the point to starboard there; I with the schooner, or you with the passengers. Give way, my lads, give way," he continued, addressing himself to the crews of both boats, as they separated in opposite directions—"give way, for the Sea Bird, and the shore."

The schooner was still the scene of combat; although the brunt of the fight on her was evidently maintained between her crew and the soldiers, while the townspeople either sat idly in their boats, or appeared in small numbers within the waist-cloths.

"By heavens, the soldiers are too strong for them," said Heatherby. "Pull, my lads, give way for life, one pull more and we are there." And with almost supernatural strength, the sailors made the oars crack again as they obeyed the order. The persons in the boats alongside, had at first believed that Heatherby and his sailors were a reinforcement of their friends; nor were they undeceived, till they heard the shout of "Heatherby and the Sea Bird," with which the buccaneer and his companions sprung aboard. And in good time did they arrive. The deck was slippery with blood. The crew, who had paid dearly for the negligence which had permitted their surprise, were nearly overcome, when the cry of "Heatherby and the Sea Bird," in the well-known voice of their commander, gave new life to their desperate exertions.

"Down with the red coats! Hurra for the free-trader! The Sea Bird for ever!" shrieked the buccaneers, as they again rushed upon their opponents like blood hounds. "Take that and that," shouted Heatherby, as, discharging his pistols, he flung them at the soldiers, and followed them with his cutlass. A sailor had, by this time, cut the cable, and the jib was now rattling up its stay; yet still the soldiers stood their ground, and, from the quarter-deck of the vessel, continued to maintain the unequal contest, a few moments longer. At last Heatherby sprung, like a tiger, upon the man who seemed to be the chief reliance of his companions.

The grapple was fierce and deadly. The soldier fell to the deck, and the buccaneer seemed unharmed at his side. The cry of "quarter" now came from the lately victorious assail-

ants, and Heatherby's voice and exertions were employed in procuring it for his enemies.

"Strike not, save, ye are cowards," he cried, throwing up the weapons of his men. "There's blood enough upon the deck already, to last for many a long day. Stand off, rascals; don't ye see they yield?" he continued, as his men sullenly obeyed him, and the soldiers, collecting in a group on the quarter-deck, threw down their arms. "Take your wounded," he added, addressing himself to them, "and ashore with ye."

The persons whom he addressed occupied but short time in descending into the only boats alongside, those which brought Heatherby and his men; for the townspeople had long since retreated. Their wounded and dead were passed down to them; and at last, shoving off, they pulled rapidly for the landing-place.

By this time, the schooner was under fair weigh. Every sail was soon set before the gentle breeze, which came from the shore; the wounded were taken below; the decks washed down; and in fifteen minutes after the last soldier left the vessel, few traces remained of the late deadly conflict.

Heatherby walked fore and aft the schooner, straining his vision in the direction of the hut in hopes of seeing Beckett and his expected companions. The hut itself was concealed from his view by the bend of the shore from which he had first witnessed the attack upon the schooner; but upon the water between no sign of the boat was visible. Presently a reddish light rose from the land, above the hut; and as the vessel opened, the low building from behind the headland, was discovered to be in flames. Each instant added to the brightness of the conflagration; until one gush of fire went up from the combustible materials.

It glared upon the crowd around it, who had thus wreaked their vengeance upon the buccaneer; and piercing the dark shadow of the eastern margin of the creek, revealed to Heatherby the boat of Beckett, rowing swiftly towards the schooner. In a few minutes, the "boat ahoy" of a sailor was answered by the hoarse voice of Beckett—"friends and all safe;" and the next instant, Orrin and his almost lifeless bride were assisted upon the deck, and conveyed to the cabin of the master. By morning light the tall trees on Thomas's point were visible only from the mast head of the Sea Bird.

Some years passed away, when the regular trader which visited Annapolis, landed a lady and gentleman with a family of two lovely children, off Windmill point, in the harbour of the town; and many were the sincere greetings which they interchanged with the crowd collected at the landing-place. The spirit of persecution had passed away: and it was Orrin Lacy, who had returned, to gladden once more the eyes of his aged parents; to become one of the most respected inhabitants of Maryland: and, in the latter periods of his life, to stand forth as one of the most active of the supporters of the independence of his native soil.

Of Giles Heatherby but little was generally known; although it was shrewdly suspected, that his voyages continued for many years after, to the waters of the Chesapeake.

That he carried on his nefarious trade in despite of the authorities, a portion of whom he bribed, and the most fastidious of whom he carefully eluded, that he was at all times a general favorite with the inhabitants, who upon all occasions greeted the Sea Bird with the most ordinary welcome on her arrival.

There are some indeed, who insist to this day, that the frequent trips of the Sea Bird to the village of Baltimore, then just settled on the Potapscow, furnished the ingenious craftsmen of that place with the model of those "skimmers of the seas," whose only rival in speed upon the ocean, is the wind that propels them.

PRECEPT FOR YOUTH.

AN all-wise Creator has ordained, that as parents watch over the helplessness of their children, so the children are to nurse the declining days of their parents, support the tottering steps, and administer to the weakness of second childhood, in those who administered to their wants.

THE LOSS OF THE MARGATE HOY.

THE hoy named the Margate, of Margate, John Goodborn, master, and J. Sackett, owner, was deeply laden with corn for the London market, and had on board twenty-eight passengers, besides the crew, consisting of four men.

They sailed about three o'clock in the afternoon of Saturday, the 6th of February, with not very flattering appearances as to weather; yet all of them, apparently, in the greatest cheerfulness, with the exception of the captain, whose melancholy countenance seemed to indicate a presentiment of the succeeding calamity, and who, during the whole scene, gradually sunk under its horrors. As the tide was on the ebb, and the wind unfavourable, they were obliged to come to an anchor at a little distance from Margate, where they remained till eight

o'clock, waiting the return of the tide; but the master apprehending blowing weather, judged it most advisable to get under way before the flood-tide, fearing they should not be able to purchase their anchor as the wind was increasing, and by its blowing on shore, rendered their situation dangerous.

The wind continued to blow from the N.N.W., and as the night was very dark, they resolved to turn up under the hook of Margate Sand, with the intention of anchoring there; but prudent as this resolution might have been, it was entirely frustrated. After beating about with the wind and waves till about eleven o'clock: upon making their last tack inward, and sounding the strap of the sounding-lead broke, a very rare accident, particularly as it had not been in use more than two voyages; but this disaster, so apparently trifling, afterwards proved to be the foremost in the train of others, as unforeseen

LOSS OF THE MARGATE HOY, NEAR THE RECVLVERS, FEBRUARY 7th, 1802.

as inevitable. They now attempted to get the vessel about and to provide themselves with another lead; but before they could accomplish either, she struck upon one of the banks below the Reculver Sand.

Alarmed by the sudden shock, and stimulated by the desire to use every possible exertion to preserve the vessel, they let go their anchor as the only remedy under these distressing circumstances, and the tide flowing, she soon floated, and they got their anchor again; but in hauling in the weather-jib-sheet it was broken by the fury of the wind; and the lee-jib-sheet being so much agitated, became unhooked. The master having stopped the tiller to leeward, sprang forward in order to assist in getting the jib in, but just at this instant the vessel again struck, and again they let go their anchor; but they were now advancing to the extremity of their distress, and the disastrous

incidents which contributed to it began to succeed each other with more rapidity; for barely had the anchor reached the ground, when the tiller broke, and on the first attempt to repair the mischief, the rudder was unshipped, and the vessel became totally unmanageable, and violently beat upon the sand. In this perilous condition they tried the fore-pump, which they found choked, and consequently useless. Upon sounding, they found between two and three feet water in the hold, which very soon rose above the floor of the fore-castle; and as they apprehended the vessel was sinking, they slipped the cable, hoisted the foresail, and dropped the gaff, in order to let her drive on shore; but having lost her rudder, they could not govern her, and she came with her broadside to the beach, and there sank, and the tide still making, the ponderous waves rolled over in a manner truly awful.

It is impossible for language to describe, in terms adequate to the reality, the dreadful scene that now presented itself. The mariners, finding that all further efforts to save the vessel would be useless, and that they must resign her to the fury of the wind and waves, directed all their energies to endeavour to save the passengers. The water had been pouring into the cabin from the scuttle, the companion, and the chimney, for some time, and all attempts to stop these avenues were totally defeated by the constant dashing of the sea over them; they therefore endeavoured to get the tarpaulin, which covered a stack of corn upon the deck, and by placing it over the cabin, to prevent it being inundated; but as several of the affrighted passengers had taken refuge on this stack, they could not so speedily remove the tarpaulin, and no time was to be lost, as the water in the cabin was increasing very fast, and many un-

happy creatures were there, fainting with fear, and almost dying with sea-sickness. With the assistance of the seamen, some of these were immediately drawn out of this watery dungeon. One of the passengers, a Mr. Thornton, of Margate, was heard in great distress, uttering the most pathetic cries for his dear wife, who was in the cabin; and to add to his painful anxiety, his son, who was a passenger with them, perished with her. The unhappy husband did not long survive this double stroke of Providence, for while lamenting the loss of the dear objects of his affections, he was suddenly swept away by the impetuosity of the waves, leaving at home five orphan children to mourn this melancholy disaster.

Soon after this, when the cabin was pretty deep in water, John Wood, one of the mariners, drew up a female, but not being able to keep his hold with one hand, in order to assist

with the other, he grasped with both, and let down his foot among the struggling victims, which was presently seized by one of them, whose hand he caught hold of, hoping to rescue the almost dying creature from the jaws of death; but the waters swelling higher with every roll of the sea, he lost his hold, and was obliged to relinquish his generous efforts, and abandon the rest of the drowning sufferers to their fate, in order to provide for his own safety.

The ship carpenter, Mr. Field, was assisting to repair the tiller, but the rudder being carried away during the attempt, and the vessel consequently becoming unmanageable, he anticipated what would happen, and began to think of his own safety and that of his beloved wife, for whom he became all anxiety. He ran to a part of the vessel where he found some rattling stuff, out of which he provided two lashings for her and him-

self, and hastened to the cabin, with the expectation of finding her there; but in this he was disappointed, as she had taken refuge on the stack. When in the cabin he found himself nearly up to his breast in water, with the poor creatures struggling round him; and here his situation became critical, for two or three of the despairing creatures clung so fast to him, that he could not extricate himself. They were therefore drawn up together, by the exertions of the seamen, as was supposed; but the darkness of the night, the constant dashing of the waters, and his own perturbation, would not allow him to distinguish who were his deliverers, and those who were drawn up with him were soon washed off the deck.

His wife he found upon the stack, where she had taken refuge, and lashed her to the boom with one of the cords he had provided; but, in his trepidation, he was not able to find the

other, and bound his arm to her with the end of that with which she was fastened, and in this position they remained while two or three heavy seas came over the vessel, which gradually swept the stack from under them, and at last carried them both into the sea. By laying hold of some ropes at the side of the vessel, Mr. Field managed to get back again, and lodged himself in the shrouds, from whence, in the anguish of his spirit, he could not forbear calling after his dear companion, who was now perishing, and who had just before embraced him, saying, "Oh, my dear, what will become of our children!" expecting they would be left orphans. There were with him and his wife on the stack, only Mr. Thornton and Mr. George Bone; the former was first washed away, and the other, who was a local preacher among the Methodists, and endeavoured to calm the fears of the wretched crew by pious exhortations, soon followed. As for the unfortunate captain, he was seen hanging by the reef-tackle, but losing his hold, he fell upon the deck, and was soon washed overboard.

One of the passengers, named John Beasley, who was a working-gardener, near Paddington, was seen leaning on the winch, to which the fore-halliards had been brought, and the foresail hove up. The sea falling heavily upon him in this situation, the halliards came off the winch, and caused the foresail to run down, upon which he was carried overboard; but the unhappy man was afterwards found under the vessel, from whence he was with great difficulty drawn out.

The others were strewed along the shore, with the exception of Mrs. Owen, and her servant. Mrs. Tatnell, Mrs. Jacobs, Mrs. Edmund's son, and a youth named John Taylor, whose bodies were found in the cabin; and from the general account given by both seamen and passengers who were saved, it is probable that many were washed away at an early period, as they came up out of the cabin debilitated by sea-sickness, their fears, and their exertions to save themselves; and the waves which were constantly breaking over them became so heavy, that a hearty man in full possession of his strength could not retain his hold, unless he were so situated as to be driven against some parts of the tackling of the vessel, or so high in the shrouds as to be above the heavy pressure of the water.

The extraordinary preservation of Mr. Jesse Carroway deserves particular notice, for, after hanging a considerable time by the boom, he became so exhausted that he dropped into the sea, which, while it hurried many to a premature grave, bore him on the crown of the billow, and left him alive upon the shore. Those also who took refuge in the shrouds, were preserved in a manner equally surprising; for the great debility and weakness to which they had been reduced, by long watching and fatigue, must have proved fatal to them also, had they continued but a few hours longer in their perilous situation. One of these, John Busbridge, a passenger and a youth used to the sea, became so enfeebled, that, unable to use his arms, he was for a short time actually suspended by the feet, till, by the assistance of his fellow-sufferers he was removed from his dangerous position, in a state of insensibility. John Wood too, one of the seamen, was so debilitated, that having a little stream to pass on his way to Reculver, whither most of them went when they got on shore, he took the precaution of going sideways through it, lest this feeble obstruction should throw him down, and he not be able to rise again.

Of the twenty-eight passengers that left Margate the day before, in good health and spirits, six only survived this calamitous disaster. Of the crew, the captain was the only one that was lost.

THE LIFE OF CAPTAIN BARTHOLOMEW ROBERTS.

BARTHOLOMEW ROBERTS left London in November, 1719, and went second mate on board the *Princess*, Captain Plumb commander, arriving at Guinea in February following, where, taking in slaves for the West Indies, he was taken by Captain Howel Davis. At first he was very averse to piracy; but afterwards he changed his mind; and what he did not like as a

private man, he was fond of as a commander. After Davis's death, the ship's crew found themselves under a necessity of choosing another captain in his room; upon which, after some debates, Roberts was chosen; who willingly accepted thereof—saying, since he had dipped his hands in muddy water, and must be a pirate, it was better to be a commander than a common man.

After which, they resolved to revenge Davis's death, he being very well beloved amongst them; and in order to do it; about thirty men were landed to make attempt upon the fort, headed by one Kennedy, a bold daring fellow, who marched directly up under the fire of the ship's guns, and went into the fort without any opposition, the Portuguese deserting it upon their approach. Which having set on fire, and thrown all the guns into the sea, they retreated quietly to their ship.

But this was not looked upon as a sufficient satisfaction for the loss of their captain; therefore, most of the company were for burning the town, only Roberts prevented it, by telling them what dangers they exposed themselves to by such an attempt, and that the bare burning of the houses would be but a small satisfaction for the dangers they exposed themselves to. After a great deal of murmuring, they took his advice, sailing out of the harbour by the light of the Portuguese ships they had set on fire.

The governors of Barbadoes and Martinico hearing that Roberts was on their coasts, sent a man-of-war in pursuit of him. This so provoked him, that he hoisted his own figure portrayed standing upon two skulls, and underneath the letters A.B.H. and A.M.H. signifying thereby, a Barbadian and a Martican's head. At Dominico, the next island they touched at, they took a Dutch vessel of twenty-two guns, and seventy men who made some defence till many of the men were killed, and then struck.

With this prize he went to Guadaloupe, where he took a French fly boat laden with sugar. From thence he went to Monay, another island, thinking to clean; but finding the sea run too high for his design, he went to the north part of Hispaniola, where in the gulf of Saminah, he cleaned the ship and the brigantine.

While they were here, two sloops came in, as they pretended to compliment Roberts, addressing him as the Queen of Sheba did Solomon; that having heard of his fame, they put in there to learn his art of piracy, being themselves upon the same honourable account, therefore hoped to receive his charity, being in want of necessaries for such an adventure. Accordingly, Roberts gave them what they had occasion for, spending two merry nights with them, and at parting, bid them, "good bye!" saying, "he hoped the Lord would prosper their handy-work."

Sometime after, while they were drunk, Harry Glasby, a reserved sober man, master of the *Royal Fortune*, having two more with him, moved off without bidding them farewell. But being soon missed, a detachment was presently sent after him, which brought him back with his companions, they were immediately brought to trial, the form of justice being kept up as if they were a parcel of the most honest fellows in the world; and although amongst them, there are no packing of juries, no perplexing the cause with hard words, yet they proceeded to judgment, as in supreme courts, although their method is somewhat different—the one getting drunk upon the bench, and the other behind the curtain.

When they were all ready, the captain in the chair, they were called up upon the steerage, where a large bowl of rum punch was placed upon the table, pipes and tobacco being ready, the trial came on, and the indictment was read. The letter of the law, of their own making, being strongly against them, they were about to pronounce sentence, when one of the judges moved that they should drink the other cup first; which was agreed to by the court unanimously.

The prisoners pleaded for an arrest of judgment; but their crimes being so very great, the court would not admit of it. Immediately up starts Valentine Sturdyback, saying, "he had something to offer to the court in behalf of one of the prisoners, whom he swore he knew to be as honest a man as ever a one of them, his name was Glasby; by G—," said he, "he shall not die, d—n me if he do."

After which, he sat down in his place, and took up his pipe. This motion was loudly opposed by all the court, they resolving he should die. But Sturdyback was positive, and swore he was as good a man as any of them! I never turned my back to any man in my life, or ever will! I know Glasby is as honest a fellow as ever breathed, notwithstanding this misfortune has happened to him, which might have been any body's case, and I love the man. Devil d—n me, if I don't kill the first man that dares say a word against him. I hope he will live and repent of what he has done amiss; but d—n me if he must die, I will die with him."

Thereupon he pulled out a pistol, presenting it to the breast of one of the judges. They seeing his argument so well supported, moved that Glasby might be acquitted; which they all agreed to, allowing it to be law. But the other prisoners were condemned; and all the favour that was shewn them, was, that they should choose four out of the company to shoot them; which was done accordingly. Then burning their own ship, they manned Norton's brigantine, sending the master away in a Dutch vessel, not dissatisfied.

With the Royal Fortune, and the brigantine, whom they named the Good Fortune they made towards Descada, where they met with Captain Hall, richly laden for Jamaica, whom they plundered, and carried him to Bermuda. Then returning to the West Indies, they daily met with some prize or other, mostly French, which stored them with plenty of provisions; after which they began to think of something worthy their aim, and accordingly they proceeded again for the coast of Guinea, where they thought to buy gold dust very cheap. In their passage, they took many ships, some of which they burnt, others they restored, according as the master pleased or displeased them.

Notwithstanding this success, the crew were very mutinous till Roberts told them they might go ashore and take satisfaction of him, if they thought fit, with sword or pistol—for he neither valued or feared any of them.

About four hundred leagues from the coast of Africa, the brigantine in a dark night, left them. This brings me back to an accident that happened at the West Indies, which had nearly ruined all—and was the occasion of the brigantine's going off.

Captain Roberts being insulted by one John Tipple, he killed him on the spot, which was resented by many of the crew, particularly by one Ralph Brag. He cursed Roberts for killing his comrade, saying, he ought to be served the same sauce. Roberts hearing of this, hastened to him in his passion, sword in hand, and run him slightly in the body. Brag, notwithstanding his wound, fell upon Roberts, and beat him to his heart's content; which put the whole ship's crew in an uproar, some being for the captain, others against him.

However, the tumult was at length appeased by the quartermaster, and as the majority were of opinion, that the dignity of the captain ought to be supported, they sentenced Brag to undergo two lashes from every one of the crew. This, however did not convince Brag that he was in the wrong, but rather irritated him on to revenge; and not being able to do it to Roberts on board the ship, he with several of his comrades conspired with Anstis, captain of the brigantine, who was also a mal-content, on account of Roberts's haughty carriage towards him. So in a little time Brag and his consort went on board Captain Anstis, on pretence of making him a visit; when, consulting with the crew, they found that the majority were for leaving Roberts, and give him a soft farewell, as they call it, that night; which they all did with one consent.

The loss of the brigantine was a sensible shock to the crew, it being a capital sailer, and had seventy hands on board; however, Roberts dissembled it, knowing that it was all through his ill-treatment of Brag.

He next proceeded to windward, near Senegal, which was monopolized by the French, who kept cruisers to hinder the interloping trade; two of which having got sight of Robert's, and supposing him to be one of them, chased with all the sail they could make to get up with him; but their hopes deceived them, for upon hoisting Jolly Roger, (the name they gave to their flag) the Frenchmen's hearts failed them, and they surrendered without resistance.

With this capture, he went to Sierra Leone, and called one of them Ranger; the other he made a store ship to clean by. The harbour of Sierra Leone is so convenient for wooding and watering, that most of our trading vessels call in there with beer, cyder, and strong liquors, exchanging it with the inhabitants for teeth and slaves.

Afterwards, he went to Old Calabar, to clean their ships where they divided the fruits of their labour, and drank and drove away care. At this place they took Captain Low, and two or three Bristol ships; but the negroes here did not prove so kind to them as they expected—for they refused to trade with them after they knew they were pirates. This did but exasperate the pirates, who sent forty men on shore under their cannon, to drive the negroes into the woods; against whom the negroes drew out a body of two thousand men? but, having three or four men killed, they retired; upon which the pirates set fire to the town, and then returned to their ships, with which they sailed for Cape Lopez, to water; and at Annabona took on board fresh provisions, and then sailed for the coast again.

This was their last and fatal expedition. Falling down as low as Cape Labon, they took a ship called King Solomon, and a trading vessel. Being at the leeward of the King Solomon, at Cape Appollonia, and the wind and current against them, they sent their long-boat filled with men to take her, who rowed towards the vessel with a great deal of cheerfulness. Captain Trahern prepared to receive them, firing at them as they came under the stern, which they returned with a volley. Then he asked his men if they would stand by him; saying, it was a disgrace to lose the company's ship without one blow. But Philips, his boatswain, laying down his arms, called out to the boat for quarter; by whose example all the rest surrendered, and they lost the ship.

The Swallow and Weymouth, men-of-war, left Sierra Leone the 28th of May, and went in pursuit of the pirates. Meeting with a Dutch ship, they inquired of him, if he had heard anything of Roberts in those seas? He answered that he had just been at Cape Lopez, and had seen no ship there. However, they beat up for the Cape; and on the 5th, at dawning, was surprised with the noise of a gun from Cape Lopez bay, where they discovered three ships at anchor, which they concluded was Roberts and his consorts; but the Swallow being to windward, was obliged to steer off, which the pirates interpreting to fear, righted the French Ranger, and ordered her to get out in all haste.

The Swallow finding they had mistaken her design, kept off to sea, as if she had been really afraid; upon which in a little time, the pirates drew near enough to fire their chase guns, and hoisted the black flag, that was worn in Whydah road thinking her to be a Portuguese; when on a sudden, they saw her bring to, and fire at a distance. They were now completely puzzled. Their main-top mast soon came down by a shot, and they got otherwise so much shattered that they struck their colours and called for quarter, having had ten men killed and twenty wounded, without the loss of one of the king's men.

While the Swallow was sending their boat to fetch the prisoners, half-a-dozen of the most desperate agreed to blow themselves up; and immediately carried their project into execution; but having too small a quantity of powder left, it only burnt them in a frightful manner.

This ship was commanded by Skyrme a Welshman, who having lost a leg in the engagement, fought upon his stump. I cannot refrain from noticing Roger Ball and William Mam, two of those who were disfigured by the blast of powder. One of the officers saying to the former, "I suppose you are boatswain of this ship!"

"No," said he, "I am boatswain of the Royal Fortune, Captain Roberts commander."

"Then, Mr. Boatswain, you will be hanged," said the officer.

"That is, as your honour pleases," replied he.

"But how came you in that condition with the powder?"

"By G—, sir, they are all mad and bewitched, for I have lost a good hat by it."

"But what signifies a hat, friend," said the officer.

"Not much," replied he, since you strip me stark naked."

The officer then inquired whether Roberts's company were all as bold as himself?

"There are one hundred and twenty," replied he, "as brave fellows as ever trod upon a shoe. Would I were with them."

"No doubt," said the officer.

The officer then turning to Mam, asked him how he came blown up in that frightful manner?

"Why," said he, "John Morris fired a pistol into the powder; and if he had not done it, I would."

"Well, I am a surgeon," said the officer, "and will dress your wounds."

"D—n my wounds!" exclaimed he, "if you put anything to 'em I shall tear it off again."

They next secured the prisoners with shackles and pinions; but the ship was so disabled, that they had thoughts of setting her on fire; only she having wounded men on board, they repaired her rigging and sent her to Princes Island.

On the 9th, the Swallow gained the Cape again, and saw the Royal Fortune standing into the bay, with the Neptune, Captain Hill, of London.

On the 10th, the man-of-war bore away to round the Cape. Roberts's crew discerning their masts over land, went out and told him; but he took no notice of it, and his men almost as little.

As the Swallow approached nigher, some of them swore it was a man-of-war coming to take them all. Roberts swore at them, calling them a parcel of cowardly rascals; but as she came nearer, being perfectly convinced, he slipped his cable, got under sail, and ordered his men to arms, swearing it was a bite: "But be it as it will," said he, "I'll get clear or die!"

Though the time was very short to consult of means to extricate himself, yet he resolved to pass close to the Swallow, with all their sails, and receive her broadside, before he returned a shot. If disabled by this, then to run ashore at the point, and every one to shift for himself among the negroes.

Roberts, in the engagement, made a noble figure, dressed in a rich crimson damask waistcoat and breeches, a red feather in his hat, a gold chain round his neck, with a diamond cross hanging to it; a sword in his hand, and two pair of pistols, according to the custom of the pirates, slung over his shoulders, giving his orders with boldness. Receiving the first fire, he hoisted the black flag, and returning it, shot away from her; but the wind shifting, he was taken back with his sails, when the Swallow came again near him, and a shot took him directly in the throat, otherwise it would have been a most desperate and bloody battle.

Roberts was a fine tall man about forty, born at Neweybag, in Pembrokeshire; of good natural parts and personal bravery; but he applied them wrong, frequently drinking, "D—n to him that ever died by a halter."

He forced himself from on board the Prince at Anamaboo; and frequently shed, as he used to tell all the new hands, as many crocodile tears as any of them; but owned it was the unkind usage of masters, that often brought the sailors to take such courses. He was in the habit of saying, "A merry life and a short one, shall be my motto." Among all his vile actions, he never forced any of his crew into his service.

When Roberts fell, the men neglected all means of defence; and their main-mast being shot by the board, they called for quarter. The Swallow kept aloof, while her boat passed and re-passed for the prisoners, some of the desperadoes swearing they would blow her up. She had forty guns, and one hundred men, thirteen of whom were killed, without any loss to the Swallow.

There was found in her two thousand pounds in gold dust, besides many other valuable things. After they were taken they had a mind to rebel, if they could have got an opportunity; but in order to secure them, they strongly barricaded the gun room, with an officer and twenty men, night and day, doing duty, with pistols and cutlasses, and the prisoners within were manacled and shackled.

They would often say, when they looked upon themselves, "That they had not one halfpenny left to give old Charon to

ferry them over the river Styx; and swearing, if they had no better allowance, that they should not have weight enough to hang them." Sutton was very profane. Asking one who used to say his prayers, what he meant by it? "I hope for heaven," said the other. "Tom-fool!" said Sutton, "did you ever hear of any pirate going there? give me hell! it's a merrier place, and I'll give Captain Roberts a salute of thirteen guns at entrance."

A conspiracy was then formed to kill all the officers and run away with the ship; but it being discovered by a mulatto boy who attended them, those who had contrived to get off their shackles, had others put on double: and it proved of no other service to them but to find stronger confinement.

When they came to be lodged in Cape Corso Castle, all their hopes of escaping were abandoned, and they expected nothing but a speedy execution, many of them becoming penitent.

A great many of them had entered with Roberts on the coast of Africa, not many months before they were taken prisoners; from whence it is evident, that Roberts compelled none into his service, as was pretended upon their trial; he being frequently heard to say, "That he would force nobody to go but who were willing."

They being now to be brought to their trial, and there being no lawyers in the country, the court consisted of Captain Mungo Heardman, president; James Philips, Esq., general of the coast; Mr. H. Dodson, and Mr. Boyne merchants; Mr. John Barnsley; Lieutenant C. Franshaw, and Edward Hyde, secretary to the company; who being met in the hall of the castle, proceeded with the trial, wherein we find the list stand as follows:

Accquitted, seventy-four; executed, fifty-two; respited, three; servitude, twenty; the Marshalsea, seventeen. Killed in the Ranger, ten; killed in the Fortune, three; died in the passage to Cape Corso, fifteen; afterwards in the Castle, four negroes; in both ships, seventy. Total, two hundred and seventy-seven.

I shall now relate what occurred worthy of notice in the behaviour of these criminals. The first six ordered for execution, were, Magnes, Moody, Sympton, Sutton, Ashplant, and Hardy, all old offenders. When they were taking off the fetters, and fitting the halters, none of them appeared the least dejected. A surgeon of a ship officiated in the room of an ordinary, representing to them the heinousness of their sins, and the necessity they laid under to call upon God for mercy.

To which they appeared quite heedless, some calling for water, and others to the soldiers for cups; giving no answer, but exclaiming against the severity of the court, saying, "They were poor rogues, and so hanged, while others, no less guilty in another way, had escaped." But he exhorting them to die in charity with all the world, they said, "What was that to him! they suffered the law, and should give no account to any but God. So they died hardy, as they called it. Hardy swore, he had seen many a man hanged, but this way of the hands being tied behind them, he was a stranger to, and never saw before in his life. I only mention this to show how thoughtless they were of their end; and that the same reprobate temper they had in their piracy, continued amongst them to the last.

Samuel Fletcher, another of the pirates, ordered for execution, but reprieved, when he saw his companions going to be hanged, desired to be informed of the meaning of it, saying, if he was to suffer the sooner the better, that he might be out of his pain.

But there were others among them, who employed their time to better purpose, and behaved with a great deal of seeming penitence and devotion; amongst whom were Scudamore, Williams, Philips, Stephenson, Jefferys, Lesly, Harper, Armstrong, Bunce, and a few others.

Scudamore discerned, but too late, the folly that had brought him under sentence of death; and that he might make the better preparation for it, he petitioned for two or three days reprieve, which was granted, and he spent the time in reading and praying, seeming to have a deep sense of his sins, and particularly the sin of piracy, for which he was to die. At the gallows, he begged they would have patience to let him sing part of the fifty-first Psalm, which they did.

Armstrong having been a deserter from his majesty's service, was hanged on board the Weymouth, sadly lamenting and bewailing his sins in general, exhorting the spectators to take warning by him; and then, desired leave to sing two or three verses of the one hundred and fortieth Psalm, which having done, he was, at the firing of a gun, pulled up at the fore yard-arm, which soon put an end to his sufferings.

Bunce was a young man, not above six-and-twenty years old, but made the best speech of any on the gallows, declaring against the gilded baits of liberty and riches, which made him turn pirate, his youth not being able to withstand the temptation. He was extremely afflicted for the injuries he had done to all men, and begged their's and God's forgiveness, very earnestly exhorting the spectators to "Remember their Creator in the days of their youth, that their minds might not so soon be corrupted; and that he should hang there as a beacon upon a rock, to warn erring mariners of their danger."

THE SEA.

How glorious to me is the stormy sea,
When the billows the shores are lashing;
When the wild winds sweep o'er the briny deep,
And Heaven's bright fires are flashing;
When the voice is heard of the lone sea-bird,
As it raises its wailing cry;
When the storm-cloud wraps the sun in a shroud,
And dreary and dark is the sky.
It reminds us of life—of its storms and strife,
Of sorrows that darken our day,
When clouds gather round and not one friend is found
To cheer us or brighten our way.

How glorious to me is the evening sea,
When the dying winds feebly moan,
And its mellowing ray, at the close of the day,
The sun o'er the billows has thrown.
I could wish to be like that peaceful sea,
When about this brief life to resign,
And that those now dear may then be near,
To gladden and soothe its decline.

But more glorious to me is the midnight sea,
When the surges are calmly sleeping;
When the wind passes by, without e'en a sigh,
And the moon her pale watch is keeping.
It reminds us of death, when our latest breath
Has exhal'd, and we are at rest;
When the spirit shall rise, and pass to the skies
For ever to dwell with the blest!

ALARMING ODDS.—NARROW ESCAPE.

WE were within hail of the frigate, and hammering away in the most Christian-like manner, when the master reported that the French fleet had tacked, and that the van ship looked to windward of us. A prudent man would have instantly desisted from further offensive operations, and only thought of a speedy retreat—not so Sir Peter Parker; he was resolved to have a continuation of the tragedy, and interrupted the cautious suggestions of old Soundings, with "Another broadside, my lads; be steady, and take good aim. That's all right—let the smoke clear away." "We must really wear, sir," said the master, "for, independent of being in shoal water, we never can pass to windward of the enemy's line; and we cannot run between them and the shore, for that in-shore squadron." "One more broadside, and then stand by to board," was the only answer. Sir Peter's guardian angel interposed, and took the film of glory from his eyes, showing him his inevitable ruin in the perseverance of his plan. We wore, and stood out to sea; the French frigate again cheering, the batteries firing, and we for the moment quieted. We had nothing left for it but to steer boldly for the van-ship of the enemy's line, say our prayers, and pack up for a French prison. As for hope, we had none!

A single frigate to face thirteen sail-of-the-line, amongst which were three three-deckers, besides an in-shore squadron, all ready to pick up the wounded bird, if it should happen to fly past the line of fire; something like pigeon-shooting, where, if the pigeon is missed by the man in, about a thousand stragglers take the liberty of knocking it down.

I was quartered at the eight after-guns on the main-deck, and therefore I had the *entree* of the captain's cabin, or rather the privilege of walking where the cabin did exist. My attention was awakened by the presence of the captain; for I had been looking out of the stern-windows at our late antagonist, who, while he directed his course into Toulon, continued to direct his broadside at us. Sir Peter called his clerk; destroyed his private letters; placed the signals in the leaded box, ready to be thrown overboard; looked round the quarters quite unconcerned; and, having cast his eyes over some private memorandums, walked on deck as leisurely as if he had a prospect of saving the frigate. Very differently did we behave. My companion at quarters had been a prisoner in Verdun, and began to recall to his memory all the privations and fatigues he had undergone. "Put on your thickest shoes, my lad," said he to me; "two pair of stockings, and an extra shirt: make your mind up to stretch your legs, for you'll be tied to a horse's tail, all in a line, like a file of soldiers: and, trot or gallop, you must trot and gallop too; no chance of an escape; *gendarmérie* before, behind, right and left—no pity for youngsters. Stop when the horses stop. As for money, that would be serviceable, if they would let you keep it; but money is a golden key too likely to fit any lock; besides, plunder is proverbial in the French navy."

The crew, who overheard these pleasant intimations, caught the alarm, and ventured to exchange ideas in the following tone:—"No more Common-hard or North-corner hops for my Poll and me. Caught upon a clinch here, and no knife to cut the seizings. I say, Tom can you palleyvous? for these outlandish lubbers can't speak our lingo. My eyes and limbs! if I would not sooner see the barkey sink under us, than see that striped rag over our jacket. It must blow great guns, and muskets, to blow us clear of these mounseers this time!"

The private signals were placed on the capstan, and Sir Peter took up his position on the carronade slide on the larboard side abreast of the wheel. The men all stood to their quarters, and the minute rapidly approached which was to decide our fate. We were within two miles of our adversaries, when the leading ship tacked, and shortened sail. This was followed by the whole fleet, which tacked in succession, and brought their rear-ship as our nearest opponent. Our enemies, being under their topsails and jib, progressed about five knots through the water; while the *Menelaus*, being under all the sail she could bear, was advancing at the rate of nine. We were now a long pistol-shot distant, and abreast of the enemy's rear-ship. Calmly did we stand the broadside of her—to return it was useless; besides, firing puts down the wind, and the harder it blew the better for us. We passed ship after ship, each firing as we came abreast, and each ceasing when her second ahead commenced. Had they made more sail, and luffed to the wind, nothing in the world could have saved us—the capture was inevitable. At last we came alongside of the headmost ship. Hope now began to dawn; provided our masts escaped, we had a chance of escape. Not a word was heard on board the *Menelaus*, as the broadside of this eighty-gun ship whistled over our heads. The master himself was steering the ship with the steadiness of a fearless sailor, determined not to lose an inch of ground, and we had passed the beam of the enemy before he relinquished the helm to the quarter-master. At this moment the enemy ceased firing, and the whole fleet began to make all sail in chase. We edged away about a point, in order to get right ahead of our antagonist; which having effected, we began to fire our stern-chasers, in hopes of wounding a spar of the eighty-gun ship. As, however, the weight aft did not assist our speed, but had evidently altered the trim for the worse, the guns were removed to their proper stations; the men were directed to lie down at their quarters; and very shortly we, thanks to the long legs of the frigate, were a mile and more ahead of our enemies.

SCENE ON BOARD H. M. S. SPITFIRE.

BURTON came down to "report himself" returned. He detailed the occurrences which took place, and the certainty of procuring provisions and water, with the invitation of Captain Crank, an old retired commander, to the skipper to dine on shore.

Unaccountable as it may appear to any but the female reader, the circumstance of Crank's fair niece having joined in the request was not mentioned.—Possibly arising from the suppression of this inducement, the valetudinarian expressed no inclination to accept the proffered civility; and the lieutenant, now more at ease as to any apprehensions that the odds were against him, or that two epaulettes might be more attractive than one, solicited permission to dine on shore—a permission which was not withheld, as Burton threw out a politic hint that the advice of the veteran might be turned to present advantage.

Burton had scarcely closed the door of the cabin, before he cried out in the steerage passage—"I say, serjeant, send my boy aft, and one of the 'party,' if you please, to pipe-clay my white pantaloons."

"Pass the word forward for the boy Barnes," cried the serjeant.

"Sing out there for Skillygalee Jack," said a saucy top-man, hauling up his trousers.

"Him mus'n'a come—him turning a spit," cried the captain's black cook, with that air of authority, so peculiar, to the sable race when in the authority of office.

From all outward signs, the boy certainly seemed better calculated to turn the spit, than ever to succeed in the higher walks of the profession; and, so far, the intuitive instinct of the savage at the coppers, proved a better guide in determining the bent, and perhaps, capabilities of the ill-starred urchin, than the more aspiring pretensions of his affectionate parents: who very judiciously, as it had been whispered, sent him to sea to learn manners. The first week, however, he had instinctively discovered the galley to be his province. Here, by a total negligence of his person, (notwithstanding the inspection and drill to which boys are subject in the service twice-a-day) and a ready acquiescence in the various drudgeries imposed by his black superior, he had become a domiciled favourite; and his services frequently preferred to those youths less ambitious.

And here a reflection may suggest itself on the prevailing taste of officers in the navy for African attendants. It has been the fashion ever since the days of Benbow; no inglorious epoch, by the by. Were we in the habit of hunting for something *recherche* in the shape of precedent, this practice with respect to poor *Quamino*, who all the world knows, often proudly traces his lineage up to sable royalty itself, might be supposed to originate in the classical recollection, that the vain glorious Romans imagined their voluptuous dainties acquired a higher relish when served up to table by royal captives. As to some of the berths occupied on board by some of our negro brethren even the amiable Wilberforce himself might augur, that the appointment originated in humane feeling. But as to the cook, Jack uniformly and artlessly attributed it to the "Negur" being born in the torrid zone, and therefore better able by "natur" to bear the burning fervours of a galley fire in the dog-days.

From reflections far less philosophical than the preceding, our lieutenant was roused by hearing the bell strike seven.

"What! Powers that be! is that seven bells?—only half an hour to rig and run ashore. Come Lively," said he to his boy, who had reluctantly relinquished his post of honour to another youngster—"Come send the barber aft in a minute."

"Aye, aye, sir," said the same loquacious top-man, who happened to be standing at the fore part of the steerage passage, and who appeared to be one of those privileged men, or rather licensed wits, that may be found in every ship in the service. "Pass the word there for 'Lathering Bob.' Tell him to bear a hand aft: the second lieutenant wants his muzzle-lashing off in a crack."

"I'll muzzle you, sir," said Burton; "if I hear any more of that singing out among the decks;" when retiring to the gun-room, he continued as he rummaged his pockets, "I say, steward, did you see my keys any where? But it's ever the way when one's in a hurry. Come, Mister Purser, no tricks upon travellers; these sort of practical jokes are very well in a midshipman's berth; besides, they are but a poor recompense for my performance of your duty."

"My duty," replied the purser, in a cynical tone, "I'm on the doctor's list. Some one must have taken the 'demand' for beef on shore, or we should have had no fresh grub to stop your grumbling mouth."

"Please, sir, all the black'ngs out this week past," interrupted Burton's domestic, drawing out his words monosyllabically.

This intelligence was quickly succeeded by another of almost as pleasing a nature. The marine to whose fostering charge the lieutenant's holiday inexpressibles had been consigned, appeared at the gun-room door with a woeful face, and pre-luding with a scratch of the head, reported, "The pantaloons, sir, are rather out o' condition. They must have been put by wet and got mildewed. Besides, sir, here's an ugly blotch of port wine in front. I've been trying to coax it out with a little hot pipe-clay, but I can't come it. I was thinking, if so be, sir, as you must wear 'em, that you'd better keep a small bit of pipe clay in your pocket, and touch 'em now and again as soon as they gets dry enough, but you'd better let them be till you gets in the wind."

"In the wind! curse you, I believe you're all in the wind."

Some one with hurried foot came tumbling down the after-ladder, and announced, "sir, there's a whiff flying ashore, and the first lieutenant thinks it for you."

The rapid announcement of one calamity after the other, (for calamities they must all be considered by a man in a hurry), strongly reminded him of that pattern of patience mentioned in sacred history, and he resolved to bear all his misfortunes with the equanimity of his parallel; but unluckily, this composure was destined to be short lived, for in his eagerness to expedite his dressing, he the next moment thrust his heel through his stocking. The weight of his woes, aggravated by this additional interruption, overcame all his self-possession, and with a hearty imprecation, he shouted out, "What next?—any more of Job's comforters!"

Irritated as he was by these occurrences what must have been the effect produced on his too sensitive ear by the report of a gun, or, as ladies would denominate it, a cannon from the shore? Another of the messengers alluded to, determined not to lose this too fortunate opportunity of trying his temper, sung down the skylight, "Mr. Hasty says, that's for you, sir, and you'll be too late for dinner."

The report of a gun was echoed by a crash below, arising from the violent contact with the beams above of a boot jack, which lay too conveniently close to the hand of the irritated lieutenant, as he have it at the messenger's head, exclaiming, "and that's for you, my young fellow."

The pantaloons were again exhibited, and Lively prostrated the tawny-coloured boots at his feet. This was too much for his philosophy. It was impossible, he thought, to make his appearance before the fair sex in such shabby attire. Not a lawyer's clerk at assizes—not a barber's apprentice parading Hyde Park on a Sunday—or a Jew rigged out on a shabbash in some of his best saleable second-hand clothes, thought he, but must appear more gay and debonair in the eyes of the sex.

"D——n it," cried Hasty, opening the skylight hatch, "you're as long bedizening as a bride, and all for that old buffer on the hill. One would think you were bracing up for a ball; or rigging out for a levee of sycens. Come, better bear a hand, the people are going to supper presently, and then we won't be able to spare the boat."

"Spare," said Burton, "that's just like you; it's long before you'd spare one, even a bottle of blacking, and when I do go on shore, (which is seldom enough), I should like to support the character of the cloth."

"Well, rather than have a cannonading from the old boy's battery ashore, I'll rig you out to the nines. But here we

have it," continued Hasty, moving from the skylight, and pointing his glass out of one of the port-holes in the direction of the cottage—"here we have it, for there comes the gunner with a red-hot poker."

Having so said, he despatched his servant for the necessary essentials for Burton, premising in a whisper—"By no means let him have my best shore-going swab."

This intimation given with respect to the poker, was no false alarm, for the conclusion of Hasty's speech was accompanied by a reverberation of echoes from the neighbouring hills, which sufficiently testify that much longer delay would be fatal to the festivities of the evening.

"What a provoking hurry!" cried Burton.

"On deck there!" cried the captain through his skylight, which was usually kept open when the weather was fine. "What guns are those firing! Any thing in distress in the offing?"

"No, sir!" replied Hasty, "only Mr. Burton in distress for time and togs—I've relieved him from one embarrassment—perhaps you'll extricate him from another, and save time, by allowing the gig to land him. Indeed it may be best for ourselves," added the first lieutenant, rather drily; "for the old gentleman ashore seems so peppery. I shouldn't wonder if the next gun was shotted!"

"Come, Hasty," said the captain, "that's rather a wild conjecture—but it's not fair to taunt poor Burton—he may have the laugh against you. Man the gig and land him at once, and tell him to say something civil to the old gentleman for me."

With one spring from his cabin-door on to the gun-room table, a vault upon the deck, aided by the rim of the skylight, he hastily descended the brig's side, and jumped into the boat, ere she had been completely manned. But his flight was not unattended by defeat; for the boat had hardly reached her destination half-way, when he thought he perceived the coxswain eyeing his dress with a significant look, as if he had detected his borrowed plumage.

"Why, coxswain," said Burton, "you seem to be over-hauling my rigging very closely, is there anything amiss?"

"I doesn't exactly know, sir; but it looks to me, sir, as if you'd carried away the weather topping-lift of your trousers, the lee-leach, you see, sir, is as slack as water."

"Curse it! if I haven't carried away my braces, springing up that infernal skylight. Back water, you starboard oars,—no, avast there—give way again—won't do to go back to the brig—I'll make shift with one o' yours."

"Mine, sir," said the coxswain, startled at the lieutenant's entertaining the idea that a sailor ever wore a suspender in his life. "Mine, sir, I hope you don't take me for a soger, sir! I never wants any thing to keep the eyes of my rigging from slipping down over the hounds o' the mast. But here's a bit o' rope-yarn in the bottom o' the boat."

"Why, Bill," said the bowman, "there's a piece of dry parcelling in the locker abaft, as 'ill make a good preventer-brace on a pinch."

"That's right, Jones," said the lieutenant, brightening up at the bowman's suggestion, "that's right my man, put me in mind to-morrow to give you a glass of grog for the thought."

"Aye, aye, sir," cried Jones, with good humoured dryness, "I'll freshen your memory, if you'll only freshen the nip."

Castling a glance once more at the flag-staff on shore, and dreading any further expenditure of powder from that quarter, he was fain to avail himself of the bowman's substitute, and consult the coxswain, instead of his mirror, as to his appearance. That arbiter of fashion, after examining the lieutenant as fastidiously as a boatswain would a ship, when employed in boat a-head, squaring yards, and repeating the usual commands on such occasions.

"Top away on your starboard lift, now lower a little o' your larboard, hold on of all, there you are, sir," concluded with the consolatory assurance that all was now "square by the lifts and braces, and everything taut fore and aft."

Despite of the embarrassments which accompanied the making up of his toilette, all which might well be considered to operate as a draw-back upon his personal appear-

ance, Burton, though like many a beau of the first-water, in clothes not his own; might be pronounced a gentleman-like, and, as the phrase runs, a well-looking fellow. Above the middle height, and though rather slender, well-proportioned. His step was elastic, his carriage commanding; and an ingenious candour diffused itself over his features.

The boat had already been beached, and with a light step on shore and injunction to the coxswain to remind the first lieutenant to send a boat for him at gunfire, he ploughed his way almost knee-deep through the shingle, and ascended to the cottage.

The consciousness that the general movements must have been all distinguished from the veteran's window, and that the scrutinizing eye of Crank had brought his favourite telescope to bear upon his person as he approached the shore, by no means contributed to allay his anxiety as to an appropriate apology for his delay. The petty embarrassments which caused it, could not even have been hinted at. He had therefore, to draw on the fertility of his imagination, which alternately suggested that the boats had all been despatched for water, that one of the gig's thawrts had been carried away in the morning, that the carpenter took longer to repair it than expected, and, finally, that there was some difficulty in obtaining leave from his captain at so busy a period. From all concern on this head he was relieved by the unaffected cordiality of his reception.

Crank contented himself with simply stating in allusion to the shots fired, that it was always his maxim afloat, when folk were either napping, or slack in stays in answering a signal, to open their ears as well as their eyes, with a gun.

ACCIDENT TO H. M. S. GUARDIAN.

"Midst dangerous shoals the sea-tossed bark is borne,
By tempests shaken, and by lightnings torn;
Still freed from harm, though peril's ever nigh,
Death's shaft flies near her—but it passes by."

THE sloop *Guardian*, commanded by Lieutenant Riou, (afterwards Captain Riou, who gloriously fell in the action before Copenhagen, on the 2nd of April, 1801,) and manned with a crew of one hundred and twenty-three persons, including twenty-five convicts, bound to Botany Bay, was uncommonly well stocked; for such had been the care of the government for the infant colony, that an ample supply of the most minute articles had been provided. The vessel having touched at the Cape of Good Hope, proceeded on her way to New South Wales. Twelve days after her departure from the Cape, being in lat. 44° S., and long. 41° 30' E. of London, on December 23, an island of ice was discovered. The weather was extremely foggy, and when first descried, the island was not very far distant. Lieutenant Riou gave directions to stand towards it, that they might collect lumps of ice to supply the ship with water, which was very much needed, as their demand was so great, having a great number of cattle on board. As the ship approached the island, the boats were hoisted out while the ship lay-to, and the supply being brought on board, she attempted to stand away; there being very little apprehension as to her safety, although the magnitude of the island occasioned a partial current, and gave, in some degree, a partial direction to the wind.

On a sudden, the base of the island, which, under water, projected a considerable way beyond the limits of the visible part, struck the bow of the ship, when she instantly swung round and her head cleared; but her stern coming on the shoal, she struck repeatedly, and the sea being very heavy, broke away her rudder, and shivered all her works abaft. In this situation, the ship became embayed as it were under the terrific bulk of the ice, which was twice the height of a first-rate's mainmast, the head of which they expected every minute to break away and overwhelm them; but after very great exertion, she was got off the shoal, and the ice floated past her.

Upon sounding, they found that the ship had six feet water

in her hold, and increasing very fast; all hands were immediately set to the pumps, and to find out the leaks, occasionally relieving one another, and thus they continued to labour incessantly the whole of the 24th, although not one of them had had any rest the whole of the preceding day.

By extreme exertions at the pumps, the leak became reduced, and continued to diminish until eleven o'clock, when there was only nineteen inches, but in half an hour the leak began to gain upon them again, upon which a second sail was fothered and got under her bottom; but the gale was so strong, attended with a heavy sea, which frequently broke over the ship, that it had little, if any, effect. At four in the afternoon, Mr. Clements, the master, went down by way of the rudder into the gun-room, and from thence into the bread and spirit room, to endeavour, if possible, to discover the leak; but not being able to succeed, it was

thought necessary to scuttle the deck close aft, which being out of the roll of the water, would enable them to get out and throw overboard some of the provisions and stores.

Lieutenant Riou, the chaplain, the purser, and two men, were employed in this business; but, unfortunately, in endeavouring to get up a cask, it fell back on Lieutenant Riou, and bruised his hand in so shocking a manner, that he was unable to give any further assistance. They gave up all further attempts to lighten the ship, and again assisted at the pumps.

At midnight the water had increased to four feet and a half in the hold, and the winch of the starboard pump breaking, it became disabled, so that at six in the morning of the 25th, it had increased to seven feet: the night had also been very tempestuous, and, by the violence of the wind, the fore and main-topsails were blown to pieces, leaving the ship entirely at the

DREADFUL ACCIDENT TO THE GUARDIAN, COMMANDER RIOU, DECEMBER, 1789.

mercy of a most tremendous sea. This so disheartened the crew, that they began to break off from the pumps and to secrete themselves, and it was only by threatening to have them thrown overboard that they could be kept to their duty. All this time they were ignorant of the true state of the ship, until one of the carpenters, stationed to sound the well, came up and reported that the water was as high as the orlop-deck, and gaining above a foot every half hour. The officers could not possibly suppress this report, and many of the people who were really unable to bear the fatigue any longer, immediately desponded, and gave themselves up to perish with the ship. Some of those who had got any strength left, seeing that their utmost efforts to save the ship were likely to prove in vain, applied to the officers for the boats, which were ordered to be got in readiness, and the boatswain was directed to put

the masts, sails, and compass in each. The cooper was also set to work to fill a few quarter-casks of water, out of some of the butts on deck; and provisions and other necessities were got up from the hold.

While they were making these preparations, Lieutenant Riou withdrew, and penned the following letter to the secretary of the Admiralty, which affords one of the most uncommon proofs of fortitude and virtue.

“H.M.S. Guardian, Dec. 25, 1789.

“SIR,—If any part of the officers and crew of the Guardian should ever get home, I have only to say, that their conduct, after the fatal stroke on an island of ice, was admirable and wonderful in every thing that relates to their duties, considered either as private men or in his majesty's service.

"As there seems to be no possibility of my remaining many hours in this world, I beg leave to recommend to the consideration of the Admiralty, a sister, together with a widowed mother, to whom their favour might be shown, if my conduct or services should be found deserving of any remembrance.

"I am, sir, with great respect,

"Your ever obedient servant,

"Philip Stevens, Esq.

"E. Riou."

This letter Lieutenant Riou, delivered to Mr. Clements, the master, that in case he was fortunate enough to escape, he might be enabled to forward it to England.

Many hours previous to this, Lieutenant Riou had declared to his officers, that he saw the final loss of the ship was inevitable, and could not help regretting the loss of so many brave fellows. "As for me," said he, "I have determined to remain in the ship, and shall endeavour to make my presence useful as long as their is any occasion for it."

He was entreated, and even supplicated, to give up this fatal resolution, and try for safety in the boats. It was even hinted to him how highly criminal it was to persevere in such a determination, but he was not to be moved by any entreaties.

He was, notwithstanding, as active in providing for the safety of the boats, as if he intended to take the opportunity of securing his own escape; and was throughout as calm and collected as in the happier moments of his life.

The ship had settled considerably abaft at seven o'clock, and the water was coming in at the rudder-case in great quantities. At half-past seven, the water in the hold obliged the people to come upon deck; the ship appeared to be in a sinking state and settling bodily down; the boats were, therefore, immediately hoisted out, to offer a chance of safety to as many as it could be done with propriety. They were fortunately all got into the water with very little damage; but the sea running so high, it was with great difficulty that they were kept from being stove along-side. The launch being forced to drop on the quarter, in order to make room for the two cutters, was nearly drawn under the quarter and sunk, and at last obliged to cast adrift from the ship with only seven or eight men on board, and without any provisions or water. A coil of rope was then handed over from the quarter-gallery, and passed over to Mr. Somerville, the gunner, in the jolly-boat, which hung over the stern; but this boat on being lowered down was drawn under and sunk. As soon as the launch had again rowed nearer the ship, one of the people in her caught hold of a rope, until the cutters brought them provisions, &c., and then veered to a great distance astern. A small quantity of biscuit, and an eighteen-gallon cask of water, were then let down between the main and mizen-chains, into the small cutter. The purser then got into the main-chains, and from thence leaped into her: Mr. Wadman and Mr. Tremlett likewise unfortunately got into her. The boat was, with great difficulty, rowed clear of the ship, and steered for the launch.

The agitation of mind, on this melancholy occasion, may be better imagined than described.

"Rent was the sail, and strained the mast,

And many a leak was gaping fast,

And the pale steersman stood aglath,

And gave the conflict o'er."

Lieutenant Riou was at this time walking the quarter-deck, and seemed happy that the boat had got safe from alongside. The ship was drifting astern, and sinking fast in the water, so that Mr. Clements began to be afraid she would drive upon the launch, and called to the crew to cut the tow-rope, and row out of the ship's wake; but Mr. Somerville, the gunner, who was looking over the ship's stern, hearing the order, prayed them to hold fast a moment, and he would jump overboard and swim to them, which he did, and was followed by John Spearman, a seaman, who were both taken on board, upon which they cut the rope and rowed out of the ship's track.

The launch soon got alongside of the cutter, out of which they took two bags of biscuit and a cask of water. The Rev. Mr. Crowther, Mr. Clements, Mr. Tremlett, Mr. Wadman, and the purser, with two more of the men, got into the launch, and the cutter was ordered back to the ship for further supplies

and to receive as many of the people as could with safety be taken on board; but the crew could not be prevailed on to return, but rowed off to some distance and lay by. In it were Mr. Brady, midshipman, Mr. Fletcher, captain's clerk, and five seamen.

The jolly-boat had put off from the ship without either provisions, water, compass, or quadrant, and rowed towards the launch, in hopes of either getting relief, or the crew being taken on board; but she had already got fifteen people in her, which were as many as she could carry with safety; and the quantity of provisions was very inadequate to support such a number, who had above four hundred leagues to travel in a boisterous ocean, without any means of relief; but there being a spare compass and quadrant, Mr. Clements handed them into the jolly-boat.

At this time one of the convicts attempted to get into the launch, but was opposed by the crew, and pushed into the sea; but, in the struggle, the fellow caught hold of Mr. Clements, who was with difficulty saved from being pulled out of the boat along with him. The people in the jolly-boat picked up the man again, and then took to their oars, and rowed close up to the launch, as if determined to board her by force, when, to prevent any scuffling, it was immediately agreed to make sail, and they took their final departure from this scene of misery and distress about nine o'clock.

The large cutter and jolly-boat made sail after the launch, but the latter almost instantly filled and went down. The ship, meanwhile, continued for several days in a hopeless state, without a rudder, and wholly unmanageable.

"Didst thou not mark the vessel reel,

With quivering planks, and groaning keel,

At the last billow's shock?

For look on sea, or look on land,

Or yon dark sky, on every hand

Despair and death are near."

Lieutenant Riou was indefatigable in his efforts to preserve the ship; and by his noble example, encouraged the remnant of the crew who had remained with their heroic commander to share his fate, to use every exertion in their power to this effect. He had not only to struggle against the boisterous element in which this melancholy accident had occurred, but also to discover means by which he could divert the minds of a desponding crew, worn down with fatigue, and in despair of ever being relieved from their miserable situation. And a still more difficult task with which he had to contend, was frequently observing symptoms of discontent among the people, which were only prevented from breaking into open rebellion, by the firm and resolute conduct which he maintained, and the strict discipline which he supported, in the midst of the almost insurmountable difficulties and dangers with which he was surrounded. Indeed, at one time, the people had carried their disobedience so far as to threaten his life, and had absolutely constructed a raft of the booms, on which they were determined to take their chance, rather than remain any longer on board the ship; but, fortunately, at the instant it was about to be launched, a favourable breeze sprang up, when Lieutenant Riou, with a presence of mind rarely possessed, prevailed on them, by his remonstrances, to give up a plan which must inevitably have plunged them into certain destruction; and as the wind was then in a favourable quarter, he had no doubt of soon being able to reach some friendly port.

The Guardian continued driving about at the mercy of the wind and sea; although at times, when the weather was moderate, Lieutenant Riou was enabled to keep her head to the course he wished to steer; and sometimes she was forced through the water at the rate of four knots an hour.

On the 22nd February, 1790, to their inexpressible joy,

"As morning broke, the light wind died away,

When he who had the watch sung out and swore,

If 'twas not land that rose with the sun's ray,

He wished that land he never might see more;

And the rest rubbed their eyes, and saw a bay.

Or thought they saw, and shaped their course for shore—

For shore it was, and gradually grew

Distinct, and high, and palpable to view."

This was Table Bay, at the Cape of Good Hope, where, by the assistance of two whale-boats, which were sent out from a British ship lying there, the *Guardian* was towed into anchorage, by which the life of this excellent officer and his companions were saved from utter destruction.

After this Lieutenant Riou was in hopes that he should be able to get the ship round to Saldanha Bay, where he might have a chance to repair, and put her in such a condition as to return to Europe; but, notwithstanding his unceasing exertions to gain this point, he was baffled in the attempt, and the ship continued to make so much water, that he was at length obliged to relinquish his efforts, and, to prevent her sinking at her anchor, to run her on shore on the beach in Table Bay.

The number saved in the *Guardian*, besides Lieutenant Riou, were the Hon. Mr. Pitt, afterwards Lord Camelford, who was killed in a duel by Captain Best; Mr. John Gore and Mr. David Gillmore, midshipmen; Mr. J. Williams, boatswain; Mr. M. Sampson, carpenter; Messrs. Schafer, Devine, and Hume, superintendents of convicts; Elizabeth Schafer, the superintendent's daughter; Mr. William Fairclough, surgeon's mate; thirty seamen and boys, and twenty-one convicts, in all sixty-two. Towards the end of the year, his majesty's ship *Sphinx*, of twenty guns, commanded by Captain George Tripp, was sent out to the Cape to bring home Lieutenant Riou, and those of the crew who were still with him.

The preservation of the *Guardian* was attributed chiefly to the casks in the hold pressing against the lower deck, the hatchways of which were made excessively strong, and caulked down. She was completely stove in under the counter, and had also an amazing hole quited through her bows, by which the iron and shingle ballast washed out; by this means she became more buoyant, and at her arrival at the Cape, was nothing more than a floating raft.

Lieutenant Riou immediately despatched another letter, dated Table Bay, February 22, 1790.

"SIR,—I hope this letter will reach you before any account arrives of the loss of his majesty's ship *Guardian*. If it should, I have to beg you will inform their lordships, that on the 23rd December the ship struck on an island of ice; and that on the 25th, all hope of her safety having vanished, I consented that as many of the officers and people should take to the boats as thought proper. But it pleased Almighty God to assist my endeavours, with the remaining part of the crew, to arrive with his majesty's ship in this bay yesterday. A Dutch packet is now under sail for Europe, which prevents me from giving any further particulars, especially, as at this instant I find it more necessary than ever to exert myself to prevent the ship from sinking at her anchors.

"I am, sir, most respectfully,

"Your ever obedient servant,

"E. Riou."

Lieutenant Riou's first letter arrived on the 23rd of April, and the loss of that gallant young officer, together with many other valuable lives, was universally deplored; however, on the 28th of the same month, his second letter was brought to the Admiralty by the master of a fishing vessel, lying off Dungeness, who had been hailed by the captain of the Dutch packet, from the Cape in eight weeks, passing through the channel, who delivered him this letter from Lieutenant Riou at the Cape, to be forwarded to London. It was immediately transmitted to the king, who, upon reading it, expressed uncommon satisfaction; and at night, Lord Chatham set off post for Lord Camelford's country seat, to carry him the joyful tidings of the safety of his son, who was on board the *Guardian*.

Thus, by the interposition of Divine Providence, and the fortitude and perseverance of the commander, this vessel was preserved, after encountering almost unparalleled dangers, and experiencing one of the most miraculous escapes recorded in the naval history of this or any other country.

We must now turn to the perilous situation of those who left in the launch. At about half-past eleven they lost sight of the ship and boats, and shaped their course as much to the northward as the wind, then at N.W., would permit.

On the next day, after leaving the ship, the wind blew in

strong gales, the weather was squally and cloudy, with remarkably high seas; and through the night they could get no sleep, as they were so chilled and benumbed with the cold. On the following morning the weather became more moderate. At four o'clock they shifted the foremast to its proper place, stepped the mainmast, and set the fore and mainsails; at eight the people were employed to make a main-topsail out of some sheets, and a yard out of one of the boat's thiwarts; the handle of a broken oar was converted into a topmast; a small tobacco canister was cut up to make a measure for the distribution of water, the allowance being rather less than two gills per day to each man.

On the morning of the 27th, the weather was cloudy, with moderate breezes. At one, p.m., having boiled all their poultry, and cut up the goose, which was but a small one, into fifteen equal parts, they blindfolded one of the men, who was directed to call each person by name, while another served out the morsels by lots; but such was the little appetite they had for food, that, although they had fasted above thirty hours, each seemed perfectly satisfied with his little morsel, and some even reserved a part of it for a future occasion. But the very scanty measure of water they afterwards received, by no means allayed the craving thirst for drink, which was evidently occasioned by the excessive heat and feverish state of their bodies. They did not dare, however, to take one drop more than the prescribed allowance; but, becoming philosophers through necessity, submitted to the exigencies of the moment with becoming resolution. At seven, they had their second allowance of water, which, being succeeded by the coldness of the night, administered greatly to their relief. At midnight, it blew a fresh gale, with dark, cloudy, and remarkably cold weather. The launch was at this time brought under her mainsail only, and the weather continuing much the same, no alteration had been made in her throughout the day.

The morning of the 28th was cloudy, with fresh gales, but, towards the middle of the day, the weather was more moderate. About noon they had one of the fowls cut up, and divided amongst them, as on the preceding day, and then received their gill of water; but the heat and fever of their bodies had so increased, that their lips began to break out in watery and ulcerous blisters. One of the crew, being afraid of famishing, requested his whole quantity of water for the day at one serving, but this being opposed by Mr. Clements he had recourse to salt water, of which he drank freely. At five o'clock in the morning, they got the topmast up, and set the topsail; but fresh gales coming on about ten, it was lowered and taken in again. There were immense numbers of sea-fowl flying about, which is not unusual in these seas, and had they been fortunate enough to have had a fowling-piece, they need not have been much at a loss for provisions; but, though they had powder and shot in store, they had only two brace of pistols, with which they were unable to do any execution.

At day-break, December 29, they had strong gales, with flying showers of rain, from which they endeavoured to benefit as much as possible, by facing the weather, with their mouths open, and handkerchiefs spread out, but the drifting moisture was so thin and light, that they were barely able to catch sufficient to moisten their lips. In the morning, they had each a small thimble-full of rum, which was occasionally allowed; and at noon they cut up and divided their last fowl, sharing the water as before.

On December 30, they were so far reduced that they were not able to swallow the smallest crumb, until they had been supplied with an additional measure of water to moisten their lips, which were almost held together by a tough viscid phlegm, that could not be expectorated but with the greatest difficulty. To eat at all, they were obliged to dip a bit of biscuit in the water, and afterwards sup a little of it with each mouthful, to force it down. The butter, cheese, and hams, were left free for the use of any one; for, as they were found to occasion greater thirst, they remained almost untouched. Several of the crew had again recourse to salt water, but it did not appear to produce any bad effects.

On the day after, they again suffered very severely from the

burning heat of the sun, and the parched state of their bodies, and had an additional allowance of water, with a larger portion of rum than usual, in which they soaked their morsels of biscuit, and made their meal of it. About four in the afternoon the clouds began to threaten rain, and preparations were accordingly made to collect as much as possible; but, to their extreme mortification, they saw it fall in heavy showers around them, while over the boat there was rarely as much as would wet their handkerchiefs. They appeared now to be in a more helpless state than ever, and began to show signs of disrespect to their officers; but this was happily checked in time, by the spirited conduct of the gunner, who chastised the leader in the face of the whole crew, and restored discipline. Many of the people this day, drank their own urine, and some tried salt water. The weather was warmer and more sultry than on any day since their misfortune.

On the next day, being January 1, 1790, they dined the same as on the preceding day, and in general appeared in much better spirits: which, as it was the first day of the new year, they considered a happy presage of their safety.

On the following day they had clear weather, till about four in the afternoon, when the sky became overcast, and it blew a fresh gale: they had before this dined on their usual fare of biscuit and water, with half a measure of rum, and were all in tolerably good spirits; but the gale increasing during the night, and the sea running immensely high, it brought them again into fresh danger; which, with the disappointment of not seeing land in the morning, as they expected, reduced them to their former miserable state of despondency. At eight in the evening, the foresail was shifted to the mainmast, and reefed, and the boat sailed under it till about six in the morning, when the mizen was set on the foremast, to give her greater steerage way. At noon the latitude was observed 33 deg. 19 m. and the supposed longitude, E. of Greenwich, was 34 deg. 15 m.

On the 3rd of January, about seven in the evening, the clouds had the appearance of very heavy rain, but unfortunately broke over in a most tremendous storm of thunder and lightning, attended with gusts of wind and very little rain, and succeeded by a violent gale from the S.W. which lasted several hours, and in which they were very near perishing. On this occasion, the master and gunner succeeded each other at the helm; and, by their experience and judgment in the management of the boat, they were this night enabled to traverse in safety an ocean of such fierce and tremendous seas, in different directions, as they could scarcely allow themselves the hope of escaping.

At day-break the gunner, who was then at the helm, discovered a ship at a little distance from them, laying under her bare poles. Their joy at this sight was great beyond expression; and, anxious to secure so favourable an occasion, they immediately made sail, and, between five and six o'clock, passed close under her, and informed her people of their distresses. They then veered about, and put alongside her on the other tack.

The people on board her had crowded immediately to their assistance, and received them in the most friendly manner; and, as soon as they were alongside, several of them jumped in, and assisted in keeping the boat from being stove.

This ship was the Viscountess of Britannie, a French merchantman, commanded by Martin Doree, with part of Walshe's, or 95th regiment, from the Isle of France, to touch at the Cape of Good Hope, for a supply of water and provisions, on her way to Europe. The officers were unbounded in their friendship and attention towards the wretched sufferers, affording them every possible comfort, and even giving up their beds for their use. They came to anchor in Table Bay, on the 18th of January.

JACK SHEAVEHOLE'S RETURN.

I BELONGED to the Tapsickoree, two-and-thirty; and, though I says it myself, there warn't many more sich tight-looking, clean-going lads as ould Jack Sheavehole—though I warn't ould Jack then, but a regular smart, active, young blowhard of a maintopman. Well, we'd just come home

from foreign, and got three years' pay and a power o' prize-money; and so most o' the boys goes ashore on liberty, and carries on till all's blue. This was at Plymouth, shipmates; but, as we wur expecting to round to Spithead, I saves my cash—cause why? I'd an ould father and mother, from whom I'd parted company when a boy, and I thought if I could get long leave—thinks I, mayhap I can heave alongside of 'em, with a cargo of shiners, and it'll cheer the cockles o' their ould hearts to see their son Jack togged off like a jolly tar, and captain of a frigate's maintop; and, setting a case, why it's just this here: I didn't want anything on 'em, but meant to give 'em better ground-tackle to hould on to life by. Well, I has a bit of a spree ashore at Dock, in course; but soon arter we goes round to Portsmouth. I axes for long leave; and, as I'd al'ays done my duty to Muster Gilmour's—he was first leutenant—to Muster Gilmour's satisfaction, I gets my fortnight and my liberty-ticket, and the large cutter lands me at Sallyport; so I hauls my wind for the Blue Postes on the pint, and enters myself on the books of a snug-looking craft, as was bound through my native village. Well, shipmates, in regard o' my being on liberty, why, I was a gen'man at large; so I buys a few duds for ould dad, and a suit of new sails, and some head-gear for the ould woman; for, thinks I to myself, mayhap we shall cruise about a bit among the neighbours, and I'll let 'em see we arn't been sarving the king or hammering the French for nothin'. And, mayhap, thinks I, they arn't never got too much to grub; so I gets a bag, and shoves a couple of legs o' mutton and a whole shoal of turnips, a full bladder of rum, and, as I knew the ould 'uns loved cat-lap, there was a stowage of sugar and tea, and a bottle o' milk; and, having plenty of the ready, I buys a little of everything useful in the small way, that the ould chap at the shop showed me: and, my eyes! but there was thousands of packages twisted and twined in true blue paper—there was bacca, mustard, snuff, salt, soft tommy, pepper, licorice, matches, gingerbread, herrings, soap, peas, butter, candles, cheese—in short, something of every thing, not forgetting a Welsh wig and a mousetrap: and I'm blowed if I warn't regularly fitted out for a three months cruise! Well, by the time I got all my consarns ship-shape, I twigs the signal for sailing, and so I gets abroad; and in course, in regard o' my station in the maintop, I goes aloft, as high as possible upon the upper-deck, and claps myself upon the luggage; but when the governor as had charge comes to take the twiddling-lines, he axes me to berth myself in the fo'k'stle, and so, not to be outdone in civility, or to mak'd, think I'd let slip my edication, I comes down, and goes forum and stows myself away just abaft the pilot; when we made sail, there was a party o' liberty boys from the ould Hibernia gives me three cheers, and I waves my bit o' tarpaulin, sports a fresh morsel o' bacca, and wondered what made the houses and every thing run past us so quick; but I soon found out it was the craft—for I remembered the comb of the sea did just the same when the frigate was walking along at a spanking rate. So, for the first hour, I sits quiet and alone, keeping a sharp look-out upon the pilot, to see how he handled the braces, rounding 'em in to starboard, or to port—for, thinks I to myself, it's best to larn every thing—'cause why? who can tell but Jack Sheavehole mayn't some day or another command just sich a consarn of his own; and how foolish he'll look not to know which way to shape his course, or how to steer his craft! But, I'm blowed! shipmates, if the horses didn't seem to savvy the thing just as well as the man at the helm; for the moment he tauten'd the gear, the hanamels slued round o' themselves all ship-shape, and Bristol fashion.

"Why, it was the reins that guided them," said the serjeant, laughing.

"Then I'm blessed if it was!" returned old Jack; "for there warn't a drop o' rain fell that afternoon—it was a bright, sun-shiny day."

"What you call twiddling lines, they call reins," explained the serjeant; "and the horses are steered by them."

"Mayhap so,—mayhap so," responded Jack, "for I arn't much skilled in them matters—'cause why? I never sail'd in one on 'em before, and ounly once since—the first was a happy trip, the last was melancholy," and Jack sighed like

an eddy wind in the galley funnel. "But, to heave ahead—when we'd run a league or two out of Portsmouth, we hove-to at virtual port, and I spied a signal for good cheer hanging out aloft; and so, without any bother, I boards 'em for a reg'lar stiff nor-wester, more nor half-and-half; and says I to the pilot, 'Yo-hoy, shipmate!' says I, 'come, and set up the standing backstay o' your heart a bit; and here, old chap, is summ't to render the lanyard;' and so I gives him a share o' the grog-tub, that set his eyes a twinkling like the Lizard lights on a frosty night. Well, just as we were going to trip the anchor again, a pretty, smart-looking young woman rounds-to under our stern, and ranges up alongside: and she says to the pilot, says she, 'Coachman, what'll you charge to take me to—?' and I'm blessed if she didn't name the very port I was bound to! 'Seven shillings, ma'am,' says he. 'Can't you take me for less?' axes she; 'I've only got five, and I'm very tired with walking.' 'Not a ha'penny less, ma'am,' says he, just as cool as an iceberg in Hudson's Bay; 'can't do it ma'am.' 'Oh, do try?' says she; and I could see sorrow was pumping the tears into her eyes: 'I would give you more if I had it,' says she. 'Can't help it, ma'am,' says old surly-chops, 'can't help it; grub for the hanemals is very dear.' 'Oh, what shall I do!' says she, so piteously: 'night is coming on, and it's a long way to travel on foot; I shall sink under it; do take the money!' 'Werry sorry, my dear,' say he, shaking his blubber-head like a booby perched on a ratlin, 'werry sorry, but never takes under price. You must use your trotters if you ar'n't never got seven bob.' 'Then I'm d—d if she does!' says I, 'for you shall carry her.' 'Gammon!' says he, as spiteful as a pet-monkey: 'who's to tip the fare?' So I ups and tells him a piece o' mind, and axes him if he ever know'd anything unfair by Jack Sheavehole; or if he thought I wanted to bilk him out o' the passage-money? 'Will you stand the two odd bobs?' axes he. 'And d'ye think I won't stand as much as Bob or Dick, or any one else?' says I, in a bit of a passion. 'Avast, old chap!' says I; 'humanity ar'n't cast off the mooring lashings from my heart yet awhile, and I hopes never will;' and so I gives him a seven-shilling bit without any more palarvar; and 'Come my precious,' says I, holding out my fin, 'mount areove;' but I'm blessed if she didn't hang back till the pilot sung out for us to come aboard! And 'Lord love you,' says I, 'you ar'n't afeard of a man-of-war's-man, are you?' 'Oh, no,' says she, 'you have been my friend this night, and God reward you for it!' So we soon clapped one another alongside upon the break of the fo'k'stle, and got to overhauling a little smattering o' larning, by way of being civil, seeing as we'd only just joined company. 'I'm thinking that's a pretty village you're bound to,' says I, in a dubersome way, 'I was there once,' says I, 'when I was a boy about the height of a tin pannikin;' for, shipmates, I didn't like to overhaul how I'd run, away from home. 'Pray, is old Martin Joyce alive?' says I. 'He was, when I left yesterday morning,' says she; 'but he is confined to his bed through illness.' 'And the old woman,' says I, 'does she still hold on?' 'Yes,' says my companion; 'but she's lame, and almost blind.' Well, I'm blow'd, shipmates, if I didn't feel my daylight's a-smarting with pain with the briny water that overflowed the scuppers—'cause why? them there wur my own father and mother, in the regard of my having been entered on the muster-books in a purser's name, my reg'lar right-arrest one being Jack Joyce. 'And what makes you cruising so far away from port?' says I, all kindly and messmate-like. 'It's rather a long story,' says she; 'but as you've been so good to me, why, I must tell you, that you mayn't think ill of me. You shall have it as short as possible.' 'The shorter the sweeter, my precious,' says I, seeing as I oughtn't to be silent. Well, she begins—'Sister Susan and I are orphans; and when our parents died, old Martin and his dame, having no children, took us under their roof.' 'No children,' says I. 'Why, I thought they had a young scamp of a son.' I said this, shipmates, just to hear what she would log again me. 'Oh, yes,' says she; 'but he ran away to sea when a boy, and they never heard from him for many years, till the other day they received a letter from Plymouth to say he was in the

Tapsikoree frigate, and expected to be round to Spithead before long. So, the day before yesterday, a sailor passing through the village told us he had arrived; and so his parents getting poorer and poorer, with his father sick, and his mother lame, I thought it would be best to go to him and tell him of their situation, that, if he pleased, he might come and see them once more before they died.'—I was going to say, 'God Almighty bless you for it!' but I couldn't, shipmates; she spoke it so plaintively, that I felt summ't rise in my throat as if I was choking, and I gulped and gulped to keep it down till I was almost strangled, and she went on:—'So yesterday I walked all the way to Portsmouth, and went aboard the frigate; but the officer told me there was no man of the name of Joyce upon the books.' 'It was a d—d lubberly thing!' says I, 'and now I remembers it.'—'What,' says she, 'what do you mean?' 'Oh, nothing, my precious,' says I, 'nothing in the world;' for I thought the time warn't come for me to own who I was: and it fell slap across my mind that the doctor's boy who writ the letter for me, had signalled my right-arrest name at the bottom, without saying one word about the purser's consarn of Sheavehole. 'And so you've had your voyage for nothing,' says I, 'and now you're homeward-bound; and that's the long and the short on it. Well, my precious, I'm on liberty; and as old Martin did me a kindness when I was a boy, why, I'll bring up for a few hours at his cottage, and have a bit of a confab consarning old times.' And the young woman seemed mightily pleased about it; so that by the time we got to—, I'm blessed if, in all due civility, we warn't as thick as two Jews on a pay-day. Well, we landed from the craft, and away we made sail in consort for old dad's cottage; and I'm blessed if every thing didn't look as familiar to me as when I was a young scamp of a boy! But I never said nothing; and so she knocks at the door, and my heart went thump, thump,—by the hooky! shipmates, but it was just as I've seen a bird try to burst out of its cage. Presently a voice sings out, 'Who's there?'—and such a voice!—I never heard a fiddle more sweeter in the whole course of my life—'Who's there?' says the voice, in regard of its being night, about four bells in the first watch. 'Its Maria,' says my convoy.—'And Jack Sheavehole,' says I. 'Heave ahead, my cherub; give us a clear gang-way and no favour.' 'Oh, Maria, have you brought him with you?' said a young woman, opening the door; and, by the light she held in her hand, showed a face as beautiful—I'm d—d if ever they carved such a figure-head as that in any dock-yard in the world! 'Have you brought him with you?' says she, looking at me, and smiling so sweetly, that it took me all aback, with a bobble of a sea running on my mind that made my ideas heave and set like a Dutch fisherman on the Dogger-bank. 'No,' says Maria, with a mournful sigh, just as the wind dies arter a gale—'No; there was no such person on board the frigate, and I have had my journey for nothing.' 'Nonsense!' says the other, 'you want to play us some trick. I know this is he,' and she pointed to me. 'Lord love your heart!' says I, plucking up courage—for I'd flattened in fornd, and fallen off so as to fill again—'Lord love your heart! I'd be any thing or any body to please you,' says I; 'but my name, d'ye mind, is Jack Sheavehole, at your service, in all due civility. But let us come to an anchor, and then we can overhaul the consarn according to Hamilton Moore.' So we go in; and there sat my poor old mother by the remains of a fire, moored in the same arm-chair I had seen her in ten years afore, and by her side was an old wheezing cat that I had left a kitten; and, though the cabin-gear warn't any very great shakes, every thing was as clean as if they'd just washed the decks. 'Yo-hoy, dame!' says I, 'how do you weather the breeze?' 'Is that my John?' says she, shipping her barnacles on her nose, like the jaws of a spanker boom on the saddle; and then Maria brings up alongside of her, and spins the yarn about her passage to Portsmouth, boarding the frigate, finding that she was out in her reckoning, and her return with me; and old dad, who was in his hammock in the next berth, would have the door open to hear it all. And I felt so happy, and they looked so down-cast and sorrowful, that I'm blessed if I could stand it any longer; so I seizes Susan round the neck, and pays out a kiss

as long as the main-t'-bowline, 'till she hadn't breath to say 'don't'; and then I grapples 'em all round, sarving out hugs and kisses to all hands, even to the ould cat; and I danced round the chairs and tables so, that some o' the neighbours came running in; and, 'Blow me tight!' says I, 'side out for a bend; here I am again, all square by the lifts and braces!'—and then I sings,

"Here I am, poor Jack,

Just come home from sea,

With shiners in my sack—

and I whips out a handful of guineas from my jacket pocket, and shows 'em,—

Pray what d'ye think of me?"

"What! mother," says I, 'don't you know me? Why, I'm your true and lawful son, Jack Joyce, though arter I run away, the purser made twice-laid of it, and christened me Sheavehole, in regard of his Majesty liking to name his own children. Never say die, ould woman! there's plenty o' shot in the locker. And come, lasses,' says I to the young 'uns, 'one on you stand cook o' the mess; and I empties my bag on the floor, and away rolled the combustibles, matches, and mutton, and mousetraps, and all, scampering about like liberty boys arter a six months' cruise; and I picks up the bladder o' rum, and squeezes a good drain into a tea cup, and hands it to the ould woman, topping up her lame leg while she drinks. And my eyes! there was a precious shindy that night: the ould ones were almost dying with joy, and the young 'uns had a fit o' the doldrums with pleasure. So I gets the big pot under weigh, and shoves in both legs o' mutton, and a full allowance of turnips, and I sarves out the grog between the squalls; and auld dad blowed a whiff o' bacca, and mother payed away at the snuff; and nobody wern't never happy if we wern't happy that night. Well, we'd a glorious tuck-out o' mutton, w' plenty of capers; and arter that I stows the ould woman in alongside o' dad, kisses the girls in course, and then takes possession o' the arm-chair, where I slept as sound as a jolly on sentry."

COURAGE AND GENEROSITY OF A BRITISH SAILOR.

SIR TIMOTHY STANDFAST received his title from a foreign Court. Being a younger brother, he went in early youth to sea, rose to the rank of Post Captain, and for a short time commanded a small squadron of frigates. At this juncture his elder brother died, he retired from the naval service, took possession of his patrimonial estate, and became a country gentleman. After being some time at sea, Jonathan his servant, was pressed on board a man-of-war, where his seaman-like conduct gave much satisfaction to his officers, particularly to Captain Standfast, who was so pleased with him that he made him captain of his barge.

One day the Captain and Jonathan were on shore, and their own boat which was to take them on board not being arrived, they hired one for the purpose. On coming alongside of the ship, the boat drifted astern; a rope was hanging over the side, Captain Standfast stretched out his hand to lay hold of it, but he overbalanced himself and his head struck against the ship's side, he fell into the water, and sunk!

A general cry echoed round the deck of the vessel. Neptune splashed into the water, leaping with buoyant springs and turning eagerly round his head. Jonathan sprang to the stern of the boat, gazing with an eagle's eye, but he saw only the rippling of the sullen plunge which still rested on his oar. The captain slowly rose—Jonathan darkly saw his rising form, threw himself forward with a splash into the deep, and with a few dashing sweeps, reached the object of his solicitude; and at the same instant, he and Neptune, cheered by the shouts of the crew, seized their beloved master. The captain soon recovered.

"My lad," said the captain to him, as he entered the cabin, "you have done me a service; I am sensible of it, and I wish to reward you. Take this (a purse with a few guineas), but

remember, that is not all: I have a liking for you, and I shall not forget you." The captain's hand was extended, but not so Jonathan's hand, which was shrunk to his side. "Take it," said the captain, rising, "no delicacy—you deserve more." Jonathan's hand still kept its position. "What! do you refuse it? I desire you to receive it: obey my orders."

Jonathan knew how to obey. He stretched out his hands, and the money was put into it. Jonathan looked at the purse and then at the captain—but such a look! To bestow a mercenary reward on a person of a generous temper, who does a generous action to one who is beloved or respected, is to pierce his heart with sorrow.

Something rose in the honest fellow's throat with a suffocating sensation, and a moistened suffusion dimmed his sight. He turned round in silence to depart, and at the cabin door he paused for a moment, dashed the purse on the floor, and with swinging arms and lengthened strides, sought the deck.

"Call that fellow back," said the captain to a midshipman who was in the cabin.

Jonathan stood before him, and in a moment the captain's displeasure melted into tenderness. "I see, my lad," said he, "that a seaman has feeling as well as an admiral. If I continue to like you, and if you continue to like me, our future fortune is knit together. Remember this, my lad, ('give him,' said he to his servant, 'a bottle of rum.') Go and make merry with your messmates."

"I will, sir," said Jonathan, whose heart rose to the elevated point of joy; "we shall drink your health and long life; added he, "this is using me like a man—I will follow you to the world's end;" and the honest fellow, as he departed, poked the corner of his jacket into each eye.

CHASE AND CAPTURE OF A FRENCH BRIG OF WAR.

We were within a few days of our destination, and were rolling down the trades, when, at six in the morning, a strange sail was discovered on our starboard quarter, apparently in chase of us; we immediately hauled to the wind. This manœuvre disenchanted the golden visions of the stranger, and finding us likely to prove an awkward customer, he likewise hauled upon a bow line. The chase now began. The lower yards of the pursued (evidently a man-of-war brig) could only be seen from the main-top; but her manœuvres, and the cut of her sails, at once announced her nation. As the sun rose in the heavens, the wind increased, and we had already gained considerably on the chase, when she was under the necessity of reefing, in consequence of the strong squalls and fiery trade wind. This was just the weather in which the old Pompée shone to the greatest advantage, and we hailed the increasing gusts with pleasure. All hands were kept upon deck ready to shorten sail at an instant's notice. The brig being to windward was a certain guide to us as to the strength of the squalls, and we were prepared to act accordingly. By noon we had her hull up from the deck; she carried on most nobly; her spars bent like bows before she yielded to the blast. As soon as her topsails were observed coming down every man was on the alert, and the instant the squall struck us, the top-gallantsails were furled, and the topsails down in a trice. The moment its force was expended, up they flew to the mast-heads, and the upper sails were again expanded to the breeze. It was one of the most beautiful and soul-stirring chase it has been my fortune to witness.

The little craft was clearly oppressed; not the vantage ground of a hair's breadth was lost on our side. In one of the heavy squalls her lee main-top sheet was carried away, and the sail fluttered in ribands. We made sure of our prey—"She is ours to a certainty,"—when that certainty vanished by the smartness of the Frenchman, who in double-quick time, bent another main-top-sail. The Pompée's men had scarcely taken in another reef, when our skilful foe was observed sheeting home and hoisting away again. It required no great sagacity to discover that her commander was a practically good seaman, who knew full well how to manage his

dashing little bark. In a short time away went both his fore-top sail sheets. "She cannot escape us now—it is impossible."—"By heavens! he has secured his canvass this time. There, he is hauling home his sheets again."—"Well done—gallantly done, Johnny Crapaud; the devil favours his own offspring."—"Blow, good breezes, blow," (the wind was beginning to lull.)—"Shake out a reef of the topsails." And now the fears of losing the brig began to assume a palpable form, as she was observed to hold her way. No sooner were our men laid out upon the topsail-yards, than the brig's men appeared to be occupied with the like duty. "He is determined to give us a run for it."—"Blow breezes blow," was again heard murmuring around; and, by way of coaxing the airs of heaven, the master and first-lieutenant were whistling to the wind, in tune something similar to that adopted by ostlers to their horses. All our whistling and coaxings failed in propitiating the wind deities. The sun declined, the wind dropped, and the Frenchman remained upon the gaining side; there was no moon, and the distance was too great between us to admit of the hope of keeping him in sight when night should close in. The ship was kept wrapt full to get on her beam, as affording us the best chance of seeing her with the night-glasses. Not a vestige of the chase could be discovered an hour after sunset. A further pursuit was considered both hopeless and unprofitable by the disappointed officers.

We expected the hammocks to be piped down, and the ship to be kept on her course again; but Captain C—had acquired too much experience of our cunning adversary's shiftings and doublings to resign, prematurely, a quarry in every way worth our attention. The plan he pursued displayed the sound judgment that always guided his conduct in cases of difficulty and uncertainty, never failing at once to inspire hope, security, and confidence in those around him. He noted the spot where he had first fallen in with the brig, and her precise situation, when last seen; and concluded that the wary Frenchman would stand on under all sail till nine o'clock then tack, and bear up before the wind to take his original position. Accordingly, at the hour he expected the chase to tack, we went about, and shortened sail to the topsails. The wind had previously fallen to a light breeze. In due time we edged away to meet him, on the supposed line of his course. All hands were ready stationed to make sail in an instant; the main-deck guns were cleared away; officers and men were peering in all directions, endeavouring to penetrate the darkness that surrounded the vessel. Meanwhile the captain, who had retired for a few minutes to consult the chart, upon which he had marked the expected point of meeting, returned to the quarter-deck. "Keep a sharp look-out on the weather bow," said he; and turning round to the officers, added, "if my conjectures are correct, we ought to be close on board of her."

"Take the night-glass forward, Mr. B—, and keep sweeping the horizon about four points on the bow."

"Ay, ay, sir."—But before that officer had reached the fore-castle, the welcome cry of a strange sail to windward was heard from the cat-head. In an instant the outlines of her extended canvass were visible, standing forth in strong relief from the dark back-ground of a mass of vapoury clouds. The top-gallantsails and foresail were speedily set, and the *Pompée* in a line with the stranger. The enemy was thus brought immediately under the muzzle of our guns. At the first shot he prudently let fly every tack and sheet, and hove to; we were equally expeditious, and both vessels were laying so close, that any attempt on the part of the brig to escape would have subjected her to certain destruction. The first boat brought on board the captain, who was, minus an arm by our countrymen on a former occasion. The prize was a fine man-of-war brig *Le Pylade*, carrying sixteen thirty-two pound carronades, and 109 men. She had run successfully the whole of the war, had just left *Martinique*, and was an excellent sailer, of which qualification we had incontestible proof. She had afforded us a chase that might have inspired and interested the most fastidious amateur in these matters. Both vessels were so admirably managed, the possible loss

and probable advantages so nicely balanced on both sides, that I do not think either of them could be said to win upon the other in point of skill during the whole of the morning's manoeuvres. Stratagem eventually favoured us, and the neat finale to the pursuit was sagaciously planned and successfully executed.

The under-writers at *Lloyd's* had paid dearly for the various depredations of this industrious little brig. The poor Frenchman, it appeared, did not perceive us till we were actually alongside of him, and the whistlings of the shot between his masts dispelled his dreams of security. At the very moment they fell into our power, they were congratulating themselves upon their escape. On looking over a log-book belonging to one of the officers, in which his hopes and fears during the day had been carefully registered, I observed that at five o'clock, when the wind had fallen and the brig appeared to have rather gained upon us, the Frenchman had written down. "*Dieu merci, nous ne serons pas pris aujourd'hui. Adieu, Jean Boull!—adieu, ros biff.*"

A NARROW ESCAPE.

The following account of the surprising manner in which a sailor was preserved from apparently inevitable death, on the coast of Africa, was transmitted in a letter from the captain of the *Devonport Guineaman*:—

"Some time after my arrival in the British factory, *Cape Coast*, on board the *Devonport Guineaman*, I was sent for by the commodore, who was stationed in the *Diana* frigate to protect the trade of the place before mentioned, and appointed by him to command a sloop employed on the service of conveying slaves, teeth, gums, and other merchandise, from the companies' factories, situated several hundred miles up the river Congo, down to the principal depot at the Cape. The sloop carried six swivels, and was manned with nine negroes and two north country seamen, named Johnson and Campbell, the former of whom was my mate. After receiving orders relative to the duty in which I was employed, we proceeded on our voyage, and had navigated nearly fifty leagues up the country, when one morning the breeze died away suddenly, and we were compelled, by a strong current running against us, to drop anchor within a quarter of a mile of the shore. In this situation the sloop remained for three days, during which time the circumstance fell out I am about to communicate—circumstances so improbable in themselves, so marvellous, as almost to border on impossibility, but nevertheless declared by me, as a spectator, to be a reality. To resume my narrative—the bosom of the deep appeared, as it does in these parts, while the calm prevails, extremely tranquil, and the heat which was intolerable, had made us so languid, that almost a general wish overcame us, on the approach of the evening, to bathe in the waters of Congo; however, myself and Johnson were deterred from it from the apprehension of sharks, many of which we had observed in the progress of our voyage, and those enormously large. At length Campbell alone, who had been making too free with his liquor case, was obstinately bent on going overboard, and although we used every means in our power to persuade him to the contrary, dashed into the watery element.

"He had swam some distance from the vessel, when we on the deck discovered an alligator, making towards him from behind a rock that stood a short distance from the shore. His escape I now considered impossible, his destruction inevitable, and I applied to Johnson to know how we should act, who, like myself, affirmed the impossibility to save him, and instantly seized a carbine to shoot the poor fellow before he fell into the jaws of the monster. I did not, however, consent to this, but waited with horror the tragedy we anticipated: yet willing to do all in my power, I ordered the boat to be hoisted, and we fired two shot at the approaching alligator, but without effect, for they glided over his scaly covering like hail-stones on a tiled penthouse, and the progress of the creature was by no means impeded. The report of the piece, and the noise of the blacks in the sloop, made Campbell acquainted

with his danger : he saw the creature making for him, and with all the strength and skill he was master of, made for the shore. Now the moment arrived in which a scene was exhibited beyond the power of my humble pen perfectly to describe. On approaching within a very short distance of some canes and shrubs which covered the bank, while closely pursued by the alligator, a fierce and ferocious tiger sprang towards him, at the instant the jaws of his first enemy were extended to devour him. At this awful moment Campbell was preserved. The eager tiger, by overleaping him, encountered the gripe of the amphibious monster. A conflict ensued between them ; the water was covered with the blood of the tiger, whose efforts to tear the scaly covering of the alligator were unavailing, while the latter had also the advantage of keeping his adversary under water, by which the victory was presently obtained, for the tiger's death was now effected ; they both sank to the bottom, and we saw no more of the alligator, Campbell was recovered, and instantly conveyed on board. He spoke not while in the boat, though his danger had perfectly sobered him ; but the moment he leaped on the deck, fell upon his knees and returned thanks to that Providence who had so protected him ; and, what is more singular, from that moment to the time I am writing, he has never been seen the least intoxicated, nor has he been heard to utter a single oath. If ever there was a perfectly reformed being in the universe, Campbell is the man."

ORIGIN OF THE UNIFORM OF THE NAVY.

SOME old admirals, at one of their clubs, resolved "that a uniform dress is useful and necessary for commissioned officers, agreeable to the practice of other nations ;" and a deputation was appointed to wait on the Duke of Bedford, then First Lord of the Admiralty. Admiral Forbes was finally selected for this office. He was shown into a room surrounded with dresses. On being asked what he thought most appropriate, he said, "One with red and blue, or blue and red, as these were our national colours." "No," replied his grace, "the king has settled it otherwise ; he saw my duchess riding in the park a few days ago, in a habit of blue faced with white, which took the fancy of his majesty, and he ordered it to be the uniform of the royal navy ; and in 1748, it was established accordingly. Red has now superseded the white, and thus his late majesty William IV. has restored to us our national colours."

COPY OF HENRY ELLARD'S NARRATIVE OF THE LOSS OF HIS MAJESTY'S SCHOONER, FELIX, DATED OFF SANTANDER.

"HONOURED CAPTAIN,—I take the liberty of sending you these few lines, to inform you of our misfortune of being cast away in your schooner, on the night of the 22nd January last, between twelve and three in the morning, on the coast that lies opposite the fort, at the entrance of Santander, where every soul perished but me, being seventy-nine in number, including nine prisoners that we got exchanged, being sent here for them as cartel. We arrived here on the 18th, got our prisoners on board on the 19th, after twelve, when it came on to blow so strong right in the harbour, that we could not put to sea, being obliged to anchor under the fort, from which they hailed us, ordering us to put to sea. We told them we could not, as the wind was right in the harbour ; that if we did, we should be in great danger, as the weather looked bad, and the wind was right dead on the shore. They told us if we did not go out immediately, they would fire into us, which they did about eight o'clock, and at twelve in the night gave us another shot ; at four in the morning a third, it then blowing a gale ; and at eight in the morning fired again on us, so was forced to weigh anchor, but it was impossible to get out, the wind blowing so strong from the N.W. with a terrible sea, which obliged us to anchor at the entrance of the bay, the sea breaking over us every instant, and the gale still increasing. We rode out all that day in the greatest danger, was forced to haul down our cartel flag, and hoisted the English flag, union

downwards, and fired a number of guns in distress ; but no assistance attempted to come near us, though a French brig, as we have since heard, and several American merchantmen, offered to assist us, but the authorities of Santander would not permit them to come near us. We stood in this state all the night of the 20th ; the gale continually increasing. On the 21st, we hoisted eight guns over-board, the sea running so high, that it washed our boat overboard, together with a great number of our hands, no one remaining on deck but what was lashed to different parts of the ship, in which we stood until the 22nd, not knowing what to do, the sea running mountains high, nothing but death before our eyes. The captain, Lieutenant Mitchel, the pilot, and myself, were all that could be seen aboard ; the bulwarks being all stove in, we were lashed to the ring-bolts, on the quarter-deck, the sea flying over us every instant. About twelve, a sea carried away our mast and bowsprit, so that nothing remained but clear decks and a bare hull ; we lay lashed until two in the morning, when a sea parted our cables so that we did not know what to do. I spoke to Captain Cameron, and persuaded him to jump overboard, that in five minutes we should all be, to pieces on the beach, and killed by the wreck ; we immediately unlashed ourselves, and jumped overboard, where I held Captain Cameron by the head for some time, until the pilot or Mr. Mitchel laid hold of me by the leg, at which time I was obliged to let go Mr. Cameron, to clear myself ; at length a sea hove me on shore, where I crawled upon my hands and knees, not being able to walk, until I was clear of the sea, where I lay until half-past six the next morning, almost dead, no person being there to assist me. I rose, and went towards the hills, but being so weak from the blood I lost, from dreadful wounds I received on my head and several parts of my body, that I could not go any farther. At length a Spaniard took me up, and dragged me to his house where I lay for some time bleeding ; at night they sent for a doctor, who dressed my wounds and ordered me to be put to bed. In this situation I lay several days, until I was a little recovered, when they took me, from thence, and put me in prison, where I remain, naked, half starved to death, and eaten up with dirt and vermin—no one to assist me. The English agent was once there to see me, and told me he could not assist me, as the Spanish government had me in their charge, and only allows five-pence per day, which scarce keeps me alive. I should be happy to be able to relate verbally to you all this, but I am afraid it will be a long time, as I am kept so closely confined. I should have sent you this account before now, but had no opportunity : at length a friend has offered to deliver this to our ambassador at Lisbon, to have it sent to you."

THE MEETING OF SHIPS.

BY T. MOORE.

When o'er the silent seas alone,
For days and nights we've cheerless gone,
Oh ! they who've felt it know how sweet,
Some sunny morn, a ship to meet.

* * * * *
Then sails are back'd—we nearer come—
Kind words are said of friends and home ;
And soon, too soon, we part with pain,
To sail o'er silent seas again.

A SAILOR'S OPINION OF KING SOLOMON.

Two sailors were one day disputing on board his majesty's ship Abundance, off Woolwich, respecting the wisdom of King Solomon ; and after having made some original and very singular remarks on this mighty monarch, one of them closed his argument as follows : "Why, Jack, you may talk till the tongue drops out of your wooden head ; but I'll tell you what perhaps neither you nor King Solomon ever knew ; that is, that, shiver my timbers, but the times are so altered, that if he was now alive, he would not know a jib-boom from a poop lantern."

BATTLE OFF CAPE ST. VINCENT.

BEFORE the glorious action off Cape St. Vincent, early in 1797, the name of Nelson was hardly known to the English public; but from the activity, talents, and zeal, which he had so eminently and constantly displayed during a long course of services in the Mediterranean, he was feared and respected throughout Italy. At this time a letter came to him, directed "Horatio Nelson, Genoa;" and the writer, when asked how he could direct it so vaguely, replied, "Sir, there is but one Horatio Nelson in the world." At Genoa, in particular, where he had so long been stationed, and where the nature of his duty first led him to continual disputes with the government, and afterwards compelled him to stop the trade of the port, he was

equally respected by the doge and by the people; for, while he maintained the rights and interests of Great Britain with becoming firmness, he tempered the exercise of power with courtesy and humanity, wherever duty would permit. "Had all my actions," said he, writing at this time to his wife, "been gazetted, not one fortnight would have passed, during the whole war, without a letter from me. One day or other I will have a long gazette to myself, I feel that such an opportunity will be given me. I cannot, if I am in the field of glory, be kept out of sight; wherever there is anything to be done, there Providence is sure to direct my steps."

These hopes and anticipations were soon to be fulfilled. Nelson's mind had long been irritated and depressed by the fear that a general action would take place before he could join the fleet. At length he sailed from Porto Ferrajo with a

BATTLE OFF CAPE ST. VINCENT.

convoy for Gibraltar, and having reached that place, proceeded to the westward in search of the admiral. Off the mouth of the Straits he fell in with the Spanish fleet; and, on the 13th of February, reaching the station off Cape St. Vincent, communicated this intelligence to Sir John Jervis. He was now directed to shift his broad pendant on board the Captain, seventy-four, Captain R. W. Miller; and before sunset, the signal was made to prepare for action, and to keep during the night in close order. At day-break the enemy was in sight. The British force consisted of two ships of one hundred guns, two of ninety-eight, two of ninety, eight of seventy-four, and one sixty-four; fifteen of the line in all; with four frigates, a sloop, and a cutter. The Spaniards had one four-decker, of one hundred and thirty-six guns; six three-deckers, of one hundred and twelve; two eighty-fours: eighteen

seventy-fours; in all, twenty-seven ships of the line, with ten frigates and a brig. Their admiral, D. Joseph de Cordova, had learnt from an American, on the 5th, that the English had only nine ships, which was indeed the case when his informer had seen them; for a reinforcement of five ships from England, under Admiral Parker, had not then joined, and the Culloden had parted company. Upon this information, the Spanish commander, instead of going into Cadiz, as was his intention when he sailed from Carthagen, determined to seek an enemy so inferior in force; and relying, with fatal confidence, upon the American account, he suffered his ships to remain too far dispersed, and in some disorder. When the morning of the 14th broke, and discovered the English fleet, a fog for some time concealed their number. That fleet had heard their signal guns during the night, the weather being fine though thick and

hazy; soon after daylight they were seen very much scattered, while the British ships were in a compact little body. The look-out ship of the Spaniards fancying that her signal was disregarded, because so little notice seemed to be taken of it, made another signal that the English force consisted of forty sail of the line. The captain afterwards said he did this to rouse the admiral; it had the effect of perplexing him and alarming the whole fleet. The absurdity of such an act shows what was the state of the Spanish navy under that miserable government, by which Spain was so long oppressed and degraded, and finally betrayed. In reality, the general incapacity of the naval officers was so well known, that in a pasquinade, which about this time appeared at Madrid, wherein the different orders of the state were advertised for sale, the greater part of the sea officers, with all their equipments, were offered as a gift; and it was added, that

any person who would please to take them, should receive a handsome gratuity. When the probability that Spain would take part in the war, as an ally of France, was first contemplated, Nelson said that their fleet, if it were no better than when it acted in alliance with us, would "soon be done for."

Before the enemy could form a regular order of battle, Sir J. Jervis, by carrying a press of sail, came up with them, passed through their fleet, then tacked, and thus cut off nine of their ships from the main body. These ships attempted to form on the larboard tack, either with the design of passing through the British line, or to leeward of it, and thus rejoining their friends. Only one of them succeeded in this attempt; and that only because she was so covered with smoke, that her intention was not discovered till she had reached the rear; the others were so warmly received that

they put about, took to flight, and did not appear again in the action till its close. The admiral was now able to direct his attention to the enemy's main body, which was still superior in number to his whole fleet, and greatly so in weight of metal. He made signal to take succession. Nelson, whose station was in the rear of the British line, perceived that the Spaniards were bearing up before the wind, with an intention of forming their line, going large, and joining their separated ships; or else, of getting off without an engagement. To prevent either of these schemes, he disobeyed the signal without a moment's hesitation, and ordered his ship to be wore. This at once brought him into action with the Santissima Trinidad, one hundred and thirty-six, the San Joseph, one hundred and twelve, the Salvador del Mundo, one hundred and twelve, the San Nicolas, eighty, the San Isidro,

seventy-four, another seventy-four, and another first-rate Trowbridge, in the Culloden, immediately joined, and most nobly supported him; and for nearly an hour did the Culloden and Captain maintain what Nelson called "this apparently, but not really unequal contest;"—such was the advantage of skill and discipline, and the confidence which brave men derive from them. The Blenheim then passing between them and the enemy, gave them a respite, and poured in her fire upon the Spaniards. The Salvador del Mundo and San Isidro dropped astern, and were fired into, in a masterly style, by the excellent Capt. Collingwood. The San Isidro struck; and Nelson thought that the Salvador struck also; "but Collingwood," says he, "disdaining the parade of taking possession of beaten enemies, most gallantly pushed up, with every sail set, to save his old friend and messmate, who was, to appear—

ance, in a critical situation," for the Captain was at this time actually fired upon by three first-rates, by the San Nicolas, and by a seventy-four, within about pistol shot of that vessel. The Blenheim was ahead, the Culloden crippled and astern. Collingwood ranged up, and hauling up his mainsail just astern, passed within ten feet of the San Nicolas, giving her a most tremendous fire, then passed on for the Santissima Trinidad. The San Nicolas luffing up, the San Joseph fell on board her, and Nelson resumed his station abreast of them, and close alongside. The Captain was now incapable of farther service, either in the line or in the chase: she had lost her foretopmast: not a sail, shroud, or rope was left, and her wheel was shot away. Nelson, therefore, directed Captain Miller to put the helm a-starboard, and calling for the boarders, ordered them to board.

Captain Berry, who had lately been Nelson's first lieutenant, was the first man who leaped into the enemy's mizen chains. Miller, when in the very act of going, was ordered by Nelson to remain. Berry was supported from the spritsail-yard, which locked in the San Nicolas's main rigging. A soldier of the sixty-ninth broke the upper quarter gallery window, and jumped in, followed by the commodore himself, and by others as fast as possible. The cabin-doors were fastened, and the Spanish officers fired their pistols at them through the window: the doors were soon forced, and the Spanish brigadier fell while retreating to the quarter-deck. Nelson pushed on, and found Berry in possession of the poop, and the Spanish ensign hauling down. He passed on to the forecabin, where he met two or three Spanish officers, and received their swords. The English were now in full possession of every part of the ship; when a fire of pistols and musketry opened upon them from the admiral's stern-gallery of the San Joseph. Nelson having placed sentinels at the different ladders, and ordered Captain Miller to send more men into the prize, gave orders for boarding that ship from the San Nicolas. It was done in an instant, he himself leading the way, and exclaiming—"Westminster Abbey or victory!" Berry assisted him into the main-chains; and at that moment a Spanish officer looked over the quarter-deck rail, and said they surrendered. It was not long before he was on the quarter-deck, where the Spanish captain presented to him his sword, and told him the admiral was below, dying of his wounds. There, on the quarter-deck of an enemy's first-rate, he received the swords of the officers; giving them, as they were delivered, one by one, to William Fearnley, one of his old Agamemnon's, who, with the utmost coolness, put them under his arm; "bundling them up," in the lively expression of Collingwood, "with as much composure as he would have made a faggot, though twenty-two sail of their line were still within gun-shot." One of his sailors came up, and, with an Englishman's feeling, took him by the hand, saying, he might not soon have such another place to do it in, and he was heartily glad to see him there. Twenty-four of the Captain's men were killed, and fifty-six wounded; a fourth part of the loss sustained by the whole squadron falling upon this ship. Nelson received only a few bruises.

The Spaniards had still eighteen or nineteen ships, which had suffered little or no injury: that part of the fleet which had been separated from the main body in the morning was now coming up, and Sir John Jervis made signal to bring to. His ships could not have formed without abandoning those which they had captured, and running to leeward: the Captain was lying a perfect wreck on board her two prizes; and many of the other vessels were so shattered in their masts and rigging, as to be wholly unmanageable. The Spanish, meantime, according to his official account, being altogether undecided in his own opinion respecting the state of the fleet, inquired of his captains whether it was proper to renew the action: nine of them answered explicitly, that it was not; others replied, that it was expedient to delay the business. The Pelayo and the Principe Conquistador were the only ships that were for fighting.

In this engagement four vessels were taken, two of which carried one hundred and twelve guns each: one eighty-four, and one seventy-four. On board the British fleet the loss amounted to about three hundred, in killed and wounded;

while the loss on board the Spanish ships that were taken, amounted to double that number.

As soon as the action was discontinued, Nelson went on board the admiral's ship. Sir John Jervis received him on the quarter-deck, took him in his arms, and said he could not sufficiently thank him. For this victory the commander-in-chief was rewarded with the title of Earl St. Vincent. In the official letter of Sir John Jervis, Nelson was not mentioned. It is said, that the admiral had seen an instance of the ill consequence of such selections, after Lord Howe's victory; and, therefore, would not name any individual, thinking it proper to speak to the public only in terms of general approbation. His private letter to the first lord of the admiralty was, with his consent, published, for the first time, in a life of Nelson, by Mr. Harrison. Here it is said, that "Commodore Nelson, who was in the rear of the starboard tack, took the lead on the larboard, and contributed very much to the fortune of the day." It is also said, that he boarded the two Spanish ships successively; but the fact, that Nelson wore without orders, and thus planned as well as accomplished the victory, is not explicitly stated. Perhaps it was thought proper to pass over this part of his conduct in silence, as a splendid fault; but such an example is not dangerous. The author of the work in which this letter was first made public, protests against those over zealous friends, "who would make the action rather appear as Nelson's battle, than that of the illustrious commander-in-chief, who derives from it so deservedly his title. "No man," he says, "ever has less needed, or less desired, to strip a single leaf from the honoured wreath of any other hero, with the vain hope of augmenting his own, than the immortal Nelson: no man ever more merited the whole of that which a generous nation unanimously presented to Sir John Jervis, than the Earl St. Vincent." Certainly Earl St. Vincent well deserved the reward which he received; but it is not detracting from his merit to say, that Nelson is fully entitled to as much fame from this action as the commander-in-chief; not because the brunt of the action fell upon him; not because he was engaged with all the four ships that were taken, and took two of them, it may almost be said, with his own hand; but because the decisive moment, which enabled him to perform all this, and by which the action became a victory, was executed in neglect of orders, upon his own judgment, and at his peril. Earl St. Vincent deserved his earldom; but it is not to the honour of those by whom titles were distributed in those days, that Nelson never obtained the rank of earl for either of those victories which he lived to enjoy, though the one was the most complete and glorious in the annals of naval history, and the other the most important in its consequences of any which was achieved during the whole war. Nelson, who, before the action was known in England, had been advanced to the rank of rear-admiral, had the order of the Bath given him. The sword of the Spanish rear-admiral, which Sir John Jervis insisted upon his keeping, he presented to the mayor and corporation of Norwich, saying, that he knew no place where it could give him or his family more pleasure to have it kept, than in the capital city of the county where he was born. The freedom of that city was voted him on this occasion. But of all the numerous congratulations which he received, none could have affected him with deeper delight than that which came from his venerable father. "I thank my God," said this excellent man, "with all the power of a grateful soul, for the mercies he has most graciously bestowed on me in preserving you. Not only my few acquaintance here, but the people in general, met me at every corner with such handsome words, that I was obliged to retire from the public eye. The height of glory to which your professional judgment, united with a proper degree of bravery, guarded by Providence, has raised you few sons, my dear child, attain to, and fewer fathers live to see. Tears of joy have involuntarily trickled down my furrowed cheeks: who could stand the force of such general congratulation? The name and services of Nelson have sounded through this city of Bath—from the common ballad-singer to the public theatre." The good old man concluded by telling him, that the field of glory, in which he had so long been conspicuous, was still open, and by giving him his blessing.

A TALE OF THE COAST.

—“That white-faced shore,
Whose foot spurns back the ocean's roaring tides.”

It was late in the afternoon of a gloomy day, in the latter part of November, when, in consequence of a signal made, that a suspicious sail was seen off the coast, as if waiting for the flowing of the tide in the dark, Lieutenant ——— had given orders to man his favourite galley, and proceed in quest of the stranger. The crew had been carefully, though to appearance, hastily selected from those inured to service, and bearing a character for intrepidity, some of whom had been the partners of an enterprise which was ever uppermost in his mind, when, among the first to board the American frigate, Chesapeake, as a young midshipman, he was stretched on the deck by a stroke of a cutlass on the head. The strokesman of the boat, whose brawny arms had borne him, on that memorable day, to the cock-pit of the Shannon, as soon as the Americans had deserted their deck, and fled for safety below, as he now shipped the rudder, looked wistfully in the wind's eye. The glance was not unobserved; but the lieutenant, apprehensive that it might be accompanied by some remonstrance (a liberty which Jack considered himself exclusively privileged to take), quietly motioned him to go forward, in order to hoist the mainsail. The boat being shoved off the beach, after pitching twice in the surf, rose triumphantly over the third sea, which had now exhausted itself. In a moment the sail was hoisted, she instantly gathered way, and stood off in a lateral direction from the shore.

The men seated themselves regularly on the thwarts, and the strokesman, after reeving the main-sheet through the fair leader abaft, sat with it in his hand in such a position on the after thwart, that, though his face was turned to windward, his eye would occasionally meet that of his commander. As the light boat lay down to the wind, and became steady in her course towards the chase, the crew had time to look around them.

The strokesman's eye was alternately turned from that part of the heavens where he had vainly sought for any encouraging appearances amid the portentous indications of a wild wintry sky, to the beach, where, in a lonely romantic gorge, skirted with verdure and leafless underwood, between two grey, beetling cliffs was discovered the compact, white, wooden station of the party, with its signal-post and miniature glacis, descending almost to high-watermark. His look betrayed unusual emotion, in one of his years and service, possibly occasioned by the intrusive officiousness of the remembrance that there were garnered up the source of his best affections—his wife and little prattlers, whom, through some unaccountable presentiment, he foreboded he should never see more. A tear might have glazed the veteran's eye at the moment; for, as if unwilling to be longer a witness of the struggle between tenderness and duty, the lieutenant addressed him in a tone of evidently assumed ease, and inquired if the arm-chest had been kept dry? Receiving an answer in the affirmative, and having ascertained that each man had his cutlass beside him, he proceeded to examine the priming of his pistols, which he finally placed in his waist-belt, and wrapped himself in a cloak which had been spread for him in the stern sheets abaft. Taking advantage of the first heavy swell, he rose in the boat to catch a glimpse of the strange sail in the offing, which was discovered broad on the lee-bow. Having directed the attention of the bowman to her position, both resumed their seats, and the lieutenant shaped his course so as to board her on the quarter.

Not a word as yet had escaped the lips of any of his men, who sat cowering in a bending attitude, with elevated shoulders and arms crossed, fearful of changing the position of a limb, lest it should occasion any alteration in the boat's trim. Thus aided by every effort of art, and impelled by a light breeze, the galley soon gained rapidly on the chase, which perceiving that the boat from the shore was evidently about

to pursue her, bore round-up, making all the sail she could carry before the wind. The bowman, just then looking under the foot of the lug, pronounced her to be a large lugger, which he had before seen on the station, under similar suspicious circumstances. The lieutenant, putting up the helm, instantly edged into her wake, and followed precisely her track.

A short period, however, sufficed to show that the chase, from the quantity of sail she was enabled to carry, had decidedly the advantage; and the wind continuing to freshen as the tide set in, she rapidly distanced her pursuer. In half an hour she was hull down; the haze of evening growing every moment thicker, she became imperceptible to view. The men now involuntarily turned their eyes, which had hitherto been strained on the chase, to the stern of the galley; the appeal was unnecessary—the lieutenant was already occupied in council with the coxswain; his trusty favourite hesitated not to dissuade him, in terms respectful, yet decisive, from continuing so unequal a chase, more particularly as there was no chance in the dark of communicating by signal, either with the shore or any cruiser which might be then off the station.

A heavy swell had now set in from the same point in which the wind had continued all day. The sun had set with every indication of stormy weather; a pale yellow streak of light over the land, partly reflected on the east, formed the only contrast to the general murky gloom of the horizon; across which the gull and other sea fowl, hastily fled the approach of the gale, already indicated by the swift drifting of the scud, which overtook them in their flight, and suddenly enveloped all in darkness without the intervention of twilight.

They had got so far to leeward, that to return with the lug was impossible. The sail had already been lowered, the mast struck, and the boat brought head to wind; when the crew, shipping their oars, bent their broad shoulders to pull her through the heavy sea, which flung itself in sheets of spray over the bows, and drenched every man on board. It was soon found that oars were unavailing to contend against the force of a sea like this, in which it was scarcely possible so small and delicate a bark should live much longer. The waves were rolling from the main in aggravated violence, and the united strength of the men could barely keep her head to wind; who, perceiving there was no longer the slightest prospect of making any progress, or the wind moderating, sullenly contented themselves with hanging on their oars.

Apprehension soon put an end to all subordination. Remonstrances on the impossibility of successfully persevering in their present course, were now muttered by every seaman, except the coxswain, whose features betrayed, notwithstanding, no less anxiety than the rest. A heavy sea, which now struck the larboard-bow, making, in consequence of its being impossible to keep the boat's head on, a rapid accumulation of water every minute, soon decided the reluctant lieutenant—though at the obvious hazard of her destruction—to run the boat ashore in the first situation which might offer a chance of saving the lives of his brave companions. “Lay in your oars, my lads,” cried he; “step the short mast—close reef the storm-lug; we must run all hazards, and beach the galley under canvass.” Whilst executing this order, the bowman sung out, “A sail close a-board, sir; if she don't keep her luff, she'll run us right down.” “Luff, luff!” exclaimed aloud every man in the boat. The lugger's course, however, remained unaltered, there could be now no doubt that she had seen them first, and perceiving her to be a king's boat, her object was to run clear over the galley, by taking her right a-beam.

Destruction appeared inevitable in their helpless condition. A shriek of despair, mingled with execrations, succeeded as she neared the galley, when the lieutenant rose in the boat, levelled his pistol at the steersman, and fired: the hand which grasped the tiller relaxed its hold, and the miscreant his life. The lugger instantly broached-to, passing to the windward of the boat. “Our oars, my lads,” said the lieutenant; “we'll board the villains.” “Aye, aye, sir,” exclaimed several voices, with an alacrity which might be taken for the surest earnest of meditated revenge. The oars were again manned, the boat in the meantime pitching bows under, and shipping green seas fore and

aft. Before she had got way on her, two of the weather-oars snapped short in the rowlocks, and her intention to board being suspected by the smuggler, she had no sooner paid off, so as to get the wind again abaft the beam, than shaping a course edging in for the land, she quickly dropped the galley astern.

Having run so far to leeward in the former chase, no one was now able to decide on what part of the shore an attempt to land might be practicable: all was darkness around: and although from two or three flashes, discernible at an elevation considerably above the sea, and which appeared to be signals made from the heights to assist the desperate outlaws they had just encountered, there was no doubt they could be at no great distance from the lane, still to follow her was to brave unseen dangers.

The men were clamorous to hoist the lug and give chase, a sentiment in which the unpresuming coxswain concurred; as he observed that "Capture or no capture, they were more likely to find a smooth sea by following the lugger, which clearly was herself making for the beach." A heavy lurch, which nearly swamped the boat, soon created unanimity. The lug was hoisted at all hazards, and the lieutenant putting the helm up, she flew with inconceivable velocity in the lugger's wake, though not without imminent danger of being pooped by every successive sea.

The roaring of the surf was now distinctly heard; and soon the whole scene was lighted up by its luminous appearance. The bowman, alarmed, now vociferated—"Breakers a-head!—hard down, sir, hard down!" Before the word was repeated, she had entered the frightfully agitated element. "Down with the sail, or we're lost!" exclaimed the crew. "Hold on! hold on everything!" cried the veteran; "'tis our only chance to beach her. The surf now reared itself in boiling masses, higher than the mast, and, as it fell thundering on the shore, the wild din burst on the affrighted ears of the seamen like successive salvos of heavy artillery. An enormous sea, striking her on the quarter, swept her broadside to the surf, washing out the lieutenant with one of the crew; and the next bursting with wilder fury, turned her bottom upwards, burying beneath her the seven unhappy seamen in one common grave.

WILL BLOCK:

A TRUE TALE.

It was on the afternoon of a lovely day in summer, a veteran tar came whistling through the narrow lane that cuts off a considerable portion of the main road between Plymouth and Exeter, and shortens the journey to the weary traveller. There was something in his whole appearance so peculiarly interesting and neat, that the passenger, after receiving his "What cheer, what cheer?" could not refrain from turning round and stopping to take another look. Indeed that sparkling eye of good-humoured pleasantry, that countenance displaying at once the generous benevolence of his heart, was not easily passed by unnoticed, or readily forgotten. His dress consisted of a blue jacket and white trousers, a straw hat bound with black ribbon thrown carelessly back upon his head, so as to display the straggling locks of silvered grey that flowed beneath, and a black silk handkerchief loosely knotted round his neck, over which lay the white collar of his shirt: a short cudgel was tucked under his arm. He had now reached the inn by the wayside, where he purposed heaving-to, to take in a fresh supply of grog and biscuit for the voyage. Crossing the threshold, and entering the passage, his ears were saluted with the vile discordant sounds of some one in a passion. "Never throw hot water and ashes to windward," says the old tar, shortening sail; "I'd sooner engage a squadron of fire-ships than one woman in a rage. They are sure to have the last broadside, even while sinking." He was putting about to stand off again, when a sweet voice, in plaintive supplication, struck upon his heart, and brought him up. 'Twas in reply to the vociferation of the termagant, and he remained backing and filling in the passage. "What money—clothes—all lost did you say," exclaimed a rough-strained

throat, something resembling the combined noise of a blacksmith's bellows and a flint-mill: "All gone, eh?" "Yes, ma'am, all—all is lost to me," replied a female, in tones which would have excited pity in any heart that claimed the smallest acquaintance with humanity. "So you think that story will do, eh?" continued the first; "'twon't though, missus, so you must tramp. I don't keep a house for vagrums, and sich like." "Indeed, indeed 'tis true; the villains robbed me of all, and I've walked many, many weary miles. Oh, but for a piece of bread—a little cold water! Can you deny me this! Indeed I've not been used to beg." "Why that's the way with all you canting creatures—all ladies, forsooth!—Where do you come from?" "Oh, ma'am, I'm a wretched girl? yet I was once happy: sorrow has indeed reached me—lost, lost Lucy!" "Ha, I see how it is! What, you've been with the fellows, have you? Why you good-for-nothing!—there, get out of my house—get out, I say!" "Can you have the cruelty to let me perish? Where, shall I find compassion, if my own sex refuse it! Oh, remember that mercy, that pity is the attribute of angels!" "Don't talk to me of angels, hussy, and as for tributes, there's sasses, and taxes, and poor's rates enough—Out I say! What, you won't eh? Here, John! Bet!—where are you all? you pack of idle vagabonds! Here, take this miss, and turn her out." "Oh, let me implore your pity—here humbly let me beg—" This was too much for our honest tar. Entering the kitchen, he beheld a young girl, plainly, but neatly dressed, on her knees before an old woman. The tears were running down her pale face, and she seemed fainting with fatigue and grief, while a man grasped one shoulder, a boy the other, and a maid-servant together, were attempting to force her out. "Yo hoy, what's the matter here?" said the veteran, flinging the man to the opposite side of the room, and giving the boy a trip that laid him sprawling on the other: "Cowardly lubberly rascals! what grapple a vessel in distress? and you," turning to the landlady, "to stand looking on! Is this a Christian country? For shame, old woman!" "Old woman forsooth!" exclaimed the now doubly-exasperated landlady. "Old woman, forsooth! What you takes the part of the young-un, eh? But she shall budge directly." "I say she shan't, then. Come here, pretty one, and nobody shall harm you while old Will Block can keep the weather-gage." "Well, this is fine treatment, too, in my own house! And you, ye rascallions, who eat my victuals and take my wages, to see it tamely! Lay hold of her, I say." "Touch her if you dare," says old Will, flourishing his stick, "and I'll—I'll—Aye, that's right, keep off, for if you come athwart my hawse, blow my wig but I'll cut your cables!" Poor Lucy had got close to his side; but, fearing her protector would be injured for his generosity, she intreated him to desist. "I am not worthy your notice, sir;—only a drop of water, for I am very faint." "Shall have the best the house affords, while I've a shot in the locker. Go along, old Mother Squeezelemon, and get something for the poor child; don't you see she's all becalmed?" "What, give my property to vagrums and wenches?—not I indeed! Will you pay the reckoning?" "A vast, old Grampus! think of this here when you stands at another bar, and the last great reckoning comes—how will you look then? This will stand a black account against you, and what'll you have to rub it off with, eh? Go get her a glass of wine." "And who's to pay? Wine indeed!—get her some water, Jack," said the now alarmed landlady, for Will's reflection, and the solemn manner in which it was uttered, operated powerfully on her conscience. "Heave-to, you porpoise-faced swab—none of your water; get us some wine, and the best in the house, too, d'ye hear? Why, what's the lubber grinning at? Will this satisfy you, you old she-shark?" thrusting his hand into his jacket-pocket, and drawing it out again, filled with gold—"Will this satisfy you?" The landlady's countenance brightened up: "Why if so be as now you means to pay for it, that's another thing. Well, well, I dare says you're a gentleman after all. Come, child, (to Lucy) I'm sorry I was so harsh, but it's only my way. There, run, John, and fetch a bottle of my best wine, and some of those nice sweet cakes—Stop, John, stop, I'll go myself for the poor dear." Ha, ha, ha! what a generous heart!" cried Will

"how ready it expands at the voice of distress!" shaking his pockets. "Here's the key will unlock the floodgates of her benevolence at any time," holding up a guinea. "But come, pretty one," drawing a chair, "sit down and rest." "Oh, sir, how shall I ever repay your bounty?" said Lucy. "Wait till I ax you," replied Will, who felt a little hurt at the idea of being repaid. "Here, miss," said the landlady, entering, "take this nice cake and wine, 'will do you good. God bless your sweet face! why, do you think that I would go for to hurt a hair of your head?" "There, there, there's enough of it—no more palaver; I arn't agreed for that, you know, though I suppose you'll consider it in the bill." Luckily at this moment, to prevent the gathering storm, the bell rang violently in another room, and she disappeared. "Come, come, don't be backward; never mind an old sailor," said Will: "refresh yourself, and then tell me what I can do to serve you; speak as if I was your father." "Oh, sir, don't talk of my father—I have fixed a wound in his heart." "There, there, don't cry I can't bear to see a woman's tears—it makes a fool of me; but tell me honestly all about it, for I've got to be at old Admiral M——'s by night!" "Of——Grove?" inquired Lucy, much agitated. "Why, ay; do you know him?" "No, sir; but—but I have seen—I have been in company with his nephew; and again she burst into tears, as if her heart would break. "Why, ay, I see how it is; knock old Will down for a witch. I see how it is: this is Master Tommy's doing, eh? Zounds!" clenching his fist;—"but no matter. And where are you come from?" "From my father's, sir." "And who is your father?" "Oh do not ask me! my name is Lucy B——." "What, the daughter of old B——, that was in the Venerable as first lieutenant?" "Yes, I am indeed his wretched daughter." "Zounds! why," starting up in a passion, "why, and has Tom dared?—But don't be frightened. And so you have deserted your home and my poor old friend?" "Spare me! sir, spare me! If my father was indeed your friend, oh, succour his erring child!" "Well, well, my upper works get crazy now—hardly able to weather the storm. But the villain that would betray innocence, and then abandon his victim—zounds!—But, come, come along." "I thought of going to the admiral's, sir." "To be sure, to be sure! we'll be under weigh in a minute." "Yet, sir, perhaps he will not see me, or it may be injurious to his interests; and I would willingly die to serve him, for he has a feeling heart." "A what? a feeling heart? Why are you here then? But come along, sweetheart!" and discharging the reckoning, they set off in company.

Of all the eccentric beings in this eccentric world, old Admiral M—— was the most eccentric. He had risen solely by merit; from the station of cabin-boy to vice-admiral of the white; and 'twas ever his boast that he had never skulk'd in great men's pockets, nor been afraid to dip his hands in a tar-bucket! "I came in at the hawse-holes," he would say, "and didn't creep in at the cabin windows." He had been known to absent himself from home for weeks together; and no one could tell where he went, or what had become of him, till his repeated acts of generous bounty discovered the track he had taken. He would frequently return home without previous notice, enter the house unobserved, ring the bell, and order refreshments, as if he had never quitted it. Not an old sailor that had ever sailed with him but was welcome to partake of his cheer; and those who had been his messmates previous to his mounting the uniform, if of good character, but not so successful as himself, always sat at his table. Possessed of an immense fortune, which he was accustomed to say was drawn from the Spanish stocks—yet without children, for he was a bachelor—he had adopted his nephew, determined to leave him the bulk of his property. The young man, who really was naturally of an amiable disposition, on this accession to his uncle's favour, associated with some of the dashing characters of the day, and became tinctured with their vices and follies. He had been introduced to the family of Lieutenant B——, by a brother officer; and that acquaintance which terminated so fatally for poor Lucy was begun. Yet he passionately loved her; but, fearing the condemnation of the admiral, and the loss of his patronage, he had withdrawn himself from Exeter without

even bidding her farewell, choosing rather to immure himself from the world than break the oath he had pledged to Lucy, or disoblige his uncle by marrying without his consent, knowing that the old gentleman was ambitious for his nephew to look for a wife agreeable to the high prospects in view before him, and equally convinced that to thwart his inclinations would but annihilate all his hopes, and cast him adrift upon the world. Such was the state of affairs when Lucy left her home to endeavour to gain an interview with her lover, and fell in with old Will, who in early life, according to his own account, had sailed with the admiral, and was now going to pay him a visit, and see some of his old messmates, of whom the principal part of the household was composed. She had been plundered by some villains of all she possessed at day-break, but still continued her journey, till, worn with hunger and faint with fatigue, she entered the inn, and implored assistance.

The shades of evening fell on the landscape as they passed under the avenue of trees that led to Grove House. Will, having promised to exert himself in obtaining an interview between Mr. M—— and his convoy, left her at a short distance, and proceeded onward. Almost overpowered by her reflections, and every pulse throbbing violently with agitation, she leaned against the trunk of a tree, expecting to see the being whom, next heaven, she loved most tenderly. 'Twas now grown too dark to distinguish objects, but she could hear footsteps approaching, and she sunk without sense or motion to the ground. On recovery she found herself sitting on a couch in a small room, and the old housekeeper, with other females, sedulously administering to her necessity. Her eye glanced wildly around for another object, while the old lady strove to soothe her mind, informing her that 'twas herself that had discovered her in the avenue, at the request of Will. Refreshments were placed, of which Lucy partook sparingly, desirous of knowing, yet trembling to ask, whether Mr. M—— was in the house, or had seen the worthy veteran, her kind conductor.

"Pray, sir," said the admiral, entering the room abruptly where his nephew was sitting alone, and ruminating upon his own hapless condition, but more upon the object of his sincere attachment, little imagining that she was at that moment under the same roof—"pray, sir, what does that man deserve, who robs a friend of his dearest treasure—who, stealing into the confidence of a young and artless girl, under the flag of affection, turns pirate, and plunders his prize with remorseless cruelty?" The young man sat petrified, for these questions were precisely accordant to his own feelings, previous to the entrance of his uncle. "Answer me," exclaimed the admiral, raising his voice—"answer me directly?" "I cannot, sir; I am too deeply sensitive of error." "Or what does he merit," continued the admiral, "who contrary to the views of a relative that has raised him to opulence, first contracted himself to a young female, and then deserted her?" "Infamy! infamy and disgrace!" exclaimed the agonized M——. "I feel all—all, and shudder!" "You have judged right, sir; your acquaintance with the poor distressed child of Lieutenant B—— I have just received information of, and your own lips have condemned you." "Not so much as my heart, sir," replied M——. "Pass what sentence you please; but oh! suffer me to expiate my fault! do not drive me to desperation!" "Tis well, sir, you are convinced of your error;" and, ringing the bell violently, a servant appeared. "Order Mr. M's horse to the door;" then, turning to the young man, "This is no longer a home for you: however, you shall first have the satisfaction of facing your accuser; and again ringing the bell, directed another servant to introduce the stranger. No culprit ever stood more agitated than M—— while these orders were given. He fixed his eyes upon the door in anxious expectancy; but what were his feelings—what his agony—when Lucy herself appeared! He would have rushed towards her; but his uncle caught his arm, and in a voice that made the poor girl tremble, "No, sir! would you again coil like a snake about your victim? would you once more sting a bosom whose only fault was loving a villain? Go sir! you have forfeited all pretensions to my favour—you have degraded my name—you have degraded yourself. Go, and never let me see your face again!" This was too much for poor Lucy; she had expected a private interview with her lover,

and imagined, when she quitted the housekeeper's apartment, 'twas for that purpose the folding-doors of the drawing-room were thrown open. How great then was her surprise and distress when she found herself in the presence of the admiral! He was habited in an immense cloak that covered his whole person, and his laced cocked hat upon his head; but the sentence was no sooner pronounced than Lucy knelt before him imploring mercy. M——, at the same moment, threw himself by her side, caught her upraised hand, joined it in his own, and offered his petitions with her's. The old admiral dashed the tears from his eyes, and, overcome by the scene, grasped their united hands, and blessed them. But who can express the astonishment, the gratitude, of Lucy, when throwing off his cloak and hat, he appeared before her as her generous benefactor, protector, and guide—even old WILL BLOCK.

FREDERIC THE GREAT.

It came to the knowledge of the King of Prussia, that a corporal of his body-regiment, a fine young fellow, wore a watch-chain suspended from a leaden ball, merely from a wish to appear consequential. Frederic, wishing to be convinced of the matter, accosted the corporal one day on the parade. "Corporal," said he, "you must be a prudent fellow, to have saved a watch out of your pay." "I flatter myself that I am brave, sire," replied the man; "the watch is of little consequence." The King, taking out a watch, set with diamonds, said: "My watch points at five. How much is yours?" Shame and confusion first appeared in the corporal's face: at length he drew out his bullet, and answered with a firm voice: "My watch, sire, shews me neither five nor six, but it tells me that I ought to be ready, at every hour, to die for your Majesty." The King replied: "In order that you may daily see one of those hours at which you are to die for me, take this watch."

In one of the forced marches of his army, Frederic rode beside his cavalry, and heard a trooper at a short distance make a horrid noise with cursing and swearing. He immediately rode up to him, and heard him exclaim, among many other oaths: "I wish this confounded sort of life was at an end."—"You are very right, my lad," said the king: "I wish the same: but what can we do? We must have patience, till it is peace."

After the action near Breslaw in Silesia, between the Prussians and the Austrians, which preceded the battle of Lissa, and before the two armies met in this latter contest, a French soldier in Frederic's service, who had just deserted, was stopped, and conducted to the king. "Why did you leave me?" said Frederic. "Because, answered the soldier, 'your affairs are too desperate.'—"Well," replied the king, "go back to your colours. We shall have another battle soon; and if I lose it, come and find me out, and you and I will desert together."

By such instances of occasional condescension and lenity did Frederic acquire the confidence of his soldiers, and secure their exertions in gaining those glorious victories which have conferred on him the title of *Great*.

During the second bombardment of Algiers, the Moors, in despair, fastened their Christian slaves to the mouths of their cannon, and in this way their mangled bodies were fired against the hostile ships. An Algerine captain, who had been, some years before, taken prisoner by the besiegers, observed among the number an officer who had at that time shown him the kindest treatment, and with whom he had contracted an ardent friendship. He perceived him at the moment when they were about to fasten the unfortunate man to the cannon. The Algerine cried out, and made the most violent struggles to save the life of the victim. But finding his entreaties vain, and that they were on the point of firing the gun, he threw himself across the body of his devoted friend, clasped his arms firmly round him, and called aloud: "Fire! Since I cannot save the life of my friend, I will at least enjoy the consolation of dying with him." The Day, who happened to be an eye-witness of this scene, was so moved at the sight, that he instantly conceded to heroism what he had denied to humanity.

CAPTURE OF A DUTCH SHIP BY ENGLISH PIRATES.

At length events occurred which opened Gerald's eyes to the true character of his associates. In the middle of one night on the morning after which he had resolved to have a serious explanation with Captain Taff Brill respecting the detention at sea, Gerald was awakened by heavy rumbling noises over his head. For a moment, he thought nothing of it, supposing that the vessel was merely going upon another tack; he was, however, shortly afterwards convinced that something unusual was at hand. Few voices were heard; but the running and hurrying of the men about the ship was very evident. An idea of the truth darted into Gerald's mind; and he was immediately on the point of starting from his couch, when, by the light of a lantern that hung in the cabin, he beheld Yaco, the negro, coming down the ladder from the deck.

The countenance of the poor slave was long and dismally dark, and portended something awful to himself, if not to others. His step was agitated; and he hastened to a locker, in which sundry stores were kept, and began taking from it rolls of old linen and tow, and pieces of plaster, and other things, which Gerald well knew to be his stock of surgical dressings. Gerald immediately leaped from his bed cabin:—"What are you preparing for, Yaco?" said he.

"Oh! Massa Staffa, make one start so," cried Yaco, who did start at the sudden spring of the impatient youth from his bed. "Oh! Massa," continued he, holding his finger to his lip, as a sign of secrecy,—"all dead men, soon;—such big ship for little ship to fight."

Gerald had begun to dress himself, and he now hastened his proceeding. "Yaco, you can get me a sword," said he, "and pistols, Yaco, and a dagger!"

"Oh, sick, massa, not fight!" cried the negro, looking at Gerald in dismay.

"Sick, me sick!" exclaimed the youth. "The devil take me if I am sick now! Get me weapons, Yaco—sword and pistols—and I'll show you what a good surgeon you have been."

"Ah, massa," said Yaco, shaking his head, "better no fight; these fighting fellows kill for money—die for money—fling money away like blood; all wild and wicked, all—"

While Yaco was speaking, a gun was fired from above. The negro paused, and Gerald finished arraying himself: meanwhile several guns were discharged from a ship evidently not very far off. This warlike reply was received by the crew of the Crown Jewel with a shout of defiance, and Gerald heard the captain order the steersman to starboard the helm, adding, more loudly, to his men, "we will go aboard of her, my lads—be ready there with your tackle!"

"Where shall I find arms, Yaco?" cried Gerald. "I must at any rate, be ready to defend myself."

"In Massa Captain's cabin," said the negro; "but Yaco no give—Yaco only say where."

Gerald was not long in providing himself with what he wanted from a little closet with a bed in it, called the captain's state-room; he then rushed for the first time upon deck.

He beheld the deck of the Crown Jewel crowded with her crew, which was more numerous than he had supposed! and the night was sufficiently clear to show that they were armed with cutlasses, dirks, and pistols. The greater part of them had thrown off their jackets, in order to fight in their knitted frocks, or shirts, and had bound handkerchiefs round and over their heads, while other handkerchiefs, pieces of ropes, or similarly available articles served them for belts or girdles, in which were stuck their pistols and dirks, or in lieu of these, long whittles, of most butchering aspect. Almost alongside, though a little in advance, was a tall ship, rising like a giant from the water, when compared with the small bark that had the audacity to attack her. Her bulwarks showed several groups of men, gazing upon the enemy, whom they appeared, by their quietude of manner, and little preparation, to despise; but somewhat unexpectedly they poured a volley of small shot amongst them, and fired a few heavy guns in the same direction, seemingly with the belief that they should sink their little assailant without much trouble, or, having crippled her, should make her an easy prize.

"An old fool!" exclaimed Mansveldt, near whom Gerald found himself; "why I, second mate as I am, could have done better than that,"—and the speaker seemed as if disappointed by the want of skill shown by his adversary.

To Gerald it seemed something like foolhardiness to attempt a vessel so superior in size and apparent force; and, recollecting that he was yet ignorant of the cause of quarrel, he advanced to the captain, and briefly asked, "what is she?"

"Ha, Stafford!" cried Taff Brill, joyfully, "mean you to join us?"

"If it is a quarrel in which I may fight," replied Gerald.

"If we are taken, you will swing for being among us," said Taff—"is not that quarrel enough?"

"Not quite," answered Gerald.

"Well, then, she is a d——d Dutchman, carrying pro-

vision and stores to Ireland for the Parliament, those tadpoles will do anything for money."

"How can you know what she is about?" said the youth.

"I have good information, lad," replied the captain, "do you think I kept cruising about here upon a cold scent? Know her! I know the old 'Vrouw Constantia' as well as my own little Jewel."

This dialogue passed in two seconds of time—another volley from the Vrouw Constantia interrupted it. Some execution was done by this round; but another discharge of great guns failed of any serious effect. The shot passed over the low deck of the Crown Jewel, and missed the masts, which they were probably designed to carry away. The rigging slightly suffered; but Gerald was so astounded by the explosion so near

CAPTURE OF A DUTCH SHIP BY ENGLISH PIRATES.

him, from very heavy artillery, and expected to see the whole fabrics of masts and sails fall about his ears. Several men lay killed or wounded on the deck; but there was no time for reflection or attention to anything but the chief object of the contest. In a few minutes the Crown Jewel ran on board of the Vrouw, under cover of her own smoke.

As the vessels came in contact, grappels were thrown by some of the crew of the assailant among the rigging of the enemy; a brisk discharge of small arms was directed by another party, at the points over which it was intended to board; and, without further delay or preparation, the aggressors poured up the side of the lofty ship in two different places, as fearlessly as if the bristling pikes, swords, pistols, and daggers of her crew could do them no injury.

The captain led the first party, or that which was nearest

to Gerald, and, impelled by natural courage as much as by any other impulse, the youth joined his followers. Sawkins and Mansveldt both headed the rest of the privateers, or pirates or whatever else they might be; and many of them went dancing along the deck of their vessel, and leaped upon her gunnel to get on board the Vrouw Constantia, with the glee of men going to join in a frolic; though in doing so, they had to pass over the bodies of those of their messmates who had already fallen. All was now, to Gerald, the struggle and confusion of hard and hurried fighting, he urged his way upon the enemy's deck, with his companions, by the force of blows and the fall of adversaries. Cuts, thrusts, and shot, were given and received without shrinking, and the combat raged fiercely. The Dutch fought silently, but sturdily; their assailants shouted and yelled as they pressed on, with a ferocity almost amount-

ing to rage, careless of all risk, and desperate to folly. But the contest did not last long. As if discomfited as much by the fury of their foes, as by the execution of their weapons, the Dutch suddenly gave way, and began to retreat down the hatchways; others now threw down their arms and cried for quarter, which was granted them; and in less than half an hour from the time of his being awakened by the sounds of warlike preparation, Gerald found his friends, or, at least, his messmates, in possession of a vessel more than twice the size of their own little bark.

The exultation of the captors was extreme, and displayed itself for awhile, in some of them, by the most extravagant caperings and exclamations: the greater part, however, were more rational, and engaged themselves in securing the prisoners to prevent any attempt to regain possession of the vessel. For this purpose, after those captured on deck had been bound, the rest were called up one by one from below and pinioned; and when this task was completed, Gerald perceived that the prisoners were far more numerous than their conquerors.

Gerald had hitherto considered his sea-faring acquaintances as rough good-natured fellows, whose occupations gave them ruder habits and blunter manners than their countrymen on shore; he now noticed signs of barbarity which shocked him. The bodies of the killed had already been thrown overboard, without any ceremony; perhaps some only wounded shared the same fate; it was now proposed by Sawkins, with an oath and a laugh directed to Mansveldt, to fling all the prisoners into the sea out of the way. A shout of applause from a great part of the crew, who overheard this proposition as they remained tumultuously crowding the deck of the *Vrouw*, seconded it loudly. "Ay, back to back, over with them, herring-stealers!" cried several voices, "Give the Hanse rascals a dive into the deep sea," exclaimed others.

It also appeared that the motion was about to be carried by acclamation, and executed without delay, when the captain, who had been engaged with the helmsman, came forward, and, as if not knowing what was in agitation, ordered his men to put the ship about, and set additional sails, in order to clear the channel as speedily as possible. The crew was then divided between the two ships, and disposed into watches.

A WOUNDED TAR'S PETITION.

Composed during a Gale in 1814, in which many Vessels were wrecked in Dublin Bay.

Where shall the weary seaman find,
Assailed by danger, death, and toil,
A home, a shelter from the wind,
That wrecks him on his native soil.

His bosom for his country glows
With ardent patriotic flame;
Intrepid still he seeks her foes,
And adds fresh laurels to her fame.

For England's cause, for England's right,
Where'er a sense of duty calls,
He fearlessly mingles in the fight,
And nobly daring fights and falls.

Then who can view the battered tar,
Who fought and for his country bled,
Returned from danger, death, and war,
Without a place to rest his head.

Nor wish to give his shattered form
The dear reward of all his toil,
A home, a shelter from the storm,
That wrecks him on his native soil.

W. P. N.

WRECK OF THE PEGASUS.

It is our painful duty to announce the melancholy catastrophe of the loss of the *Pegasus* steamer, plying between Leith and Hull, with upwards of forty human lives. We now proceed to lay before our readers the interesting, but distressing particulars of this calamitous event; and, before doing so, we may be allowed to advert briefly to the most prominent features of the locality in which it occurred. Every general reader (not to mention those whose daily experience makes them acquainted with the facts) is aware of the topographical peculiarities of Holy Island, the ancient Lindistarne; of its forming a continuation of the main-land of Northumberland at ebb of tide, and becoming insulated at flow. The rock on which the *Pegasus* is supposed to have been wrecked is called the Goldstone—a well-known object, situated about two and a half miles east, or seaward, from Holy Island. It is seldom or never left uncovered by the tide; it is well known to, and anxiously avoided by, our coasting navigators, in working through the Fair Way or Channel, between the Farne group and the main-land—a channel generally preferred to the open sea, by masters of vessels as a shorter cut, but never so preferred (especially at night) without incurring a risk which infinitely counterbalances any saving of time thus acquired.

The *Pegasus* left Leith on Wednesday, July 19, 1843, on her usual voyage to Hull. At a late hour on the evening of the same day, or early the next morning, she became a total wreck, by striking on the rock above mentioned; and as the only authentic narrative of the sad occurrence which has yet appeared, as well as the most touching and intelligible, is that which has been given by a seaman, named Baillie, who was saved, under Providence, by his own almost superhuman exertions, we subjoin it entire:—

Baillie said; "I have been a seaman for about eighteen years, but was recently in attendance on Mr. Torry, who was one of the passengers on board the *Pegasus* when she went down. I think it was about twenty minutes past twelve when the vessel struck. I was down in the cabin, lying on a sofa, and when I found that the vessel had struck I ran on deck, and having seen the state of matters there, I went down to the cabin for Mr. Torry. I told the passengers below that I believed the ship had struck, but they did not seem to comprehend what I meant. Some of the passengers (chiefly the ladies) were in bed. When I reached the deck with Mr. Torry, I saw the crew in the act of lowering the boats. I put Mr. Torry in the starboard quarter boat, when it was in the act of being lowered, and when it had reached the water I sprang in myself. There were then about nine of us in the boat. A lady I remember, was sitting in the bow. When we were in the boat, there was a cry from the quarter-deck to 'stick to the ship.' At that moment, the engines were set in motion, and the boat being hooked to the ship's stern, but unhooked from it at the bow, the back water raised by the paddles filled the boat and upset her, throwing the passengers into the sea. I got hold of the ship's rudder chain, and the chief-mate having thrown a rope to me, I got into the ship again. Seeing the danger increasing, I undressed myself to prepare for swimming for my life, and laid my clothes upon the companion. By this time the engine had stopped, and the ship was fast settling by the head. Looking around me, I saw the Rev. Mr. Mackenzie on the quarter-deck praying with several of the passengers on their knees around him. Mr. Mackenzie seemed calm and collected. All the passengers around him were praying too, but Mr. Mackenzie's voice was distinctly heard above them all. I heard the captain say that we must do the best we could for ourselves. I saw a lady, with two children, close beside me on the companion, calmly resign herself to the Almighty. The children seemed unconscious of the danger, for they were talking about some trifling matter. When I found the vessel fast filling, I leapt overboard, and the engineer and I were at first drawn into the sea by the suction occasioned by the vessel sinking. I soon got up again, however, and got hold of a plank and the steps which led to the quarter-deck. The stewardess attempted to get hold of me; but I extricated myself from her to save my

own life. By this time the scene was a most dismal one. The surface of the water was covered with the dead and the dying. The screeching was fearful. One of the firemen also attempted to get hold of the plank, which I had, but I swam away from him. I remained floating about till half-past six, when I was picked up by a boat from the Martello. I was then about a mile from the wreck, and the people in the Martello did not for some time observe me, till I attracted their attention by waving a stick. One little boy (probably the boy Scott) kept himself afloat for above three hours on the part of the skylight covering, and made great exertions to save himself, but he sunk at last. His body was warm when picked up. I was once wrecked before, about twenty years ago, off the coast of St. Domingo, when I was three days and three nights on a reef. It was the experience I learnt then, which gave me an idea of taking off my clothes before leaping into the sea."

The Rev. Mr. Mackenzie, whose calm and Christian resignation at the awful hour of death is thus so graphically described, was the Rev. Mr. Morell Mackenzie, formerly pastor of the Independent church in Nile-street, Glasgow, and latterly tutor of the Theological Seminary in that city connected with the Congregational body. The eminent talents and attainments of Mr. Mackenzie were well known to many, and his death will be a severe loss, not only to the ecclesiastical connection he belonged to, but the religious and literary society of Glasgow.

Another seaman, named Hildyard, states as follows:—"I belong to Beverley. My father is a clergyman there. I have for several years followed the trade of a seaman, but I was going to Hull as a passenger by the Pegasus. I think it was about half-past twelve when the vessel struck; I was below at the time, but when I heard the crash I went on deck. I was at once aware, from the violence of the concussion, that the ship had struck on a rock. I ran forward, and looked into the fore-castle, and found her fast filling with water. I perceived the captain and mate in earnest conversation on the cross bridge, between the paddle boxes; I heard the captain order the engine to be reversed, which was immediately done. I then went aft, and found the people all rushing into the boats, men and women. I got into the starboard boat, but finding it crowded with people who knew nothing about the management of a boat, I got up again, and the boat soon afterwards swamped. I heard some passengers eagerly asking the captain what was best to be done; I did not hear his answer, but he did not seem much agitated. Seeing the boat fast sinking, I took off my hat, boots, and stock, and helped myself to two or three fathoms of rope, with the view of lashing myself to something, if I should afterwards be able to do so while in the water. Two rockets and a blue light were burned by order of the mate as a signal of distress. I think about half an hour elapsed from the time the vessel struck till she went down; it was certainly not more. I was standing on the after part of the larboard paddle-box when she went down, and I sank with her. I was about half a minute under water. I felt myself caught by the legs by some one, but I got quit of them. When I rose to the surface the top part of the funnel and the stern of the quarter-deck were just disappearing. The first thing I got hold of was the accommodation-ladder, which I got astride of. I perceived about eight feet of the foremast standing out of the water, and a carpenter clinging to it. I asked him if there was room for two, and he said there was. I then proceeded to lash the ladder with my rope to the mast-head, and we both of us stood upon this ladder, which was under water, until we were picked up by the Martello. When we left it there was only about two feet of the mast visible. If we had been much longer we could not have held on. Just before the vessel went down I saw a woman climbing up the main-rigging; but she must have gone down with the vessel, for I never saw her again."

It appears that between three and four o'clock on Thursday morning the fishermen of Holy Island, returning from the herring fishing, and when within a short distance of the rock mentioned, were surprised by the appearance of human bodies, articles of wearing apparel, furniture, &c., floating on the sea, which was remarkably calm at the time. Within half a mile of the Goldstone stood a steamer, but not the fated one. Singular to relate, this was the Martello, Captain Blackwood, be-

longing to the same company as the Pegasus, flying in the same track at the same intervals, and which, on her return, voyage from Hull to Leith, had arrived at the scene of her compeer's destruction within but a very short interval after the awful catastrophe, but not early enough to avert its most appalling effects. The boats of course immediately commenced to pick up the bodies, along with such property as lay in their course, and in a short time the dead bodies of three females, one man, and one young boy were taken up. Markwell's boat was in time to rescue at least one sufferer from the brink of death; we give the facts from his own lips, and corroborated by his boat's crew. On approaching the spot, they saw a man apparently immersed up to the breast in the sea. They approached, and found him sitting erect in a sunken boat, in a state of frigid insensibility, with the film of death overspreading his eyes. He was taken up, and on some spirits being administered, he began to revive. The first words he uttered were in the form of a question, as to the state of the fires. He was an engine man of the Pegasus, named Duncan Campbell. He, as well as five other survivors, and all the dead bodies, and most part of the property, were immediately taken on board the Martello, which, after it had fished up everything, living and dead, to be found floating around, set sail for Leith.

The following is a list of the bodies which were claimed on their arrival in Leith:—

Miss Barton from Lincolnshire, who was returning to England from a visit to Miss Banks's boarding-school, 45, Moray-place. Two ladies, Miss Hopetoun and Miss Floors, pupils of Miss Banks, and were returning home for the holidays, under the charge of Miss Barton, and a little boy, a brother of one of the young ladies.

Mrs. Alexander, widow of R. Alexander, weaver, Paisley. James Martin, son of Mr. Martin, cabinet-maker, and coffee-house keeper, Great Russell-street, Covent-garden, London (also lost).

David Scott, a boy about twelve years of age, son of Mr. Matthew Scott, shawl manufacturer, Paisley.

The following is the list of the cabin passengers booked at Leith:—Mrs. Edrington, from Edinburgh; Miss Hopetoun, Miss Barton, Miss Floors, (the little boy was along with these three); Miss Briggs, Mrs. M'Leod, Mr. M'Leod; Mr. Torry, from Hull; Mr. Baillie, attending on Mr. Torry (saved); Mr. Elton, the actor; Mr. Hodgson; Rev. Mr. Mackenzie, from Glasgow; Mr. Banks; Mr. Elliot and son, from Dundee; Mr. Moxham, Mr. Milne.

In addition to these we have ascertained the names of Mr. James Hunter, son of Mr. Hunter, ironmonger, 15, Howe-street; D. Whimster, late with Messrs. Ireland and son-linendrapers, South Bridge; Mr. Martin, of Great Russell-street, London, and son. The crew for the most part belonged to Leith, and several of them have left widows and children to deplore their loss. We may state that the Mr. Hodgson, mentioned in the list of the cabin passengers, is the brother of Mr. W. B. Hodgson, secretary of the Liverpool Mechanics' Institution, and who was himself appointed to the assistant-secretaryship of the Mechanics' Institution and Literary Society, Leeds. He was a native of Edinburgh. Mr. Torry was an English gentleman of weak mind, who had been in Scotland for the benefit of his health. Baillie, one of the two passengers saved, was in attendance on him. The lamentable fate of Mr. Elton has been deeply felt by that profession of which he was so distinguished a member. His virtue in private life were generally known and acknowledged. He has left a large family to deplore his departure from among them; and we are delighted to find that Mr. Murray, the Edinburgh manager, suggested that the profession should mark their esteem for Mr. Elton by benefits for his orphan children. On Saturday, August 5th, the evening's products was devoted to that purpose. We also learn that among the passengers was a girl named Susan Allan, daughter of a soldier in the 25th regiment, and who was intending to go out to her father in India along with the soldiers of the 56th, who were on board the Pegasus.

The following communications respecting this melancholy wreck will be found of interest, painfully so, but any

information from an authentic source is of twofold importance:—

"Berwick, July 22, 1843, 9 p.m.

"Sir,—I have just now returned from Holy Island, and beg to enclose you some particulars as to the loss of the ill-fated steamship *Pegasus*. I have been off to the vessel, and find she is in ten fathoms of water, six fathoms above her rail, and the mast is five feet above the water at low water.

"It does not appear that she has as yet broken up, as the mast is still standing, and very little wreck-wood has yet driven from her.

"It is supposed, when the vessel struck the Goldstone, that the passengers had rushed to the boats and upset them. What makes this wreck more lamentable is, that it was a fine night and clear, with a westerly wind, and the lights seen distinctly, and it is also said that the master was on the bridge at the time she struck. From inquiries that I have made, it appears that the master must have steered between the buoy and the rock, and then, standing out again, struck the rock. It is also remarkable, and said to be so dangerous by the pilots, that several of our coasting steamers prefer, in coming through the Fairway, to steer outside of the Megstone, and thence come inside between the Big Farn and it. This is condemned, as it leads them in their course too near the Goldstone.

"From all that I can learn from the pilots, they state that the leading light through the Fairway is too low, and does not open sufficiently; and that this leading light would be of much more service if it were built on the Megstone Rock, as it would be more distinctly seen, and open better, as the Big Farn light and this leading Fairway light are too near each other.

"It has been suggested that there should be a red standing light placed on some point off Holy Island, but there is a difference of opinion as to the spot on which it should be placed.

"All the Fairway buoys are at present in their places, and it is singular that the crew of the *Pegasus* should not have seen them, the night being clear.

"I understand that an attempt is to be made to weigh the vessel, and preparations are now making for that purpose. The wind is now so easterly, perhaps some more of the bodies may come on shore.

(Signed by)

"Lloyd's Agent.

"To William Dobson, Esq., Lloyd's."

Several of the relatives of the persons who have been lost have visited the scene of the wreck, and the grief that they have manifested has been great.

Some of the French herring fishery boats are supposed to have picked up some of the wreck floating about.

The following is the substance of a communication received from Leith by Mr. Lyall, manager of the General Shipping Company, at Berwick:—"Captain Samble will be able to inform you of the melancholy loss of the *Pegasus* Steamer, lost last night at half-past twelve, having struck upon the Goldstone, and sunk with all on board, nearly 40 passengers, except the mate, engineer, carpenter, a seaman, and two passengers, who were saved. Six bodies were picked up—three females two boys, and a fireman."

Mr. Browne; the mate, who still continues very weak, states, that previous to getting into the boat in which he was discovered by the Martello, he floated about for three hours on a board. When he fell in with the boat it was nearly full of water and it was with the utmost difficulty he could get into it without upsetting it. Steadying himself, however, upon the board he had got, he planted one foot into the middle of the boat and thus preserved its balance till he got both legs in. He then placed the board across the boat and made himself a seat. He describes the scene at the period of the vessel going down as being a heart-rending one. A great many of the passengers he says, floated about on the surface of the water for a considerable time, calling upon their Maker to help them in their distress, but they all disappeared, one by one, except himself and the other five who were picked up by the Martello.

WONDERFUL ESCAPE OF AN AMERICAN TRAVELLER.

On the twenty-second day of April, our party set sail in a large schooner from Fort George, or Niagara Town, and in two days crossed Lake Ontario to Kingston, at the head of the river St. Lawrence; distant from Niagara about 200 miles. Here we hired an American barge (a large flat-bottomed boat) to carry us to Montreal, a further distance of 200 miles; then set out for Kingston on the twenty-eighth of April, and arrived the same evening at Ogdensburgh, a distance of 75 miles. The following evening we arrived at Cornwall, and the succeeding night at Pointe du Lac, on Lake St. Francis. Here the bargemen obtained our permission to return up the river, and we embarked in another barge, deeply laden with pot-ashes, passengers, and luggage. Above Montreal, for nearly 100 miles, the river St. Lawrence is interrupted in its course by rapids, which are occasioned by the river being confined in comparatively narrow, shallow, rocky, channels: through these it rushes with great force and noise, and is agitated like the ocean in a storm. Many people prefer these rapids, for the grandeur of appearance, to the falls of Niagara. They are from half a mile to nine miles long each, and require regular pilots. On the thirtieth of April we arrived at the village of Cedars, immediately below which are three sets of very dangerous rapids (the Cedars, the Split-rock, and the Cascades), distant from each other about one mile. On the morning of the first of May, we set out from the Cedars, the barge very deep, and very leaky. The captain, a daring, rash man, refused to take a pilot. After we had passed the Cedars rapid, not without danger, the captain called for some rum, swearing at the same time, that God Almighty could not steer the barge better than he did! Soon after this we entered the Split-rock rapids, by a wrong channel, and found ourselves advancing rapidly towards a dreadful watery precipice, down which we went. The barge slightly grazed her bottom against the rock, and the fall was so great as to nearly take away the breath. We here took in a great deal of water, which was mostly bailed out again before we were hurried on to what the Canadians call the Grand Bouillon, or Great Bolling. In approaching this place the captain let go the helm, saying, "By God, here we fill!" The barge was almost immediately overwhelmed in the midst of immense foaming breakers, which rushed over the bows, carrying away planks, oars, &c. About half a minute elapsed between the filling and going down of the barge, during which I had sufficient presence of mind to strip off my three coats, and was loosening my suspenders when the barge sunk, and I found myself floating in the midst of people, baggage, &c. Each man caught hold of something; one of the crew caught hold of me, and kept me down under water, but, contrary to my expectation, let me go again. On rising to the surface, I got hold of a trunk, on which two other men were then holding. Just at this spot, where the Split-rock rapids terminate, the bank of the river is well inhabited: and we could see the women on shore running about much agitated. A canoe put off, and picked up three of our number, who had gained the bottom of the barge, which had upset and got rid of its cargo; these they landed on an island. The canoe put off again, and was approaching near to where I was holding on the trunk, when, terrified with the vicinity of the cascades, to which we were approaching, it put back, notwithstanding my exhortations, in French and English, to induce the two men on board to advance. The bad hold which one man had of the trunk to which we were adhering, subjected him to constant immersion, and, in order to escape his seizing hold of me, I let go the trunk, and, in conjunction with another man, got hold of the boom (which, with the gaff, sails, &c., had been detached from the mast to make room for the cargo), and floated off. I had just time to grasp this boom, when we were hurried into the cascades; in these I was instantly buried, and nearly suffocated. On rising to the surface, I found one of my hands still on the boom, and my companion still adhering to the gaff. Shortly after descending the cascades, I perceived the barge, bottom upwards, floating near me. I succeeded in getting to it, and held

by a crack in one end of it: the violence of the water, and the falling out of the casks of ashes, had quite wrecked it. For a long time I contented myself with this hold, not daring to endeavour to get upon the bottom, which I at length effected; and from this, my new situation, I called out to my companion, who still preserved his hold of the gaff. He shook his head, and, when the waves suffered me to look up again, he was gone. He made no attempt to come near me, being unable or unwilling to let go his hold and trust himself to the waves, which were then rolling over his head.

The cascades are a kind of fall, or rapid descent, in the river, over a rocky channel below: going down is called by the French *sauter*, to leap or shove the Cascades. For two miles below, the channel continues in uproar just like a storm at sea, and I was frequently nearly washed off the barge by the waves which rolled over. I now entertained no hope whatever of escaping; and although I continued to exert myself to hold on, such was the state to which I was reduced by cold that I wished only for speedy death, and frequently thought of giving up the contest as useless. I felt as if compressed into the size of a monkey; my hands appeared diminished in size one half, and I certainly should (after I became very cold and much exhausted), have fallen asleep, but for the waves which were passing over me,

and obliged me to attend to my situation. I had never descended the St. Lawrence before, but I knew there were more rapids ahead, perhaps another set of the Cascades; but at all events, the LaChine rapids, whose situation I did not exactly know. I was in hourly expectation of these putting an end to me, and often fancied some points of ice, extending from the shore, to be the head of foaming rapids. At one of the moments in which the succession of waves permitted me to look up, I saw at a distance a canoe with four men, coming towards me, and waited in confidence to hear the sound of their paddles; but in this I was disappointed. The men, as I afterwards learned, were Indians (genuine descendants of the Tartars), who, happening to fall in with one of the passenger's trunks, picked it up, and returned to shore, for the purpose of pillaging it, leaving, as they afterwards acknowledged, the man on the boat to his fate. Indeed, I am certain I should have had more to fear from their avarice than to hope from their humanity; and it is more than probable, that my life would have been taken, to secure them in possession of my watch and several half-eagles which I had about me.

The accident happened at about eight o'clock in the morning; in the course of some hours, as the day advanced, the sun grew warmer, the wind blew from the south, and the water became calmer. I got upon my knees, and found myself in the small lake St. Louis, about three to five miles wide. With some difficulty I got upon my feet, but was soon convinced, by cramps and spasms in all my sinews, that I was quite incapable of swimming any distance, and I was then two miles from shore. I was now going, with wind and current, to destruction; and cold, hungry, and fatigued, was obliged again to sit down in the water to rest, when an extraordinary circumstance greatly relieved me. On examining the wreck, to see if it was possible to detach any part of it to steer by, I perceived some-

thing loose, entangled in a fork of the wreck, and so carried along. This I found to be a small trunk, bottom upwards, which, with some difficulty, I dragged up upon the barge. After nearly an hour's work, in which I broke my penknife trying to cut out the lock, I made a hole in the top, and, to my great astonishment, drew out a bottle of rum, a cold tongue, some cheese, and a bag full of bread, cakes, &c., all wet. Of these I made a seasonable though very moderate use, and the trunk answered the purpose of a chair to sit upon, elevated above the surface of the water.

After in vain endeavouring to steer the wreck, or direct its course to the shore, and having made every signal with my waistcoat, &c., in my power, to the several headlands which I had passed, I fancied I was driving into a bay, which, however, soon proved to be the termination of the lake, and the opening of the river, the current of which was carrying me rapidly along. I passed several uninhabited islands; but the banks of the river appearing to be covered with houses, I again renewed my signals with my waistcoat, and a shirt which I took out of the trunk, hoping, as the river narrowed, they might be perceived: the distance was too great. The velocity with which I was going convinced me of my near approach to the dreadful rapids of La Chine. Night was drawing on, my destruction

THE SPLIT ROCK FALL.

appeared certain, but did not disturb me very much: the idea of death had lost its novelty, and become very familiar. Finding signals in vain, I now set up a cry or howl, such as I thought best calculated to carry to a distance, and being favoured with the wind, it did, although, at above a mile distance, reach the ears of some people on shore. At last I perceived a boat rowing towards me, which, being very small and white bottomed, I had for some time taken for a fowl with a white breast; and I was taken off the barge by Captain Johnstone, after being ten hours on the water. I found myself at the village of La Chine, twenty-

one miles below where the accident happened, and having been driven by the winding of the current a much greater distance. I received no other injury than bruised knees and breast, with a slight cold: the accident took some hold of my imagination, and for seven or eight succeeding nights, in my dreams, I was engaged in the dangers of the Cascades, and surrounded by drowning men.

My escape was owing to a concurrence of fortunate circumstances, which appear almost providential. I happened to catch hold of various articles of support, and to exchange each article for another, just at the right time. Nothing but the boom could have carried me down the Cascades without injury, and nothing but the barge could have saved me below them. I was also fortunate in having the whole day; had the accident happened one hour later, I should have arrived opposite the village of La Chine after dark, and of course should have been destroyed in the rapids below, to which I was swiftly advancing. The trunk, which furnished me with provisions and a resting place above the water, I have every reason to think was necessary to save my life; without it, I must have passed the whole time in the water, and been exhausted with cold and hunger. When the people on shore saw our boat take

the wrong channel, they predicted our destruction: the floating baggage, by supporting us for a time, enabled them to make an exertion to save us; but as it was not supposed possible to survive the passage of the Cascades, no further exertions were thought of, nor, indeed, could they well have been made.

It was at this very place that General Ambert's brigade of 300 men, coming to attack Canada, were lost; the French at Montreal received the first intelligence of the invasion, by the dead bodies floating past the town. The pilot who conducted their first bateau committing the same error as we did, ran for the wrong channel, and the other bateau following close, all were involved in the same destruction. The whole party, with which I was, escaped: four left the barge at the Cedar's village, above the rapids, and went to Montreal by land; two more were saved by the canoe. The barge's crew, all accustomed to labour, were lost: of the eight men who passed down the Cascades, none but myself escaped or were seen again; nor, indeed, was it possible for any one, without my extraordinary luck, and the aid of the barge, to which they must have been very close, to have escaped; the other men must have been drowned immediately on entering the Cascades. The trunks, &c., to which they adhered, and the heavy great-coats which they had on, very probably, helped to overwhelm them; but they must have gone at all events; swimming in such a current of broken stormy waves was impossible. Still, I think, my knowing how to swim kept me more collected, and rendered me more willing to part with one article of support to gain a better. Those who could not swim naturally clung to whatever held they first got, and of course many had very bad ones. The captain passed me above the Cascades, on a sack of woollen cloths, which were doubtless soon saturated and sunk.

The trunk which I picked up belonged to a young man from Upper Canada, who was one of those drowned; it contained clothes, and about 70*l.* in gold, which were restored to his friends. My own trunk contained, besides clothes, about 200*l.* in gold and bank notes. On my arrival at La Chine, I offered a reward of 100 dollars, which induced a Canadian to go in search of it. He found it, some days after, on the shore of an island at which it had been driven, and brought it to La Chine, where I happened to be at the time. I paid him his reward, and understood that above one third of it was to be immediately applied to the purchase of a certain number of masses, which he had vowed, in the event—of success, previous to his setting out on the search.

MOTHER CAREY'S CHICKENS; OR, THE FATAL REPAST.

We had been nearly five weeks at sea, when the captain found, by observation, that we were within one hundred and thirty miles of the north side of Jamaica. Favourable winds and smooth seas had hitherto been our constant attendants, and everything on board conspired to render the confinement and monotony of a long sea voyage less annoying than they usually are. The cabin passengers consisted of Major and Mrs. L., a newly married couple; Miss P., sister to the latter; Mr. D., a young Irishman; and myself. Our captain was a man of pleasing manners and liberal ideas, and formed an important acquisition to our party, by joining in all its recreations, and affording every facility to the indulgence of them.

Although he possessed more general information than usually falls to the lot of seafaring persons, his mind was tinged with some of their weaknesses and prejudices. The ladies of our party had a great taste for natural history, and wished to obtain specimens of all the most interesting kinds of sea-birds. They had several times requested the captain to shoot one of Mother Carey's chickens, that they might take a drawing from it; however, he always declined doing so, but never gave any satisfactory reason for his unwillingness to oblige them in this respect. At last, Mr. D. killed two of the birds, after having several times missed whole flocks of them. The captain seemed very much startled when he saw the animals drop on

the waves. "Will you have the goodness to let down the boat to pick up the game?" said Mr. D. "Yes, sir," replied he, "if you'll go off in her, and never return on board this vessel. Here is a serious business! Be assured we have not seen the end of it." He then walked away, without offering to give any orders about lowering the boat; and the seamen, who witnessed the transaction, looked as if they would not have obeyed him had he even done so.

One delightful clear morning, when we were in hourly expectation of making the land, some dolphins appeared astern. As the weather was very moderate, the captain proposed that we should fish for them; and a great many hooks were immediately baited for that purpose by the seamen. We caught large quantities of dolphin and of another kind of fish, and put all into the hands of the steward, with orders that part should be dressed for dinner, and part distributed among the crew.

When the dinner-hour arrived, we all assembled in the cabin, in high spirits, and sat down to table. It being St. George's day, we made the wine circulate rapidly, and every glass increased our gaiety; in the midst of it the mate entered the cabin, and said, the man at the helm had dropped down almost senseless, and that another of the crew was so ill that he could scarcely speak.

The captain, on receiving this information, grew very pale, and seemed at a loss what to reply. At last, he started from his chair, and hurried up the gangway. Our mirth ceased in a moment; and, after a little time, we sent the servant to inquire what was going forward upon deck. He returned immediately, and informed us that the two sailors were worse, and that a third had just been attacked in the same way. He had scarcely said these words, when Mrs. L. gave a shriek, and cried out that her sister had fainted away. This added to our confusion and alarm; and the major and Mr. D. trembled so much, that they were hardly able to convey the young lady to her state room.

All conversation was now at an end, and no one uttered a word till Mrs. L. returned from her sister's apartment. While we were inquiring how the latter was, the captain entered the cabin in a state of great agitation. "This is a dreadful business," said he. "The fact is—it is my duty to tell you—I fear we are all poisoned by the fish we have eaten. One of the crew died a few minutes ago, and five others are dangerously ill."

"Poisoned! my God! Do you say so? Must we all die?" exclaimed Mrs. L., dropping on her knees. "What is to be done?" cried the major distractedly; "are there no means of counteracting it?" "None that I know of," returned the captain. "All remedies are vain. The poison is always fatal, except—but I begin to feel its effects—support me—can this be imagination?" He staggered to one side, and would have fallen upon the floor, had I not assisted him. Mrs. L., notwithstanding his apparent insensibility, clung to his arm, crying out, in a tone of despair, "Is there no help—no pity—no one to save us?" and then fainted away on her husband's bosom; who, turning to me, said, with quivering lips, "You are a happy man: you have nothing to embitter your last moments. Oh, Providence! was I permitted to escape so many dangers, merely that I might suffer this misery?"

Mrs. L. soon regained her senses, and I endeavoured to calm her agitation by remarking, that we might possibly escape the fatal influence of the poison, as some constitutions were not so easily affected by it as others. "Is there then a little hope?" she exclaimed. "Oh! God grant it may be so!" "There is one thing," said the captain, faintly, "I was going to tell you, that—but this sensation—I mean a remedy." "Speak on," cried the major, in breathless suspense. "It may have a chance of saving you," continued the former; "you must immediately"—He gave a deep sigh, and dropped his head upon his shoulder, apparently unable to utter a word more. "Oh, this is the worst of all!" cried Mrs. L. in agony. "We have only to be resigned now," replied her husband; "let us at least die together."

The crew had dined about an hour and a half before us, and, consequently, felt the effects of the poison much earlier

than we did. Every one, however, now began to exhibit alarming symptoms. Mr. D. became delirious; the major lay upon the cabin floor, in a state of torpidity; and the captain had drowned all sense and recollection by drinking a large quantity of brandy. Mrs. D. watched her husband and her sister alternately, in a state of quiet despair.

I was comparatively but little affected; and, therefore, employed myself in assisting others until they seemed to be past all relief, and then sat down anticipating the horrid consequences which would result from the death of the whole ship's company.

While thus occupied, I heard the steersman call out, "Taken all a-back here." A voice which I knew to be the mate's, immediately answered, "Well, and what's that to us? Put her before the wind, and let her go where she pleases." I soon perceived by the rushing of the water, that there was a great increase in the ship's progress, and went upon deck to ascertain the cause.

I found the mate stretched upon the top of the companion, and addressed him, but he made no reply. The man at the helm was tying a rope round the tiller, and told me he had become so blind and dizzy, that he could neither steer, nor see the compass; and would, therefore, fix the rudder in such a manner, as would keep the ship's head as near the wind as possible. On going forward to the bows, I found the crew lying motionless in every direction. I alone retained my senses unimpaired. The wind now blew very fresh, and we went through the water at the rate of ten miles an hour. The night looked dreary and turbulent. The sky was covered with large fleeces of broken clouds, and the stars flashed angrily through them, as they were wildly hurried along by the blast. The sea began to run high, and the masts showed by their incessant creaking, that they carried more sail than they could well sustain.

I was filled with dread lest we should strike upon rocks, or run ashore, and often imagined that the clouds which bordered the horizon were the black cliffs of some desolate coast. At last, I distinctly saw a light at some distance—I anticipated instant destruction—I grew irresolute whether to remain upon deck, and face death, or to wait for it below. I soon discovered a ship a little way ahead—I instinctively ran to the helm, and loosened the rope that tied the tiller, which at once bounded back, and knocked me over. A horrible crashing, and loud cries, now broke upon my ear, and I saw that we had got entangled with another vessel. But the velocity with which we swept along, rendered our extrication instantaneous; and on looking back, I saw a ship without a bowsprit, pitching irregularly among the waves, and heard the rattling of cordage, and a tumult of voices. But, after a little time, nothing was distinguishable by the eye or by the ear. My situation appeared doubly horrible, when I reflected that I had just been within call of human creatures, who might have saved and assisted all on board, had not an evil destiny hurried us along, and made us the means of injuring those who alone were capable of affording us relief.

About midnight, our fore-topmast gave way, and fell upon deck with a tremendous noise. The ship immediately swung round, and began to labour in a terrible manner, while several waves broke over her successively.

I had just resolved to descend the gangway for shelter, when a white figure rushed past me with a wild shriek, and sprang overboard. The darkness prevented me from discovering who had thus committed himself to the deep, in a moment of madness. As the sea continued to break over the vessel, I went down to the cabin, after having closely shut the gangway doors and companion. Total darkness prevailed below. I addressed the captain and all my fellow passengers by name, but received no reply from any of them, though I sometimes fancied I heard moans and quick breathing, when the tumult of the waters without happened to subside a little. I began to catch for breath, and felt as if I were immured in a large coffin, with a number of corpses, and was doomed to linger out life beside them. The sea beat against the vessel, with a noise like that of artillery, and the crashing of the bulwarks driven in by its violence, gave startling proof of the danger that threatened us. I groped for my bed, and lay

down in it, and, notwithstanding the horrors that surrounded me, gradually dropped off asleep.

When I awoke, I perceived, by the sunbeams that shone through the skylight, that the morning was far advanced. The ship rolled violently at intervals, but the noise of the wind and waves had altogether ceased. I got up hastily, and almost dreaded to look round, lest I should find my worst anticipations concerning my companions too fatally realized.

I immediately discovered the captain lying on one side of the cabin quite dead. Opposite him was Major L. stretched along the floor, and grasping firmly the handle of the door of his wife's apartment. He had, I suppose, in a moment of agony, wished to take a farewell of the partner of his heart, but had been unable to get beyond the spot where he now lay. He looked like a dying man; and Mrs. L. who sat beside him, seemed to be exhausted with grief and terror. She tried to speak several times, and at last succeeded in informing me, that her sister was better. I could not discover Mr. D. anywhere, and therefore concluded, that he was the person who had leaped overboard the preceding night.

On going upon deck, I found that everything wore a new aspect. The sky was dazzling and cloudless, and not the faintest breath of wind could be felt. The sea had a beautiful bright green colour, and was calm as a small lake.

Four of the seamen were dead, but the mate and the remaining three had so far recovered as to be able to walk across the deck. The ship was almost in a disabled state. Part of the wreck of the fore-topmast lay upon her bows, and the rigging and sails of the mainmast had suffered much injury. The mate told me, that the soundings, and almost everything else, proved we were on the Bahama banks, though he had not yet ascertained on what part of them we lay, and consequently could not say whether we had much chance of soon falling in with any vessel.

The day passed gloomily. Much of our time was employed in preparing for the painful, but necessary duty, of interring the dead. About ten at night, we began to commit the bodies to the deep. There was an awful solemnity, alike in the scene and in our situation. I read the funeral service, and then we dropped the corpses overboard, one by one. When these last offices of respect were performed, we retired in silence to different parts of the ship.

About midnight, the mate ordered the men to put down our anchor, which, till then, they had not been able to accomplish. They likewise managed to furl most of the sails, and we went to bed, under the consoling idea, that though a breeze did spring up, our moorings would enable us to weather it without any risk.

I was roused early next morning by a confused noise upon deck. When I got there, I found the men gazing intently over the side of the ship, and inquired if our anchor held fast? "Ay, ay," replied one of them, "rather faster than we want it." On approaching the bulwarks, and looking down, I perceived, to my horror and astonishment, all the corpses lying at the bottom of the sea, as if they had just been dropped into it. We could even distinguish their features, glimmering confusedly through the superincumbent mass of ocean.

We were now exempted from the ravages and actual presence of death, but its form haunted us without intermission. We hardly dared to look over the ship's side, lest our eyes should encounter the ghastly features of some one who had formerly been a companion, and at whose funeral rites we had recently assisted. The seamen began to murmur among themselves, saying, that we should never be able to leave the spot where we then were, and that our vessel would rot away as fast as the dead bodies that lay beneath it.

In the evening, a strong breeze sprung up, and filled us with hopes that some vessel would soon heave in sight, and afford us relief. At sunset, when the mate was giving directions about the watch, one of the seamen cried out, "Thanks be to God, there they are!" And the other ran up to him, saying, "Where, where?" He pointed to a flock of Mother Carey's chickens that had just appeared astern, and began to count how many there were of them. I inquired what was the matter, and the mate replied, "Why, only that we've

seen the worst, that's all, master. I've a notion we'll fall in with a sail before twenty-four hours are past." "Have you any particular reason for thinking so?" said I. "To be sure I have," returned he; "aren't them birds the spirits of those brave fellows we threw overboard last night? I knew we never would be able to quit this place till they made their appearance above water. However, I'm not quite sure how it may go with us yet," continued he, looking anxiously astern; "they stay rather long about our ship." "I have always understood," said I, "that these birds indicate bad weather, or some unfortunate event, and this appears to me to be true." "Ay, ay," replied he, "there was a time when I did not believe that these creatures were anything but common birds, but now I know another story. Oh, I've witnessed such strange things? Isn't it reasonable to suppose, that these little creatures, having been once such as we are, should feel a sort of friendliness towards a ship's crew, and wish to give warning when bad weather or misfortune is a-head, that every man may be prepared for the worst!" "Do you conceive," said I, "that any people but seamen are ever changed into the birds we have been talking of?" "No, for certain not," answered the mate; "and none but the sailors that are drowned, and thrown overboard after death. They fly about the wide ocean, far out of sight of land, and never find a place whereon they can rest the soles of their feet."

Next morning I was awakened by the joyful intelligence that a schooner was in sight, and that she had hoisted her flag in answer to our signals. She bore down upon us with a good wind, and in about an hour hove-to, and spoke us. When we informed them of our unhappy situation, the captain ordered the boat to be lowered, and came on board of our vessel, with three of his crew. He was a thick, short, dark-complexioned man, and his language and accent discovered him to be a native of the Southern States of America. The mate immediately proceeded to detail minutely all that happened to us; but our visitor paid very little attention to the narrative, and soon interrupted it, by asking of what our cargo consisted. Having been satisfied on this point, he said, "Seeing as how things stand, I conclude you'll be keen for getting into some port." "Yes, that of course is our earnest wish," replied the mate, "and we hope to be able, by your assistance to accomplish it." "Ay, we must all assist one another," returned the captain. "Well I was just calculating, that your plan would be to run into New Providence. I'm bound for St. Thomas, and you can't expect that I should turn about, and go right back with you—neither that I should let you have any of my seamen, for I'll not be able to make a good trade, unless I get sick into port. Get ready the boat, boys. I guess your men will soon get smart again, and then, if the weather holds moderate, you'll reach port with the greatest of ease." "You surely do not mean to leave us in this barbarous way?" cried I; "the owners of this vessel would, I am confident, pay any sum rather than we should perish through your inhumanity."—"Well, mister, I've got owners too," replied he, "and my business is to make a good voyage for them. Markets are pretty changeable just now, and it won't do to spend time talking about humanity."

Having said this he leaped into the boat, and ordered his men to row towards his own vessel. When they got on board, they squared their topsail, and bore away, and were soon out of the reach of our voices. We looked at one another for a little time with an expression of despair, and then the seamen began to pour a torrent of invective and abuse, against the heartless and avaricious shipmaster who had so inhumanly deserted us.

The mate now endeavoured to encourage the seamen to exertion. They cleared away the wreck of the fore-topmast, which had hitherto encumbered the deck, and put up a sort of jury-mast in its stead, on which they rigged two sails. When these things were accomplished, we got up our moorings, and laid our course for New Providence. The mate had fortunately been upon the Bahama seas before, and was aware of the difficulties he would have to encounter in navigating them. The weather continued moderate, and after two days of agitating suspense, we made Exuma Island, and cast anchor near its shore.

The arrival of our vessel, and all the circumstances connected with this event, were soon made known upon the island; and a gentleman who resided upon his plantation, sent to request our company at his house. We gladly accepted his hospitable offers, and immediately went ashore.

Those only who have been at sea, can conceive the delight which the appearance of trees and verdurous fields—the odours of fruits and flowers, and the sensations of security and freedom that arise from treading the earth—produce in the mind, at the termination of a long voyage. Every step we took seemed to infuse additional vigour into our limbs. Our host met us at the door of his mansion, and immediately introduced us to his wife and family, and likewise to several persons who were visitors at the time. We were ushered into an airy hall; the window-curtains of which had just been sprinkled with water and lime-juice. The odour of the fruit, and the coolness produced by the evaporation of the fluid, exerted a most tranquillizing influence upon the mind, and made the distressing scenes I had recently witnessed, pass my remembrance like a dream. We were soon conducted into another apartment, where an elegant banquet and a tasteful variety of the most exquisite wines awaited us. Here we continued till evening, and then returned to the hall. From its windows we beheld the setting sun, curtained by volumes of gloriously-coloured clouds, and shedding a dazzling radiance upon the sea, which stretched in stillness to the horizon. Our vessel lay at a little distance; and when a small wave happened to break upon her side, she seemed, for a moment to be encircled with gems. The dews had just begun to fall, and that composing stillness which, in tropical climates, pervades all nature at such a time, was undisturbed by the slightest murmur of any kind. Two young ladies sat down to a harp and a piano, and a gentleman accompanied them upon the flute. The harmony was perfected by the rich gushing voice of one of the females of our party; and the flushed cheeks, and trembling eyelids of the charming Bahamians, showed that the music affected their hearts as much as it delighted their ears.

When the night was advanced, we retired to sleep—lulled by the pleasing consciousness of being secure from those misfortunes and dangers, to the invasion of which we had of late been so cruelly exposed.

LOSS OF THE CHARLES BARING, CAPTAIN ARIS, OCT. 24. 1779.

THE Charles Baring, West Indiaman, commanded by Captain Aris, sailed from Port Royal, Jamaica, on September 6, 1779; but nothing that is worthy of mention occurred until October 15, when they discovered that the ship had made a considerable quantity of water, and which increased so much, that by the 17th the pumps could scarcely free her; and they continued in this situation until the morning of the 20th, when, on sounding, they found five feet water in the hold.

The captain immediately ordered the gun-deck to be scuttled, to enable them to get at the pump-well, and this being done, they slung two large casks, with tackle, so as to fill and empty alternately; and this mode of baling was found to answer their purpose so well, that, by twelve o'clock, the water was reduced to three feet. They kept the water from gaining on them until the morning of the 21st, when the quantity of coffee, or cocoa, which continually got to the pumps, rendered them almost useless.

About ten o'clock, the danger of their situation hourly increasing, it was thought advisable to throw the guns overboard, which was accordingly done, as also a considerable quantity of wood from the fore-peak; and, about dark, the pumps became entirely useless, being completely choked. To their great dismay they now found that the leak gained upon them considerably, and all hands that could be spared from baling were employed in clearing the fore-hatchway, which they so far completed by daylight, that they were enabled to get two more casks to work.

On the morning of the 22nd, the water was up to the orlop-deck beams, and it was only by the most unremitting exertions

of the passengers and crew, who alike toiled incessantly, that it was kept from gaining on them, until the night of the 23rd, when it came on to blow a heavy gale of wind, which caused the ship to heel so much, that the greater part of the water which they were baling out returned again to the hold. The gale increasing, the water gaining fast upon them, and the people worn out with their previous exertions, there were now no hopes remaining of saving the ship, and their only care was to save themselves.

About the dawn of the 24th, the main-mast went over the side, and it was with great difficulty that they could manage to clear it from the ship; the water, by this time, had reached the gun-deck, and there was not a moment to be lost in providing for their safety.

About eight o'clock the boat was got out, and, much to the credit of Captain Aris, his first object was to have the ladies put into it, at the same time remarking to all of them, that, though it appeared hardly possible to save them otherwise, it was also impossible for the boat to contain the whole of them; he, therefore, recommended all hands to construct a raft with spars and cotton-bags; but, before they had time to accomplish it, the ship completely foundered, and every man attempted to swim to the boat, the captain himself being the last that quitted the ship; but, miserable to tell, twenty-seven of the number unfortunately failed in their attempt, and perished.

"Then first one universal shriek there rushed,
Louder than the loud ocean, like a crash
Of echoing thunder, and then all was hushed,
Save the wild wind, and the remorseless dash
Of billows: but at intervals there gushed,
Accompanied with a convulsive splash,
A solitary shriek, the bubbling cry
Of some strong swimmer in his agony."

SHIPWRECK OF THE SCHOONER CUMBERLAND, CAPTAIN CROOK, SEPTEMBER 24, 1837.

THE Cumberland, from St. Petersburg, made Pile light-house, but as it was blowing hard, and the weather very hazy, Captain Crook thought it better to take shelter at Pile till the morning, and with that view he stood in under double-reefed topsails. Before it could be accomplished, however, the vessel struck on the Foul-ground, and knocked her rudder off. The anchors were let go, but they came home, and the vessel got hard aground, with a tremendous sea breaking over her. She continued to strike very heavily, and at length was so much damaged that she filled, and fell over on her beam-ends. The unfortunate sufferers on board sought safety on the broadside, in the chains, &c. The captain and his wife were clinging to the wreck, somewhere about the afterpart. The mate observing that the sea broke with less violence over the bows than elsewhere, with great labour, and at the hazard of his life, conveyed Mrs. Crook forward, requesting her to permit him to lash her to the ring-bolts, but she could not be persuaded to have that done, and Piele left her to assist her husband. At that moment a dreadful sea broke over the wreck, and carried the mate overboard, but he succeeded in getting a berth in the cross-trees; for, although the weather rigging was cut away for the purpose, the masts did not go; and soon after Mrs. Crook was washed away, and she was seen no more. Captain Crook, on witnessing the loss of his wife appeared paralysed; but struggling, he made some indistinct remark, and was swept into eternity with the next wave. The horrible situation of the survivors may be imagined. Clinging to the wreck of the vessel, with a long and dreary night just set in, the probability of the craft going to pieces long before its expiration, and the hopelessness of all human aid availing, the poor fellows had nothing to look to but the merciful hand of Providence. That safe anchor did not fail them; for the wind somewhat suddenly lowered, and the sea became comparatively calm. The mariners at first thought this was only a lull—the herald of harder weather than before; but in this they were mistaken. The weather continued fair and in the

morning the crew taking to the jolly-boat, rowed themselves to Pile, where they arrived safe. It is supposed the vessel went to the bottom in Lune Channel, as she was last seen near the N. W. buoy.

INTREPIDITY OF ENGLISH SAILORS.

LAURISTON told me, amongst other anecdotes, relative to Napoleon's sojourn at the camp of Boulogne, a remarkable instance of intrepidity on the part of two English sailors. These men had been prisoners at Verdun, which was the most considerable dépôt of English prisoners in France at the rupture of the peace of Amiens. They effected their escape from Verdun, and arrived at Boulogne without having been discovered on the road, notwithstanding the vigilance with which all the English were watched. They remained at Boulogne for some time, destitute of money, and without being able to effect their escape. They had no hope of getting aboard a boat, on account of the strict watch that was kept upon vessels of every kind. These two sailors made a boat of little pieces of wood, which they put together as well as they could, having no other tools than their knives. They covered it with a piece of sailcloth. It was only three or four feet wide, and not much longer; and was so light that a man could easily carry it on his shoulders. So powerful a passion is the love of home and liberty!

Sure of being shot if they were discovered, almost equally sure of being drowned if they effected their escape, they, nevertheless, resolved to attempt crossing the channel in their fragile skiff. Perceiving an English frigate within sight of the coast, they pushed off, and endeavoured to reach her. They had not gone a hundred toises from the shore, when they were perceived by the custom-house officers, who set out in pursuit of them, and brought them back again. The news of this adventure spread through the camp, where the extraordinary courage of the two sailors was the subject of general remark.

The circumstance reached the emperor's ears. He wished to see the men, and they were conducted to his presence along with their little boat. Napoleon, whose imagination was struck by every thing extraordinary, could not conceal his surprise at so bold a project, undertaken with such feeble means of execution.

"Is it really true," said the emperor to them, "that you thought of crossing the sea in this?"

"Sire," said they, "if you doubt it, give us leave to go, and you shall see us depart."

"I will. You are bold and enterprising men; I admire courage wherever I meet with it. But you shall not hazard your lives. You are at liberty, and more than that, I will cause you to be put on board an English ship. When you return to London, tell how I esteem brave men, even when they are my enemies."

Rapp, who, with Lauriston, Duroc, and many others, were present at this scene, were astonished at the emperor's generosity. If the men had not been brought before him, they would have been shot as spies, instead of which they obtained their liberty. This circumstance was one of those which made the strongest impression on Napoleon, and he recollected it when at St. Helena, in one of his conversations with M. de Las Casas.

LOSS OF THE ZENOBIA, JANUARY, 1762.

THE Zenobia French Frigate was lost off Portland, she was commanded by M. Le Sage, about 70 persons reached the shore, when they were barbarously stripped by the inhabitants. But on his majesty being made acquainted with their deplorable state, he directly ordered clothes and food at his own expense, and the Lords of the Admiralty gave them to understand that they were not considered as prisoners.

It was not long before this act of generosity was retaliated by the subjects of France. An English trading vessel being driven on shore on the coast of Havre-de-Grace, the Commandant of that place received the crew with the utmost hospitality. They had good quarters, and a daily allowance of 30sols per man, until they were sent back to their own country.

EXPEDITION OF LA PEROUSE.

On the re-establishment of peace, in 1783, the French government, stimulated by the discoveries of the immortal Cook, and the voyages of the various English navigators, resolved upon the prosecution of a voyage of discovery. For this purpose, the frigate *La Boussole* and *L'Astrolabe* were fitted out at Brest. The command of the expedition was conferred on John Francis Galaup de la Prouse, commodore in the navy of France, who had distinguished himself in the naval service of his country, and, during the American war, had the command of the force which destroyed the trading establishments of the British at Hudson's Bay. La Prouse appointed to the command of the *Astrolabe*, M. de Langlé, a

captain in the navy, who had commanded the *Astrea* in the Hudson's Bay expedition. The two vessels being equipped with everything requisite for the voyage, sailed from Brest in August, 1785, and anchored on the Brazil coast in November, after touching at Madeira and Teneriffe. Proceeding round Cape Horn, they arrived in the bay of Conception, in 1786; but nothing worthy of description occurred to them till they reached Easter Island, in the South Sea, which they did in April of that year.

On gaining Cook's Bay, at that island, the two ships dropped their anchors, but the water deepened so rapidly, that both anchors came home. This, however, did not abate the ardour or curiosity of the Indians, who swam after them to a league off the shore, and went on board with a laughing, careless air which left a very favourable impression of their character.

EXPEDITION OF LA PEROUSE.

Men of a more suspicious turn of mind would have feared, when they got under sail again, in order to regain the anchorage, that the ships were carrying them off from their native soil; but the idea of such perfidy did not seem to present itself to their minds. Naked and unarmed, a simple string round their middle supported a bundle of herbs, that hung down before. Their physiognomy was generally agreeable, but extremely various, not having, like that of the Malays, Chinese, and inhabitants of Chili, a general character that is peculiar to themselves.

La Prouse made several presents to these Indians, who preferred pieces of painted cloth, half an ell long, to nails, knives, and beads. Even these yielded to the stronger inclination for hats, of which, however, they had too small a quantity to give to many of them. At eight in the evening,

No. 34.

they quitted the ships, after having been made to understand by signs, that at day-break the two commanders would go ashore. They then went dancing into their boat, and threw themselves into the sea, two musket-shots from the shore, on which the billows broke with considerable force.

Next morning, accordingly, everything was made ready to go on shore. La Prouse was too well acquainted with the accounts of the different navigators, not to know that the Indians are but grown-up children, whose desires the sight of property, or anything gaudy, would so strangely excite, that they would take every possible method to get possession of them. He was therefore convinced that he must restrain them by fear, and gave orders that this visit should be accompanied with a little warlike train. Four boats, with twelve armed soldiers, proceeded for the island. The two

commanders, Messrs. La Perouse and de Langle, were accompanied by all the passengers and officers, except those who were necessary to carry on the duty on board, forming about seventy persons in all, including the crews of the boats.

Four or five hundred Indians waited for them on the shore. They were unarmed, and several of them were covered with pieces of white and yellow stuff; but the greater number were naked, several were tattooed, and their faces painted red. Their cries and their countenances equally expressed their joy, as they advanced to give their visitors their hands and assisted them in landing.

Their first care, on quitting the boats, was to form a ring of armed soldiers, enjoining the inhabitants to leave this space void. Then, pitching a tent, the presents intended for the

natives, and the different species of animals to be left on the island, were brought ashore. But, as the soldiers had been expressly forbidden to fire, or, even with the butt-end of their muskets, to keep off the Indians who might be troublesome, the soldiers themselves were soon exposed to the rapacity of the islanders, whose numbers rapidly increased. They amounted at the least to eight hundred, out of whom full one hundred and fifty were women. The countenance of many among the latter was agreeable, and they unscrupulously offered their favours to those who were willing to give them presents. The men endeavoured to induce the French party to comply, and while the women lavished their caresses on them, the natives took their hats from their heads, and stole their handkerchiefs from their pockets. They all seemed to be accomplices in these thefts, for they had scarcely committed them, when they all

took to flight at the same instant, like a covey of birds. But, observing that the soldiers made no use of their muskets, they returned a few minutes afterwards, renewed their caresses, and watched a favourable moment to commit new thefts. These manoeuvres continued all the morning, and as the visitors were to leave them at night, they only amused themselves with observing the artifices these islanders employed to rob them. In order to remove every pretext for any kind of force which might produce unfortunate consequences, La Perouse declared that he would replace the hats that might be taken from the soldiers and sailors. These Indians, as has been already stated, were unarmed. Only three or four among so great a number, had a kind of wooden club, not in the least formidable. Some of them appeared to have a slight authority over the others; and, taking them for chiefs, the commodore distributed

some medals among them, which he hung about their necks with a chain. But he soon discovered that these were in fact the very men who were the most notorious thieves; and although they seemed to pursue those who stole their handkerchiefs, it was easy to perceive that they were fully determined not to overtake them.

"Having but eight or ten hours," says La Perouse in his journal, "to remain upon the island, and being desirous not to lose that interval of time, I confided the care of our tent, and of all our effects, to M. D'Escures, my first lieutenant, to whom I also gave the command of all the soldiers and sailors on shore. We then divided ourselves into two parties, of which the first, under the orders of M. de Langle, was to penetrate as far as possible into the heart of the island, to sow the grain in such spots as should appear best adapted for their cultivation; and

to examine the nature of the soil, plants, agriculture, population, monuments, and in general everything interesting among this very extraordinary people. The second party, of which I made one, visited the monuments, the platforms, the houses, and plantations, within a league around our quarters. The population may be estimated at two thousand. The number of women appeared nearly equal to that of the men, and I saw as great a number of children as in any other country. For, though in about twelve hundred inhabitants, whom our arrival had drawn together round the Bay, there were not more than three hundred women, I should conjecture, that although the men came from the extremity of the island to see our ships, the women, either because more delicate, or more occupied with their children and families, were left at home; and we only saw those who inhabited the environs of the bay. M. de Langle found in the interior of the island, a great number of women and children; and we all explored the caverns where Mr. Forster and some of Captain Cook's officers thought the women might be concealed. These are subterraneous dwellings; and it seemed indisputable that the natives had concealed their wives when Captain Cook visited them in 1772, but I could not discover their motives; and, it is perhaps to the kindness with which those navigators conducted themselves towards this people, that we owe the confidence they seemed to place in us, and by which we were enabled to judge better of their population."

The monuments which they saw in this island appeared very ancient, and were placed in a kind of burying-ground. There were, besides, small heaps of stone in the shape of a pyramid, of which the upper stone was whitened with lime-water. These little monuments were erected on the sea-shore, and an Indian clearly explained, by laying himself down on the ground, the object of these heaps of stones; afterwards lifting his hands towards heaven, he evidently expressed their belief in a future existence. Yet they could trace no sign of any religious worship among the natives, and they did not consider that their rude statues, having on them some clumsy colossal busts, could be taken for idols, notwithstanding the Indians may have shown for them a species of veneration. All conditions appeared to be equal. To be king over a people who are almost naked, and live on yams and potatoes, excites little jealousy; and these Indians never having occasion to go to war, because they have no neighbours, have no need of a chief invested with any considerable authority.

Scarcely the tenth part of the island was cultivated and such appeared to be the abundance of nature, that La Perouse was led to state his belief that the productions of the earth were in common. He describes one of their houses, which, with two or three of a similar nature, he says, formed one of their villages. This house was three hundred feet in length, ten in breadth, and in the centre ten in height. Its form was that of a cave inverted, and there was no entrance except by creeping on the hands through two doors, both less than two feet high. This house, which would contain more than two hundred persons, could not be the residence of the chief, if there was one, for there was no furniture in it, and so great a space would have been useless to him.

In Captain Cook's voyages, it is stated, that on this island, that celebrated navigator, had some difficulty in procuring a sufficient quantity of provisions and yams, but that must be attributed not so much to a scarcity of these vegetables, as to the necessity of obtaining an almost general consent for their sale. "The identity of these people with the other islanders of the South Sea" as Captain Cook observes, "cannot be doubted, for their language and national physiognomy are the same, their manufactures also, made from the bark of the mulberry, though these trees are very rare, having been destroyed by the droughts."

"At one in the afternoon," continues La Perouse, in his account of these islanders, "I returned to the tent, designing to go on board, that M. de Clonard, my second captain, might go on shore in his turn. I found almost all my people without hats or handkerchiefs; for our gentleness had encouraged these plunderers, nor was I at all distinguished from the rest. An Indian, who had assisted me in descending from a plat-

form, took away my hat, and as soon as he had rendered me this service, ran off at full speed, followed as usual by all the rest. I did not, however, cause him to be pursued, for being nearly all in the same state, I would not alone enjoy the privilege of being sheltered from the sun. At two o'clock, I returned on board, and M. de Clonard went on shore. Soon afterwards, two officers of the *Astrolabe* arrived to inform me that the Indians had just committed a robbery which had occasioned a considerable contest. Some divers had cut the grapple rope of the *Astrolabe's* boat under water, and carried off her grapple, which was not perceived till the robbers had got a considerable way into the interior of the island. As this anchor was necessary to us, a couple of officers, with several soldiers, pursued them, but were soon overwhelmed with a shower of stones. A musket fired in the air without shot produced no effect, and they were at last obliged to fire a charge of small shot, some of which, doubtless, touched one of the Indians, for the throwing of stones then ceased, and our officers were able to gain the tent in tranquillity: but it was impossible to overtake the Indians, who must have been astonished at our patience, which all their insults had not been sufficient to subdue. They soon, however, returned around our quarters, and we became as good friends as at our first interview. At length, at six in the evening, every thing was got on board, the canoes returned on shore, and I made the signal to prepare to weigh. I think I shall complete the portrait of the character of these islanders, when I relate that a kind of chief, to whom M. de Langle had presented a male and female goat, received them with one hand, while, with the other, he stole his handkerchief!"

The ships then proceeded for the Sandwich Islands, and after visiting Owhyhee, they set sail for the northwest coast of America, which he reached towards the end of June, 1786, and spent some time in exploring. A port was discovered, which was named Port des Francaises, or Frenchmen's Port, and here the two vessels cast anchor, after narrowly escaping shipwreck. Nothing of moment occurred during their stay at this place, except the loss of two boats, and twenty-two men, owing to the tremendous swell. To the memory of those who were drowned on this occasion, La Perouse erected a monument, bearing an appropriate inscription, detailing the whole circumstances of the unfortunate catastrophe. He also named the place, l'Isle du Cenotaphe, or Monument Island.

Of the Indians of Port des Francaises La Perouse says:—"Equally rough and barbarous as their soil is stony and unimproved, they inhabit this land only to spread devastation, and, waging continual war with every kind of animal, despise the vegetable productions that spring up around them. I have, indeed, seen women and children eat strawberries and raspberries, but, doubtless, such food is insipid to men who, on the surface of the earth, act the part of vultures in the regions of the air, or wolves and tigers in the forest. The arts of life are there considerably advanced, and they have already made great progress to civilization. But that civilization which polishes manners, and softens ferocity, is yet in its infancy, for their manner of life excluding all subordination, exposes them to be continually agitated by fear or vengeance, and being choleric and prone to violence, we saw them incessantly raising their poignards against each other. Though subject to famine in the winter, as the chase may not produce a sufficient supply of provisions, they enjoy in summer the most profuse abundance; for, in less than an hour, they catch fish enough for the subsistence of their families during the day. Thus, the remainder of their time being condemned to idleness, it is passed in play, which they pursue with as much ardour and passion as the dissipated inhabitants of a great metropolis; and, like them, make it the grand inexhaustible source of their quarrels. Our ships were incessantly surrounded by canoes of Indians, who would suffer three or four hours to pass away before they commenced an exchange of a few fish, or two or three other skins, seized every opportunity of plunder; stole every piece of iron that could be easily carried away; and, in the night particularly, tried every means of eluding our vigilance. I invited all the principal personages on board, and loaded

them with presents, yet, these very men who had been eminently distinguished, were never ashamed to steal a nail or an old rag of clothes. Whenever they assumed an air of mirth and hilarity, I was assured some theft had been committed, and very often merely pretended not to observe it. I expressly recommended the children to be caressed and loaded with small presents, but their parents were insensible to this mark of kindness. The only reflection it excited among them was that, by asking to accompany their children when I invited them on board, they would find new opportunities for plunder; and, for my instruction, I often had the pleasure of observing the father take advantage of moments when we appeared most occupied with his child, to pilfer, and conceal under his covering of skin, everything within his reach. I pretended to desire some trifling articles of little value belonging to the Indians, to whom I had made large presents, that I might awaken their generosity, but without effect.

"Always quarrelling among themselves, indifferent to their children, and tyrants to their wives, whom they condemn to the most incessant and intolerable labour; I have observed nothing among these people to induce me to soften the dark colouring of the picture.

"We never landed without being armed, and in a body, for they greatly dreaded our muskets; and eight or ten Europeans together might command a whole village. The two surgeon-majors of our ships, imprudently venturing alone to the chase, were attacked by the Indians, who endeavoured to seize their muskets, but fortunately without success, and only two men were sufficient to drive them away. A similar accident occurred to M. de Lesseps, our young Russian interpreter, when a boat's crew fortunately came to his assistance. Yet these hostilities appeared to them of so little moment, that they did not discontinue their visits on board, and seemed never to suspect it possible for us to make reprisals.

"I am almost certain this port is inhabited only during summer, and that the Indians never pass the winter there. For I did not perceive a single cabin sheltered from the rain; and, although there were not, at any time, more than three hundred Indians together in the bay, we were visited by seven or eight hundred others.

"The canoes were continually coming in and going out, carrying with them their houses and furniture, which consists of several little chests, containing the most valuable effects. These chests are placed at the entrance of their cabins, which are more unclean and stinking than the dens of the most loathsome animal with which we are yet acquainted. They never withdraw two steps for any common occasion of necessity, nor in the relief of nature do they seek any concealment, or observe any mystery, but continue the conversation in which they are engaged, as if there was not a moment to be lost; and should this occur during a repast, resume their places without concern, from which, however, they do not stir two yards." (Dixon and Cook gave a similar account of the inhabitants of Nootka Sound.

"The wooden vessels in which they cook their fish are never washed, but serve equally for kettle, dish, and plate; and as they cannot be placed on the fire, they boil their water by throwing in red-hot flints, continually renewing them till their food is completely dressed. They are also acquainted with a method of roasting their victuals similar to that used by soldiers in camps.

"The men pierce the cartilage of their nose and ears, to which they attach various little ornaments. They scarify their breasts and arms with a very sharp iron instrument, whetting it upon their teeth, as on a hone. Their teeth are filed down, even with the gums, with a piece of rough stone, rounded off in the shape of a tongue. They paint their faces and other parts of their bodies in a frightful manner, with ochre, lamp-black, and black-lead, mixed up with the oil of the sea-wolf. During great ceremonies, their hair is long and powdered, and dressed with the down of various sea-birds. This seems to be their greatest luxury, and is reserved, perhaps, only for the heads of families. A plain skin covers their shoulders, while the rest of the body is absolutely naked; but they usually

cover their head with small hats of straw, very neatly made. Sometimes, however, they wear on their heads a bonnet with two corners, eagles' plumes, and, lastly, the entire head of a bear, in which they introduce a skull-cap of wood. Of these different head-dresses, they have great varieties; but their principal object seems, like their other customs, to render them only more frightful, and perhaps to inspire their enemies with terror. Some of the Indians had entire shirts of otter-skins, and the ordinary dress of the grand chief was a shirt made of the elk skin. This very dress is well known among the savages of Canada, and other nations on the eastern side of America.

"I saw no tattooing but on the arms of the women, who have also a custom which makes them so hideous, that I could scarcely have credited it, had I not been an eye-witness to it. Every one of them, without exception, has the under-lip cut across, even with the mug, the whole width of the mouth. In this incision, they wear a kind of ladle, without handles, which presses against their gums, to which their cut-lip serves as a pad outwards, so that the lower part of the mouth projects two or three inches. The young girls only wear a kind of bodkin, while the married women alone are entitled to the honour of the ladle. We sometimes persuaded them to take off this ornament, which they consented to with difficulty, making the same modest gestures, and experiencing the same embarrassment, as a European lady would show at uncovering her bosom. The under-lip then fell down on the chin, and this second picture was no less hideous than the former."

The custom of cutting the under-lip appears very general among the tribes who inhabit the north-west coast of America, from the 50° to the 60°, and extends even to the savages of the Isle of Foxes and the Aleutian Islands.

La Perouse says, it cannot be doubted that the sun is the god of the inhabitants of the the Port des Français, who frequently address prayers to him; but he could perceive neither temple nor priests, nor the traces of any regular religion.

Having refitted his ships at Monterey, a Spanish settlement at California, La Perouse steered for China; and, in crossing the North Pacific Ocean, discovered Necker Island. This island, which is very small, is almost a mere rock; and, though totally destitute of trees, it is furnished with a great deal of herbage towards its summit. In the neighbourhood of this island, they met with a sunken rock in the night, on which they were nearly cast away, and which, in consequence, they named the "Shoal of the French Frigates."

On the 3rd of January, 1787, they anchored in the Road of Macao. La Perouse gives a very favourable description of the Chinese. "I dare affirm," he says, "that all the persons employed by the different European companies would joyfully unite in sacrificing a great part of their fortunes, to teach these base Mandarins that there are limits to their injustice, and that their enormities have exceeded the bounds of humanity to tolerate. The Portuguese have more reason to complain of the Chinese than any other nation. Their respectable title to the possession of Macao is well known. The grant of the site of that city is a monument of the gratitude of the Emperor Cam Hy, granted to them as a reward for destroying the pirates who, from the islands in the vicinity of Canton, infested the seas, and ravaged all the coasts of China. It is a vain declamation to attribute the loss of their privileges to their abuse of them. Their only crime is the feebleness of their government. The Chinese every day load them with new injuries, and every moment increase their pretensions, to which the Portuguese government never offered the least resistance; and thus this station, from which a nation that possessed the least energy might overawe the Emperor of China, is scarcely more than a mere Chinese village, where the Portuguese are tolerated, although possessing an incontestible right to command, and the means to make themselves respected, had they but a garrison of 2,000 Europeans, with two frigates, a few corvettes, and a bomb-ketch. The Portuguese, however, have, of late, made an effort of vigour, which will be engraved on tablets of brass in the *façade* of the senate. A seapoy having killed a Chinese, they shot him in the presence of the Mandarins, and re-

refused to submit this affair to the decision of the Chinese tribunal.

The ships afterwards proceeded to the Philippine Islands, and were repaired at Cavita, in the bay of Manilla, where they stayed for some time for the purpose.

In April, 1787, the ships sailed from Manilla towards the north; and, after passing the islands of Formosa and Quelpaert, proceeded along the coast of Corea and Japan, without being able to hold any communication with the natives, in consequence of communication with strangers being prohibited by the Japanese.

On the 15th and 16th of June, which were very foggy days, while near the coast of Tartary, in the 44th degree of latitude, they witnessed a very singular illusion. At four in the afternoon of the 16th, a perfectly clear sky succeeding to the thickest fog; they descried the continent extending from W. by S. to N. by E., and soon after, an extensive land in the south, running towards Tartary in the west, where it left an opening of less than fifteen degrees. They distinguished the mountains, hollows, and all the variations of the ground, but could not imagine how they entered that strait; these hills and hollows soon disappeared. The most extraordinary fog-bank ever beheld had occasioned the deception, and they soon witnessed its dispersion. Its forms and its tints mounted and vanished in the atmosphere among the clouds; and enough of day still remained fully to demonstrate that land to be unsubstantial and imaginary. They stood on, during the night, over the space it had appeared to occupy, and at day-break no object presented itself to their view. The horizon was even sufficiently extensive to admit of their distinctly seeing the coast of Tartary, although more than fifteen leagues distant, to which they shaped their course.

On the 23rd, they dropped anchor in a bay, which La Perouse named the bay of Ternia. They burned with impatience to explore this country. It was the only part of the globe which had escaped the indefatigable activity of Captain Cook, and they were perhaps indebted to the melancholy event which put a period to his life, for the advantage of being the first who landed there.

"Five small creeks," says La Perouse in his journal, "like the sides of a regular polygon, form the circumference of this roadstead. They are separated from each other by hills, clothed with trees to their summits. The loveliest spring never produced, in France, shades of verdure equally various and lively; and, although we had not perceived, while we sailed along the coast, either a canoe or the smoke of a single fire, we could not believe a country so fertile, and so near to China, could be destitute of inhabitants. Before our boats landed, we viewed the coast with our glasses, but only perceived some stags and bears feeding in undisturbed tranquillity along the shore. This view increased the impatience every one felt to land. Our arms were got ready with as much despatch as if we had to defend ourselves against an enemy; and, while these preparations were going on, some of the sailors, who were fishermen, took twelve or fifteen cod with their lines. I gave orders immediately to distribute no more salt provisions, but to keep them for less favourable circumstances. I had the casks got ready to be filled with fresh and limpid waters, rivulets of which flowed into every creek. The whole soil was carpeted with the same plants that grow in our own climate, but more vigorous and of a finer texture. The majority were in flower. At every step we met with roses, yellow and red lilies, lilies of the valley, and, in general, all the flowers that adorn our meadows. The summits of the mountains were crowned with pines, and oaks began to clothe them from the middle, but diminished in size and vigour as they approached the sea. The banks of the rivers and brooks were lined with willows, birch and maple; and the great woods skirted with apple-trees and medlars in bloom, with clumps of nut-trees, whose fruit was beginning to set. Our surprise increased, when we reflected that the vast empire of China is surcharged with an excess of population; inasmuch, that the laws do not even punish parents who are barbarous enough to drown or destroy their children; that this nation, whose polity is so highly extolled, dare not pass the great wall to procure subsistence from a land, whose vege-

tation requires rather to be restrained than accelerated. We found, indeed, at every step, the traces of man marked by destruction; trees cut down with sharp instruments; the ravages of fire in various spots, and shelter constructed for hunters at the corners of the woods. We found also some small baskets, formed of the bark of birch, sewed with thread, exactly similar to those of the Canadian Indians, and some snow shoes. Everything led us to conclude that some of the Tartars came down to the coast in the hunting and fishing season; that, at present, they were collected in villages along the course of the rivers, and that the great body of the nation lived up the country, on a soil more adapted to the multiplication of their immense herds.

"These meadows, so delightful to the eye, were scarcely passable. Buried in thick grass, three or four feet high, we could scarcely direct our steps. We were also in fear of serpents, of which we had found a great number on the banks of the rivulets, though we had no experience of the nature of their venom. This land then was to us a magnificent solitude. The sands of the beach were alone passable, for in every other part we could not make the smallest progress without the most incredible fatigue."

Fishing they found a more advantageous and successful pursuit than hunting; the crews of the two frigates had plenty at every meal, and they deemed the fish they caught here, and the herbs with which they seasoned them, during a stay of three days, a preservative against the scurvy, of which none of the seamen had, till then, the least symptom, notwithstanding the damp and cold occasioned by the almost uninterrupted fogs. It was after one of their fishing parties that they discovered a Tartar tomb by the side of a brook, near a ruined house, and almost buried in the grass. They opened it, when they found two bodies placed side by side; their heads covered with a taffeta cap, and their bodies wrapped in a bear's skin, with a girdle of the same, to which were suspended some small pieces of Chinese money, and various trinkets of copper. Blue beads of glass were spread about in every part, and they found ten or twelve silver bracelets, as they supposed, weighing a quarter of an ounce each, which were afterwards found to be ear-rings, an iron hatchet, a knife of the same metal, a wooden spoon, a comb, and a little bag of blue nankeen filled with rice. They restored everything to its place, and had no room to doubt that the hunters of Tartary frequently landed in that bay. A canoe left near the beach, intimated that they came by the sea, doubtless from the mouth of some river they had not yet perceived. The Chinese coins, the blue nankeen, the taffeta, and the cap, proved that those who buried these bodies had a regular commerce with the Chinese, and were probably subjects of that empire.

On the morning of the 27th, having left on shore various medals, and a bottle with an inscription, containing the date of their arrival, they set sail from this bay, and continued their course to the northward.

They went on shore at Langle Bay, so called from the name of the captain who discovered, and first landed there. They were much pleased with the country and the inhabitants, not having met, since their departure from France, with any who more strongly excited their curiosity and admiration. It was totally contrary to the ideas of the navigators to find, among a people of hunters and fishermen, who do not cultivate a single production of the earth, and who are destitute of flocks, manners more gentle, more serious, and a more comprehensive intellect than in any nation of Europe.

On the 19th of July the two vessels again weighed anchor, and shaped their course N.W. towards the coast of Tartary. They sailed between Chinese Tartary and Saghalien, without being able to determine whether the latter was an island or a peninsula. Returning south, they discovered the straits which bear the name of La Perouse, and sailing north, on the eastern coast of Saghalien, at length, on the 6th of September, arrived at the harbour of St. Peter and St. Paul, on the coast of Kamtschatka. There they stayed for some days to refit the ships; and from thence La Perouse sent copies of his journals, &c., to France, by M. de Lesseps, who proceeded over land across Siberia to St. Petersburg. From these

papers was drawn up the narrative of his voyage. On the 30th of September, the vessel sailed in search of further discoveries.

After leaving Kantschatka, where they were very hospitably received and entertained by M. Kasloff-Ougrenin, the Russian governor of Okhotsk, and the other Russian local authorities, they traversed in the parallel of 37 deg. 30 sec., a space of three hundred leagues, in search of the island which was said to be discovered by the Spaniards in 1620, but in vain; they could not find it; notwithstanding, they saw flights of birds, and other indications of their being near land; these birds, however, they believed to have been driven out to sea by the violence of the winds which blew from the south. La Perouse now shaped his course towards the southern hemisphere, and crossed the line for the third time. He made for the Islands of Navigators, after having passed the Isles of Danger of Commodore Byron. The most easterly island of that archipelago came in sight the 6th of December, 1787. They saw no canoes till they arrived in the channel between the great and small island. They were afterwards visited by many canoes, and bartered freely with the Indians.

On the morning of the 9th, the two frigates approached the land, and ran along the coast at half a league's distance. It is surrounded by a reef of coral on which the sea broke with great force; but this reef almost joined the shore, and the coast formed several little coves, in front of which were inlets where canoes could pass. At the bottom of each of these creeks were numerous villages whence issued innumerable canoes, laden with pigs, cocoa-nuts, and other fruits, in exchange for which were given glass trinkets. The frigates got as near the coast as possible, and let go the anchor at about a mile from the shore; but were tossed about by a heavy swell, which set towards the land, notwithstanding the wind blew off the shore. The name of this place was Maoua Island, and in the afternoon, M. de Langle, the second in command, and several officers, with three armed boats from the two frigates, went on shore at the village where they were received in the most amicable manner. Night coming on when they landed on the beach, the Indians kindled a great fire to make the landing-place clear, and brought birds, pigs, and fruit. After staying an hour, the boats returned. Every one seemed satisfied with this reception; and the only thing regretted on board was being anchored in so bad a roadstead, where the frigates rolled as in the open sea.

Next day was particularly fine, and La Perouse resolved to take advantage of it to reconnoitre the country, and supply the vessels with provisions, prudence not permitting him to pass a second night at that anchorage, which M. de Langle, in the *Astrolabe*, had also found too dangerous for a longer stay; wherefore it was agreed that they should weigh in the afternoon. Ever since daybreak had the islanders brought round the two frigates a hundred canoes filled with different provisions, for which they would receive nothing but beads in exchange. The hatchets and other articles of commerce offered to them, they regarded with contempt. While one part of the crew was occupied in keeping the Indians together and carrying on commerce with them, the remainder filled the long boats and barges with empty casks to go and procure water. Four armed boats set off with this view at five o'clock in the morning for a bay at the distance of about a league, and rather to windward; a situation the more commodious, as the boats could sail back with a free wind. La Perouse went ashore in his Biscay yawl. Unfortunately M. de Langle would go in his jolly boat to a second creek, about a league from the watering place; and this tour, from whence he returned enchanted with the beauty of the village which he had visited, was the cause of a dreadful misfortune which happened to them at this place, as will afterwards be described.

The creek to which the long boat steered was large and convenient; the boats and barges there remained afloat at low water, within half a pistol shot from the beach. The water was fine and easy of access. A line of soldiers was posted between the beach and the Indians, who were in number about two hundred, among whom were many women and children, and who were prevailed upon to sit down under some cocoa

palms, at a short distance from the shore. Each had by him some fowls, pigs, parroquets, pigeons, and fruit, which all wanting to dispose of at the same time created some confusion. The women, some of whom were very pretty, offered, with their fruit and fowls their favours to all such as had beads to give in return. They soon attempted to break through the line of soldiers, who gave them too weak a repulse to stop them. Their manners were soft, lively, and engaging; and they succeeded, without much trouble, in breaking through the ranks. The men next came near, and the confusion increased; but some Indians, whom the travellers took for chiefs, made their appearance armed with clubs, and order was re-established. A circumstance had, however, occurred in one of the long boats, which was a real act of hostility, and which La Perouse thus relates: "An Indian had got upon the stern of our boat when, catching hold of a mallet, he gave one of our sailors several hard blows on the arms and back. I ordered four of the strongest marines to lay hold of him, and fling him into the sea, which they immediately did. The other islanders appeared to disapprove of their countryman's conduct, and this scuffle passed off without any other consequences. Perhaps an example of severity was necessary to make a stronger impression on these people, and let them know what power our arms had over their individual strength; for their height, about five feet ten inches, their limbs strongly formed, and in the most colossal proportions, gave them an idea of their own superiority, which did not render us very formidable in their eyes; but having very little time to stay among these islanders, I did not think myself justified in inflicting a more severe punishment on him who had committed the offence. At the same time, to give them some idea of our power, I ordered three pigeons to be brought which were thrown up into the air, and killed by musket-shot in presence of the whole assembly. This act seemed to have inspired them with some fear, and I must own I affected more from this sentiment than from that of kindness, of which man, hardly out of the savage state, is rarely susceptible."

While everything was going on with the greatest tranquillity, La Perouse thought he might walk about two hundred paces, for the sake of visiting a charming village, situated in the midst of a wood or rather orchard, the trees in which were weighed down by fruit. The houses were placed in the circumference of a circle, about one hundred-and-fifty fathoms in diameter, the centre of which formed a vast open place, with a grass plat of the most beautiful verdure. The trees which overshadowed it, kept up a delicious freshness. Women, children, and old men accompanied him, and invited him into their houses; there they spread the finest and freshest mats on the ground, formed by small picked pebbles, and which they had raised about two feet to protect them from the damp. He entered the handsomest of these huts, which probably belonged to the chief, when how great was his surprise to see a large room of lattice work, equally well executed with any of those about Paris. This charming country united the two-fold advantage of a soil fertile without culture, and a climate which required no clothing. Bread-fruit, cocoa-nut, banana, gonyas, and orange trees, furnished this fortunate people with abundance of wholesome nourishment; while fowls, pigs, and dogs, which live on the refuse of these fruits, afforded them an agreeable variety of meats. They were in want of so little that they disdained the instruments of iron and stuffs of their visitors, and would only have beads. These islanders the voyagers thought are undoubtedly the happiest people in existence; but they were deceived; that beautiful abode was not the mansion of innocence. These Indians, it is true, had no arms, but their bodies were covered with scars, which proved that they must be at war, or quarrel among themselves, and their countenances bespoke a ferocity imperceptible in the physiognomy of women. Nature had, without doubt, left this stamp on the figure of the Indians to denote that man, almost wild, and in a state of anarchy, is a being more mischievous than the fiercest of the animal creation.

This first visit passed off on the whole, without any dispute or disturbance. La Perouse, however, was informed there had been private quarrels, but that great prudence had done them away. M. Rollin, the surgeon-major, had been pelted with

stones; an islander, under pretence of admiring M. Monneron's (one of the officers) sword, attempted to wrest it from him, and the scabbard only having come off, he ran away frightened to death at the sight of the naked blade. It could not fail to be observed that these islanders were, in general, very turbulent, and that they paid very little attention to their chiefs. Towards noon, La Perouse returned on board in his Biscay yawl, and the boats followed very close. It was difficult to get alongside, because of the canoes which surrounded the two frigates, and the market not being exhausted, the command of the ships had been given in charge to M. Boutin, when La Perouse went on shore; and to him it was left to act as he should think proper, in permitting the islanders to come on board, or absolutely forbidding it, according to the circumstances. La Perouse, on his return, found on the quarter-deck seven or eight Indians, the oldest of whom was introduced to him as a chief. M. Boutin told the commodore that he could not prevent them from getting on board without giving orders to fire; that when they compared their bodily strength with theirs, they derided his threats, and made a joke of the sentinels; that, on his side, he was not willing to employ violent means, which, notwithstanding, were the only means that could now restrain them. He added, that since the presence of the chief, the islanders on board had become more orderly, and less insolent. La Perouse made the chief many presents, and gave him proofs of the utmost kindness; wishing afterwards to inspire him with a high opinion of their strength, he ordered different proofs of the use of their arms to be made before him; but their effect made little or no impression on him; he seemed to think they were only fit for killing birds. The boats arrived, laden with water, and everything was disposed for weighing, and taking advantage of a land breeze which had sprung up. M. Langle, on returning from his excursion, informed La Perouse that he had landed in a fine cove for boats, which was situated at the foot of a delightful village, and near a cascade of the most limpid water; and he expressed a strong desire to go ashore next day, and procure a few long-boat loads of water before finally bidding adieu to the island. This was mainly the cause of the concluding tragedy that was enacted at this island, the account of which is thus related by La Perouse:—

"In vain I represented to him that we were not in the least in want of water. He had adopted Captain Cook's system, and thought that water recently taken on board, was a hundred times preferable to that which we had in the hold; and as some of his ship's company showed slight symptoms of scurvy, he thought, with reason, that it was our duty to give them every possible comfort. Besides, no island could stand in competition with this for abundance of provisions; the two frigates having already trafficked for five hundred pigs, a great quantity of fowls, pigeons, and fruit, and all at the expense only of a few beads of glass. I at once saw the truth of these reflections, but a secret foreboding, at first, prevented my acquiescence. I told him that I found these islanders too turbulent to risk sending our boats on shore, where they could not be supported by the fire of the ships; that our moderation had only served to increase the confidence of the Indians, who only calculated on our personal strength being far inferior to their own. But nothing could shake M. de Langle's resolution, who told me that my opposition made me responsible for the progress of the scurvy, which began to make its appearance with sufficient violence, and that, besides, the harbour of which he spoke, was much more commodious than our former watering place. At last, he begged me to give him leave to head the first expedition, assuring me that in three hours he would return on board with all the boats filled with water. M. de Langle was a man of such judgment and capacity, that these considerations, more than any other motive, determined my assent; I therefore promised him that we would stand off and on all night; that on the morrow, our two long boats, and our two barges should be expedited, armed as he might judge proper, and that the whole should be under his orders. On taking up the anchor, we found one strand of the cable cut by the coral, and in the course of two hours the whole cable would have been cut."

It was too late to think of sending the boats ashore that evening, but next morning, about eleven o'clock, the frigates

being only one short league from the island, the large boat and the barge of the Boussole, containing twenty-eight men, and carrying about twenty empty casks to be filled with water, were despatched to the Astrolabe, where they were joined by thirty-three persons belonging to that ship; all being under the command of M. de Langle.

"Among the sixty-one individuals," continues M. de la Perouse, "composing the whole expedition, were the choicest men of our crews. M. de Langle armed the whole with muskets and outlasses, and six swivels were mounted in the long-boats; I left it to him to do whatever he might think necessary for his safety. The boats put off from the Astrolabe at half-past twelve at noon, and in less than three-quarters of an hour arrived at the watering place. How great was the surprise of all the officers, and of M. de Langle himself, to find, instead of a large and commodious bay, a creek, almost choked up with coral, which could only be entered by a winding channel, less than twenty-five feet in width, where the surf broke as upon a bar. When they were within they did not find three feet water; the long boats got aground, and the barges were only kept afloat by being hauled up to the mouth of the channel, far enough from the beach. Unfortunately M. de Langle had explored this bay at high water, and did not suppose that in these islands the tide rose five or six feet. He thought that his eyes deceived him. His first movement was to quit this bay for that where we had already taken in water, and which comprehended the same advantages; but the air of tranquillity and mildness of the people who were in waiting on the beach with an immense quantity of fruit and pigs; the women and children he remarked among the islanders, who always take care to send them out of the way when they have any hostile views; all these circumstances together made his first ideas of prudence vanish, which an inconceivable fatality prevented him from following.

"On their arrival, the savages, who lined the coast, threw into the water many branches of the tree from which the islanders of the South Sea extract their intoxicating beverage, as a token of peace. On landing, M. de Langle gave orders that each boat should be guarded by an armed soldier and sailor, while the crews of the long-boats were employed in filling water, under the protection of a double line of musqueteers, who extended from the boats to the watering place. The casks were filled and quietly put on board, the islanders being kept in tolerable awe by the soldiers.

"But this calm was not of long duration; many of the canoes which had disposed of their provisions to our ships had returned on shore, all of which resorted to the bay where they were taking in water, so that, by degrees, it was full. Instead of two hundred inhabitants, including women and children, which M. de Langle found assembled on his arrival at half-past one, at three there were ten or twelve hundred. The number of canoes which had traded with us in the morning was so considerable that we had scarcely perceived their diminution in the afternoon.

"Towards the end of their work, the natives became more troublesome, which circumstance determined M. de Langle to give up his first idea of trafficking for provisions with them, and he gave orders for embarking immediately; but before this, he presented some beads to a kind of chief, who had contributed in keeping the islanders at a little distance, although he was convinced that if these chiefs had any actual authority, it extended over only very few. Their presents distributed to five or six individuals, excited the discontent of all the others. From that time a general murmur arose, and it was no longer in their power to keep the savages quiet. They, notwithstanding, allowed them to get into their boats, but part of the natives followed them into the water, while the others collected stones on the beach.

"The situation of M. de Langle became more embarrassing every moment. The bay was almost dry, and he could not expect to get his long-boats afloat before four o'clock in the afternoon. He, nevertheless, went on board, as well as his detachment, and took his station in the bow with his musket and fusileers, forbidding them to fire without orders, although he began to perceive that he should soon be forced to it. The

stones already flew about, and these Indians, the water only reaching up to their knees, surrounded the boats, at less than a toise distant; the efforts of the soldiers who were embarked, to disperse them were in vain. If the fear of commencing hostilities and being accused of barbarity had not checked M. de Langle, he would have assuredly ordered a discharge both from the musketry and swivels to be made on the Indians, which would certainly have kept the multitude at a distance; but he flattered himself that he should be able to restrain them without shedding blood, and fell a victim to his own humanity. A shower of stones, thrown from a very short distance with all the strength of a sling, soon reached almost all those who were in the long-boat. M. de Langle, had only time to fire his musket twice, when he was knocked down, and unfortunately fell over the larboard side, when more than two hundred Indians immediately massacred him with clubs and stones. When he

was dead, they tied him by one of his arms to a rowlock of the boat, for the purpose of profiting, no doubt, of his spoils. The long-boat of the Boussole, commanded by M. Boutin, was aground, two toises from that of the Astrolabe, leaving in a parallel line between them a little channel, unoccupied by the Indians, whereby all the wounded who were fortunate enough not to fall on the off side, saved themselves by swimming; they reached our barges which, very fortunately, remaining afloat, were the means of saving forty-nine men out of the sixty-one composing the expedition. M. Boutin, commander of the long-boat of the Boussole, had imitated all the movements, and followed all the steps of M. de Langle; his water-casks, his detachment, and all his people, had been embarked at the same time, and he posted himself in the same manner in the bow of the long-boat. Although apprehensive of the dreadful consequences of M. de Langle's moderation, he did not fire himself

nor order his detachment to fire, until after his commander. It may be supposed that at the distance of four or five paces every shot must have brought down an Indian, but they had not time to load again. M. Boutin was, in like manner, knocked down by a stone; he fortunately fell between the two long-boats, on board of which, in less than five minutes, not a single man remained. Those who had saved themselves by swimming to the two barges, had each several wounds, mostly on the head; those, on the other hand, who had the misfortune to fall over on the side of the Indians, were put an end to in an instant by their clubs.

"But such was their rage for pillage, that those Islanders ran to take possession of the long-boats, and got on board to the number of three or four hundred. They broke up the seats, and pulled the inside to pieces in search of our supposed riches. They then took no further notice of our barges,

which gave Messrs. Vaujuas and Mouton time to save the remainder of the people, and to be sure that none remained in the power of the Indians besides those who had been massacred and killed in the water by blows of their *patous*. Those who were on board our barges, and who had till then been firing upon and killing many of the islanders, no longer thought of any thing but throwing their water-casks into the sea, that the boats might hold them all; besides they had exhausted most of their ammunition, and the soldiers in rushing through the sea to the barges wetted their arms; and the retreat could not be effected without difficulty with so great a number of persons dangerously wounded, who, extended on the thwarts, prevented the cars from having full play. M. Boutin, who had five wounds in the head, and one in the stomach, was kept above water by the coxswain of the long-boat, who was himself wounded. M. Colinet was found lying almost lifeless on the

grapnel-rope of the barge, with one arm fractured, a finger broke, and two wounds in the head. M. Lavaux, surgeon-major of the *Astrolabe*, was so badly wounded that it was necessary to trepan him. He had nevertheless swam to the boats, as well as M. de la Martinière and Father Receveur, who had received a violent contusion in the eye. Messrs. de Lemanon and de Langle were massacred with unexampled barbarity, as well as Talin, master-at-arms of the *Boussole*, and nine others of the two ships' companies. The ferocious Indians, after having killed them, yet sought to wreak their fury on their lifeless carcases with clubs. M. C. Gobien, who commanded the *Astrolabe's* long-boat under the orders of M. de Langle, did not quit it until he found himself left alone. After having used all his ammunition, he leaped into the water on the side of the channel formed by the two boats, which, as I said before, was not possessed by the Indians: and, notwithstanding his wounds, succeeded in saving himself in one of the barges: that of the *Astrolabe* was so deeply laden that it grounded, which gave the islanders an idea of harassing the wounded in their retreat. They came down in great numbers towards the reefs at the entrance of the cove, which the barges were under the necessity of passing at the distance of about ten feet. The little ammunition that remained was exhausted on the furious crowd, and the boats at length got out of this den, more dreadful by its perilous situation, and the cruelty of its inhabitants, than the haunt of lions and tigers.

"At five o'clock they arrived on board, and gave us the recital of this disastrous event. At that moment we had round us a hundred canoes, the natives in which, were selling their provisions with a security which proved their innocence; but they were the brothers, children, and fellow-countrymen of those barbarous assassins who murdered our friends; and I confess I had recourse to all my reason to restrain the rage which animated me, and to prevent our ship's companies from destroying them at once. Already were the soldiers unslashing their guns, and flying to arms; I checked these movements, which were, nevertheless, very pardonable, and ordered a single gun, loaded only with powder, to be fired, to give notice to the canoes to keep off. A small canoe from the coast probably made them acquainted with what had happened; for in less than an hour not a single one was to be seen. An Indian who was on the quarter-deck when our boat arrived, was by my orders arrested and put in irons. Next morning having gone nearer the coast, I gave him leave to jump into the sea, the confidence with which he remained in the frigate being an unequivocal proof of his innocence.

"It was my first intention to give orders for a new expedition to avenge my unhappy companions, and recover the wrecks of the boats; with this view I approached the coast in search of an anchorage; but I only found the same bottom of coral, with a swell setting in shore and breaking on the reefs. Besides, the creek where the massacre took place, was a deep bight in the island, and seemed scarcely possible to approach within gun-shot. M. Boutin, whose wounds still kept him to his bed, but whose mind was in full vigour, represented to me also, that such was the situation of the bay, that should our boats run aground, it was probable not a man would return, for the trees, which grow almost close to the sea-side, sheltering the Indians from our musketry, would leave such as might be disembarked exposed to a shower of stones, the more difficult to avoid, as being slung with great power and skill; their effect was nearly the same as our balls, and had the advantage over them of coming in more rapid succession. I would not, however, give my consent, until thoroughly convinced of the impossibility of anchoring within gun shot of the village. I passed two days in lying before the bay, where I still saw to windward the wrecks of our long-boats aground on the sand, and an immense number of Indians round them. During this time five or six canoes put off from the coast, and came with pigs, pigeons, and cocoa-nuts, to offer us in exchange, I was every moment under the necessity of repressing my anger not to order them to be sunk. These Indians, ignorant of our having any arms that could carry further than our muskets, remained without fear, fifty toises from our ships, and offered their provisions with the most

perfect security. We did not encourage their approach; railway succeeded their offer of traffic, and I soon perceived many other canoes detached from the bank to join them. As they thought themselves secure from our guns, and everything evinced that I must soon be obliged to lay aside my principles of moderation, I ordered a gun to be fired in the midst of them. My orders were executed with the greatest precision. The ball dashed the water into the canoes, which in a moment hastened to the shore, drawing with them in their flight those who had just quitted it. This event deprived us, for a time of thirty-two men, who were grievously wounded, and the two long-boats, which were the only ones capable of containing any number of armed men for the purpose of making a descent."

After this misfortune, La Perouse proceeded to Oyolava, an island near Maouna, which they named the Island of the *Massacre*. "At the distance of three leagues from N.E. point," says La Perouse in his journal, "we were surrounded by an innumerable quantity of canoes, laden with bread-fruit, cocoanuts, bananas, sugar canes, pigeons, and gallinules, but very few pigs. The inhabitants bore a great resemblance to those of the island of Maouna, who had so detestably betrayed us; their dress, features, and gigantic stature were so nearly alike, that our sailors fancied that they recognised many of the assassins, and I had not a little trouble in preventing their being fired upon. But I was certain that they were blinded by rage and the desire of vengeance, which, if I did not think myself justified in wreaking on the canoes of the Island of Maouna itself at the moment of being made acquainted with this horrible event, could not be justly exercised four days after in another island fifteen leagues distant. I, therefore, appeased their fermentation, and exchanges were continued. Much more tranquillity and honesty prevailed there than at the Island of Maouna, the smallest injustice being punished by blows, or reprimanded by threatening words and gestures. At four o'clock in the afternoon, we hove-to, opposite perhaps the most extensive of any island of the South Sea, or rather abreast of a very extensive plain, covered with houses from the summit of the mountains down to the banks of the sea. These mountains are nearly in the middle of the island, from whence the land inclines by a gentle declivity, presenting to the view of the ships an amphitheatre, covered with trees, huts, and verdure; the smoke rose from the heart of the village as from a great city; the water was covered by canoes, all of which endeavoured to get near our ships; several were only paddled by idle lockers-on who having nothing to sell, rowed round our frigates, and appeared to have nothing to do but enjoy the spectacle we afforded them. From women and children being amongst them, it might be presumed that they had no sinister intentions; but we had two powerful motives for not trusting to these appearances, and were ready to repel the most trifling act of hostility in a manner which would have rendered navigators formidable to these islanders. I am strongly inclined to believe that we are the first with whom these people have ever trafficked. They had no idea of the use of iron, constantly refusing that which we offered them, and preferring a single glass bead to an axe or six-inch nail. Rich in the wealth of nature, they in their exchanges, only sought for superfluities and objects of luxury. Among a great number of women, I observed two or three agreeable countenances, which might be supposed to have served as a model for the print of the 'Young woman bearing presents,' in Cook's third voyage; their hair ornamented with flowers and a green ribbon, like *bandeau*, was plaited with grass and moss; their shape was elegant, and their arms well turned and exactly proportioned; their eyes, countenances, and gestures bespoke their mildness, while on those of the men were only depicted surprise and ferocity."

La Perouse afterwards steered for the British colony, in New South Wales. On the 23rd of January, 1788, they made the coast of New Holland, and on the 26th anchored in Botany Bay, which they left in March. In a previous letter the commodore stated his intention to continue his researches till December, when he expected, after visiting the Friendly Islands, to arrive at the Isle of France. This was the latest intelligence received of the expedition; and M. D'Entrecasteaux, who

was despatched by the French government in 1791, in search of La Perouse, was unable to trace the course he had taken, or gain any clue to his fate.

In 1825, an American captain declared that he had seen, in the hands of one of the natives of the island in the tract between Louisiade and New Caledonia, a cross of the order of St. Louis, and some medals, which appeared to have been procured from the shipwreck of La Perouse's vessels. Other intelligence relative to the wreck of two large vessels, on two different islands of the New Hebrides, was obtained by Captain Dillon, the commander of an English vessel, at Tucopia, in his passage from Valparaiso to Pondicherry, in May, 1826, in consequence of which he was sent back to ascertain the facts, when he learnt that the two ships struck on a reef at Mallicolo. It is not indeed certain that these were the vessels of La Perouse, whose fate remained involved in mystery.

THE YOUNG SAILOR'S FIRST TRIP.

On a clear frosty morning, the 12th of January, 182—, I (being then a lad of seventeen) started from my father's house with the firm determination of going to sea on board of a man-of-war. Although brought up in an inland quarter of the country, I had early imbibed an enthusiastic attachment to a seafaring life; a man-of-war's man, with his neat blue jacket, straw hat, and white trousers, appeared to me to be the only individual in the world worthy of envy; and, in defiance of the feelings and wishes of my parents, or of any more prudential motives, I resolved to place myself in the way of becoming one. I therefore steered my course for the nearest sea-port, with that on my shoulder which I proudly denominated my sea-chest, containing a small assortment of shirts, stockings, and other articles of wearing apparel, which, though altogether unfitted for a sailor's sea-stock, "were my best, and I was vainly."

My mind was so taken up with building castles in the air, that I scarcely cast a thought on the friends and relations I had left behind, till after I had got into the steam-boat for Liverpool, and was a number of miles down the Firth of Clyde. It being the first time I had ever been from home, the recollections, then, of former days crowded thick on my mind; and I almost began to repent of the step I had taken, when one of the men who had noticed me a little active in assisting to work the vessel, called, "Ho, there! Sailor! lend a hand here to coil down this hawser, will ye?" I sprang to the spot; and there, in coiling down the rope, I forgot for a time that I had any person belonging to me on the face of the earth. Indeed, the term "Sailor," and the word "Hawser," had almost an electric effect on me. I walked the deck with the air of a midshipman on half-pay, and really thought myself, "Ay, every inch a sailor."

Nothing particular happened till we reached the Mersey, where we were obliged to lie at double anchor, riding out a heavy gale of wind. During the night, while lying on the bare deck, I was roused from a half-sleep by the cry of "A man overboard!" I started up, and looked around. As the steam-boat pitched, the reflecting lights, at the entrance of the river, appeared for an instant, and then sunk under the crested waves, which threatened every moment to make the vessel drag her anchor. The scene on deck was not so busy as I expected, on account of so few men being aboard, except the passengers, who knew no more about a ship than a cow does about handling a musket. Four of the seamen jumped into the boat, the captain making one of them, and pulled directly for the place whence the wretch's drowning cries were heard. We on deck waited with great anxiety, but in a short time could distinguish no sounds, except the roaring of the boisterous waves that lashed against the bow and sides of the vessel, covering us with spray, and wetting us to the skin. The boat returned in safety, but the man was lost.

This accident, and the miserable plight which I was in with cold and wet, affected me much. "My mother!" thought I,
